Principal items yet to be rushed through concern appropriations for the next fiscal year. For it must be borne in mind that while the fiscal year of the Federal Government begins on July 1, only 1 of the 12

major appropriation bills had been sent to the White House by that time and on July 15 only 5 of the 12 were awaiting Presidential action. Meanwhile, such governmental agencies as have not received appropriations to match budget needs are proceeding under temporary stop-gap financing. To make these budgets available is the principal remaining job of Congress before adjournment.

Left for action are many bills which have attracted public attention. These include the issue of universal military training, the admission of European displaced persons to America, the fixing of a higher minimum wage in the wage-hour set-up, statehood for Hawaii, Federal aid to education, health insurance, and other socialization of medical care, new housing legislation, the Missouri Valley Authority and other flood-control measures for which President Truman has asked four billions, and the St. Lawrence waterway and power project.

These bills are, to many persons, highly important and there may be regret that the 1947 session of the Eightieth Congress did not find time or inclination for definite decision on them. On the other hand, the amount of controversial legislation which has been passed, either to become law or meet Presidential vetoes, has been unusually large. Further, as to the undecided items enumerated above, it is quite possible that some require time for additional consideration. We may expect a more determined attitude on these after our national legislators have studied the public mind at home.

At any rate, we cannot by any means label this as a do-nothing Congress. Under the circumstances, with Republicans in control for the first time in 16 years, with a Chief Executive of the opposing political faith, with both major political organizations studying every move with an eye to the 1948 elections, it is remarkable that as much concrete accomplishment was actually obtained. It is also worthy of notice that the first Congress to operate under the provisions of the La Follette-Monroney Legislative Reorganization Act of 1946 was apparently benefited by the reforms. Committees worked harder, there was better stream lining of effort, altered composition of committees gave greater efficiency, and the entire program of the Congress was handled in a more systematic manner.

Problems were solved; other problems remain. But this session made fine headway and we are justified in the expectation of further progress next year. Certainly, too, this was not by any means a rubber-stamp Congress of the type we had so long. This third branch of our National Government has regained its independence and the Nation is to be congratulated therefor.

Report on the Work and Activities of the House Committee on Agriculture for the First Session of the Eightieth Congress

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. HOPE. Mr. Speaker, with the close of the first session of the Eightieth Congress, I desire to make a report covering the work and activities of the House Committee on Agriculture during the first session.

At the outset I desire to commend the members of the committee for their hard work and keen interest on the legislative proposals before the committee in connection with the work of the subcommittees in charge of special investigations and the hearings by the full committee on long-range agricultural policy.

During the session, 120 bills and resolutions were referred to the committee for consideration. The full committee and legislative subcommittees held hearings, some of them quite lengthy, on 29 of these bills. The full committee reported 22 bills, not counting cases where similar House and Senate bills were reported. Of these 22 bills, 16 passed both the House and the Senate and have been enacted into law; one passed both the House and the Senate and was vetoed by the President and another was pocket vetoed; two passed the House and are now pending in the Senate; two are still on the House Calendar. In addition, the committee reported and the House passed House Resolution 276.

HEARINGS ON LONG-TIME AGRICULTURAL POLICY

The committee also spent considerable time in a study of long-time agricultural policy and conducted quite extensive hearings thereon. These hearings began on April 21 with the appearance of the Secretary of Agriculture, Hon. Clinton P. Anderson, and covered 19 days. During the course of the hearings, the committee heard representatives of all of the great national farm organizations, spokesmen for the processors and distributors of agricultural commodities, independent public organizations such as the Committee for Economic Development and the Association of Land-Grant Colleges, the proponents and sponsors of various detailed agricultural programs, and others.

These hearings on long-time agricultural policy have been devoted primarily to a search for a sound national agricultural policy which could serve as the basis for a long-range legislative program.

In order to enable the committee to secure the viewpoint of the men and women on the farms in various agricultural sections of the country, it is planned to conduct a field trip throughout the country during the congressional recess. This will be preceded by a week or ten days of hearings in Washington, at which time the committee will hear the Secretary of Agriculture submit detailed studies and plans for a long-time program. This will supplement the statement previously made by the Secretary. In addition, the committee will at this time hear further general witnesses who were unable to appear during the congressional session.

The hearings throughout the country will be held in all of the principal agricultural sections in order that the members of the committee may become familiar first-hand with the particular problems of each area and region. On this field trip, the committee will not only conduct formal hearings, but will make an effort to get out on the farms for a first-hand study.

SUBCOMMITTEES

No mention of the committee's activities during the session would be complete without referring to the splendid work of the subcommittees which were appointed to investigate various emergency situations. The reports of these subcommittees were timely and informative and were well received by the public and the press.

The Subcommittee on Food Shortages, of which Hon. AUGUST H. ANDRESEN was chairman, made three reports during the session—one on the sugar situation, dated February 1, 1947; one on the food situation, dated July 26, 1947; and one on potato surpluses and prevention of wastage on July 30, 1947.

The Subcommittee on Fertilizer, of which Hon. ANTON J. JOHNSON was chairman, made a report on 1947 fertilizer supplies on February 10, 1947.

The Subcommittee on Fur, of which Hon. REID F. MURRAY was chairman, made a report entitled "The Fur Situation" on June 17, 1947.

The Subcommittee on Foot and Mouth Disease, of which Hon. GEORGE W. GILLIE was chairman, made a report on July 17, 1947, entitled "The Campaign Against Foot and Mouth Disease." This report covered the trip of the subcommittee to Mexico, on which trip it was accompanied by other Members of the House and Senate.

The Subcommittee on Cotton, of which Hon. ANTON J. JOHNSON was chairman, conducted extensive studies and hearings on the economic problems connected with cotton and agriculture generally in the cotton-producing areas.

SUMMARIES OF THE PROVISIONS OF BILLS REPORTED

For the information of Members of the House and others who may be interested, there is submitted the following summary of the provisions of each of the 16 bills reported by the committee which have passed both Houses and have been signed by the President.

ERADICATION OF FOOT-AND-MOUTH DISEASE, H. R. 1819, PUBLIC LAW 8

Shortly after the committee assembled for its first meeting, it was faced with a situation which threatened the welfare of the livestock industry, and indeed the whole agricultural economy of the continent. That was the outbreak of the foot-and-mouth disease in Mexico. Not since an outbreak in California was eradicated in 1929 has this continent known this dread livestock scourge, but the memories of American farmers still retain the disastrous consequences of the outbreak in 1914 which spread from Chicago to Oregon on the west and New York on the east.

Fortunately, the committee numbered among its members a man who for many years was engaged in practicing veterinary medicine, GEORGE W. GILLIE, of Indiana. He was appointed chairman of a subcommittee to investigate the reported outbreak and, moving quickly to put his subcommittee's recommendations into effect, the committee reported out a bill (H. R. 1819) authorizing the Secretary of Agriculture to cooperate with the Government of Mexico in the eradication of

this disease. In the House all after the enacting clause in this bill was substituted for S. 568 and became Public Law No. 8.

The only known method of eradicating foot-and-mouth disease is to kill and bury all infected and exposed animals and to thoroughly disinfect all exposed premises. The act, Public Law 8, authorizes this Government to participate in a joint-eradication program with the Government of Mexico. Pursuant to that act there has been established in Mexico the joint United States-Mexican Commission for the eradication of foot-and-mouth disease. Since there is no known cure for this disease and since it is so contagious, the only way the livestock of the United States can be protected is to eliminate the virus entirely from the North American continent. This is the plan of battle adopted pursuant to this legislation. Beginning at the northern edge of the infection in Mexico, the purpose is to interpose a barrier between the diseased area and this country, then by killing and burying infected animals to drive the disease southward and eastward until the disease has been completely eradicated.

If, as it now appears, this program is successful in preventing the introduction of the virus into the United States, the Congress, by its prompt and effective action, will have saved the livestock industry and the farmers of this country untold millions of dollars and will have protected the meat supply of the Nation.

FARM LABOR SUPPLY PROGRAM EXTENSION, H. R. 2102, PUBLIC LAW 40

The farm labor supply program which was established during the war to obtain for farmers the necessary labor, both foreign and domestic, in order to expand production is continued by this act until December 31, 1947. This program has provided much needed labor for the planting, cultivating, harvesting, and processing of food crops vitally needed for domestic consumption and export. The need for the labor procured under this program has been particularly acute in connection with the production of sugar beets, fruits, vegetables, and canning crops. In extending this legislation the committee added a new provision which directed the Secretary of Agriculture and the Secretary of Labor to take whatever steps may be necessary to obtain full cooperation between State public employment agencies and the Federal-State Extension Services so that all qualified farm workers may be placed in suitable farm employment, if it is available, thereby reducing the number of persons on the unemployment compensation rolls.

The continuance of the farm labor supply program until the end of the year has been of great importance in obtaining maximum food production. Sugar acreage, in particular, was increased by this legislation through the assurance that producers received from it that farm labor would be available for harvesting sugarcane and sugar beets.

FEDERAL INSECTICIDE, FUNGICIDE, AND RODENTICIDE ACT, H. R. 1237, PUBLIC LAW 104

This act, known as the Federal Insecticide, Fungicide and Rodenticide Act, is a very important but unpublicized piece of legislation. Insecticides have become increasingly important to farmers with the development of new materials. It was accorded wide support by agricultural, industrial, trade, governmental and scientific groups.

This is an Act which will benefit everyone who manufactures, sells, distributes or uses economic poisons in any form. It replaces and expands the Insecticide Act of 1910. It is designed to prevent the sale or distribution, in interstate commerce, of adulterated or misbranded insecticides, fungicides, herbicides, and rodenticides. So many new and powerful plant materials, synthetic chemicals and other economic poisons have been developed that the Insecticide Act of 1910 is outmoded and no longer adequate. This legislation will bring that Act up to date and extend the protection for the first time to cover herbicides, rodenticides and devices intended to control pests.

The protection afforded by this legislation includes the requirement that all economic poisons be registered; that appropriate warnings be carried on labels if the substance is highly toxic; that economic poisons which are likely to be mistaken for flour, salt, sugar, and so forth, be distinctly colored; that adequate instructions, warnings or caution statements be used whenever necessary to prevent injury to vegetation, man or other animals; that false or misleading statements or claims not be used.

Only recently cotton producers have complained that a new herbicide known as 2, 4–D which has been sprayed by airplanes by rice growers has caused great damage to cotton and the committee has reported and the House passed a resolution (H. Res. 276) calling upon the Secretary of Agriculture to make an investigation. It is believe that the Insecticide Act may be found very useful in effectuating whatever corrective action may be found necessary.

This legislation is also in harmony with uniform State legislation which was modeled after this act and which has been recommended for adoption by the Council of State Governments. It is believed that this act will greatly facilitate the coordination of work in this field among the States and Federal Government.

SALE OF LAND TO QUEENS CHAPEL METHODIST CHURCH, H. R. 2511, PRIVATE LAW 107

This act authorizes the Secretary of Agriculture to sell 2 acres of land Muirkirk, Md., to the Queens Chapel Methodist Church. The land has been determined by the Department of Agriculture not to be essential to its activities.

PROTECTION AGAINST FOREST PESTS, S. 697, PUBLIC LAW 110

Additional protection to forestry was provided through the enactment of S. 597 which was identical with the House bill (H. R. 1974) reported by the committee.

This act is designed to bring about more effective control measures in an effort to reduce the tremendous losses caused by destructive forest pests and diseases. Our defense against the onslaught of these pests will be materially strengthened by the enactment of this legislation under which a means is established whereby incipient epidemics may be detected on State and private, as well as on federally owned lands.

The losses caused by destructive insect pests and diseases greatly exceed the losses caused by fire and have reached such proportions that it is imperative that more effective control be undertaken. The threat to our forest resources by insects and diseases has long been recognized by the Federal Government and legislation has been enacted for the protection of federally owned timber, but there has been no adequate authority under which the Federal Government, State agencies and private interests could join forces to bring about a concerted attack on insects and tree diseases, irrespective of the ownership of the land involved.

Under this bill the Secretary of Agriculture is authorized directly or indirectly or in cooperation with other agencies of the Federal Government, States, Territories, possessions, public agencies, private organizations, and persons to conduct surveys on any forest lands, irrespective of ownership, to detect and appraise infestations of forest insect pests and tree diseases, to determine the kind of protective measures which should be taken and to take the necessary steps to carry out such protective measures. Under this authority it is hoped that it will be possible to obtain unified action so that all forest insects and tree diseases may be detected in the incipient stages and effective control measures taken before they cause widespread loss.

SALE OF LAND TO SITKA, ALASKA, H. R. 195, PUBLIC LAW 172

This act authorizes the Secretary of Agriculture to sell a tract of land formerly occupied by the Alaska Agricultural Experimental Station to the city of Sitka, Alaska. The lands involved consist of approximately 1.3 acres within the city of Sitka. The city of Sitka has already been permitted to use this property for noncommercial purposes, and the Department has no further use for the same.

PLANT QUARANTINE ACT AMENDMENT, S. 338, PUBLIC LAW 290

Additional protection is accorded American agriculture, horticulture, and forestry through the enactment of this bill which authorizes the Secretary of Agriculture to limit the entry of nursery stock from foreign countries under such rules and regulations as he deems necessary, including the requirement that such nursery stock be grown under post-entry quarantine for the purposes of determining whether imported nursery stock is infested or infected with plant pests and diseases.

The supplemental authority conferred under this act will better protect the agricultural, horticultural, and forest interests of this country by providing full authority to impose whatever limitations as may be necessary for proper and adequate pest and disease control.

EXTENSION OF THE BANKHEAD-JONES FARM TENANT AND SOIL CONSERVATION ACTS TO VIRGIN ISLANDS, S. 512, PUBLIC LAW 249

S. 512 will extend to the Virgin Islands the provisions of the Bankhead-Jones

Farm Tenant Act, as amended, and the Soil Conservation and Domestic Allotment Act, as amended. The population of the Virgin Islands is dependent for its existence almost entirely on a single agricultural crop, sugarcane. There is definite need to encourage the development of a more diversified agriculture which will provide food needed for consumption on the islands and encourage the establishment of family-sized farms. Soil conservation is of primary importance and it is important to conserve and utilize in the most effective manner possible the water supplies which are available on the islands.

The enactment of this measure is believed to be of fundamental importance to agriculture in the Virgin Islands.

MARKETING AGREEMENTS AND ORDERS, H. R. 452, PUBLIC LAW 305

This act is of utmost importance to the fruit and vegetable producers of the country. It amends the Agricultural Adjustment Act, as amended, and authorizes the use of marketing agreements and orders to establish and maintain standards of quality and maturity through grading and inspection, notwithstanding the fact that the seasonal average prices of such commodities may be above parity. It also authorizes assessments for the maintenance and functioning of the authority or agency administering the marketing orders which are financed by assessments against those participating throughout the period the marketing agreement or order is in effect, irrespective of whether particular provisions of such agreements or orders are suspended or become inoperative.

Before the enactment of this legislation, all provisions of marketing orders were required to be terminated whenever the price of the commodity rose above parity. This has seriously interfered with the maintenance of organizations to administer the order programs, and in efforts to maintain standards of grades and quality. This act will add flexibility and permit a continuation of certain phases of marketing order programs irrespective of the price level of the commodity.

AGRICULTURAL AND MARKETING RESEARCH, H. R. 4110, PUBLIC LAW 297

H. R. 4110 amends section 11, title 1, of the Bankhead-Jones Act which was added by the Research and Marketing Act of 1946—Public Law 733, Seventy-ninth Congress—by striking out the words "authorized to be" so that not less than 20 percent of the funds appropriated under section 9 (a) of that act will be made available for use in conducting marketing research instead of not less than 20 percent of the funds authorized to be appropriated.

This amendment is a technical one and corrects what was clearly an inadvertence in the drafting of the Research and Marketing Act.

DISPOSITION OF FARM LABOR FACILITIES, H. R. 4254, PUBLIC LAW 298

Another very important piece of legislation to the farmers of this country is the act which authorizes the disposition of farm-labor facilities to public or semipublic agencies or nonprofit associations of farmers to assure the continued use of these facilities for housing farm labor.

Many of these labor camps were originally established and operated by the Resettlement Administration. These camps and facilities were subsequently transferred to the Farm Security Administration and later to the Farmers' Home Administration. At the inception of the farm-labor-supply program during the war, these camps and facilities, along with others, were put into use for housing migratory domestic and foreign farm labor recruited under that program. In many instances the camps and labor centers have become an important and integral part of the agricultural economy of the States and areas in which they are operated. These centers or labor camps are both permanent and temporary in character. The permanent camps, of which there are 52, have a capacity for housing 48,600 persons. There are 70 temporary camps, with a capacity for housing 20,500 persons.

Since the farm labor supply program will terminate December 31, 1947, these camps and facilities would have been liquidated commencing January 30, 1947. If this legislation had not been enacted, there would have been no adequate authority under which the Secretary of Agriculture could have disposed of the labor-supply centers, camps, and other facilities in a manner which would have assured their continued use for housing migratory agricultural workers and a great number of them would have gone into less essential uses. This is because the Secretary would have had to dispose of the facilities under the provisions of section 43 (d) of the Farmers' Home Administration Act of 1946, which requires that the facilities be transferred to appropriate agencies of the United States for disposition as surplus property or be sold at the best price obtainable. Thus, these facilities for housing agricultural workers would probably have been sold and put to other uses not in the best interests of agriculture.

Under this legislation, the Secretary of Agriculture is authorized to dispose of such facilities to public or semipublic agencies or nonprofit associations of farmers for use in housing farm labor under such terms and conditions, at such prices, and in such manner as to make it feasible for such agencies or nonprofit associations of farmers to acquire the properties and to operate them for housing agricultural labor. The authority to dispose of these properties in this manner extends until June 30, 1949.

The Secretary of Agriculture is also authorized to enter into contractual arrangements with responsible public or semipublic agencies or nonprofit associations of farmers who will agree to operate the housing facilities for the principal purpose of housing migratory agricultural labor and to relieve the Federal Government of all financial responsibility in connection with their operation. Under this authority, public or semipublic agencies or nonprofit associations of farmers may operate these facilities after January 30, 1948, for the purpose of housing agricultural workers until such time as appropriate arrangements can be made for their purchase. Through this legislation, a great portion of these facilities will be preserved and continued in operation by State and private groups as agricultural housing for the benefit of agriculture generally.

PEANUT MARKETING QUOTAS, H. R. 4124, PUBLIC LAW 323

H. R. 4124 amends the peanut marketing quota provisions of the Agricultural Adjustment Act of 1938 so as to improve the operation of programs conducted thereunder. It provides that the marketing quotas for each farm shall be the actual production of the farm-acreage allotment instead of either the actual or the normal production of the allotted acreage, whichever is greater.

This provision restores the law to exactly what it was under the original act and is necessary because there have been no adequate records kept since quotas were suspended after 1942 upon which normal production could be determined. This provision will also result in a reduction in administrative costs by making it unnecessary to calculate normal production. The bill also increases the penalty from 3 cents per pound to 50 percent of the basic support rate. This will assure compliance with the quotas and make the penalty in the case of excess marketings of peanuts exactly the same as is now provided by law for excess marketings of wheat, corn, and cotton.

CROP INSURANCE, H. R. 3465, S. 1326, PUBLIC LAW 320

In 1938 the Nation embarked on a program of crop insurance. Formulated as it was in the midst of the depression and drought era, the program partook as much of the nature of relief and rehabilitation as it did of sound insurance. Instead of starting on an experimental basis until insurance tables and methods could be accurately evolved, it was undertaken to write insurance on wheat on an unlimited national scale. Cotton was later added on virtually the same basis.

As the result of this broad approach to a subject which probably should have been dealt with only experimentally at first, the total losses, counting administrative costs, had reached more than $125,630,437 by the end of the fiscal year of 1947.

It became apparent that the best interests of agriculture were not being served by a program which was operating at such a tremendous deficit. The committee reviewed the entire crop-insurance program and reported a bill (H. R. 3465) which would place the entire program on an experimental basis. The Senate passed Senate bill 1326, and an agreement was reached in conference on a program which authorized wheat insurance in 200 counties, cotton insurance in 56 counties, corn and flax insurance in 50 counties each, and tobacco insurance in 35 counties.

Such a program, it is believed, will prove adequate for experimental purposes. Although the coverage under the bill has been reduced, particularly with respect to wheat and cotton, the Crop Insurance Corporation is given far more authority to try out different types of insurance associations and the underwriting of crop insurance written by privately established insurance companies.

In the opinion of the committee, this bill provides the basis for developing over a period of years, without any substantial risk to the Public Treasury, an actuarially sound system of crop insurance that will be of lasting benefit to American agriculture.

WOOL, H. R. 1498, PUBLIC LAW 360

Perhaps the most difficult and controversial matter confronting the committee during this session was the subject of price support for wool. Legislative action on this subject was made necessary by the action of the Secretary of Agriculture in terminating the wool-price-support program which had been in effect since 1943. Simultaneously with his termination of this program, which had been conducted under the authority of the Commodity Credit Corporation, the Secretary recommended price-support action "to put wool on an equal footing with the basic and so-called Steagall commodities," the prices of which are supported until December 31, 1948.

The committee considered a number of bills seeking to develop an adequate support program for wool growers and at the same time relieving the taxpayers of any unnecessary burdens. A rather simple bill (H. J. Res. 158) was first reported which directed the Commodity Credit Corporation to continue to support the price of wool until December 31, 1948, and authorized the Commodity Credit Corporation to sell wool below parity. The Senate passed a bill (S. 814) and in its report accompanying the bill recommended that the House give consideration to the imposition of import fees so that the wool support program would not place a burden upon the Treasury of the United States. The House amended the Senate bill so as to give the President the same authority to impose import fees or quotas upon the importation of wool that he has to impose import fees or quotas upon practically every other agricultural commodity on which price supports are in effect. The amended bill was vetoed by the President.

In order to give the wool grower a price support program and to provide the protection which this Committee believes he is entitled, the Committee reported and the House passed S. 1498. Under the terms of S. 1498, the price of wool to the grower will be supported at the same price at which it has been supported since the inception of the wool support program, or approximately 42 cents per pound in the grease on a national average basis. The act also authorizes the Commodity Credit Corporation to sell wool below the parity price so that it may compete with foreign producers for the American wool market.

SALE OF TIMBER WITHIN TONGASS NATIONAL FOREST, HOUSE JOINT RESOLUTION 205, PUBLIC LAW 385

This act, which is of great importance to the Territory of Alaska and to the Nation, authorizes and validates the sale of timber growing on any vacant, unappropriated, or unpatented lands within the exterior boundaries of the Tongass National Forest, notwithstanding any claims of possessory rights which may be asserted to certain of these lands. It also authorizes the sale of vacant, unappropriated, and unpatented lands which the Secretaries of Interior and Agriculture, respectively, believe are needed for plant sites and for other incidental purposes by the persons who undertake the development of the timber resources of the forest under contracts made with the Secretary of Agriculture. The legislation is necessary because the question of native land titles in the Territory of Alaska remain largely unresolved.

A large-scale development of the timber resources in southeastern Alaska, involving the establishment of important business enterprises and the employment of many persons, is essential to the maintenance of a prosperous and stable economy in the Territory. Moreover, this development would be of great value to the Nation as a whole from the standpoint of making available to the national economy valuable and sorely needed products from the forest. The inauguration of such a timber development program in the Territory will be made possible by this legislation.

Provision is made for retaining the funds derived from the sale of timber and land in a special account in the Treasury until the respective interests of the Government and those who assert claims of possessory rights to the timber and land are finally determined. Such a procedure, it is believed, adequately protects the rights of all interested persons.

SUGAR ACT OF 1948, H. R. 4075, PUBLIC LAW 388

One of the most important pieces of legislation reported by the committee is H. R. 4075, the Sugar Act of 1948. This bill establishes an orderly policy relating to the production and importation of sugar for the next 5 years.

H. R. 4075, like its predecessors, the Jones-Costigan Sugar Act of 1934, and the Sugar Act of 1937, has as its primary objective the stabilization of the sugar producing, refining, and importing industries. This over-all objective is effectuated through the establishment and use of quotas under which the United States market is divided among the various domestic sugar areas and certain foreign sugar-producing areas which have historically supplied the needs of the domestic market. As a means of implementing the sugar program, provision is made for the making of payments to domestic producers of sugar beets and sugarcane. The excise tax on sugar manufactured in the United States is continued in effect and will provide sufficient revenue to meet the payments made to producers. The Secretary of Agriculture is also authorized, under certain circumstances, to make determinations with respect to fair prices to be paid domestic producers and fair wages to be paid to domestic laborers who work in the sugarcane or sugar-beet fields.

Sugar legislation was necessary because sugar production is returning to peacetime levels and because the Sugar Act of 1937 expires on December 31, 1947. Moreover, that act, even if extended, would not have been adequate should the reimposition of quotas become necessary because under the provisions of that act, any deficit in the quota for the Republic of the Philippines is required to be allotted to foreign countries other than Cuba, and other countries could not have supplied the sugar needed. Under the provisions of H. R. 4075, practically the entire Philippine deficit will be allotted to Cuba, whose production was greatly expanded during the war. The allotment of the Philippine deficit to Cuba at a time when its production is at an all-time high will, in effect, substantially continue the pattern established during the war and will give Cuba a reasonable time within which to adjust gradually its production downward to a normal level with a minimum of economic disruption.

The principal difference in the Sugar Act of 1948 and the Sugar Act of 1937, other than the provision for the reallotment of the Philippine deficit, is the provision for estimating the quantity of sugar needed to meet the requirement of consumers in the continental United States. Several new factors, such as the level and trend of consumers' purchasing power, and the relationship between the wholesale price of sugar and the general cost of living in the United States, are required to be taken into consideration, but the over-all and controlling guide in determining the amount of sugar to be made available for consumption is a provision which requires the establishment of a supply of sugar which will be consumed at prices which will not be excessive to consumers and which will fairly and equitably protect the sugar industry of the United States.

Memorial for Hon. Joseph Jefferson Mansfield

EXTENSION OF REMARKS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. LEA. Mr. Speaker, one of the greatest rewards of serving as a Member in the House of Representatives is the opportunity of the acquaintance and friendship of a very fine group of men who come from every section of our country. It is a busy life we lead here, but it does constantly bring us in contact with each other in the practical work of Congress. It is a contact that gives us an opportunity to know, appraise, and appreciate our fellow Members.

There is no experience of my life that I appreciate more than the opportunity to know and have the friendship of so many men who have served in this House.

I will always appreciate Hon. Joseph J. Mansfield as one of the men with whom I served, for whom I had a personal fondness and respect, and appreciation of his services as a Member of this House. We began our services here together at the beginning of the Sixty-fifth Congress in 1917. Our first day in the House was when we heard the war message of Presi-

dent Wilson. From that time until the passing of Mr. Mansfield, we had served together with almost exactly 2,000 men. During that time our votes on general measures were pretty much alike.

Mr. Mansfield, Mr. KNUTSON, and myself were the three surviving Members who entered Congress with the beginning of the Sixty-fifth Congress. Subsequently, Mr. BLAND, of Virginia, became a new Member with us in the Sixty-fifth Congress. In this long association, a certain degree of fellowship or common bond developed among us.

Mr. Mansfield was a fine type of representative of our Republic. Personally, he was likable to an unusual degree. He had the respect and confidence of his colleagues. As chairman of the Rivers and Harbors Committee he served as leader in a program that will long identify him with the initiation of constructive developments of far reaching advantage to the country. The Nation, and particularly his own State of Texas, can take a just pride in the career of such a man.

What a Change a Little Word or Two Can Make

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. MURDOCK. Mr. Speaker, during the hearings on the Gila reclamation project bill, H. R. 1597, and identical Senate bill 483, passed in the closing hours of this session, one unfriendly to the measure said there ought to be a few slight changes made in its language, just a word or two here and there which might be called perfecting amendments. Now, one of these "slight changes" was to strike out the word "diverted" and substitute in lieu thereof the words "of or", in the following language of the bill occurring twice in section 1: "acre feet of water per annum diverted from the Colorado River." The amendments were not formally offered, and of course the idea was not adopted by the committee nor written into the bill.

Why was I unalterably opposed to such a slight change of wording? I was opposed to it because if adopted it would write into a reclamation law a new concept in regard to irrigation in the West. This new concept, carried to its ultimate conclusion, was not dreamed of by the men who established irrigation and reclamation in our western States. If written into law, it would lead to a labyrinth of difficulties making the law impossible of administration and creating a field day for lawyers. The proposal was not adopted in this act, therefore why should I speak of it now? Because there will be other bills for which the proposal will be equally plausible and equally dangerous. I bring it up as a warning.

The intent of this proposal, so far as it is apparent, would be to bring under legal consideration and subject to Federal accounting all water pumped for irrigation, the assumption being that any water pumped out of the ground, no matter what its depth, is water "of or from" the river within whose basin the water is being pumped. Now that may or may not be a reasonable assumption. It may or may not be provable fact. My contention is, that very much more will need to be learned about the source of underground water before any such assumption can be rightfully used. Even if it were a provable fact in all cases, I still contend that it would be unwise public policy to write that idea into law, especially so far as it concerns the Colorado River Basin waters. The waters of this basin constitute a special case—a unique case—controlled by law and covenant not lightly to be changed.

I do not want to be misunderstood or regarded as frowning upon the control of underground waters. I believe wise public policy in the semiarid West requires a local control of water pumped out of the ground for irrigation. A suitable undergrcund water code is desirable even though it is a difficult subject of just legislation. I want to emphasize that such control of underground water, like the control of surface waters, is properly a subject of State legislation, to be respected by the Federal Government. The unique case of the Colorado River Basin waters arises out of the fact that the degree and pattern of water control by the Federal Government and by the States of the basin have been fixed by compacts and irrevocable law. Any change in the plan must be by the same authority.

Another less apparent but probably equally significant result of this proposal, if it should be written into law, would be that any artificial precipitation over a water shed could be made the subject of legal control by such language written into the statute. If we are to consider waters "of or from" a river, regardless of how such water is taken out of the river to its point of application, we cannot overlook water carried by evaporation and later received from the clouds. While all moisture comes through clouds, getting it from them artificially is not only a scientific possibility but already an accomplished fact. However, meteorology has not been carried to such an extent as to enable scientists to compute with accuracy the exact source of water which is brought by the clouds. This puzzling matter would be involved.

If moisture is obtained on the Colorado River watershed by artificial means, can it be assumed that that water came from the Colorado River or from the Gulf of California, or from the Gulf of Mexico, or from the Pacific Ocean? The presumption is great that it came from one of these sources, but it might have come from others. We do know that in the hot area in the Colorado River Basin evaporation losses from Lake Meade and other reservoirs are enormous; hundreds of thousands of acre-feet of water which the farmers would like to have for irrigation are lifted annually through evaporation from the rivers, the artificial lakes, and the open canals before that water can reach the irrigation head gates, to be applied on the land. Now, if by the newest scientific methods we are able to capture that moisture in clouds and precipitate it on the land, should the law include such water in river accounting? I state emphatically that it should not be included in our river accounting. First, because of our lack of knowledge of the source of such clouds, and second, because such an accounting would discourage if not prohibit the application of science in this new way to furnish water for thirsty land.

In the desperate struggle for water in the Colorado River Basin, it is likely that future attempts will be made to write into law the little words "of or from" instead of "diverted from" in an effort to subject to Federal control waters seeping underground from it and waters carried from it in the atmosphere, as well as waters diverted from it in the usual way. It is my considered judgment that all such attempts to extend Federal control should be defeated.

How Can the Republican Members of This Congress Explain Their Errors of Omission and of Commission to Their Constituents?

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. SABATH. Mr. Speaker, the first session of the Eightieth Congress is history; but what a sad history.

I can only ask you: "How can you Republicans go back to the people who elected you and explain how you have betrayed them?"

Your majority leader, Mr. Speaker, the gentleman from Indiana [Mr. HALLECK] in his political recital used all the old worn-out Republican chestnuts. He pointed with pride to the alleged accomplishments of the Eightieth Congress and viewed with alarm everything else. He especially cited legislation passed in behalf of veterans.

But behold, here is a statement by the gentlewoman from Massachusetts [Mrs. ROGERS], the Republican chairman of the Committee on Veteran Affairs, which appeared in the Washington Post, a Republican daily. The headline reads: "GOP bosses killed GI bills."

Is not the gentleman from Indiana a GOP boss?

The only veteran bills passed by this Republican do-nothing Congress, as the lady from Massachusetts pointed out in her public statement, were minor, with the exception of the cashing of terminal-leave bonds; and it will be recalled by veterans that then the issue was forced by Democratic Members, and the bill was passed unanimously on a yea-and-nay vote.

REPUBLICANS DID NOT DELIVER FOR VETERANS

Such urgent and fundamental problems as raising the ceilings on subsistence allowances for GIs taking on-the-job training, or studying under the GI

bill of rights, or of providing automobiles for disabled veterans, were not touched, in spite of the pleas and activities of the gentlewoman from Massachusetts, myself, and other Democrats.

Mr. Speaker, I should like to mention some of the things that the Republican Party has delivered that do not clearly appear in the roll calls.

The Republican Party has delivered the American people into the hands of Big Business, firmly wrapped up in a bundle of high prices tied in red string.

The Republican Party has delivered American ex-servicemen—and for that matter American citizens—into the hands of the real-estate lobby.

The Republican Party has delivered labor and management into the hands of lawyers with the Taft-Hartley bill. That is one profession which needs to fear no future depression.

It also appears that not the Republican Party but the United States Post Office Department is going to do the delivering. The purely political message of the gentleman from Indiana is being printed in this issue of the RECORD for free mailing by Republicans.

ABJECT REPUBLICAN SURRENDER TO PRESSURE LOBBIES IS NOT HEROIC

Mr. Speaker, do you believe for one moment that the people will hail you as heroes because you surrendered abjectly to the power lobby, the sugar lobby, the wool lobby, the National Association of Manufacturers' lobby, the high-tariff lobby, the real-estate dealers' lobby, the copper lobby, the railroad lobby, and to every one of the high-pressure, selfish, special-interest lobbies which have gathered like dollar-marked flies about the Washington honeypot during this last 7 months, dictating to you legislation in the interest of all the combinations and trusts?

Can you be proud of your assaults on the hard-won rights of labor, and on the civil rights of American citizens, or of your shocking posthumous slaps at our great wartime President, Franklin Delano Roosevelt, so loved not only by our people but by the people of the world?

Perhaps you Republicans will point with pride to your action in repealing the Price Control Act and completely killing off OPA, which has enabled your friendly contributors of huge campaign funds—the meat packers, the dairy combines, the shoe manufacturers, the big food processors, the chain stores, and the wholesale houses—to supply the American people with $1.25 steaks and chops; 89-cent bacon; 79-cent eggs; 20-cent milk; 14-cent bread; in short, with every necessity of life, at prices from 200 to 300 percent higher, all this notwithstanding the fabulous profits now being made by those who hold the monopoly on distribution.

CAN TAKE NO PRIDE IN LABOR RECORD

Are you going to point with pride to your record on labor legislation?

You rode roughshod over all decency to pass the Taft-Hartley antiunion bill, and then passed it again over President Truman's veto. This destroyed basic rights of labor granted in the Wagner Act. It is not workable, even disregarding its manifest repressive unfairness. It is a vicious law, from which you and the Nation, labor and management, will be long in recovering.

You boast that you have not repealed any of the New Deal laws which for years you have so viciously criticized and opposed; yet you have emasculated our protective labor laws, the Norris-LaGuardia Act, the Bacon Act, and the Minimum Wage Act and the Wagner Act. You did not have to repeal them to render them impotent.

SPECIAL INTEREST LEGISLATION DID NOT HELP THE VETERANS

When the bill to extend the Reconstruction Finance Corporation was brought out, you stripped it of its power to finance veterans' homes in the interest of your friends, the mortgage bankers, who wanted to handle that mortgage business and who also wanted RFC to be an agency for the benefit of the big corporations only. Will you argue that that was in the interest of the veterans?

In the miscalled rent control bill you did three things: You took off the remaining controls on distribution of scarce materials prematurely, thus doubling the cost of new homes and halving their number; you wrecked the veterans' emergency housing program; and you increased rents 15 percent. Will you say that was in the interest of the veterans or of the consumers?

You tried to put over a phony tax reduction bill; but President Truman, with the courage of true statesmanship, exposed the dishonesty of this "pennies for the poor and thousands for the rich" kind of tax reduction, and twice vetoed the bill; and not even the desperate cracking of the party whip could carry that bill over his veto.

In appropriation bills you have done what you dared not do in substantive law. You have deprived every agency dealing with human beings and with human needs of the funds necessary to be efficient and effective. You have not stinted War and Navy nor any other department or office which can be helpful to Big Business; but you have cut and slashed at Federal Security Agency, Department of Labor, Department of Agriculture, Department of the Interior—you have crippled every agency which serves the plain people, and which therefore you do not like.

REPUBLICAN LEGISLATION ALWAYS SOAKS THE POOR AND CODDLES THE RICH

You adopted, with only 2 hours of debate, a constitutional amendment to limit the tenure of office of a President—a cheap exhibition of political animosity toward a dead man who piloted this Nation, and the whole world, through its most trying times to the ultimate triumph of democracy.

Yes, you extended some of the wartime rationing powers of the President but you limited them to the interests of Big Business.

You added $2,000,000 to the cost of living of the American housewife by passing the Sugar Act for the benefit of the Sugar Trust.

You lowered the import tax on copper; but I want to point out that you did it, not in the interest of the consuming public or of labor, but mainly because Big Business demanded it.

In the wool-grab bill you tried to saddle on the backs of the American people an additional tax of $400,000,000 for just a small group of beneficiaries, and at the same time to scuttle the whole reciprocal-trade program. This bill was so bad that the President had to veto it. In its place you passed another bill which at least had the worst features removed, but is still bad as it will cost the American consumer hundreds of millions—yes, billions—of dollars in the next 5 years.

NO CONGRESS IN MY LONG MEMORY HAS BEEN SO OBEDIENT TO PRESSURE LOBBIES

Although there never was a time when all business was so prosperous and disastrous inflation so close, you insisted on removing all credit controls and encouraging a resumption of the same instalment buying which helped bring on the 1929 crash. Then you took the tax off short sales of securities to further encourage the same kind of stock-market gambling that we had in 1927 and 1928 and which precipitated the crash in 1929.

This has been the most obedient Congress toward lobbyists and the special interests within my long memory of congressional sessions. Never have I seen lobbyists so bold, so impudent, nor so successful.

With that anxiety always to please the pressure groups from Big Business and the lobby boys you made it possible for the meat packers who were not originally eligible for subsidy payments at the beginning of the war to get in on the gravy at the expense of millions of dollars of the taxpayers' money. Yet many of these favored firms were the fly-by-night black marketeers who appeared during the war, either with the blessing of the few big packers in opposition to them, to take advantage of the needs of the people. Under the New Deal you so often denounce, these subsidies were to help the consumers; but as you have distorted them they have become merely additional hand-outs to the profit-fat processors.

You passed the Rees so-called loyalty bill, which even outstanding Republican newspapers have condemned as un-American, and which would deprive millions of Government employees of rights guaranteed by the Constitution. It is no secret that this bill was not only aimed at driving from Government all liberals and progressives, but also at those with foreign-sounding names, and at the representatives of minority racial and religious groups.

I will concede that President Truman has signed many of the bills you passed, even though he has not approved of them. You know that he had to accept them because he did not want to reduce our government to complete paralysis while you were wrangling, and that he was obliged to hold his nose while doing so.

HERE ARE SOME OF THE REPUBLICAN SINS OF OMISSION

Mr. Speaker, I have spoken of what you did do; and now I am going to call off some of the things you did not do.

You pointed with alarm, I know not how many times, to the dangers of communism; but when are you going to take the same alarm over fascism, which in my judgment is fully as dangerous; yes, is even more dangerous to the democratic form of government than communism? You were successful in preventing the Government Printing Office from printing 100,000 copies of the pamphlet, Fascism in Action, prepared for the Democratic gentleman from Texas [Mr. PATMAN] for distribution by Members; but you gladly printed more than a half million copies of Communism in Action. Do you actually want the people to be uninformed, unwarned, and relaxed toward the creeping dangers of reaction and fascism? Do you believe in free speech only for Republicans?

Every action you have taken has increased the cost of living.

Instead of acting on any of my resolutions to investigate the high cost of living, or the meat industry, or the business lobbies who have dictated your legislative record, you did everything within your power to "get back to normalcy" without any regard for the fact that these are not normal times, and that the process of reconversion from 14 years of global war is not as simple as reconverting from 14 years of popular Democratic control to 2 years of Republican Big Business control.

It is true that in these hectic closing weeks the Joint Committee on the Economic Report held a few hearings; but you called as witnesses chiefly those same people who deliberately advocated that price controls should be taken off, and who claimed 2 years ago that when ceilings were removed prices would fall and supplies would flow to market.

Do you still believe them? The country does not.

PESSIMISTIC ABOUT RESULTS FROM INVESTIGATIONS

When you learned that, following my importunities to the Attorney General, the Department of Justice had decided to launch a full-scale investigation of the criminal conspiracies which have boosted living costs 59 percent since you came into power, you hurriedly passed a resolution directing the Committee on Agriculture to do a little investigating; but I shall be surprised if all industries are not white-washed.

You have set up a joint committee to investigate housing with $150,000 to spend. I am fearful that this will only be a case of the real-estate lobby vindicating itself. I am pessimistic about getting $150,000 worth of results.

You prate of free enterprise; but how can there be free enterprise when you continuously legislate to strengthen the vicious powers of the trusts and combinations, which even the National Association of Manufacturers which seems to dictate your actions was forced to warn against?

In the last 2 years 2,800 of the smaller competing businesses have been absorbed by these colossal corporations under one gaping loophole in the Antitrust Acts. A Democratic Member of this House, the gentleman from Tennessee [Mr. KEFAUVER], recognizing the danger to free enterprise which results from unchecked monopoly, prepared and introduced a bill to close that loophole; the Committee on Interstate and Foreign Commerce reported the bill; but your Republican Rules Committee refused to grant a rule even to permit the House to vote on this bill.

You talk a lot about guarding and helping small business; but while you talk and legislate to give greater power to the big corporations small business gets smaller and smaller. Soon there will be no small business.

REPUBLICAN CONGRESS COSTS DOUBLE THAT OF THE DEMOCRATS

You have sold out to Wall Street and Big Business on every front. Your Committee on Appropriations has caused the firing or the reduction in pay of thousands of little employees in Government, yet that same committee brought in the registered lobbyists of chambers of commerce and other business organizations to pass on the budgets of the American people and has itself spent more than $100,000 this year. Some of you have furnished desks and office space to lobbyists.

Mr. Speaker, it is a startling thing to discover that an actual itemized recapitulation of the appropriations and expenditures for special investigations of the select and standing committees of the House in the Eightieth Congress shows that already $1,430,704 have been authorized or appropriated.

In the Seventy-ninth Congress, under the Democratic administration, when we had many investigations under way for the benefit of the people, the total authorizations for select committees for 2 years amounted to only $1,270,219 and we spent of that amount only $836,456.

Furthermore, Mr. Speaker, the reports of the standing committees of the Clerk of the House indicate that already the legislative committees have spent more than $1,000,000—a figure which does, of course, include the expenditure of $143,000 for special investigations.

Among the expenditures to be made is the payment of $25,000 to such NAM spokesmen as J. Cheever Cowdin, John W. Hanes, Roswell Magill, E. H. Lane, and John F. Connelly for advice on tax legislation. We do not need or want a national sales tax such as these men intend to recommend, and the American people do not want or need advice from such spokesmen for the most selfish economic groups in the country.

I suspect that before the year is over you will find that you have spent over $2,000,000 for jaunts around the world and for smearing the New Dealers.

You have toyed with the bills on health and social-security programs, but no one now believes you have serious intentions toward this very serious legislation.

It is true that you passed the antipoll tax bill, but only because you were satisfied the Senate would not act.

Where is the antilynching bill? Still in committee.

Where is the Fair Employment Practice Act which you promised to enact? Support of that bill is written into your 1944 party platform, or would you like to forget about that, too?

YOU HAVE AGAIN FILIBUSTERED IN COMMITTEE AGAINST THE WAGNER HOUSING BILL FOR HOMES FOR THE AMERICAN PEOPLE

Last year you deliberately staged a committee filibuster and smothered the Wagner-Ellender-Taft bill to death, and this year you have repeated the process, although, if passed, this measure would help get housing for our veterans and for our homeless citizens at prices they can afford to pay.

You have done nothing about raising minimum wages, although your policies have cut the real wages of American workers in half by almost doubling the cost of living since you have been in power.

If you were honest, you would not say you point with pride to this Congress.

You would say, "We look with apprehension and dismay upon our deplorable record, and we are going off on a lot of junkets at the expense of the taxpayers to avoid facing the voters."

NO ACTION TAKEN TO SOLVE THE PROBLEMS OF 800,000 TRAGIC VICTIMS OF HITLER HORROR AND OPPRESSION

You do not want to mention the fact that you adjourned without taking any action on the Stratton bill to permit 400,000 victims of Nazi terror and warfare to enter the United States, although this bill was endorsed and recommended by your high command; nor did you take any action on my own bill, which was introduced 3 months before the Stratton bill, and which would have authorized the entry of only 200,000 of these suffering displaced persons, all within the quota, nor was I given an opportunity for full discussion of my bill.

Therefore, you start two world-circling junkets off with big appropriations to investigate conditions abroad. I suppose you want to find out if these 800,000 homeless, stateless refugees from Hitler's war of extermination—70 percent of whom are God-fearing Catholics and 20 percent of whom are equally God-fearing Jews—really exist and are really suffering. I can tell you from here that most of these tragic DP's are women, children, and old men.

COUNTRY PRAYS TO BE DELIVERED FROM REPUBLICANS

A jovial gentleman on your side of the aisle whom I shall leave nameless, but who is noted for his epigrams, said last fall that the Republican Congress would open each day's session with a prayer and close it with a probe.

Well, you Republicans have your probes going to distract public attention from your failures and it is the country that already is praying to be delivered from you.

I know it is very wonderful to go from State to State—except, of course, your own—and from country to country in airplanes while the taxpayers pay the bill. Mr. Speaker, I do not blame any of you for not wanting to go back home to your districts where you would have to face the people and explain your record of the last 7 months.

Mr. Speaker, I believe very strongly in real and useful investigations. The power of investigation is one of the most valuable and precious powers of Congress. But I do not like to see that power misused.

For instance, your Committee on Un-American Activities has been used for partisan purposes. That committee has smeared liberals and progressives, but it has done little or nothing to investigate and expose the Fascists, the real enemies of our form of Government. To the contrary, it has encouraged them, and has given a forum to such exponents of an un-American attitude as Gerald L. K. Smith, Walter S. Steele, and other rabble-rousers who have been given an opportunity to spread their undemocratic doctrines of contempt and hatred for all progressives, liberals, new dealers, and minority groups.

And yes—I almost forgot—the committee has found time to make a few trips to California to "investigate" some of the ladies of Hollywood.

INVESTIGATIONS WILL BE DROPPED WHEN REAL MISCREANTS ARE DISCOVERED

You will go on with your investigations; but I tell you now that when you find the real miscreants you will drop them like hot potatoes, for you will find that those who have betrayed their public trust are not members of the Democratic Party, but the Republican economic royalists and apologists for big-business monopoly. I am satisfied that all your investigations will not bring anything to light that is detrimental to the wonderful record of the last 14 years of Democratic administration under our late great President Roosevelt and under President Truman, or to any Democrat or Democratic businessman or manufacturer.

But when and if you start investigating war contracts and fraudulent contract settlements and phony renegotiations, you will find that the "gimme boys" were almost all, yes, 99 percent Republicans, especially those "patriotic" dollar-a-year men who were forced on the Government for the duration of the war.

Nearly all of these great "dollar patriots" continued to draw their salaries from their own companies; or, as the record will show, they had made arrangements to resume their former or better positions upon concluding their Government service with those whom they favored with fat contracts.

You will find that the big manufacturers, the big financiers, the big producers of raw materials emerged from the war stronger than ever before. They had accumulated tremendous cash reserves, acquired huge new plants costing hundreds of millions of dollars at 15 to 25 percent of the cost to the Government, paid for by all the people, the greatest profits in all history, and their smaller and weaker competition had been killed off by collusion among the combines by withholding from them during and even after the war, steel, lumber, and other materials.

YOU WILL HAVE A BEAR BY THE TAIL

I also feel that when you investigate the purchase and lease of hotels during the war, and the subsequent disposal of the hotels and the furnishings—as in the Stevens Hotel in Chicago and others elsewhere—you will find that these profitable deals were engineered by and for Republicans at a cost of millions upon millions to the taxpayers, and you will quickly discontinue your investigation. That will also be true in any honest investigation of the real-estate experts who recommended, selected, and acquired sites for many of the factories, camps, and new plants out in the sticks, far removed, as I have frequently criticized on the floor, from more advantageous places. And at what a cost to the Government.

You will surely come to the conclusion that you have a bear by the tail and quickly try to turn loose. You will not dare charge this waste of funds to the Democrats, because you know the evidence would disclose that it has all been done by Republicans under a Secretary and Assistant Secretary of the Navy who were Republicans; of a Secretary of War and Assistant Secretary who were Republicans; and other highly placed corporation officials, all of whom were Republicans.

Mr. Speaker, you promised—you and the big boys of business—you promised the country that as soon as OPA was abolished and price controls were removed the supply of everything would increase and the cost of living and of homes would fall. No such thing has happened, despite the President's appeal.

Instead, we now read that Republic Steel, headed by Tom Girdler, once treasurer of the Republican Party, is increasing the price of steel by an amount about three times the actual increases in labor costs, and other steel makers are doing the same, notwithstanding that every steel company is making the greatest and longest-sustained profits in history.

The coal barons are doing the same thing.

PRICE INCREASES NOT JUSTIFIED BY WAGE INCREASES

The NAM as spokesman for big industries has tried to justify price increases on the grounds that wages have increased.

Yes, wages have increased—some—for a few.

About 12,000,000 out of the 60,000,000 gainfully employed Americans have received wage increases running from 12 to 18 percent.

But that means that only one-fifth of all wage earners have enjoyed such increases; only one out of every five workers got a raise, but they all received the cut in their real earnings brought about by a 59-percent increase in the cost of living.

From the most recent statement of the Securities and Exchange Commission, Mr. Speaker, I have selected this single paragraph in contrast showing how the corporations have increased their working capital:

The net working capital of United States corporations was estimated at $59,000,000,000 as of March 31, 1947, according to the quarterly analysis made public today by the Securities and Exchange Commission. During the 3 months, January through March 1947, working capital increased by $1,700,000,000, a somewhat lower rate than in the preceding quarter, although considerably higher than in the first quarter of 1946. The increase in net working capital reflected in a large increase in total current assets amounting to $2,500,000,000 while total current liabilities rose by $800,000,000.

INFLATION CUTS REAL EARNINGS OF ALL THE LOW INCOME GROUPS

Although the country as a whole enjoys a greater prosperity than ever before, and bankers and industrialists are accumulating still greater wealth, as I have already pointed out, the rank and file of the American people are necessarily forced to restrict themselves in every way in their mode of living, due to the outrageous high costs of living which constantly outrun any increase in income.

The special interest blocs have dug deep into the pockets of the people; the various farm blocs, representing grain producers, cotton planters, wool growers, peanut farmers, tobacco raisers, and the food processors, have all worked side by side with the pressure groups from retailers, wholesalers, manufacturers, and financiers to gain advantage at the expense of the people.

It is the white-collared workers, the annuitants and pensioners, the insurance beneficiaries, who suffer the most and are mulcted and robbed and find it impossible to make ends meet. They have had to sell their Government bonds in which they had invested their savings for protection in years to come, merely to eat and be decently clothed.

I fully appreciate that what I have said will not be pleasing to the ears of a few of my wealthy friends; however, I feel it is my duty to the people to call attention to the way you Republicans have betrayed the masses.

IN 1948 THE PEOPLE WILL CALL ON DEMOCRATS FOR RESCUE FROM REPUBLICAN MISRULE

The excuses you will try to make will avail you little.

The public-opinion polls show already that in 1948 the voters again will call on the Democratic Party for rescue from Republican misrule.

Your accomplishments in the interest of big business began in the Seventy-ninth Congress with the aid of a Republican coalition with a few reactionary Democrats, but in this Congress, due to your misleading and pull-the-wool-over-the-eyes-of-the-people campaign, you succeeded in winning a clear majority in the membership of both Houses. Therefore, the honor of these accomplishments in the interest of the greedy and against the interest of the common people is all yours.

AFTER 7 MONTHS THE PEOPLE HAVE HAD ENOUGH OF THE REPUBLICANS

Mr. Speaker, the Republican leaders seem to feel that they can fool and mislead the American people in 1948 as they did in the 1946 campaign, feeding them with reckless promises, distorted propaganda, half-truths and untruths.

Mr. Speaker, I think the people have had enough.

One of your outstanding leaders made a surprising speech in Boston. He bitterly assailed the New Deal, saying that business had suffered under the New Deal for 14 years, while the Democratic Party had conspired against free enterprise. He should have known better.

The truth is, and don't think that the people have forgotten, that when President Roosevelt was elected there was no enterprise of any kind.

Banks were failing on every corner; stocks were so low the brokers had to jump off the East River docks to find them; factories and plants were closed; homes and offices and apartments were untenanted; 18,000,000 jobless people walked the streets and the highways, hungry, disillusioned, embittered, and hopeless. Farms were on the auction block. Home owners were losing their homes, helpless to save their equities.

The bitter truth is that this Nation was closer to revolution than at any time since 1776.

Then the New Deal came into power. The brave and vibrant voice of Franklin Delano Roosevelt declared: "All we have to fear is fear itself * * * we have a rendezvous with destiny."

There was the famous "hundred days" when new legislation flowed out of Congress to meet the dire emergency. Banks reopened. Factories flung wide their doors and started their motors humming. The working people went back to work. Decent profits began to appear. Farmers and home owners borrowed the money they needed at low interest on favorable terms. Their markets were restored and they began to make a profit again.

Now, 14 years later—14 years of wise and successful New Deal leadership, meeting our problems head-on, never sacrificing our democratic form of government or our free elections—we have 60,000,000 people at work. Business is booming. Measured by every index, our prosperity is so great that our only just cause of anxiety is the danger of a runaway inflation.

And the Republican Party is doing everything possible to encourage inflation in the name of free enterprise.

You like the idea of a big boom that goes bust.

There are always some "smart operators" ready to make a killing out of human misery, unemployment, deflation; and you have made yourselves the errand boys for those cruel profiteers, your friends, the Wall Street manipulators. They are the ones to whom you will deliver.

THE REPUBLICANS HAVE FAILED MISERABLY

Notwithstanding all the insincere promises, the misrepresentations, the scare campaigns, and the ballyhoo of the Republican 1946 campaign, the fact remains that the Republican Party has miserably failed in its responsibilities to the Nation and to the world in the last session of Congress.

They have failed to adopt any constructive plan or policy.

They have failed to adopt positive legislation to meet real needs.

Everything the Republicans have done has been repressive and negative. They have been busy turning the clock back—faster and faster, farther and farther.

Because of that failure they will naturally resort again to a campaign of misrepresentations and falsehoods, just as they did in 1920, when they fell back on a smear campaign against the League of Nations, as I have so often pointed out on this floor.

The Republicans seem able to do nothing but disparage what the Democrats have done.

The Democrats have really accomplished a wonderful record. They can point with real pride to the highest employment in all history, the most widely spread profits, the largest national income, the greatest world power and prestige.

In 14 years we have won two wars—the war against depression, want, hunger, and misery; the war against Nazi and Japanese aggression.

In all that time the Republicans have been able only to criticize.

I am not speaking now of those honest Republicans who served their nation in our fighting war without regard to partisan considerations, just as Democrats did.

I am talking rather about Republican political bankruptcy which can find no campaign material except to criticize the Democratic leaders who have successfully piloted our ship of state through the most dangerous times of history.

REPUBLICANS SEEK TO HIDE THEIR OWN COMPLICITY WITH EVIL POWERS

They can only play upon the unworthy fears of our new responsibilities.

It is a foregone conclusion that the Republicans will again rely upon the false issue of communism in the forthcoming campaign. They will again attempt to becloud the minds of the American people with villification of every progressive and independent. Their aim is to hide their own complicity with world cartels, with special privilege, and with reaction.

Not even their own pet spokesmen will support their position.

As quoted in the press, Lady Nancy Astor, Virginia heiress and British peer, the darling of the reactionary Republican newspapers, recently said about United Nations:

> The real difference between the UN and the League of Nations is that America is in. If America had been in the League of Nations we wouldn't have had the last war.

She was only repeating what I have said so often.

By their refusal to enter the League of Nations, merely to gain political advantage, to win an election, the Republicans are actually responsible for the terrible Second World War; and now they are frankly flirting with the idea of repudiating the United Nations for the same selfish and short-sighted reasons.

THE PEOPLE HAVE NEITHER FAITH NOR HOPE IN THE REPUBLICAN PARTY

The hope of America, Mr. Speaker, is in the Democratic Party; the hope of the whole world is in the Democratic Party. That is the only political party in the United States which has shown a mature acceptance of the responsibilities of our power within the framework of our Constitution and our traditions.

The people can have neither faith nor hope in the Republican Party. There lies nothing.

It is true that now, when farmers are receiving the highest prices in history and are making lots of money, the once bankrupt bankers have their vaults crammed with profits, and no one needs to look very hard for a job, they seem ungrateful to the Democratic Party.

THESE POLITICAL INVESTIGATIONS DO YOU NO GOOD

But they can read the handwriting on the wall, and I believe—and the opinion polls show—that after only 7 months of a Republican majority in Congress the farmers are ready to join with labor in bringing the Democratic Party back to full power.

In conclusion, Mr. Speaker, let me warn you that the thousands and thousands of dollars of the taxpayers' money you are spending in purely political "investigations" are not doing you any good at all.

You should have learned from the flop of the Pearl Harbor investigation; but you did not.

The smear investigation of the Hughes airplane contracts and of the Roosevelt family is so obviously and so rankly political, so nauseatingly a part of the conspiracy between the high Republican leadership and special business monopoly, that already it has had a bad reaction in the public press and in the public mind.

Most of even the conservative newspapers have openly charged that the whole investigation is part of the Republican strategy for the 1948 campaign of "running against President Roosevelt."

Repeatedly I have urged and demanded that all contracts be investigated. You should not confine your investigation to the minnow contractors; turn your attention also to the sharks who have, up to this time, received 95 percent of the contracts and the profits and zero percent of the investigations.

The country is demanding, as I demand, that in all this investigating you are doing you pay equal attention to all the giant manufacturers and their planted stooges in Government who saw that they got special consideration and advance notice of the fattest contracts, whereby the Government—and that means the people—were defrauded of millions, if not billions, of dollars.

When are you going to investigate them?

A Splendid Tribute

EXTENSION OF REMARKS

OF

HON. W. HOWES MEADE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. MEADE of Kentucky. Mr. Speaker, under leave accorded I desire to place in the CONGRESSIONAL RECORD the splendid tribute paid to the United States of America by the Star and Herald, of Panama City, Panama, on July 4, 1947.

The Star and Herald is the outstanding daily newspaper published in Central America, and enjoys a wide and commanding influence. For almost a century it has performed notable service in promoting friendly relations between the United States and the Government of Panama, and has been an unfailing and effective advocate of the principles

of pan-Americanism. Particularly has all this been true since the publication has been—in the more recent years, and now—in the hands of Messrs. Thomas G. Duque, chief owner and publisher; A. V. McGeachy, editor; and Gerald Z. Typaldos, general manager.

The story of the Star and Herald is a most interesting one. It was founded in 1849, about the time when the trans-Isthmian railroad was begun, and it has ever since continued. During all the years it has been published in English and Spanish, companion editions; and, during the French period of canal construction, it was trilingual in character, a French section being added. The best interests of the Panama Canal have always been cherished by those in charge of the paper. Unceasingly, and effectively, the Star and Herald has fought against the infiltrations of communism into Latin America, and deserves the highest commendation therefor.

I may suggest, Mr. Speaker, that I have had some first-hand knowledge of the Star and Herald and Isthmian institutions, generally, for during World War II, in our naval organization I was stationed at Balboa, C. Z., as communications officer during the months of July and August 1944 and during the months of May, June, and July 1945. I was then transferred to the naval air base at Coco Solo, on the Atlantic side, as staff communications officer of the Fifteenth Naval District, advance base, and thus served until the latter part of December 1945.

The indicated editorial follows:

1776—JULY FOURTH—1947

Today, as the news filters into many of the far corners of the earth as well as to the metropolitan areas, from millions of lips a murmured "God Bless America" will rise as an expression of gratitude to the Almighty for having encouraged the growth of such a mighty and at the same time humane and God-fearing nation as the United States of America.

Even as it was in the days when totalitarian Nazi fascism was making its evil might felt throughout the world and threatening the freedom of men everywhere, similarly today—the one hundred and seventy-first anniversary of independence of the Nation which Washington and his stalwarts founded in 1776—finds Uncle Sam on his feet ready to defend those same freedoms from the threats of totalitarian communism.

This anniversary of independence finds the United States and the nations of the democratic Occident virtually at a definite parting of the ways with Russia whose communism has made it impossible for the world to return to the ways of peace though the guns ceased firing on the major battlefields of Europe almost 2 years ago.

After straining every point to appease Russia and convince her that the democratic Occident is not her enemy the United States and the other representatives of occidental civilization seem now determined to travel the road to peace alone—without Russia—the chief impediment in the attainment of the desired goal.

Thus democracy led by Uncle Sam, serves notice that she will now strive to make sure that the democratic way of life shall not be tampered with by the totalitarians who seek to place all humanity in a strait-jacket and destroy the individual's sense of his God-given right to free self-expression.

The one hundred and seventy-first anniversary of independence of the United States finds the democracies of the world in a state of expectation as Uncle Sam stands pledged to stretch his hands across the oceans to lend aid to the stricken democracies of Europe and Asia to restore their economic equilibrium, and so be able to live free of the chaos and human misery in which totalitarian communism seeks the basis for world-wide domination.

Having lived and prospered in the democratic way of life since the definitive establishment of the Nation, the United States offers generous aid to the war-disrupted nations of the Old World and the Orient. It is a gigantic task which Uncle Sam is ready to assume, but it is quite in keeping with the Old World and the Orient to also enjoy life in democracy. It is a gigantic task which Uncle Sam is ready to assume, but it is quite in keeping with the gigantic proportions of that young and industrious Nation which, only 171 years old, rides easily in the forefront of the world's leaders in moral and material greatness.

This great power of the great democracy of the Western Hemisphere, created with the toil and sweat of freemen who preferred freedom in foreign lands to slavery in the homeland, will be used to help the old nations recover their economic independence destroyed by totalitarian aggression.

Freedom has been the password in the lands which make up the great United States of America today, and freedom from totalitarian regimentation and enslavement is the legend on the banner which democratic America offers the prostrate people of Europe—the stock from which its people sprung.

The Communist's propaganda that Uncle Sam is out to further imperialistic aims is a vicious misrepresentation of the facts. This is evident to any who is not too lazy to think things out for himself. It satisfies only those who came into the world with an ingrained inferiority complex which distorts their view of life and prevents them from recognizing the truth.

Though the United States undisputably stands in the forefront of the world's great and mighty, and though it might have used its power to subject many of the free nations of the New World, on this one hundred and seventy first anniversary of its inauguration as a free Nation, it can hold its head high and look any people in the eye, convinced that there are no skeletons in its closet which could shame them. No nation in the Western Hemisphere groans under chains of Yankee domination; all are free people, subject only to such chains as they impose on themselves.

Imbeciles, unable to recognize their true interests, the eternal malcontents, the propagators of falsehoods, the willing instruments of envious incompetents who would see the United States discredited and eliminated in order that there might be no bars to their depredations against the free institutions of the people of the Americas and the world, these have been preaching what they have been pleased to call "Yankee imperialism," even as they lauded Russian communism which seeks only to rob them of the democratic heritage which their forefathers left them and to which they owe their present freedom to think, to talk, and to act.

But time in its inexorable march has taken care to prove that those who so maligned the United States and its intentions were conscious or unconscious instruments of bastard interests which sought to destroy and divide in order to reap an easy harvest among the fools who believed their untruths.

Today the United States of America stands as a firm bulwark against the depredations of the totalitarians; today our great North American neighbor stands ready to defend our democratic way of life, against the attempts of Russian communism to impose its unproved experiment on the people of the world. Today Uncle Sam moves to help remove from the face of the earth the conditions of misery and hunger which is the soil in which communism thrives, and offers to help the afflicted nations to restore their economic independence on which their political independence inevitably rests. This is what the youngest of the world's powers offers the rest of the world today. And it is not demanding that its recipients mortgage their souls in exchange for this help.

Today we join the world in congratulating the great democracy of North America, and wish it success as it acts to make the world safe for continued freedom in democracy.

Ararat Shrine Temple Visits the Nation's Capital

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. REEVES. Mr. Speaker, recently a delegation of 500 Shriners and their wives, representing Ararat Shrine Temple, of Kansas City, Mo., visited Washington en route to their Imperial Council Meeting at Atlantic City. The 6,000 members of Ararat Temple have ample cause to be proud of the splendid body of men who comprised this colorful caravan.

Arriving in two special trains they quickly formed a parade of uniformed units, led by the brilliantly costumed shrine patrol, which acted as the color guard. In succession there followed the illustrious potentate of Ararat Temple, the Honorable Chet A. Keyes, with the members of his divan; a drum and bugle corps; the temple chanters; a band; and their justly famous mounted guard. The guard, consisting of 40 uniformed nobles mounted on magnificent and well-matched horses, added a spectacular note to the line of march.

From the Union Station the parade proceeded to the Capitol Plaza, where, in a ceremony on the east steps of the Capitol, the Ararat marchers were welcomed by Senators DONNELL and KEM, of Missouri, and by Members of the House of Representatives from Missouri.

Following this brief ceremony the entire parade moved out through the Capitol Grounds and down historic Pennsylvania Avenue, past the great Peace Monument, through the busy throngs who stopped to watch, to salute the flag, to grin at the antics of the tandem-driven Missouri mule, and to listen to the stirring music of the drum corps and band. Make no mistake about it—Washington knew that Ararat Temple had landed in town and had the situation well in hand. At the Washington Hotel, a mile and a quarter from the Capitol, the parade disbanded, gathered for luncheon and then followed their own sightseeing programs through the rest of the day.

Mr. Speaker, this great and peculiarly American organization—the Shrine—

typifies all that is best in manhood and American citizenship. Its zest for fun and good fellowship is only one of its rich traditions.

It maintains and contributes to many worthy charities. The best known and finest of these is the group of 15 hospitals for crippled children which Shriners maintain and operate all over the United States. All Shriners contribute financially to the support of these hospitals, and many have left their estates to provide funds to continue their work. In these splendid institutions there is no restriction because of race, or creed, or color; they are open to any crippled child, and offer only the finest in medical care and attention.

To all Shriners we pay special tribute for their patriotic and constructive citizenship as loyal Americans. And to Ararat Temple of Kansas City we express congratulations and appreciation for the stirring and impressive appearance which its caravan made in Washington.

Displaced Persons

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. DORN. Mr. Speaker, I am very much disturbed over the proposal to bring into this country 400,000 displaced persons from Europe, and the people of the country on the whole are also disturbed. While in Germany, during the last war, I became very familiar with the displaced persons and the reasons for their being displaced. I had a great deal of sympathy for them but on the whole I found them to be undesirable material for citizenship in America. The American people today are worried over the increasing unemployment and about the housing shortage. Bringing additional people to this country who will have to be housed and given employment is, I believe, unwise at this time. If some plan could be worked out whereby these displaced persons could be given an opportunity to clear the forest and establish their own civilization in Africa, South America, Australia, or even Alaska, I would be inclined to support such a proposal. This is not too much to ask of a people, as our forefathers came to this continent and out of the wilderness built the greatest democracy the world has ever known.

To further prove my point about the possibility of the displaced persons becoming undesirable citizens, I include in my remarks a copy of a letter I received from a young lady who came to this country from Germany in 1937, after her husband had been murdered some years before by the Gestapo:

JULY 25, 1947.

The Honorable Representative DORN,
Democrat, South Carolina,
Washington, D. C.

DEAR SIR: Sorry I don't know your full name to address you properly, but I had to write you because I feel that the people in the United States should take more active interest in the Government and let their Congressmen know more about their feelings and thinking.

Some days ago I heard on the radio that President Truman suggested very strongly to permit several thousand European displaced persons to enter the United States. I was then very much disturbed but was sure that our Congress would take immediate counteraction. My disturbance was, however, very much aroused when the article Action To Permit Entrance of DP's Disturbs Dorn appeared on July 24, 1947, in the News and Courier of Charleston, S. C.

I agree fully with you and I do hope that there will be enough sensible people in our country to support your disapproval of such terrible action.

I am German by birth and came in April 1937 to the United States. I obtained citizenship in February 1941. Since my arrival in the States, I have been aware of a lack of interest in Government affairs by the general public and that a few nonpatriotic persons have been taking advantage of this situation. I have tried, and sometimes with success, to stir up more interest by giving informative speeches comparing Europe with America. I refrained from any criticizing activity all during wartime, but if an important action pertaining to each and every citizen, as the entrance of thousands of DP's is put over the people as a matter of fact, then it is time again to criticize.

I love America and I am interested that my country is not harmed by any sentimental action which would later prove as harmful to the general public. I have lived since 1941 in Charleston, S. C., and I have watched the efforts of our Congressmen to bring prosperity to this State. I have also seen the success of such efforts and it would be a shame if all the hard-working people would be burdened with the support of thousands of DP's.

As a German, I was naturally interested to know what is to become of the homeless people, and I have spoken about the subject of the DP's to a great number of returned servicemen and also to employees on overseas duty. The undivided opinion, based on experience, was always the same as yours. My friends and relatives in Germany, with whom I very frequently correspond, wrote me that the headquarters of the black market are in the DP's camp and that the occupation forces do very little about it because of the pitiful front which the DP's put on.

My first husband, a prominent physician in Berlin, was murdered by the Gestapo in 1933. I worked after his death until I left Germany with the German underground and I believe that I am able to judge the proposed action. I know that after the First World War, Germany, and especially Berlin, was the rendezvous for crooks and gangsters leaving surrendered zones, keeping up the dirty work which made them leave their homes and the government was forced to close their eyes because a certain interested group demonstrated against punishment, saying that these people had already suffered. I believe that a lot of Hitlerism was created right then.

I know that the American people will react also in an antagonistic manner when confronted with the fact; but why play with fire; have we not learned enough on the German case?

I certainly am thankful that the people of South Carolina have elected Representatives who are not afraid to fight the President if needed. More power to you and thanks for the interest.

Very sincerely yours,

FRIDA A. PAUL.

NORTH CHARLESTON, S. C.

Adequate Investigation of Activities of Arab Office and Its Fronts Will Prove Its Cooperation With Native Fascists, Violation of the Alien Registration Act, and Complicity of British

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1947

Mr. SABATH. Mr. Speaker, we had thought that Hitler-like pogroms against the Jews were confined to Germany, but today's news from Palestine, and even dispatches from Liverpool, England, show that it is possible for these pogroms to continue today in Palestine under British dominion. Nowhere else in the civilized world, outside the domains of the late Adolf Hitler, has a government countenanced the organized breaking of merchant's windows by mobs or the shooting down of innocent civilians in cold blood by ill-disciplined soldiers.

The most unbelievable thing is that the Arab states, with the British Government as their protector and money lender, are maintaining one of the most expensive lobbies ever set up to try to prove to the United States and to other countries of the United Nations that this inhuman and unbelievable conduct is really moved by love for all people.

To put across this indefensible propaganda for an unjust cause a whole network of expensive propagandists and international lobbyists has been set up in America, and is at this very moment making expenditures, to count only those which are visible on the surface, at the rate of at least fifty or sixty thousand dollars a month, plus goodness knows how much more in hidden expenditures, possibly coming under the head of entertainment, but perhaps more justly described as bribery. All this, they would have us believe, to keep a few hundred thousand homeless Jews out of Palestine. But actually there are other issues involved as well—more secret and more sinister.

ARAB OFFICE SPREADS HITLERIAN PROPAGANDA

Several months ago I inserted in the CONGRESSIONAL RECORD a memorandum by the Non-Sectarian Anti-Nazi League showing how the Arab Office at Washington—in conjunction with some self-styled unofficial agencies such as the Institute of Arab-American Affairs and the so-called League for Peace with Justice in Palestine—was working hand in hand with some of the most despicable, un-American, anti-democratic, and hate-mongering organizations to accomplish their purposes.

One effect of that exposé was to make the Arabs recall the two top men from their Washington office—and I understand that they have since sent one of these very same men knocking on the doors of our sister republics in Latin America.

In addition, agents of the Federal Bureau of Investigation have made, and I

understand are continuing to make, a careful check of the files of the Arab Office.

The Arab Office does not enjoy a diplomatic status. Its position is that of a propaganda office for foreign powers—as, indeed, the Acting Secretary of State has pointed out in an official letter—and it is officially registered as such with the Department of Justice.

The attitude of the Arab Office toward our democracy can be well judged by their acceptance of an invitation to send a speaker to a meeting arranged by a man who, in his letter of invitation, observed that "democracy is nothing but jewocracy" and referred to his fellow citizens of the Jewish religion by a dirty epithet which I will forbear repeating here. In their literature, this office has dared to characterize the Mufti—Hitler's ace Moslem quisling—as "a single-minded and courageous patriot."

ARAB OFFICE SUPPORTS YEMEN UN APPLICATION

Today, the Arab Office is engaged in an effort to get American support for the admission of the Arab kingdom called Yemen into the United Nations. Yemen is the only country in the world where the institution of human slavery is still legally practiced without apology—and in 1925 a special investigation by the League of Nations Temporary Slavery Commission brought to the formal attention of the civilized world the fact that Yemen continues even in the twentieth century to allow Arab slave traders to cross the Red Sea and capture and enslave hapless inhabitants of the Negro countries along the North African Coast. This slave trade has not been stopped and no effective steps have been taken to stop it. This is the kind of country that the Arab Office is trying to get us to do business with.

The Non-Sectarian Anti-Nazi League has continued its study of this problem, and at my request has submitted evidence which shows that these propaganda groups, even after being publicly exposed in their evil connections, have continued their campaign among us, spending more money than ever, and acting more brazenly in defiance of our American principles of freedom and democracy. I propose now to summarize some of the more startling of these findings.

ARAB PROPAGANDA IN SOUTH AMERICA

For example, to show how these people try to cover our whole hemisphere with their propaganda, I direct your attention to a publication issued in Spanish by an Arab Office representative located in Argentina. This document is typical of the kind of lies that these highly paid agitators are trying to scatter about the world. This is a reprint of part of the vicious and infamous forgery called the Protocols of the Elders of Zion—a fictional document fabricated out of thin air which Goebbels got translated into all the tongues of the earth and made into a piece of damnable, lying propaganda, which undoubtedly was worth more to the Nazis than a whole division of SS men might have been.

A look at the men who are associated with the Arab Office in our country shows that their choice of political bedfellows has not improved.

BUNDIST FELLOW-TRAVELER NOW DIRECTOR OF ARAB OFFICE FRONT ORGANIZATION

In New York there is an organization called the Institute of Arab-American Affairs. This Institute is incorporated as an educational organization which is supposed to promote better understanding between countries. Actually, it is nothing more or less than the successor of the old Arab National League, which on the eve of Pearl Harbor was being operated as part and parcel of the political machine headed by the German-American Bund of the Nazi Party.

If you go through the files of the Weckruf und Beobachter, the Nazi official newspaper in this country, you will find month after month the reports of the activities of the Arab National League, and of the speeches of its president, Dr. Shatara, who later traveled about the country and addressed different units associated with the Bund.

No wonder that the doctor decided to commit suicide not long after Pearl Harbor.

Yet the very same man whose name appeared as executive director on the letterhead of this old affiliate of the Nazi Bund, H. I. Katibah, is now in charge of the propaganda of the Institute of Arab-American Affairs.

So arrogant are these people that they do not even bother to conceal the connection and when a representative of the Non-Sectarian Anti-Nazi League visited the Institute a few days ago he was casually handed a publication of this old Bund-affiliated organization, which had simply been rubber-stamped with the new name, in blue ink, on top of the name of the old organization which blew up along with Pearl Harbor.

ARAB FRONT SPENDS THOUSANDS ON PROPAGANDA

The League for Peace with Justice in Palestine is dominated by a man named Benjamin H. Freedman, of New York, who incorporated it along with this same Katibah and an Englishman named Passman, who is reputed to have been a former officer of the British Government in the Near East.

This outfit—which conceals itself behind a post-office-box address—has spent thousands upon thousands of dollars on full-page advertisements in all the principal newspapers of the country. You have no doubt seen them in the New York and Washington dailies. One would think, from the size of their advertisements, that these people were trying to sell $10,000,000 worth of furniture, rather than to justify a selfish government in taking away the rights of their fellow men in Palestine.

The last advertisement which this league published has set a line for the discussion of Palestine throughout the whole underworld of un-American propagandists. It has been reprinted in full, in installments, in the magazine called The Defender, which is published by Gerald Winrod in Wichita. This man Winrod was three times indicted for sedition by the Federal Government, during the war, and his service to the totalitarian cause was such as to lead the official Nazi news organs to sing his praise in the strongest language.

ARAB OFFICE FRONTS ARE PART OF SUBVERSIVE NATION-WIDE NETWORK

Out on the west coast there is a weekly publication called The Broom, whose editor was also indicted for sedition during the war. Small wonder that The Broom has also repeated the advertisements of the League for Peace with Justice in Palestine and has advised its readers that they can secure additional reprints free of charge by writing to the League's mysterious post-office-box address in New York City.

A Mrs. Lyrl van Hyning in Chicago edits a publication called Women's Voice. This is the publication which disgraced itself during the war by trying to get American mothers to prevent their boys from volunteering to fight against the Hitler hangmen. Mrs. van Hyning is distributing reprints of advertisements of the League for Peace with Justice in Palestine, along with many other clearly seditious and hate-inspiring publications.

The west coast representative of these groups is a man named Salem Bader who boasted that he arranged the Nation-wide radio broadcasts by the chiefs of the Arab delegations at the San Francisco Conference on World Organization. In this he admits working in cooperation with an officer of the Institute of Arab-American Affairs. Bader is on such close terms with Freedman's League for Peace with Justice in Palestine that he exchanges congratulatory letters, and then has them printed in The Broom afterwards. "To be called a Fascist or an anti-Semite should be a laughable matter to thinking people," says Bader in a letter to the Freedman group.

ARE THESE AGITATORS VIOLATING FOREIGN AGENTS REGISTRATION ACT?

I urge and demand that the Justice Department push its investigation further, to determine if a number of these gentleman have not violated the Foreign Agents Registration Act. The evidence which the Non-Sectarian Anti-Nazi League has accumulated indicates that the so-called Institute of Arab-American Affairs in New York is nothing but a front for the Arab Office, and possibly for the Arab High Committee for Palestine besides. Yet it poses as an educational institution and is not even registered with the Foreign Agents Registration Section of the Justice Department.

There is incontrovertible evidence that the Arab Office has also been the medium of exchange by which funds have been brought into this country to run the Arab Student League, which is a part of the Institute, whose head is an officer of the Institute, and one of whose major purposes is the extension of this propaganda structure into our universities.

ARAB OFFICE DIRECTOR CONVICTS HIMSELF OF COMPLICITY

Similar inquiries should be raised about the League for Peace with Justice in Palestine, which is so free with its expenditures in the purchase of advertising space. On at least one occasion Mr. Cecil Hourani, who is now the director of the official Arab Office in Washington,

so far forgot himself as to write a letter of introduction for a man who represented himself as a pro-Fascist Italian sailor seeking funds for anti-Semitic propaganda amongst other Italian sailors, introducing this man to Mr. Freedman in New York as a possible "angel" for his evil activities. Fortunately, the evil activities were only hypothetical, for the Italian sailor was really a research worker on the staff of the Non-Sectarian Anti-Nazi League, who was anxious to find out just how close the relations between these groups might be.

Mr. Hourani's letter of introduction to this man was a confession of guilt, and a confession that he was anxious if he could to violate the clear spirit and purpose of the Foreign Agents Registration Act.

Finally, the Justice Department should and must investigate the status of a number of Arab agents who are in this country ostensibly for diplomatic purposes or whose passports say they came here as students, but who are now actually functioning as lecturers or propaganda agents of the Arab Office, or of the Institute, or of the Arab Higher Committee, or the Committee for Unity of the Nile Valley, or one of the dozen other front committees which these interests maintain to influence legislators here in Washington or diplomats at Lake Success.

So numerous are these high-powered lobbyists that they have offices located in at least eight different New York hotels—all of the most expensive class—and I dare say that an investigation of these activities would be a lot more sensational, in its revelations of the devices used to influence the actions of our statesmen and diplomats, than most of our other recent investigations of expensive lobbies.

FORCES OF EVIL WORK HAND IN HAND

To sum up, while these propagandists who oppose rights for Jews in Palestine are getting out their expensive propaganda and their beautifully printed brochures, they are actually maintaining the closest contacts and are working hand in hand with the most evil elements in our country. I have illustrated this fact with a few instances, and the memoranda which the Non-Secretarian Anti-Nazi League have supplied me contain a multitude of other examples.

Perhaps it is the crowning touch to observe that Salem Bader, the west coast representative of these men, is the very same Salem Bader who Homer Loomis, Jr., recently sentenced to the chain gang for several years in Georgia, boasted was the west coast contact man for The Columbians—the Nazi-like, uniform-wearing order which the State of Georgia has recently outlawed.

Thus do the forces of evil work hand in hand all the way from Cairo to California, and all the way from the headquarters of Hitler's No. 1 Arabian quisling, the so-called Grand Mufti, to the headquarters of the Arab Office in Washington and of the Institute in New York.

Summary of Agricultural Coordination Act of 1947

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement regarding the coordination of agricultural agencies and the national soil-fertility program, prepared by me.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. STEWART. Mr. President, recently I joined with the junior Senator from Kansas [Mr. REED] in the introduction of S. 1621, the so-called Agricultural Coordination Act of 1947, because I believe it is fundamental to the welfare of agriculture and the Nation that we expand, accelerate, and improve the work of restoring and conserving the fertility of our soils. We cannot hope to accomplish this task successfully unless the activities and programs of the various agencies engaged in conservation work are properly coordinated.

During this session of Congress the friends of agriculture have had a desperate, hard battle to secure the necessary appropriations to continue conservation programs and other vital agricultural projects. If we are to save these programs and to strengthen and improve them, we must take the necessary steps to eliminate duplication, overlapping, and conflicts, and reduce the total over-all cost of carrying out these programs. I agree with the statement made by Edward A. O'Neal, president of the American Farm Bureau Federation, in his recent testimony before the Senate Appropriations Subcommittee on Agriculture in support of agricultural appropriations, from which I quote the following:

"Farmers are daily becoming increasingly concerned over duplication, overlapping, and conflicts in the administration of agricultural conservation programs.

"The Soil Conservation Service maintains Washington, regional, State, and local or area offices at a cost of $44,723,000 in the fiscal year ending June 30, 1947. A total of $36,673,000 would be provided by House action for this agency in 1948. This program consists almost entirely of research and educational information and technical advice and assistance to farmers in soil conservation districts.

"In addition, the Production and Marketing Administration is carrying out a conservation program through State and county committees. This agency also maintains offices at Federal, State, and county levels to carry its programs to farmers at an estimated cost of $28,910,956 in 1947.

"The Agricultural Extension Service was established for the purpose of furnishing informational, educational, demonstrational, and technical assistance in all agricultural problems and programs. The Extension Service also has Washington, State, and county offices, at an estimated Federal cost of $23,526,150 (not including State and local funds).

"We are convinced that a large saving in administrative operating costs could be made and the programs better administered, with greater results and more farmers aided, if these programs were properly integrated and coordinated."

I want to emphasize that it is not the purpose of this bill or its authors to cripple or handicap in any way the conservation work now carried on by the Soil Conservation Service, the State and county committees of the Production and Marketing Administration (formerly Agricultural Adjustment Agency), and the Agricultural Extension Service. They are all doing a very outstanding work. The basic purpose of the bill is to coordinate their programs and activities so as to accomplish greater results, to extend the benefits and services to a larger number of farmers, and to reduce the total over-all cost of carrying out this work.

An erroneous impression has been created in some areas that it is the intention of this bill either to eliminate the Soil Conservation Service, headed by Dr. Hugh Bennett, or to greatly cripple the activities of this organization and the work of the local soil conservation districts that have been organized in the States. There is absolutely no justification for such conclusions. This is not the purpose of the bill or its authors. I know Dr. Bennett and regard him highly. He will not be hurt by the passage of this bill.

On the contrary, we want to see a great expansion of agricultural conservation. I think Dr. Bennett and the Soil Conservation Service has rendered a great service and we want to continue to make available to farmers and to local soil conservation districts this needed technical information and service, but it is important to coordinate this service with the services being rendered by the Extension Service and the State and county Production and Marketing Administration committees.

In this connection I would like to point out that the bill specifically provides for the retention of the Soil Conservation Service, both at the State level and within the respective States; but instead of operating independently and maintaining a duplicate administrative organization at Washigton, State, and local levels with the administrative set-up of the Extension Service, the bill would consolidate the Soil Conservation Service with the Agricultural Extension Service at Federal, State, and local levels. The identity of the Soil Conservation Service at the Federal and State levels would be maintained, and the appropriations that are provided would be earmarked for these purposes. Furthermore, in each State the Agricultural Extension Service would be required to maintain the Soil Conservation Service as a division of the Extension Service in each State. The bill further requires that in this transfer of the Soil Conservation Service to the Federal and State Extension Service, all needed personnel now employed by the Soil Conservation Service at the Federal, State, and local levels would also be transferred and retained as part of the Soil Conservation Service and would function hereafter under the supervision and directions of the Director of Extension of the Federal Extension Service in Washington and the State Director of the Agricultural Extension Service in each State.

The bill would also retain the State and county committees of the Production and Marketing Administration (formerly AAA committees) to administer the program of soil and water conservation practices within the various States. This program, which is carried out pursuant to the Soil Conservation and Domestic Allotment Act of 1936, would be decentralized so each State would develop its program subject to approval of the Secretary of Agriculture, and each county committee could adapt this program to local needs and conditions. The State and county committees would be enlarged

and would be more representative in character, and the conservation practices for which payments are approved would be limited to those approved by a competent representative State technical committee. The agency administering the State Soil Conservation District Act would be represented on the State committee and also on the State technical committee. The local soil conservation district would also have a representative on the county committee where such districts have been organized. The education and informational work in connection with this program would be carried on through the Extension Service in cooperation with these committees. The work these committees would thus be confined to carrying out is the planning, enforcement, regulatory, and action phases of programs under the Soil Conservation and District Allotment Act and the Agricultural Adjustment Act of 1938.

It is confusing and annoying to farmers to have representatives of so many agricultural agencies contacting them and furnishing advice and assistance on conservation and farm planning. The Agricultural Coordination Act seeks to coordinate all of the educational and technical assistance to farmers and to local soil conservation districts through the Agricultural Extension Service, with which the Soil Conservation Service would be consolidated. This consolidated and expanded agency would cooperate with the State and county Production and Marketing Administration committees and with the State authority established to administer the State Soil Conservation Districts Act and local soil-conservation districts organized under that act. Therefore, farmers could go to one agency to get the necessary information and technical assistance to enable them to plan their individual conservation programs and farm plans most effectively and efficiently.

The Agricultural Extension Service was established pursuant to the Smith-Lever Act of May 8, 1914, which authorized the United States Department of Agriculture to cooperate with the States in agricultural extension work, and provided a system of Federal grants-in-aid to the States for these purposes. Following the passage of this act, a so-called memorandum of understanding was entered into with the State colleges of agriculture and universities which set forth what the State colleges agreed to do and the Department of Agriculture would do, and what they would mutually agree to do. In this agreement the United States Department of Agriculture agreed "to conduct in cooperation with ——— College all demonstration and other forms of extension work in agriculture and home economics which the Department is authorized by Congress to conduct in the State of ———."

This program proved to be one of the greatest educational endeavors in the world's history. It has played a major part in helping to make American farmers the most efficient in the world. As tangible evidence of this efficiency, American farmers, during the war, with nearly 5,000,000 less people on farms, broke all prewar records for food production, and are continuing to produce at record levels.

The Agricultural Extension Service was established to provide educational and technical assistance to farmers on all of their agricultural problems, including conservation practices and also information and technical assistance in the field of economic problems, marketing, and home and community activities.

In recent years, however, there has been a tendency to set up action agencies, with administrative organizations in Washington, in the States and counties, reaching to the individual farmer, to give information and technical assistance on specific projects. For example, when the Soil Conservation Service was established in 1935, it set up Washington, regional, State, and area offices to provide educational, demonstrational, and technical assistance to farmers in dealing with soil erosion. Gradually, the program was broadened to cover the field of soil and water conservation, even related economic and social factors. As a result, there developed parallel administrative set-ups and duplication of services, and assisting farmers to lay out contour lines and terracing, planning for strip cropping, advice as to drainage, planning of rotation systems, field arrangements, and other farm planning.

In my own State of Tennessee the Extension Service has done a magnificent job in helping farmers to develop and carry out an effective conservation program. By employing an assistant county agent in each county—an especially trained man in conservation work—who gives all of his time to this work, the Extension Service assisted farmers in accomplishing marvelous results at very low cost through a coordinated program. The educational and technical assistance in this program is coordinated through the Extension Service, which works closely with the State and county Production and Marketing Administration committees and all other interested agencies in the State.

A striking example of the results that have been obtained through this work carried on by the Extension Service in Tennessee was related by Mr. Thomas J. Hitch, president of the Tennessee Farm Bureau Federation, before the Senate Committee on Agriculture on May 27, 1947, when he testified in support of the national soil fertility bill, S. 1251, which I am sponsoring together with several of my colleagues in the Senate. I quote the following excerpt from Mr. Hitch's statement:

"I can think of no better way to explain the test demonstration program in Tennessee than to take a community from the start of this work 12 years ago and relate how it has worked there.

"There are many communities in Tennessee that I can think of that are good examples of what the test demonstration program has meant to the Tennessee Valley as well as some that have not been so good. I think of one that I visited just a few days ago. This community was one in the very southern part of middle Tennessee composed of 60 small farmers. I was told the day I was there by several farmers that up to 1935 they raised nothing but cotton and peas, and that they had reached the place they couldn't even raise very much cotton because their land had got so poor. On some of the farms we visited I was told that they had been bought 15 years ago for as little as $10 an acre, and none of the farms in this community would have brought more than $25 an acre, yet today they would ask you $150 an acre for any that could be bought.

"In 1935 there was no alfalfa. Today there is some on every farm. In 1935 there was no permanent pasture, but today every one of them has some. At the beginning of this program there was not a man selling whole milk. Last year they sold $50,000 worth of whole milk.

"Practically all of their farms are terraced. The houses are all painted and many are being repaired. There was as nice a country church as you would see anywhere and a very interesting story was told about it. I was told by these people living in this community that before they had started this community improvement program that they couldn't get along with each other, they were afraid to trust each other.

"As the story of the work of three test demonstrators in the community began to spread others wanted to know what would make their soils respond so they could grow something besides cotton and cow peas. They more and more began to attend these meetings and take part in the discussions, telling their problems and soil needs, until today it is not only a community where they are interested in the welfare of each other, but they are prosperous and doing for themselves many of the things that they have wanted to do for a long time.

"Because they were shown what to do and got some help through their assistant agent, they have changed from a community that would have been depending on some kind of Government relief first to a community of progressive people thinking not only of their own homes but of national problems as they feel they have a part in them because most of them now are paying income tax."

The enactment of the national soil-fertility bill is also vitally important to the success of an adequate Nation-wide program of agricultural conservation in the United States. The agricultural coordination bill clarifies the lines of administrative responsibility and gets rid of duplication and conflicts in the administration as to make possible a well-coordinated program of agricultural soil and water conservation. The national soil-fertility bill fits right into this picture by providing for the development of improved concentrated fertilizers and a Nation-wide educational program through a system of test-demonstration farms and technical assistance to farmers through the Extension Service to show farmers how to use these improved concentrated fertilizers in carrying out conservation practices and efficient land utilization on their own farms.

I sincerely hope that when Congress reconvenes next January, it will enact into law these two important measures.

A Republican Platform

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. LEMKE. Mr. Speaker, for 16 years the Republican Party has been kept out of the White House; this largely because they had no program. Their candidates were "me too" candidates. They aped Franklin Delano Roosevelt. They claimed they could give our country away faster than he could. They, too, were one-worlders.

Eighty percent of the American people demand as the Republican standard bearer a real American—one who believes in the fundamental principles of the American form of government as proclaimed in the Declaration of Independence and established by our Constitution. The rank and file of the Republicans demand as their candidate a man who will follow in the footsteps of Washington, Jefferson, Madison, Monroe, and Lincoln. They demand a liberal as well as an American.

They demand a candidate who will make our foreign policy a crystal-clear issue; a candidate who will not denude America of its natural resources and make it a fourth- or fifth-rate nation; a man with sufficient vision to know that the only way to maintain peace, and the good will of all nations, is by being honest and just to all; a candidate who will avoid meddling in other nations' affairs, and foreign entanglements; a candidate who will not form a combination

with favorite nations. No nation can long exist if the rest of the world hates it.

Attempted paternalism always has and always will bring conflict and hatred. The holier-than-thou attitude has never succeeded among men nor among nations. The one-worlders have now been driven into the cyclone cellar. The fallacy of their ideals has now been exposed to ridicule by the actions of Russia, Holland, and other aggressor nations. Only a Wallace and a Stassen still insist that we can learn to understand Russia. Intelligent people, and especially Lithuania, Estonia, Latvia, Poland, Finland, and other nations, who have been or are being liquidated, understand and have long ago understood Russia.

Again, 80 percent of our people know that our present foreign policy is really an undeclared World War III. They know that an armament race always has and always will end in war. They know that an attempt to boss other nations will end in conflict. They know that to arm the Greeks and the Turks with one hand against communistic Russia, and to ship some 400 times more steel to Russia than before the war, with the other hand, is not a foreign policy but foreign stupidity.

If to oppose this policy is isolationism, then we are isolationists. Only an ignoramus would say that we ever were, or ever will be, an isolated nation. All thinking people know that America has always been the foremost nation in mingling and dealing with other nations. Our people in the past have and will continue to chase the almighty dollar on every ocean, on every sea, and in every land. This we did not do in the past with the feeling that we were a superior race or holier than other nations, but because we felt that the intermingling of civilization was essential to the welfare of our Nation.

Eighty percent of our people demand that we again become the America that we knew—the America of fearless, independent thought—the America that will not continue to give silent approval to liquidation of other nations' people, and the theft of their territory and property.

The performance of our Nation for the past 14 years has not been an honorable one. The weak-kneed, knock-kneed, me-too candidates that the Republicans attempted to elect in the past three elections were doomed to defeat before they got started. This because they had no clear-cut issues. They were me-too followers of the one worlders and the Rhodes scholars.

Little wonder that the electors did not change animals—the elephant for the donkey—in the middle of the international stream. They wanted the elephant to carry the banner of Washington, Jefferson, and Lincoln—not the banner of Wallace, Browder, Stassen, and company. The electors refused to disgrace the elephant by electing a me-too candidate.

Here is a Republican and American platform:

First. We demand that all branches of our Government again observe the Constitution—the Constitution that protects minorities and the unfortunate from persecution at the hands of a reckless bureaucracy. We pledge to the Nation that we will unpack and rehabilitate the Federal courts so that they will again function not as a tool of the executive but as an independent coordinate branch of our Government.

Second. We favor the nomination and the election of the President and Vice President by popular vote in a primary and general election. The term of office for these officials to be 6 years with no election or reelection to either office thereafter. This will reduce political manipulation and corruption—self-perpetuation in office—and the unwarranted assumption of Executive power.

Third. Prohibition of any political, economical, financial, or military commitments, treaties, agreements, undertakings, entanglements, or alliances with any foreign nation or combination of nations, except by authorization and approval of Congress. This puts the responsibility of our dealings with foreign nations on Congress where it belongs. It will prevent foreign nations, in the future, from exploiting our people and involving us in their quarrels. It will prevent giving away our domestic market to foreigners through executive trade agreements.

Fourth. Any elected or appointed officials, or any citizen, who enters, or attempts to enter, into any agreement, commitment, or treaty with any foreign representative or nation, in violation of No. 3 of this platform, or any person who spreads political propaganda as a paid or financed agent of a foreign government, shall be guilty of un-American and subversive activities, and upon conviction, shall be deprived of citizenship, and otherwise punished. This will stop the false foreign propaganda by paid agents. We are capable of running our own Government—we need no foreign assistance.

Fifth. We believe in cooperation and collaboration with all nations for a just and permanent peace. We demand that the four freedoms, with the right of self-determination, be incorporated into the United Nations Charter and that no nation, large or small, be allowed a veto. We demand that our representatives in the United Nations organization do not give tacit or silent approval of the liquidation of other nations' people and the theft of their territory and property.

Sixth. We demand that the sovereignty of the States be reestablished, and that government by bureaucracy be abolished. Government by bureaucracy is inconsistent with the American way of life. For 150 years we got along fairly well without government by bureaucracy and we can do so in the future. We demand that all legislative powers that have been granted and now reside in the many Government bureaus, commissions, and agencies be returned to Congress. This in order to reestablish government by law and not by men.

Seventh. We demand that the over 2,000,000 Federal employees be gradually reduced to less than 700,000, and that there be a reorganization, consolidation, and elimination of all unnecessary, multiple Federal bureaus and agencies.

Eighth. We demand that deficit spending stop and that the budget be balanced. But in order to accomplish this, the governors and other State and local officials must be given to understand that deficit begging must also stop. The constant begging for Federal aid is the cause of bureaucracy, and will in the end mean dictatorship.

Ninth. We favor a living wage for common labor on the American standard, and the ultimate abolishment of slums. There must be an economic floor below which no human being is permitted to fall.

Tenth. We favor cost of production for the farmer for that part of his products domestically consumed. Congress must preserve and protect the domestic market for agriculture, industry, commerce, and labor. It must prohibit importation of agricultural or industrial products until a price equal to the cost of production on such domestic products has been reached. Congress must protect American producers from the manipulation of foreign exchange, and from all raw materials and manufactured goods, produced abroad by labor living below the American standard. Congress must further restrict undesirable immigration.

Eleventh. We believe in employment assurance rather than in unemployment insurance. To insure idleness is economic waste. Congress must make it possible for all able-bodied men and women to labor and provide themselves with food, fuel, clothing, and shelter. It must make it possible for them to raise and educate a family not by unemployment insurance but by employment assurance. It must make it possible for the youth of this Nation to become self-supporting.

Twelfth. There must be an intelligent old-age compensation—security from want. Any person who has worked from the ages of 20 to 60 has produced enough wealth to last for life. If such a person finds himself in financial distress, and without the means of a comfortable livelihood, then it is because society appropriated the wealth he created. Therefore, it is society's duty to protect such a person from want.

Thirteenth. Congress must also resurrect, protect, and promote individual enterprise. It must give to small business a square deal—not a New Deal with stacked cards, points, and loaded dice.

Fourteenth. We must never forget that veterans come first. It is the duty of the Government to see that the veterans are put into the same position as they would have been in if they had never been inducted into the armed forces. They are entitled to the same consideration and should be compensated in paid-up life insurance to the same extent and equivalent in compensation as those who stayed at home received.

Fifteenth. Congress must rewrite and simplify our whole tax system. It must protect private property and enterprise from confiscation by taxation. It must protect small business and individual enterprise by eliminating the economical domination of corporate monopoly. Property rights are but human rights when rightly distributed.

Sixteenth. Congress must restore representative government. It must repeal all laws giving unwarranted power to the Chief Executive. It must again establish itself as the sole legislative branch of our National Government.

"The Greatest Recommendation Possible for a System of Government Is To Make It Work"—Senator George W. Malone

EXTENSION OF REMARKS
OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 22, 1947

Mr. GEARHART. Mr. Speaker, because of its timely importance and the excellence of its composition, I hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD the text of an unusually able and well considered address recently delivered by the Honorable GEORGE W. MALONE, United States Senator from the State of Nevada, at a meeting of the Western Institute of the United States Chamber of Commerce Secretaries and Trade Association Managers which convened in Reno, Nev., a few days ago.

The address to which I have just referred, Mr. Speaker, is the following:

Gentlemen of the Western Institute of the United States Chamber of Commerce Secretaries and Trade Association Managers, the development of the western slope and the entire United States is dependent directly upon the national and international policies finally adopted by this Nation.

The international policy is in a state of flux and depends entirely upon whether the administration decides to warn Russia that a continued policy on her part of infiltration into the European countries will be considered an unfriendly act to this country, and war if she persists—continue to pour money into these countries with uncertain results—or let Europe go her way. The administration has made no decision—and Congress cannot.

Our national policy is hinged squarely upon the diametrically opposed policies of holding our wage standard of living through a flexible import fee representing the differential of cost of production between this country and the most competitive foreign area on each specific product due to the difference in the wage standard of living; and the reciprocal free trade policy being pushed in Geneva at this time without regard to such standards, and which can only result in a lower-wage living standard through imports produced by the Asiatic and European low-cost labor.

FOREIGN POLICY

The adoption of a sane foreign policy by this Nation is retarded by a nervous fear of war, deliberately fostered by an administration using communism as the whipping boy, and building up an international WPA in the same manner as the national WPA was kept alive throughout the thirties through fear of unemployment.

The administration is playing both sides of the foreign policy street just as they always have. At one Senate Appropriations Committee meeting the State Department asked for funds to stop Russian communism in Greece—and at the same meeting requested additional money to strengthen communism by shipments to Russia on the old lend-lease agreement. These shipments include oil refinery equipment and power machinery, which our own people are unable to secure.

The tragic part of the whole thing is that the State Department even now apparently sees nothing wrong with furnishing Russia with oil refining and cracking equipment necessary for production of high-octane gasoline for war planes; and heavy power equipment with which she may manufacture the atom bomb and other war-waging equipment. Yet at the same moment we are spending $400,000,000 in Greece to train and equip an army to stop Russia at the border.

Fortunately, they ran head-on into Senator STYLES BRIDGES, chairman of the Appropriations Committee—one of the most forthright and fearless men that it has been my good fortune to meet—and he literally blasted them out of the committee room.

The administration which is now using Russian communism as a scare-head to secure billions of dollars for expenditure in Europe is the same administration which in 1933 recognized Russia as a blood brother before the President even had his chair warm, without safeguards of any kind whatsoever.

This is also the same administration that continued shipments of oil and scrap iron to Japan up to the time of the Pearl Harbor catastrophe and then sent the boys out in the Pacific to catch the same scrap iron with their bare hands coming back out of Japanese guns.

They have apparently learned nothing from experience.

BIPARTISAN FOREIGN POLICY

We do not have a bipartisan foreign policy in the United States Senate—what we do have is a few Republicans who vote with the Democrats for the disconnected and dangerous emergency decisions of the administration, apparently following the pattern of 1937 to Pearl Harbor.

THE TRUMAN POLICY

The Truman policy, a so-called extension to Europe of the 124-year-old Monroe policy, never had a chance to be effective, primarily because President Truman did not say about the European area—as President Monroe said about South America in 1823—that any invasion of that area by a foreign power with an attempt to interfere with its government or trade relations would be considered an overt act which meant war.

President Truman simply asked for $400,000,000 from the Congress of the United States to stop Russian communism at the Greek border. He did not serve notice upon Russia that a violation of that doctrine would be considered an overt act and indicate that war would result, so it was not a policy at all—it was simply a means of securing an appropriation from the Congress of the United States on the theory of delaying an emergency, but without any definite plan for final solution. The reports are now that they are reemploying most of the old UNRRA crowd that proved such a flop, and that they will be back for more money next spring.

MAJOR POWERS

Two major powers emerged from World War II—not three—not five and not fifty-five. They are Russia and the United States.

When the United Nations recognized five major nations—that number included three countries, England, France, and China, that can only survive through our support—and then only by a drastic reorganization of their way of life.

It is my humble opinion that there are only two courses: First, we can serve definite notice upon Russia that to continue her methods of infiltration in Europe will be considered an overt act endangering the peace and safety of the United States and amounting to a declaration of war, as President Monroe did in relation to South America 124 years ago, or second, we can pull out of Europe; money alone will not solve their difficulty. England took our money and financed socialism. France, Italy, and most other European nations will take our money and finance either socialism or communism, and then crawl under the Russian trade tent.

England has already signed a trade treaty with Russia, and we have approved a peace pact with Italy providing that approximately 200,000 Italians will work 7 years without wages processing raw materials, mostly for Russia and her satellite nations, and we call it reparations. Presumably Uncle Sam will feed the 200,000 men while they work for Russia, since we have already expended more than three-quarters of a billion dollars in Italy since the end of the war.

SIX METHODS OF SIPHONING THE WEALTH OUT OF THE UNITED STATES

There are more ways of siphoning the wealth out of the United States and into the hands of foreign nations than are generally suspected. They are very adept and very active in Washington in creating a psychology by threats of communism, or socialism, or some other "ism" unless we support them, and that promiscuous spending abroad is necessary for our own protection.

These methods are not too well known or understood—and all appear innocuous on the surface—the six most active and effective are:

1. The direct appropriation by Congress "loaned" to a foreign nation; the Greek-Turkey loan is an example.

2. Financing through the Export-Import Bank, as in the case of the loan to Mexico.

3. Slave treaties like the Italian Reparations Agreement just ratified by the United States Senate, in which it is provided that raw materials from Russia and other nations are processed by the Italian workers without wages of any kind as reparation payments, leaving someone (meaning Uncle Sam) to feed them while they are doing slave work for the Russians during a period of 7 years.

4. The World Bank is set up to sell securities to the investors of this Nation, whose money is then loaned to the foreign nations upon the judgment of the Bank officials, with every prospect that thousands of small investors in this country will lose, as in the case of English investors through the Bank of England when the same thing was tried there many years ago.

5. The proposal by the State Department to divide the markets of this country with the foreign nations through the so-called reciprocal-trade program. More harm may be done to the economy and standard of living of this country by our State Department in Geneva during the next 3 months than Congress could repair in several years.

6. There is now in the course of organization a world trade organization operated by the 55 members of the United Nations, each with one vote.

It is indicated that this organization, when perfected, will allocate the markets and production of the world making the universe thoroughly and totally one world. It is difficult to see how we can win, since we have the only market in the world where you can sell anything and get the money, unless we have previously loaned that nation the money to pay for it.

The cumulative result of these plans can only be greatly reduced wages and standards of living in this country.

If these methods are allowed to continue indefinitely we can easily spend ourselves into a form of government that we would not knowingly vote for—some kind of a collective or authoritarian form that it could

require generations of time to throw off, if in fact we could ever overcome it.

FLEXIBLE IMPORT FEE

The objective is permanent peace while increasing the standard of living throughout the world.

It must be recognized, however, that the 55 different standards of living represented by the 55 members of the United Nations present a definite problem in trade relations.

A partial answer to the problem is the determination of the differential of the cost of production on specific products between this nation and wherever our chief competition is located. That differential should be represented in this country by an import fee. Imports are not prevented by such an import fee, but the fees bring the goods in on the basis of an equal wage-standard of living level; as the standard of living wages are raised in other countries the import fees here are reduced in proportion—and when the wage standard of living of the competitive country approximates our own—then free trade is the immediate and automatic result.

The workers in any American industry are entitled to protection from low cost foreign labor equal to the differential of the cost of producing such products in this country and the cost of production in the foreign area where or chief competition is located.

Such a flexible import fee is included in the 1930 flexible tariff act in which it is provided that the President of the United States may at any time request the Tariff Commission to compute the differential of cost of production of any specific product between this country and such competitive nation—that amount can then be made the tariff or import fee by Executive order.

I see no difference between importing the product of low-cost labor and importing the low-cost labor itself.

Let us get our feet back on the ground and face this thing—we have no friends in the world today except through the protection, or of the money that we can offer them. Every nation but ours is being intensely realistic and practical—other nations are working on every angle to improve their position.

INVESTMENTS

Congress does not know how to lend money; it only knows how to give it away. Congress does not have the money to give away, except as it is extracted from the people's production through taxes. Congress does not have the moral right to give away these work dollars soaked in sweat.

Private business not only knows how to lend and invest money, but it also knows how to collect it and to make investments pay dividends.

American private capital in Asia, Europe, and South America, backed by American brains, ingenuity, and know-how, could gradually raise the standard of living of the world, through investments in new enterprises and in rehabilitating the obsolete plants without Government assistance of any kind.

To encourage the investment and operation of such capital it is necessary to rebuild the national and international integrity of the nations of the world. If such integrity could be established no Federal appropriations would be necessary or required, except perhaps for an emergency food supply while they were making their first crop.

BUSINESSMEN AND INDUSTRY

Few remember that when America woke up after the Civil War it was England's businessmen and private investors who furnished the first substantial financing for our transcontinental railroads and heavy industries in this country because they knew that this Nation had integrity and that the country would grow and prosper. They did not give or loan America the money—they took stock and shares in the railroads and industries and were repaid through increased production.

The situation is now reversed. Our businessmen have the experience, the credit, and the know-how. The opportunities for profitable investment throughout the world are almost unlimited, providing the integrity of the nation, members of the United Nations organization can be established and maintained. American industrialists would take stock and shares in the new enterprises and operate them—taking their profit and amortization payments out of the increased production. No appropriation by the Congress of the United States would be necessary.

LOANS

We must adopt a policy for loaning money to foreign nations, and only loaning for the purpose of increasing their productivity. Take a lien or mortgage on the increased productivity to run until the loan is repaid as we do in the case of our own citizens; loan the money for the purchase of industrial and farm machinery, equipment for the production of fertilizer and income-producing materials.

Handle it just like the people treat a good neighbor who has had a bad fire; loan him a team of horses and a plow, and maybe sign a small note at the bank to buy his seed corn and a few necessary things until he makes his first crop.

Put the affected nations in the way of supporting themselves, otherwise there is no end to their needs; they will be just as helpless and hungry next year as they are now.

Why is there no talk of new methods of production, new machinery, and new and more diversified industrial production in the European, Asiatic, and South American countries; why is all of the talk confined to a reshuffling of old interests and old wealth; why are there no plans for creating new wealth—and why is there no effort being made to encourage these countries to raise their own wage standard of living through their own energy and resources?

EMERGENCY FOOD

It is time that we adopted a definite policy in the method of emergency feeding the people of any country, of appropriating the necessary funds and of notifying such nations that the required credit has been established through the proper agency in this country. When shipments of the supplies are made in the approved manner, then the invoice should be sent direct to the Treasury of the United States for payment—quit sending them the cash to be expended anywhere in the world and in any way they may decide—also distribute the food ourselves so it will reach the hungry people and so they will know where it came from.

Treat them like a groceryman treats a contractor whose payments for his work are delayed. The contractor gets credit; he does not get the money from the groceryman so he can go across the street and buy from his competitor.

LABOR

The Taft-Hartley labor legislation is wrong in principle. In the first place, the Government should not be in the business of regulating either the employer or the employees beyond seeing that they obey the laws of the land as everybody else is required to do. The principle of the Wagner Act was wrong in the first place, and the mere fact that we passed another act of a slightly different character on the same principle does not make it right. Under the principle of Federal board control the swing of the pendulum could continue to vibrate with the political philosophy and fortunes of the party in power for generations. It should be decided upon basic principles and then left alone.

The Taft-Hartley labor act together with the Wagner Act should be repealed. There should be no Government labor boards with authority to direct either the employer or the employees to do anything.

In their place there should be enacted a simple statement of national policy which in effect would lay down the principle that:

Employees and employers alike shall have the right to self-organization, to form, to join, or assist organizations to bargain collectively through representatives of their own choosing, and to engage in concerted activities for the purpose of collective bargaining or other mutual aid and protection.

The Federal Government could very well continue the principle of the conciliation board—having no authority whatsoever, except to cooperate with both parties to a dispute—and then only when invited to sit in—and perhaps to hold hearings and make public their findings. Any necessary authority should be vested in the States. They alone have the power to keep the peace.

The maintenance of free collective bargaining and the integrity of contracts between employers and employees is the only solution for that age-old problem between the man who hires the work done and the man who works with his hands. And that should be the scope of the Government statutes.

I am very fond of Senator TAFT—I can discuss the matter with anyone who believes he could be mistaken—but I will not listen to anyone who questions his integrity.

CAPITAL INVESTMENT AND TAXABLE PROPERTY

Due to increased mechanization and improved methods of operation in industry, the average business investment in equipment per man has increased from approximately six or seven thousand dollars to from eight to twelve thousand dollars.

Continually increased capital expenditure in business is always necessary due to new inventions, obsolescence, and growing demand.

The tax structure and excessive regulation have combined to discourage venture investment capital. A reorganized tax structure and a severe scrutiny of regulatory bodies set up by the Government over the last decade is necessary to regain the required confidence and incentive for such investments which are absolutely mandatory if we are to keep pace with production, employment, and the creation of taxable property.

OUR LOANING TECHNIQUE

We are about to be treated to a repetition of the loaning and spending technique which prevailed during the decade just preceding World War II.

Two advisory committees have just been appointed to determine the maximum amount of money we can loan to Europe and pile on the two hundred seventy billion national debt, together with the amount of goods we can ship them, without wrecking our internal economy—Mr. J. A. Krug, Secretary of the Interior, and W. Averill Harriman, Secretary of Commerce, head the two committees.

It is generally expected that they will read the menu backward and come up with the amount they need which estimates have ranged from five to eight billions of dollars per year for 5 years, making the national debt add up to around three hundred billions.

It will be remembered that when the national debt reached fifty or sixty billions in the late thirties, people began to get jittery—when the versatile Henry Wallace, then Vice President of the United States, came up with the statement that he had estimated the resources and that the country could support a debt of approximately eighty-nine billions—the people settled down until the debt was dangerously close to that amount—and then the world economist, Leon Henderson, after a profound study of national resources, announced that

the Nation was good for a $133,000,000,000 debt—and then we were in the war and costs were forgotten.

And now on September 1st Mr. Krug and Mr. Harriman, following a further study of the natural resources, are expected to start the cycle all over again—if Congress follows their recommendation and appropriates the funds for foreign loans they recommend—that is.

Some advocates of such a loan say it is necessary to balance our foreign shipments and keep up the dollar balance abroad, since we are now shipping nearly $20,000,000,000 worth of goods abroad annually and buying less than one-half of that amount; while some say that the loaned difference is necessary to keep our own industrial plants and farms in full production.

Others have the temerity to say that we should turn more of our production for home consumption and balance the Nation's production capacity against domestic consumption plus the natural exports while there is yet time.

SO-CALLED MARSHALL PLAN

All of this is being done in furtherance of the so-called Marshall plan—which again like the Truman announcement is not a plan at all—but was a simple announcement that no more money will be forthcoming for Europe until the countries of that area decide together how much they need and what they will do with it. Congress had already decided that the Greek-Turkey loan would be the last of the so-called loans for the current session.

There are 29 European countries containing 250,000 square miles less than the area of the United States and three times as many people. The could band together in a United States of Europe for their mutual protection and pool the lines of royal inherited kingdoms and dictatorships into one strong nation of 29 separate states—and reestablish their national integrity through a democratic free election form of government—then a substantial loan to build industrial plants to produce for their own needs would begin to make sense, however, in that event American private capital would do the job.

It is estimated that England and British citizens have approximately $12,000,000,000 in investments in the United States—and that other European nations have approximately eight billions in the same category.

It seems not too much to expect for them to take the twenty billions of dollars, including other outside invested assets amounting to approximately $13,000,000,000, into account when considering financing the new United States of Europe.

THE EMPIRE-MINDED NATIONS

The Dutch, English, and French have always been empire-minded and have always held certain foreign nations under their control for the trade benefits, as witness the trouble that the Dutch are currently having with the Indonesians.

Any reason that may have heretofore existed for the domination of one nation by another has long since passed out of the picture. Such domination is purely and simply a trade racket—resulting in slave labor and trade wars, and must not continue indefinitely if the principle of freemen is to have any meaning. This Nation cannot afford to become a party to a combination of such plans through continuing to lend money for its support.

If the national and international integrity of the nation members of the United Nations can be reestablished the opportunity for American technicians, businessmen and for private capital, investments will be practically unlimited throughout the world for generations to come.

With the European nations joined together in a United States of Europe the manipulation of their currency systems can be abolished including the silver-bloc operations, then the relative value of the world's currencies can be evaluated and some stabilization maintained. It is time to quit juggling their money systems and work to increase production. Devaluing money to lower wages and to escape debt is one of the oldest tricks in the trade, but it also destroys the integrity of nations.

The greatest recommendation possible for a system of government is to make it work.

WAR AND PEACE

Most of our people naturally assume that all of the world is at peace most of the time, since this country has only had its periodic wars and in between peace has prevailed in this Nation.

Even a casual historic review will reveal that there never has been a period over the 5,000 years of recorded history when all of the world was at peace. Even now there are 21 small wars going on in the world, six are in the Far East ranging all the way from civil war, as between the so-called Chinese Communists and the Chiang Kai-Chek forces in China; to the East Indies in the Southwest Pacific where the Dutch are again engaged in subduing the Indonesians.

Those little people weighing about 75 pounds wringing wet, but presumably owning a country which is very rich in many of the things the world needs, which include the spices, rubber, and many strategic and critical minerals and materials needed badly by this country, have a national pride and want to run their own country.

The Netherlands, or the Dutch nation, is known to be an empire-minded nation and have always exploited other nations just as England and France have done over several generations, and are still trying to maintain their status in their satellite nations.

The wages of the Indonesians amount to about two to five dollars per month in our money and the goods produced under the Dutch supervision are sold to us at high prices. It is a trade interest that the empire-minded nations have in other countries, and mostly to exploit the low cost labor in these areas for their own profit.

We have 5 other small wars, or armed rebellions going on in Europe, 6 such disturbances in the Near East and India, and 4 in Latin America, making a total of 21 small wars now in progress, any one of which might light the fuse that would lead to another world conflict, as was done in Austria in World War I and at Pearl Harbor in World War II. Systems of government based upon trade wars or the domination of other nations for any reason will not work and must finally fall of their own weight.

MAKE OUR OWN SYSTEM OF GOVERNMENT WORK

The greatest recommendation possible for a system of government is to make it work. It should be clear to us now that money from our own taxpayers' pockets scattered at random throughout the world is not the answer.

I can say to you, like Churchill said to his people when someone suggested that England relinquish her domination over some of her Asiatic peoples, that he did not become the King's first minister to liquidate the British Empire. I can say to you in a like vein that I did not become a Member of the United States Senate to dissipate the wealth of the United States.

We must make our system of free enterprise continue to work—keep our armed forces strong—continue our laboratory experiments in methods of warfare—keep our secrets to ourselves so that no nation ever knows just how strong we are—establish and maintain the best intelligence system in the world and know what other nations are doing—stand ready at all times to cooperate with all other nations in maintaining permanent peace in the world—and in raising the standard of living for our less fortunate neighbors.

Above all things, we should begin to turn the spotlight on ourselves and determine the effect of our actions on America's future, and if we are really looking for communism and reds, it seems that the hunting is pretty good in some parts of this country and we could practice here while getting ready to take on the Russian Communists. It is time that we sold America back to Americans and set the pattern for the world.

Controlling Floods in the Missouri Basin

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed as an extension of my remarks a radio discussion between John B. Quinn, executive director of the Missouri Valley Development Association, and Russell Smith, legislative secretary of the National Farmers Union, on the question of controlling our floods and developing our water resources in the Missouri Basin. This discussion was broadcast over the Columbia Journal of the Columbia Broadcasting System with Mr. Don Lerch as moderator.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Mr. LERCH. Next we're going to discuss a question which affects the lives of millions of people—in 10 States of the Nation—known as the Missouri Valley region—including all of Nebraska and parts of Montana, Wyoming, North and South Dakota, Kansas, Missouri, Colorado, Minnesota, and Iowa. So far this year, people in this region have lost hundreds of millions of dollars from floods. Ask a farmer whose fields have been under water—ask a businessman who's been pumping water out of his store—ask a housewife who's been cleaning up silt and mud—they'll tell you flood control is needed—most everyone agrees to that. The question is how. Two gentlemen with me today are going to discuss the two major proposals. Mr. Russell Smith, legislative secretary of the National Farmers Union believes the region should be governed by a central authority similar to the Tennessee Valley Authority. Mr. John B. Quinn, executive director of the Missouri Valley Development Association, believes the plan approved by Congress in 1944 should be continued. Now, Mr. Quinn, since you favor the plan now in operation, will you outline it for us—that is, what is it and what has been accomplished so far?

Mr. QUINN. Well, Mr. Lerch and friends of the Columbia Country Journal, just three short years ago Congress and our late President Roosevelt, realizing the absolute necessity of preserving the bread basket of the Nation and the world for future generations approved the most gigantic, diversified program to develop all phases of natural resources in the Missouri Valley Basin that this Nation or the world has ever undertaken.

Congress made the very important decision to use in this vital undertaking the experienced, established agencies of our Federal Government, who employ the best technical

experts of our Nation. Strong political pressure was applied by political idealists to establish a single independent Government agency—such as the TVA—but Congress in its wisdom realized that the Missouri Valley Basin was a multiple-purpose project that covered a huge territory, 13 times larger than the TVA, and that the program required four agencies, each experts in their own line, rather than just one agency whose major qualification was to administer a political and economic philosophy such as in the TVA.

When the development program for the Missouri Valley Basin, called the Pick-Sloan plan is completed, more than 5,000,000 acres of land will be irrigated, 10,000,000,000 kilowatts of electric power will be generated annually, floods will be controlled and commercial navigation from Sioux City to St. Louis will be a reality. The basic design of the plan provides for 105 reservoirs, for flood walls and levee protection, for soil conservation, soil-erosion control, recreational facilities and fish and wild-life conservation.

The Department of Agriculture, the Bureau of Reclamation, the Corps of Engineers of the United States Army and the Federal Power Commission, all long-time established agencies of Federal Government directly under the control of Congress and the President of the United States, have each been given by legislative mandate a definite, distinctive part in the carefully coordinated plan.

In three short years, interrupted first by the war and again last year by a Presidential order to stop all public works, the Pick-Sloan plan is already 22 percent completed, and has just been given an appropriation to be expended in 1948, that amounts to more money than totally spent in the Missouri Valley Basin since the Republic was founded.

Mr. LERCH. Well, Mr. Quinn, you've outlined the program which is now in operation. Now on the other side of the table, Mr. Smith of the Farmers Union is proposing a Missouri Valley Authority. Now Mr. Smith, just how does your plan differ from the program as outlined by Mr. Quinn?

Mr. SMITH. Well, Don, it differs in two principal respects. They are the two that were cited by President Roosevelt at the time he urged the adoption of a Missouri Valley Authority bill, and that was at the time that he approved the present Pick-Sloan plan. First of those is that administratively, it has become obvious to most of us now that these separate agencies in the valley are competing with each other in a very wasteful manner—that we will never be able to achieve an integrated program—we will never be able to achieve a program that is close to the people—that is responsible to them—unless we make it possible for decisions to be made in the area, and for those decisions to cover all phases of the development and use of resources. Now the second principal difference is that in the present Pick-Sloan plan, we feel that the problems are being attacked piecemeal—that nothing is done until an emergency exists, and that it never is the kind of action that attacks the basic difficulties. In other words, the only way you get an integrated plan is through one directing agency, and the only way you actually control floods or get maximum power development or use the rivers to their best advantage for navigation, for recreation, or for irrigation in the western part is through a single plan. The present plan, in our view, is not a plan at all—it's simply a compromise between two conflicting agencies.

Mr. LERCH. Well now, Mr. Quinn, do you believe that your plan overcomes the weaknesses which Mr. Smith feels are inherent in it—in other words that the administration of the Pick-Sloan plan is loose, and leaves room for a great deal of needless argument between the various governmental agencies?

Mr. QUINN. Well, Mr. Lerch, I'm delighted that you asked that question. The coordinating factor for the agencies of Federal Government is what we call the Missouri Valley Interagency Committee, which is composed of five Governors in the Missouri Valley States, and the heads of the departments involved. This committee has been in operation for 2 years and it has settled every major problem that has come before it.

Mr. LERCH. Well now, let me ask this question of Mr. Smith. Which plan do you believe offers the fastest flood relief—that is, your plan or Mr. Quinn's plan? Which will get the job done first?

Mr. SMITH. Well, there's no question of speed involved. The question is whether you control floods or not, period. Because the Army engineers have been controlling floods theoretically there for 100 years, and yet the flood crest this year was the highest in history.

Mr. LERCH. And yet on the other hand, Mr. Quinn, you say that this measure was approved by Congress in 1944.

Mr. QUINN. Well, Mr. Lerch and Mr. Smith, I might point out that speed to control floods is essential and that nature sometimes provides floods that even the best of plans doesn't contemplate. For instance, in the Tennessee Valley when over $800,000,000 has been expended to control floods, the Army engineers have been called upon again to build a flood-control dam, and as far as we're concerned, we have the best competent engineers and the only plan—we need only adequate money. The MVA doesn't exist. It is purely a theory. Isn't that right, Mr. Smith?

Mr. SMITH. It's a bill.

Mr. LERCH. Well, let me ask what is the status of that bill at the present time, Mr. Smith.

Mr. SMITH. It's in the Senate committee—the Interstate Commerce Committee—and it is highly unlikely that there will be any action in this session of Congress on it, because the President has just asked for additional money for the Army engineers to spend—in our view to waste——

Mr. LERCH. Well, now, what is the President's attitude on this question?

Mr. SMITH. The President's attitude is that he is for a Missouri Valley Authority, but he wants immediately the Army engineers to spend two hundred thirty-seven million out of——

Mr. QUINN. We might put it this way. The President evidently is for an MVA only so far as the few votes it will catch, but I would remind you that he keeps signing the appropriations bills for the existing agencies of government.

Mr. LERCH. Well, now, how do the people in the Missouri Valley feel about it, Mr. Smith?

Mr. SMITH. Well, from what Mr. Quinn just said, I would assume they must be for it, if it is a vote-catching device.

Mr. QUINN. I would like to point out that the Pick-Sloan plan is supported by all governors, all legislative bodies, every farm bureau federation, and Mr. Smith, some of your State farm union organizations are for the Pick-Sloan plan. In other words, it is the only congressional authorized plan, which calls for the development program to be accomplished under the American system of government. No States' rights or powers are surrendered.

Mr. SMITH. Well, any action that's taken as a result of an authorization by Congress will be done under the American system of government. As far as the Farmers Union is concerned, there's only one State organization that has ever approved the Pick-Sloan plan.

Mr. LERCH. Well then, gentlemen, from your positions, it's impossible to reach an agreement on this question. However, from what you have said, you are agreed that there should be a program of flood control and development in the Missouri Valley—but you disagree on how it should be carried out. Your disagreement centers on the administration. Whereas, Mr. Smith, you feel that it's essential to have a central authority in order to gain the full benefits of flood control, navigation, power, and irrigation; you, Mr. Quinn, feel that this can be better achieved under the present plan as approved by Congress—whereby authority is decentralized between the various Government agencies.

It Will Be Interesting To Know Why Mr. Hoover, After a Few Days' Visit in Germany, Is So Vitally Concerned and Should Again Advocate a Repetition of the Tragic Errors of the Past Which, Due to British Influence, Permitted German Cartels To Rebuild Her Heavy Industries

---

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. SABATH. Mr. Speaker, a great deal of attention and publicity has been given to the recommendations of our former President, Mr. Herbert Hoover, on Germany. Since it is unfortunately apparent that many high officials in the Government, due to their former affiliations, seem to agree with his proposals and advocacy, I believe it is important that the House should also consider the implications of Mr. Hoover's views on reconstructing Germany.

Mr. Speaker, why is Herbert Hoover so solicitous toward Germany?

In 1919, as American Food Administrator, he wanted to rebuild Germany, not punish her.

In 1931, the Hoover moratorium on reparations' payments enabled the Germans to utilize all their financial resources to increase the speed of rearmament, and to escape their just deserts for the First World War.

In 1936, he called German military rearmament negligible.

In 1947 Hoover has reported to the President, after only 3 weeks in Europe, that the Potsdam agreement to disarm Germany and destroy her war potential is unwise.

Mr. Speaker, Mr. Hoover seems to be unnecessarily concerned by the future of Germany. I think he is just as wrong about rebuilding German strength now as he was in 1928 when he assured the American people that we would have two cars in every garage and a chicken in every pot, or again in 1932 when he prophesied that grass would grow in the streets of every main street in America under our great, late war President, Franklin D. Roosevelt.

GERMANS ALONE TO BLAME FOR WAR'S DEVASTATION

The whole world, except the Americas, is prostrate because of the ravages of German warfare. Europe is in shambles.

Germany and Germany alone is to blame. Naturally, all this devastation and tragedy have been brought about under that fiend incarnate, Adolf Hitler, who was brought to power by the German industrialists and cartelists and Junkers, and who now are bent on reconstructing and rebuilding a strong Germany for another try, apparently with Mr. Hoover's approval.

Notwithstanding all this, Herbert Hoover appears to be willing to excuse Germany just as he excused her after the First World War, and urged that we give assistance to her. More than once before the Second World War began he pointedly ignored their armies, their tanks, their growing war industry, and their savage trade policies.

Mr. Hoover did not show the same solicitude for our own veterans after the First World War, nor for our own hungry and unemployed millions after the 1929 crash.

Why, Mr. Speaker; why?

Hoover says he is anxious to save money for the American taxpayers.

Yet he knows full well that we have just finished a war against German aggression which cost the American taxpayers more than $350,000,000,000, and the lives of 300,000 brave Americans, not to mention the tragedy of 700,000 disabled.

Are we again to save a few millions of dollars now, and spend billions later to destroy the monster he aims to recreate?

Had it not been for the Hoover policies of "be kind to poor Germany" in 1919 and throughout the perilous years that followed, Germany could not have rearmed even with aid of Great Britain, and had the Republican Party not frustrated the will of the American people by keeping the United States out of the League of Nations, the League might have been strong enough to keep Germany and Japan in check. There might have been no World War II. I should think that by now, in the light of history, even Herbert Hoover would know that it is a mistake to allow Germany to grow strong, to create armies and to develop a capacity for again scourging the face of the earth with inhuman and barbarous warfare.

Herbert Hoover already shows equal solicitude for Japan.

LET GERMANY PRODUCE FOR PEACE

Mr. Speaker, I certainly want the Germans to produce as much of their own living as is possible with the resources which they have available.

I want them to mine their coal; their phosphate; their minerals; grow their potatoes; produce their milk and their butter; and learn how to live the democratic way of life--the American way of life; to provide for peace and not for war, and if possible for them, to forswear their Nazi ideology.

But, Mr. Speaker, I would prefer to see the entire German Nation living on our dole than to see one thing done to make it possible for Germany to launch another world war, from which our civilization can never survive.

GERMANY MADE CARTELS TOOLS OF AGGRESSIVE WORLD-WIDE WARFARE

In Germany the German Government deliberately encouraged the forming of international cartels which entwined themselves like the strangulation of a python in the economy of the world so that when Hitler struck, the western democracies were almost helplessly enmeshed in the coils of international cartel agreements.

Many of our own great trusts and monopolies were deep in this international conspiracy to create a world government of the people, by Big Business, and for Big Business, as a vast amount of reliable evidence proves, and as Mr. Hoover should know.

TERRIFIED BY PROSPECT OF STRONG GERMANY

Mr. Speaker, I am terrified by what is happening today in Germany. For all practical purposes, the Potsdam agreement is a dead letter.

Now and then we get a peek behind the iron curtain of Allied occupation. We find that not even the saturation bombing of Germany really destroyed Germany's industry, and the new American Government policy appears to be to restore German industry as rapidly as possible.

It took Germany 20 years, from 1919 to 1939, with only the passive help of her former enemies, to be in position to strike again and destroy the world's peace and prosperity.

Now, with the invaluable help of our own blind patriots, I greatly fear it will be only a few short years before Germany can again set out to conquer the world and destroy civilization.

Three times within my own life the German people have been led by their leaders into a foreign war—the Franco-Prussian War of 1870, the First World War, and the Second World War. Every war has brought death and destruction to other nations; but always Germany has struck outward and kept any great devastation from her own lands, and has emerged more powerful and more dangerous than before.

Just a hundred years ago, in 1848, the forebears of many of the finest and most patriotic families in America fled Germany to escape that always-increasing militarism and aggression and the tyranny of the industrialists and the Junker families. The German leaders have driven out the strongest democratic elements and have led the remaining population farther and farther down the road to international self-destruction.

ALREADY WAR'S HORRORS ARE FORGOTTEN

We have not yet begun to bring back from their foreign graves the bodies of our brave boys, sacrificed to the insane ambitions of world conquest of Hitler and the cartelists who put him in power and supported his mad lust for death and destruction; yet already there are Americans, forgetful of Lidice, of Buchenwald, of Oswiecm, of the Battle of the Bulge, and lured only by dreams of avarice, who want to forget what Germany did and how she betrayed the world, and restore the Germany of cartels, slave labor, and economic warfare.

Yet, Mr. Hoover says that we must ignore the lessons of history. We must discard the economic controls agreed upon at Potsdam. We must repeat the folly of 1919 and the succeeding years when we pampered and petted the spoiled brat of Europe.

Mr. Speaker, there are agencies of our Government which, during the war, gathered together the outstanding economists of this Government, genuine experts in the sick economy of Europe, who had no personal interest in the problems except the restoration and preservation of world peace, and who knew that Germany has always thwarted world peace and cooperation. Their studies and recommendations laid the basis for the Potsdam agreement.

HOOVER 21-DAY EXPERT

Herbert Hoover came back from Europe after only 3 weeks—and I know not how few of those days he actually spent in Germany—posing as an expert.

With no more knowledge than he could glean on that short trip, and as a result of a tour on which he was presumed to be studying the food situation in all of Europe, not the politics or the economics, Mr. Hoover came back and made recommendations which could result only in remaking Germany into the most potent industrial power in Europe in a very short time.

Fortunately, we have expert testimony from other and equally patriotic sources.

We have, for instance, the statements made by James S. Martin, who resigned as chief of the decartelization division of the American military government effective July 1 after having served since December 23, 1945.

Relying, not on the superficial observations of 2 or 3 days, but on the inside, expert knowledge gained in 18 months, Mr. Martin asserted that decartelization is being defeated by American special-interest groups who are trying to maneuver the American Government into a position "of having to oppose communism by sponsoring, in one form or another, monopoly of economic control of Germany."

This is fascism.

CONCERN INCREASES

That there is increasing concern about the new direction of American policy is shown by the widespread discussion of the issues in the American press. Since I began work on these remarks, Mr. Sumner Welles, who as Under Secretary of State helped the great Cordell Hull in the conduct of American foreign policy through our most crucial years, has decried the help-poor-Germany idea so prevalent in the thinking of industry and finance and high Government circles.

I here insert several pungent paragraphs from Mr. Welles' recent discussion of the problem:

> The reactionaries who saw no danger in nazism again demand a powerful and centralized Germany as a buffer against communism. German propagandists, and the sob brothers who are more distressed by the present plight of the Germans than by the tragedies the Germans have inflicted on the rest of the world, once more complain of France's "policy of vengeance."

They have been joined by our occupation authorities, who are apparently unaware that our policies in Germany involve any issues outside of the occupation zones, and by those Members of Congress who would reduce our present expenditures, no matter what the ultimate cost of such a penny-wise, pound-foolish reduction may represent.

If these influences prevail in the determination of our policy, we will sacrifice our basic objective of creating a world order under which we can safely live.

France is the key to European reconstruction. History has shown that France was right in 1919 when she demanded adequate guaranties against a resurgence of German might, and that the English-speaking powers were blind to their own vital interests when they refused to provide her with such guaranties.

If we once more adopt a German policy that endangers French security, we will again lose our chance of helping to bring about European reconstruction and a lasting peace.

As our recent directive stated, Germany must become "stable and productive." The resources of western Germany must certainly become an integral part of Europe's economy. But the only safe way to achieve those objectives is through permanent international reconstruction which meets the needs of all western Europe.

WHAT OF GERMANY'S VICTIMS?

Must we weigh what is our righteous course in European rehabilitation? No. That was determined under the Potsdam agreement. Let us not forget bled-white and war-destroyed France, ravaged and war-destroyed Poland, war-torn and robbed Belgium and the Netherlands, war-overrun and robbed Czechoslovakia, Norway, Yugoslavia, Greece, Luxembourg, Russia, Rumania, Hungary, Austria, Denmark, and Bulgaria, our Allies who suffered with us, whose countries were despoiled. And to the aggressor of those countries—Germany—Mr. Hoover would extend first aid in rehabilitation to again flaunt military might and power. That cannot be.

HOOVER WANTS TO REVERSE POLICY

Mr. Hoover wants to reverse our policies. Instead of reducing Germany to a peaceful, democratic state dedicated to the pursuits of peace, while we give her weaker neighbors an effort to build up their own resources so they can be prosperous without the stifling restrictions of German economic warfare, Mr. Hoover apparently would like to see all the rest of Europe transformed to a great farming area merely to be domineered and under the iron heels of the German cartels.

He seems not in the least disturbed that the heavy industry of Germany is the war industry of Germany. Under Hitler the Germans learned that there is no basic difference between economic warfare and military warfare. They fought both with the same plants, the same cartel agreements, the same savage tariff agreements, the same phony money, the same utter disregard of treaties and promises.

Great God, Mr. Speaker, if Herbert Hoover thinks that rearming Germany is a barrier against Russian communism he is indeed blind.

If we reduce all Europe to abject poverty while we create a German boom, we are inviting communism. We are begging for it.

I know of no better way to cost us the faith and loyalty of the liberated people of Europe than to reward Germany for having started this last war while we punish our friends and allies for resisting.

Let us halt this mad race toward war and race suicide. Let us work and strive for peace. And let us, as a first step, see that Germany stays disarmed.

HOOVER IN 1919

Mr. Speaker, I now shall quote from Mr. Hoover.

On March 21, 1919, in a memorandum entitled "Why We Are Feeding Germany," Herbert Hoover reasoned as follows:

From the point of view of a Governor, I would say it is because famine breeds anarchy, anarchy is infectious, the infection of such a cesspool will jeopardize France and Great Britain which will yet spread to the United States. * * *

From the point of view of the American treasurer, I would say that this is a good bargain because it saves the United States enormous expenditures in Europe for the support of idle men and allows these men to return to productivity in the United States.

In his recent reports to the President on the German economy, Mr. Hoover made approximately the same observations. He said, for instance:

A still further saving to British and American taxpayers is possible if maximum expedition could be made of exports of German manufacture.

The restoration of trade is inevitable and every day's delay in removing these barriers is simply adding to the burden of our taxpayer. * * *

To persist in the present policies will create, sooner or later, a cesspool of unemployment or pauper labor in the center of Europe which is bound to infect her neighbors.

The present reports by Mr. Hoover are not only the rehashing of an old Hoover formula for the preservation of Germany's industrial might, but they are shot through with economic fallacies.

At the outset, I must admit, he succeeded in presenting to the American people a very simple, and hence easily convincing, statement of the exceedingly complicated German problem. But on such questions as exports and imports, Mr. Hoover depends upon 1936 figures on the grounds that in that year, German industry was not "distorted by her annexations and her most intensive armament activity." Surely, Mr. Hoover knows about the devious devices employed by Germany as early as 1936 to bolster her export trade. Surely, Mr. Hoover is familiar with the fact that German rearmament began as early as the establishment of the Weimar Republic.

HOOVER ECONOMIC FALLACIES

Germany's cartelization program began almost immediately after the cessation of World War I hostilities. The German steel cartels, I. G. Farben, the electrical cartel, the coal cartel—all these developed prior to 1936 and reached proportions hitherto unknown in the modern industrial world, so that by 1936 it was clear that no European power was in a position to withstand Germany's economic pressure. The regular trade practices of Europe were upset by Germany's machinations and dumping. No nation could oppose Germany's ruthless trade practices. In the field of heavy machinery and machine-tool industries, and aluminum, Europe became subservient to and dependent upon Germany for supplies. The total result was that Europe's trade and commerce were not in a position to prosper. But it was not only Europe, Mr. Speaker, which was affected by the German octopus; American industry, too, had to shell out, and the consequences were most disastrous when we remember that on the eve of World War II our war preparations were hamstrung by the German cartel network.

The best way to illustrate what Germany did in the 1930's is to show where her money was spent. German statistics available show that between the years 1933–36 Germany spent most of her income on the development of her capital goods or heavy industry. In 3 years, after Hitler seized power, Germany's new investments in heavy industry were increased almost 500 percent, while it increased only 200 percent in the consumer-goods industry. These figures are extremely important and should be kept in mind in discussing Germany's economy, which Mr. Hoover has not done. These figures clearly show that the German economy before the war—yes, and as early as 1936—was deliberately planned to give Germany the mastery over Europe—war or no war. In 1936—and this is for Mr. Hoover's information—with less than 10 percent of the area and 20 percent of the population of Europe, Germany accounted for one-half, and, in some cases, much more than one-half, of the total European production of heavy industries that furnished her war potential—namely, coal, pig iron, steel, nitrogen compound, machine tools, and machinery. In other categories, such as cement, sulfuric acid, electrical energy, cotton and wool yarn, and paper, more than one-third of the European production was concentrated in Germany. Such, in brief, was the picture of Europe's economics in 1936.

GERMANY MUST BE DISARMED

We and our Allies paid bitterly during World War II, for not having learned the nature of such economic controls, and for not having imposed them upon defeated Germany. It is apparent that Mr. Hoover is trying to repeat the very same blunders again when he states:

It is urgent that we at once revise the reparations and industrial demilitarization policies imposed * * * by various Allied agreements.

Mr. Hoover forgets that the whole aggregate of economic and industrial power, left intact after World War I, enabled the Germans to experiment and plan for the future production of weapons of war. When Mr. Hoover now calls for the elimination of the disarmament program, he not only approves the present failure of military disarmament—in

the British zone, for instance, only 7 percent of the tank, gun, and other military factors have been eliminated thus far—but, in fact, is in favor of a policy to leave the tremendous German war potential intact.

Mr. Hoover also ignores the entire problem of atomic research, which would imply that Germany should be permitted to engage in such work.

The implementation of Mr. Hoover's recommendations would make Germany the greatest industrial power in Europe. When Mr. Hoover advocates the scrapping of the reparations program to which our country is committed, he is striking an irreparable blow at the economic rehabilitation of Germany's victims.

Germany's industrial war potential is relatively intact. Germany still possesses over 4,000,000 tons of undamaged machine tools. It is also significant that before the war, Germany, with a population only one-half as large as that of the United States and with an economy not as highly mechanized as ours, had a machine-tool industry and machine-building capacity larger than that of our own country. But Mr. Hoover chose to bypass such significant facts.

CANNOT RELY ON TREACHEROUS GERMANY

Does a strong industrialized Germany mean that she will be automatically on the side of the United States? I think it is pure illusion, Mr. Speaker, to hope that a strong Germany would be our natural ally in any future emergency. Recent history affirms this; yet, undeniably, it is the deep-seated dream of Herbert Hoover and John Foster Dulles and other Wall Street representatives that Germany can be the bulwark against bolshevism. They fail, however, to take into account that the Germans are clever people and make their alliances on their own conditions. They have no particular love for Americans, Russians, British, or French, and surely not for Czechs. Their main concern is Germany, and what will further the interests of the Fatherland will have their undying support. Why, therefore, must our State Department underwrite a policy which has resulted in disastrous consequences in the past? Why must our State Department use as its bible for Germany the discredited theory and principles of Hooverism?

Today pro-German voices are again concocting schemes that they hope will be swallowed by the naive Americans as after World War I. They have taken up the banner of the American taxpayer and with crocodile tears plead that the taxpayer is being steadily impoverished by so-called punitive policies toward Germany. This is not only the slogan of pro-German voices in this country, but I have reason to believe that this new line was born right in Germany itself.

SCHACHT BLUEPRINTS FUTURE OF REBORN, AGGRESSOR GERMANY

Not so long ago, for instance, when the ousted war criminal Hjalmar Schacht was freed by the International Tribunal at Nuremberg, he immediately began to talk about Germany's economic future. Schacht's interest in this problem is quite understandable, inasmuch as he was the chief architect of Germany's rearmament program after World War I and under Hitler. Schacht boasted to reporters that he had worked out a solution for Germany's economic problems, but would disclose it only "to the men who have the power to put it in effect." Nevertheless, he gave his interviewers a break. He stated that Germany must produce and export. Yes; this was his plan, and, as he stated:

> The taxpayer in America and Britain will begin to cry out at the burden of supporting Germany as a beggar people and the German people will not starve without raising a rumpus either.

These are Schacht's plans for rebuilding Germany's industrial war potential. So, we see that Hjalmar Schacht also is worried about the "poor" taxpayer, hoping that the American taxpayer will forget that they spent $350,000,000,000, and millions of lives were sacrificed, to destroy Germany's capacity to wage war.

Mr. Hoover's recommendations, however, regarding the future of Germany, imply that the Allies must ignore the lessons learned from our failure to protect the people after World War I, and to discard the economic controls agreed upon at the meetings of the Big Three. If Mr. Hoover's recommendations are accepted, the Allies will repeat the mistakes made in 1919 and Germany again will dominate Europe.

Mr. Speaker, that is after all the question—shall Germany be permitted to dominate Europe?

She cannot do it if her huge industrial war potential is cut down to peacetime requirements. This is practicable, necessary, and imperative for our future security.

The Foreign Economic Administration worked out such a plan in conformity with the Potsdam decisions. It is a plan which would create a better economic balance in Europe and deprive Germany of her monopoly of industry. This is sensible and sound and would be a real saving for the American taxpayer, not only in dollars and cents, but in terms of the future of our peace.

WHO BACKS STRONG GERMANY HERE AT HOME?

Mr. Speaker, it is rather interesting to note the swelling chorus here at home in support of a revived Germany.

Kurt Mertig, for instance, who was immobilized during the war by the commanding general of the Eastern Defense Command because he was a dangerous enemy alien, an ex-convict, an ex-employee of the German railways and the Germany Library of Information, who had a finger in every pro-German propaganda campaign between 1931 and Pearl Harbor, is the most vocal and raucous voice in that chorus. In his latest vicious propaganda mailing he refers to the United States as "the most inhuman of all victors" and demands we substitute a Hoover plan for the Marshall plan. He also wants to get the American Army out of Germany

This is the man who has the audacity to borrow the name of your party, Mr. Speaker, the Republican Party, to forward his own dishonest ends.

When are you going to do something about Kurt Mertig?

I could go on for many pages with a recitation of the names of revived Nazi propagandists who are weeping crocodile tears for poor ravished Germany just as after the First World War, but I forbear. If I have not already shown the dangers of allowing Germany to rise and sin again, if I have not shown that her war potential is not seriously hurt, then I have talked in vain and we are deaf to facts.

But on close examination you find that the systematic campaign from professional pro-German sympathizers has the backing of representatives of our own huge cartels and trusts and combines.

The "poor, wronged Germany" publicity flows from hidden financial wells in the heart of Wall Street.

It seems to me that Mr. Hoover, mistaken as I believe him to be, is only reflecting and supporting the views of John Foster Dulles and his law firm's clientele of German bankers and industrialists. Our own Government is unfortunately honeycombed with officials drawn from Wall Street law and brokerage firms. They, too, reflect that attitude. Possibly they do not realize how they undermine our own country's best interests, because they see everything through a veil of dollar signs.

It is time for us to forget the short-range profit motives, and look ahead.

We must not, we dare not, we shall not permit Germany to rearm and grow strong, lest we perish, and the whole world with us.

I. G. FARBEN GOES ON TRIAL FOR WAR CRIMES

My attention has been called to an article which appeared in the New York Times magazine under the title "The Fabulous Farben Empire Faces Trial."

Written by Delbert Clark, chief of the Berlin Bureau of the Times, the article is illuminating in its exposition of the dominant role played by this vast and dangerous cartel in the world aggression of the Nazis.

It is obvious that Mr. Clark's historical essay on I. G. Farben is drawn from official sources. I hope that our high officials and all having the real interests of our country at heart will find it possible to read the article.

While I feel it is too long for insertion in whole in the RECORD, I am extracting and inserting several of the pertinent paragraphs showing why the occupation authorities have chosen to indict and try civilian directors of a private industrial empire and why so many of us are disturbed and apprehensive because of the apparent determination of high American personages to restore cartelists to power in Germany.

THE FABULOUS FARBEN EMPIRE FACES TRIAL—FIRST IT CONQUERED THE CHEMICAL INDUSTRY, THEN IT HELPED HITLER PLAN AND WAGE HIS WAR OF AGGRESSION

(By Delbert Clark)

Forty-three years ago half a dozen industrial chemists seated themselves around a table in Ludwigshafen in southwestern Germany and pledged themselves to an association. Out of that almost unnoticed meeting came an organization that was to be the backbone of the national war economy in two great world conflicts. Today 24 successors of the half-dozen are in prison at Nuremberg, awaiting trial as war criminals.

The six principal chemical firms in Germany that formed the trust in 1904 planned to eliminate domestic competition and to dominate the world market in synthetic dyes. By 1926 their number had increased to eighteen. Their fabulous—and infamous—organization bore the name Interessen Gemeinschaft Farbenindustrie Aktiengesellschaft which, freely translated, means Associated Dyestuffs Industries Joint Stock Company.

I. G. PLANNED BOTH WARS

This is I. G. Farben, the huge combine that helped the Imperial German Government to fight the First World War and then helped Adolf Hitler to plan and fight the second. This is the gang of industrialists who through bribery, blackmail, and espionage gained a stranglehold on the world's chemical industry and set about to make Germany master of the world.

Farben executives were not indicted because they made synthetic dyes or because they dominated the world's chemical industry. They were indicted because they formed an alliance with Hitler. They are charged with "planning, preparing, initiating and waging wars of aggression and invasion of other countries; deportation to slave labor of members of the civilian population of the invaded countries and the enslavement, mistreatment, terrorization, torture, and murder of millions of persons"; with plunder and spoliation "pursuant to deliberate plans and policies"; with plotting the rise of Hitler, with espionage and many other things that go far beyond the making of munitions.

INDICTMENT: "SLAVERY AND MASS MURDER"

Count three of the indictment, entitled "Slavery and Mass Murder," relates with horrible exactitude the enslavement and wholesale killing of forced laborers in work camps organized and managed by and for Farbenindustrie.

"In its plants Farben accepted and appointed as its security representatives men designated by the SS and the Gestapo, and in the administration of its plants adopted the policies and practices of the Gestapo. Although the Farben plant manager was responsible for the morale and discipline of its slave workers, it was standard policy to call in the Gestapo to enforce discipline.

"Farben was aggressive in the acquisition of slave laborers * * * subhuman standards of living were the established order. * * * Poison gases manufactured by Farben and supplied by Farben to officials of the SS were used in experimentation upon and extermination of enslaved persons throughout Europe."

Such in outline is the nature of the indictment.

There follows a fascinating history of the formation of the trust and of its discovery that the byproducts of aniline dyes were the munitions of war, and then these paragraphs telling of how the trust came to the United States before the First World War:

Early in this century the German chemists realized the military significance of trinitrotoluene, which is readily made from coal-tar byproducts of dye manufacture. Better known as TNT, it is an important ingredient of many high explosives. Abruptly the chemists ceased research for new colors and let stock piles accumulate for the coming war.

Parallel to this development the Big Six determined to thwart development of a coal-tar industry in the United States or anywhere else. There was no objection to attempts to produce dyes so long as coal-tar products from which the dyes were made came from Germany. But there must be no opportunity on the other side of the Atlantic for the development of a coal-tar munitions industry. At one time during this period, when three American manufacturers of heavy chemicals tried to start production of aniline oil and get away from reliance on the German product, the Big Six sent emissaries to the United States with a demand that the production of oil be stopped and offered to repay American firms for expenses already incurred.

When Congress put a 10-percent duty on aniline oil the Germans cut prices below American cost of production. This was not trade, it was war.

Research went on apace, and economic penetration of other countries continued, with branches and agencies set up in the principal countries of the world. Dyestuffs now were distinctly secondary and medicines from coal tar began to assume an increasing importance, but always in the background were munitions of war. It was in the interest of Germany's monopoly in this field that I. G. Farben resorted to espionage, bribery, legislative corruption, and disguised ownership of subsidiary companies abroad.

Then there are these revealing paragraphs:

Even Germans accept the fact of Farben's complicity in Hitler's war plans. In 1932 Farben considered abandoning research in synthetic gasoline, but asked Hitler if his party would support such research. When Hitler agreed Farben cast in its lot with him. And when Goering asked for money to replenish the party treasury Farben tossed in 400,000 marks, the largest contribution of any single firm. Thus Farben headed the German industrialists who prevented the Nazi collapse in 1933.

In the diplomatic maneuvering that led to war Farben stood ready at all times. Hitler absorbed Austria and Farben took over the Austrian chemical industry. A week before the Munich pact the German Ministry of Economics advised Farben that its plans for seizure and operation of the Czech munitions industry were acceptable. After Munich Farben moved into Czechoslovakia. And 14 days after the invasion of Poland, Farben received the "trusteeship" of major Polish firms.

In my eyes, Mr. Speaker, and in the eyes of the world, the events of history already have proved the guilt of this gigantic octopus which has twice tried to encompass world conquest in its slimy tentacles.

But it is fitting and proper that these men should have a formal trial under an international tribunal. It is fitting that their dark misdeeds should be written in ink on the books and thus on the minds of men, as they already are written in blood on the face of the ravished earth and in the souls of fearful people.

I feel that formal conviction will follow. I hope that American officials who are trying to replace the Nazis in power in Germany will be warned by the record of the trial.

And above all, Mr. Speaker, I hope that the American people, and American officials, will be forever warned to be alive to the dangers of monopoly, and will always guard our freedoms against the menace of criminal monopoly.

With the approval and aid of Great Britain, and even of some of our own officials, the partners and representatives and collaborators of this dangerous world octopus are being placed in direct charge of its "de-cartelization," as is shown only too clearly in my remarks on another page in which I insert the text of a warning, with names and facts, issued by the Society for the Prevention of World War III.

Résumé of Work of Senate Judiciary Committee, Eightieth Congress, First Session

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 23 (legislative day of Wednesday, July 16), 1947

Mr. WILEY. Mr. President, I believe that my colleagues and constituents, as well as many others, would be interested in a brief résumé of the work of the Senate Judiciary Committee in this first session of the Eightieth Congress, in particular concerning the impact of the legislative reorganization law upon our committee's jurisdiction and activities. I therefore ask unanimous consent that there be printed in the Appendix of the RECORD, to be published shortly after the recess of Congress, a summary on this subject which I am now having prepared by the staff, in addition to an overall review which I have made of the record of the Eightieth Congress.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

REPORT OF THE SENATE COMMITTEE ON THE JUDICIARY, EIGHTIETH CONGRESS, FIRST SESSION

ORGANIZATION OF THE JUDICIARY COMMITTEE

(A) Historical development of the Judiciary Committee

The Senate Committee on the Judiciary was first designated a standing committee by the Senate Resolution of December 10, 1816, which required that the committee be appointed at the commencement of each session of Congress. This requirement was later changed by Senate Rule XXVI, adopted January 11, 1884, to provide that the standing committees be appointed at the commencement of each Congress rather than at each session (Cong. Rec. 15: 307 and 367). The functions which have been the concern of this standing committee for more than 130 years are now among those which under Public Law 607, Seventy-ninth Congress, have been given to a new committee with a far more extensive jurisdiction.

(B) Jurisdiction of the Judiciary Committee

Under the Legislative Reorganization Act of 1946, all proposed legislation, messages, petitions, memorials, and other matters relating to the following 18 subject groupings are referred to the new Committee on the Judiciary:

1. Judicial proceedings, civil and criminal, generally.
2. Constitutional amendments.
3. Federal courts and judges.
4. Local courts in the Territories and possessions.
5. Revision and codification of the statutes of the United States.
6. National penitentiaries.
7. Protection of trade and commerce against unlawful restraints and monopolies.
8. Holidays and celebrations.
9. Bankruptcy, mutiny, espionage, and counterfeiting.
10. State and Territorial boundary lines.
11. Meetings of Congress, attendance of Members and their acceptance of incompatible offices.
12. Civil liberties.
13. Patents, copyrights, and trade-marks.
14. Patent Office.

15. Immigration and naturalization.
16. Apportionment of representatives.
17. Measures relating to claims against the United States.
18. Interstate compacts generally.

Committee membership is limited by the Legislative Reorganization Act to 13 Senators. Furthermore, under this act each of these Senators is limited to membership on two standing committees with the exception that Senators of the majority party, who are members of the Committee on the District of Columbia or of the Committee on Expenditures in the Executive Department, may serve on three standing committees (sec. 102 (o) (4)). These limitations concentrate a high degree of responsibility on the committees and their members.

Prior to the amendments to Senate rule XXV the subject matters listed in the 18 groupings above were referred largely to the following standing committees:

(a) Committee on Claims, consisting of 13 Senators.

(b) Committee on Immigration, consisting of 14 Senators.

(c) Committee on the Judiciary, consisting of 18 Senators.

(d) Committee on Patents, consisting of eight Senators.

The combined membership of these committees (53 members) and their staffs when compared with the present committee membership of 13 makes apparent the need for a high degree of efficiency and organization if there is to be thorough consideration of legislative matters.

(*C*) *Internal organization of the Judiciary Committee*

1. Membership of the Judiciary Committee: ALEXANDER WILEY, Wisconsin, chairman; WILLIAM LANGER, North Dakota; HOMER FERGUSON, Michigan; CHAPMAN REVERCOMB, West Virginia; E. H. MOORE, Oklahoma; FORREST C. DONNELL, Missouri; JOHN SHERMAN COOPER, Kentucky; PAT MCCARRAN, Nevada; HARLEY M. KILGORE, West Virginia; JAMES O. EASTLAND, Mississippi; WARREN G. MAGNUSON, Washington; J. WILLIAM FULBRIGHT, Arkansas; J. HOWARD MCGRATH, Rhode Island.

2. Standing subcommittees of the Judiciary Committee: Patents, Trade-Marks, and Copyrights, Mr. FERGUSON, chairman; Mr. MCGRATH. Immigration and Naturalization, Mr. REVERCOMB, chairman, Mr. MCCARRAN. Federal Charters, Holidays, and Celebrations, Mr. DONNELL, chairman; Mr. KILGORE. Constitutional Amendments, Mr. REVERCOMB, chairman; Mr. MCCARRAN. Improvements in Judicial Machinery, Mr. FERGUSON, chairman; Mr. MCCARRAN. National Penitentiaries, Mr. LANGER, Chairman; Mr. DONNELL, Mr. MCGRATH.

(*D*) *Procedures of the Judiciary Committee*

1. Procedures under section 133 of the Legislative Reorganization Act of 1946: Each standing committee is required by the Reorganization Act to fix regular meeting days for the transaction of business and to keep a complete record of all committee action, including record votes on all questions on which record votes are demanded.

Measures and recommendations shall be reported only by a majority of the committee actually present. It then becomes the duty of the chairman to report promptly to the Senate and take steps necessary to bring the matter to a vote.

2. Judiciary Committee Rules of Procedure: The statutory requirements are supplemented by the rules of the committee, the more pertinent of which are the following:

Rule 1: Five members of the committee shall constitute a quorum for the transaction of such business as may be considered at any regular or special meeting of the committee, subject, however, to the provisions of section 133 (d) of the Legislative Reorganization Act of 1946. No member of the committee shall for the purpose of determining the existence of a quorum of the committee be deemed to be present unless he be personally present.

Rule 4: No vote cast in the committee, or any subcommittee thereof, by proxy shall be counted.

Rule 6: The committee shall, so far as practicable, require all witnesses appearing before it to file in advance written statements of their proposed testimony at least 24 hours before hearing, and to limit their oral presentations to brief summaries of their argument. The committee staff shall prepare digests of such statements for the use of committee members.

Rule 7: All hearings conducted by the committee or its subcommittees shall be open to the public except (1) executive sessions for marking up bills, or (2) for voting, or (3) where the committee by a majority vote orders an executive session.

(*E*) *Program of the Judiciary Committee*

(a) Scope of Judiciary Activities at Close of First Session, Eightieth Congress

(1) Percentage of legislation referred to Judiciary Committee:

(a) Of the total number of all House bills and resolutions sent to the Senate, the percentage referred to the Senate Committee on the Judiciary was approximately 36 percent plus.

(b) Of the total number of all Senate bills and resolutions introduced, the percentage referred to the Committee on the Judiciary was approximately 29 percent.

(c) Of the total number of all Senate and House bills and resolutions received by the Senate, the percentage referred to the Committee on the Judiciary was approximately 30 percent plus.

(d) Number of bills received, 830.

(e) Number of bills and resolutions reported favorably, 215.

(f) Number of bills and resolutions indefinitely postponed by action of the full committee, 113.

(g) Number of bills and resolutions acted upon, 328.

(h) Number of bills becoming law (Private and Public) (as of close of 1st sess.), 136.

(2) Reports requested on legislation: Number of reports requested from Government departments and agencies on legislation referred to the committee, 930.

(b) Hearings and Executive Sessions of the Judiciary Committee

(1) Number of hearing sessions conducted on legislation, 70.

(2) Approximate number of witnesses (all hearings), 420.

(3) Number of executive meetings of the full Committee on Legislation and Nominations, 42.

(4) Number of executive meetings of subcommittees on legislation, 105 (approximate). Approximately 20 of the above meetings were night sessions.

(5) Number of meetings held by conferees, 21.

(c) Reports of the Judiciary Committee

(1) Bills and resolutions reported by the committee, 215.

(a) Number of printed reports on bills and resolutions, 215.

(2) Number of documents, hearings, etc., printed for the use of the committee, 9.

(d) Nominations Referred to Judiciary Committee

(1) Number of nominations referred to the committee, 69.

(2) Reports of the Judiciary Committee on nominations: Number of nominations reported favorably, 66; number of nominations reported unfavorably, none; number of nominations withdrawn, 1; number of nominations pending at close of first session, 2 (received shortly before session ended).

(3) Hearings of the Judiciary Committee on nominations: Number of recorded hearings on nominations, 52 (the figures do not include routine unrecorded hearings).

SUMMARY

To effect, in an orderly manner, the changes required by the Reorganization Act was an impressive challenge. When these changes became enmeshed in the further reorganization of the Congress, which ensued as the result of the recent election and political change, the combined task of the organizing and reorganizing became enormous. The new Senate Committee on the Judiciary has attempted to meet the challenge presented by this situation. At the close of the first session of the Eightieth Congress it had among other things reported 215 bills and resolutions and had considered 328 of the 830 legislative measures referred to the committee.

Of the total number of House bills and resolutions sent to the Senate, approximately 36 percent were referred to the Senate Committee on the Judiciary and of the total number of all Senate and House bills received by the Senate the percentage referred to the Judiciary Committee was somewhat more than 30 percent.

Examples of committee work

The committee conducted extensive and comprehensive hearings on the issues involved on portal to portal under the Fair Labor Standards Act and reported out the bill which subsequently became Public Law 49.

The committee gave detailed consideration to the more than 500 laws involved in the so-called war and emergency legislation and published three extensive documents in connection with the consideration of these laws and reported out of committee Senate Joint Resolution 123 relative to the termination of war controls and emergency and war powers. This involved legislation ultimately became Public Law 239.

It is interesting to note that in connection with the committee consideration of Senate Joint Resolution 123, the committee cooperated with each standing committee of the Senate in a procedure which is almost unique.

The committee also considered and wrote legislation relating to the several extensions of title III of the Second War Powers Act and the Export Control Act.

The committee also considered a substantial volume of private claims and immigration bills requiring extensive reference and printed Senate reports. In the consideration of these private bills, the committee endeavored to develop certain over-all patterns for future use.

In reporting out a number of so-called corporate charter bills, the committee initiated certain over-all principles which it is hoped will effect a standardization of congressional policy relating to Federal charters.

(1) Immigration

In the consideration of immigration matters the committee, through its study of various private bills, has begun the formulation of certain over-all principles which will be further considered in connection with the very comprehensive immigration study currently being made by a Senate judiciary subcommittee under the terms of Senate Resolution 137. In this general category the committee also reported out bills:

1. Amending section 12 of the Immigration Act of 1917;

2. Amending Public Law 271 of the Seventy-ninth Congress to expedite the admission to the United States of alien spouses and alien minor children;

3. Amending the Nationality Act of 1940;

4. Extending the period of validity of the act to facilitate the admission into the United States of the alien fiancées or fiancés

of members of the armed forces of the United States;

5. Amending the Nationality Act of 1940 to preserve the nationality of citizens unable to return to the United States prior to October 14, 1946;

6. To amend the Nationality Act of 1940 to preserve the nationality of naturalized veterans and wives and minor children and dependent parents;

7. Providing for the extension and application of the provisions of the Classification Act of 1923, as amended, to certain officers and employees of the Immigration and Naturalization Service in the Department of Justice;

8. Correcting an error in section 342 (b) (8) of the Nationality Act of 1940, as amended.

9. To amend the Nationality Act of 1940 so as to permit naturalization proceedings to be had at places other than in the office of the clerk or in open court in the case of sick or physically disabled individuals.

10. Amending section 327 (h) of the Nationality Act of 1940.

(Above is a partial list.)

(2) Patents

The committee reported out several patent bills, one of them being the urgent bill relating to the patents involved in certain treaties of peace. Equally urgent was the bill which extended temporarily the time for filing applications for patents and for taking action in the United States Patent Office with respect thereto.

The necessity for this latter bill arose out of the hardships occasioned by the war in connection with the filing and prosecution of applications for patents.

Under the direction of the patent subcommittee a study will be made during the adjourned session and should provide data which can serve as the basis for possible over-all patent legislation when Congress reconvenes.

(3) Judiciary

In the fields of jurisdiction traditionally associated with the Judiciary Committee the committee reported out bills:

1. Making criminally liable, persons who negligently allow prisoners in his custody to escape.

2. Amending the laws relating to larceny in interstate or foreign commerce.

3. Proposing the preparation of a revised edition of the Annotated Constitution of the United States.

4. Authorizing additional allowances of good time and the payment of compensation to prison inmates performing exceptionally meritorious or outstanding services.

5. Prohibiting the operation of gambling ships.

6. Amending the Bankruptcy Act with respect to qualifications of part-time referees in bankruptcy.

7. Establishing uniform qualifications of jurors in the Federal courts.

8. Amending the act to express the intent of Congress with reference to the regulation of the business of insurance.

9. Amending the Administrative Procedure Act to authorize commissioned officers of the Coast Guard to preside at the taking of evidence in proceedings under section 4450 of the revised statutes, as amended.

10. Providing secretaries for circuit and district judges.

11. Codifying and enacting into positive law title 4 of the United States Code.

12. Codifying and enacting into positive law title 1 of the United States Code.

13. Codifying and enacting into positive law title 6 of the United States Code.

14. Codifying and enacting into positive law title 17 of the United States Code.

15. Codifying and enacting into positive law title 9 of the United States Code.

16. Amending the criminal code and certain other legislation with reference to part-time referees in bankruptcy to act as agents or attorneys for claimants against the United States.

17. Proposing an amendment to the Constitution of the United States relating to the terms of office of the President.

(Above is a partial list).

(4) Interstate Compacts

In the category of interstate compacts, the committee reported out a bill consenting to an interstate oil compact to conserve oil and gas.

(5) Other Jurisdictions of Committee

The foregoing indicate the general scope of the activities of the committee during the first session of the Eightieth Congress. In addition to the foregoing, the committee had measures referred to it relating to the following categories:

1. Protection of trade and commerce against unlawful restraints and monopolies.
2. Holidays and celebrations.
3. Civil liberties.
4. Apportionment of Representatives.

PROPOSED RECESS ACTIVITIES

1. A comprehensive survey of proposed patent legislation.

2. A survey of committee powers and committee hearings.

3. Digest of reports and studies relating to so-called Mediterranean fruitfly claims.

4. A comprehensive study of the background of the so-called Tidelands case.

5. Possible additional hearings on nominations.

6. Study of monopolistic practices, particularly in the South.

7. A comprehensive digest of all departmental recommendations relative to proposed committee bills covering repealing of obsolete laws.

8. Digest and preparation of departmental reports on bills still pending before the committee.

9. Further hearings on claim of midwest truckers and possible hearings on other claims bills.

10. Extensive study of over-all immigration subcommittee with particular emphasis on displaced persons problem.

11. A review of all claims bills.

12. Continuing study on export controls and second war powers under the direction of subcommittee chairman to determine effectiveness of controls and possible further need for continued extension.

OBSERVATIONS

The review of a single session of Congress functioning under Public Law 601, Seventy-ninth Congress, is perhaps inadequate evidence on which to base any final conclusions.

In the Senate Committee on the Judiciary, however, it was apparent throughout the session that the volume of work appeared to definitely necessitate additional stenographic help.

The Immigration and Naturalization Subcommittee of the Committee on the Judiciary initiated a policy with reference to the consideration of private immigration bills which perhaps warrants study for possible general legislative use.

This policy required the submission of certain supporting data by the sponsor of the bill as a prerequisite to consideration by the subcommittee. This procedure was found to be extremely helpful.

The possibility of the adoption of a rule requiring the submission of certain data to accompany the introduction of every bill may warrant exploration. Such data could include: The necessity for the bill, the objectives sought in the bill, the sponsor's explanation of the bill's provisions, and supporting data. The adoption of such a procedure might serve to insure the careful presentation of legislation and might be of tremendous value to the committees and moreover would occasionally disclose flaws in legislative proposals which might lead the sponsors to withhold introduction.

Another proposal which may warrant exploration would be the possible creation of a pool of carefully selected and trained Senate investigators which would be available to the various standing committees.

Apart from the committee work itself, observations are perhaps in order on the over-all congressional machinery. In this connection it might be well to explore—

1. The "sloughing-off" of complete areas of the Congress' work—either trivial areas, local areas such as relate to the District of Columbia legislation or major areas such as rightfully belong to the State and local governments inherently.

2. The mechanical modernization of Congress, modern folding-room equipment, forms controls, legislative card-punch machine, etc. The latter particularly should materially facilitate the necessary collection of important legislative statistical data.

3. Congressional scheduling could be studied with a view to spreading the workload throughout the year rather than concentrating a tremendous number of bills in a relatively short period of time.

RADIO ADDRESS BY SENATOR ALEXANDER WILEY OVER WISCONSIN RADIO STATIONS

RECORD OF THE EIGHTIETH CONGRESS

I am grateful for this opportunity to discuss with you briefly the subject of the record of the Eightieth Congress.

This is a matter in which you as a citizen are vitally interested. The Congress which you elected in November 1946 and which opened in January 1947 had a heavy obligation to fulfill the mandate which you gave to it. I believe that it has earnestly fulfilled the mandate to the best of its ability—that it has worked conscientiously and devotedly in the interests of the American people—in the interest of the public welfare.

But let the facts talk for themselves. Let us look over the record of the Eightieth Congress. Let us consider how many bills were introduced, what were the principal bills that were passed, what are the principal bills that still await action, and then let us try to evaluate how well the Congress performed its job for Wisconsin and the Nation.

MY OBLIGATION TO YOU

I feel that as a legislator, I owe this report to you, to submit this summary. Each of my listeners holds a share, so to speak, in America Unlimited. Yes, each of you, whether you are a farmer, a small businessman, a laboring man, a housewife, a clerk, a doctor, lawyer, teacher, a secretary, a storekeeper, holds a share of what might be called preferred stock in our beloved country. There may be differences of opinion among us as to what specific legislation benefits our country best, but all of us love our America and want to see it prosper in a prosperous and peaceful world. Well, how has the Eightieth Congress contributed to prosperity and peace? Let's let the record talk for itself.

VOLUME OF BILLS

Let's note first, however, that over 6,500 bills were introduced in Congress during these seven brief months of Congress' session. These bills ranged from one line resolutions to hundred-page books. They included appropriations bills for over $37,000,000,000, claims bills, immigration bills, treaties, as well as general legislation.

And even before the Congress could take any of them up, it had to complete a legislative reorganization (in accordance with the law adopted in the Seventy-ninth Congress) and a political reorganization. Both jobs it completed with a speed and efficiency that amazed many observers.

Then, it "plowed into" its mass of legislation.

BILLS ENACTED

What bills did it enact Let me read a list of a few of the major bills passed by the House and Senate.

1. Perhaps the major accomplishment of the Eightieth Congress was the Labor-Management Relations Act of 1947. It was designed to protect labor, management, and, most important of all, the American public, from racketeering abuses. It was designed to give us the industrial peace and full production which we so need for prosperity.

2. Another significant accomplishment of the Congress was the Portal-to-Portal Act of 1947. It removed the cloud of financial bankruptcy, arising out of the absurd so-called portal-to-portal claims and affecting the very foundations of American industry. I am proud to say this act was considered in the Senate by the Judiciary Committee, of which I am proud to serve as chairman.

3. Item 3 to Congress' credit is the proposed constitutional amendment limiting the Presidency to two terms. Through this nonpartisan resolution, we hope to prevent the perpetuation in office of any one man which makes for dictatorship. Almost half of the 36 States required for adoption of this amendment have already ratified it. I am proud to say that, here too, the Judiciary Committee was the one which handled this important amendment in the Senate. As in the case of the Portal-to-Portal Act, I had personally introduced legislation to accomplish the very objective which Congress ultimately agreed to.

4. Another feather, I believe, in Congress' cap is armed services unification. After thorough study, it enacted a bill to merge the Army, Navy, and Air Forces under a single new Cabinet Department of National Defense. This will help assure adequate United States preparedness in the atomic age.

5. Another bill enacted sets up a National Science Foundation to encourage United States research.

6. The Presidential succession bill, setting up a new line of succession to the Presidency in the event that the President and the Vice President are unable to fulfill the duties.

7. Repeal of wartime laws, ending immediately, or within a given time thereafter, around 175 of the President's emergency war powers. This was a major step toward placing America back on a full peacetime basis. I am proud to say that I personally sponsored this resolution, and that its initial consideration was also handled in the Senate Judiciary Committee.

8. Along the line of veterans' legislation, there was enacted the veterans' terminal-leave bill enabling the cashing after September 1 of almost $2,000,000,000 of enlisted men's terminal-leave bonds.

9. A bill for 20-percent increase in the pensions of Spanish-American and Civil War veterans and their dependents, designed to help them meet the high cost of living.

10. A bill widening the number of disabled veterans eligible to receive automobiles for their personal transportation.

11. Turning again to civilian bills, the Eightieth Congress established a Commission To Reorganize the Executive Branch of Government for purposes of efficiency and economy.

12. The Congress extended rent controls because of the housing shortage, but made provision for turning this problem over to the respective State governments where it rightly belongs.

13. It sets up a National Aviation Council to stimulate our vital aircraft industry.

14. In the field of foreign policy, the Congress was adequate to its heavy obligations in this war-ravaged world. It enacted the bill for economic aid to Greece and Turkey as a buffer against Russian aggression and as a means of preserving the peace.

15. The Congress enacted all necessary foreign relief appropriations to help disease- and hunger-ridden European and Asiatic peoples.

16. Returning again to the domestic front, the Congress launched much needed investigations: Into the housing shortage, the price situation, our whole social-security structure, our tax system. These studies will provide much valuable background material for later legislation.

17. On a matter vital to Wisconsin, the Congress authorized the minting of 500,000 commemorative coins to help finance our State's 1948 centennial celebration. It had been my privilege to introduce the initial legislation for these coins and to appear in committee in their behalf.

ECONOMY EFFORTS

In all its work the Congress sought to apply reasonable economy to conserve the taxpayers' dollars rather than to spend them like a prodigal as had many previous Congresses. Considerable savings were made in the President's budget, but unexpected foreign commitments served to reduce such savings.

TAX VETOES

The Congress did not, of course, succeed in all its objectives. Perhaps, the biggest disappointment to the American people was the President's two arbitrary vetoes of the tax reduction bills. These bills would have provided 30 to 10 percent reduction in your tax load. Passage of these bills would have meant $4,000,000,000 in the pockets of the American people. This money could have been used for buying food, clothing, for taking care of rent bills, for business needs in the face of our higher cost of living. You can be sure, however, that I, for one, am going to do all I can in the next session of the Congress to see that tax-reduction legislation is enacted in accordance with the mandate of the American people.

OTHER BILLS PENDING

A number of important bills are still awaiting the action of the Congress. Among these bills are the St. Lawrence seaway, Federal aid to education, national health and national housing, increase in veterans' subsistence allowances and earnings ceilings, displaced persons legislation, numerous bills affecting railroads, such as railroad reorganization and rate-making agreements, anti-poll tax and FEPC bills, United Nations Charter revision, universal military training.

Some of these bills may never be enacted into law. Others may yet find their way into the statute books. All of them are controversial and require the thorough consideration of the Congress. Studies are under way on many of them during the congressional recess.

LAKES SEAWAY

As you will note, one of the major items still awaiting action is the St. Lawrence seaway bill. It was my privilege to serve as chairman of the Senate Foreign Relations Subcommittee which considered the seaway. Following extensive hearings, which I personally conducted, the subcommittee favorably reported the seaway bill without dissent. Then, in the face of strong opposition, I asked the full committee to consider the bill. This it did, voting 9 to 4 on behalf of completion of the seaway.

I want to assure my audience that I am going to do everything within my power to have the St. Lawrence seaway bill completed as early as possible in the next session of the Congress. This vital waterway, so essential to national defense and to the economic health of the great Midwest, should not be delayed any longer. The people of Wisconsin and of all America demand its completion, and I will do everything I can to help fulfill their will.

COMMITTEE WORK

The Congress is not closing up shop in terminating the session. My office will be open, as it is always open, to serve Wisconsin 6 days a week, 52 weeks a year. Congressional committees will be busy all summer. And while we are on the subject of committees, let us not forget that the committees of the Senate and House have done an unparalleled job which often escapes public attention. In my own Judiciary Committee, for example, we received around 830 bills. We conducted many hearings, confirmed numerous nominations by the President. As a comparison between the Judiciary Committee's work accomplished in the Eightieth Congress and its work of preceding Congresses, we might note that the 830 bills we considered are many times the number of bills considered in both sessions of the preceding Congress. Our jurisdiction has been expanded many fold—considering claims, immigration, civil liberties, antitrust, and many other activities.

We have tried to do the best possible job we could.

No one will claim that the work of the first session was perfect. Every one of us can see faults and omissions in the Congress' work. In many instances the small Republican majority in the Congress was hamstrung by Democratic filibuster tactics. Such tactics succeeded in the Senate in blocking the probe of the Kansas City vote frauds, at least temporarily.

EVALUATING CONGRESS

Well, how can we evaluate the work of the Congress? The answer must come from your own heart, my fellow citizens, according to your personal convictions. My personal standard by which I judge the Congress is whether or not it served the public welfare, not the interest of this or that segment of our population, but the interests of all of us. I feel that, judged by that standard, the first session of the Eightieth Congress did a splendid job in promoting the public welfare.

CONCLUSION

A big task lies before us. The international situation is, to say the least, cloudy. There are dark spots in the domestic picture too. We are, however, enjoying heretofore undreamed of prosperity. Sixty million Americans are working, our national income is at the rate of $160,000,000,000 a year. These are facts of which you and I may be proud.

We may, in summary, be proud, too, of the work of the first session of the Eightieth Congress—a session which, I believe, fulfilled the mandate of the American people.

With thanks for the past, with pride in the present, with confidence in the future, the Congress and the American people may go forward.

Statement on National and Foreign Policy

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. HOLIFIELD, Mr. Speaker, the Democrats of California are girding their loins for the 1948 campaign. The record of the Republican-controlled Eightieth Congress in failing to serve the people is the main reason for their zeal.

Under the devoted leadership of James Roosevelt, the chairman of the California State Democratic Central Committee, the people of California are uniting to win. There have been attempts to discredit and discourage real organization of a strong Democratic party. These attempts have been abortive, regardless of their origin or political sponsorship. Disgruntled pseudopolitical leaders on the extreme right and the extreme left have been discomfitted by the growing strength and unity of influential Democrats behind James Roosevelt's leadership. The recent Democratic State Central Committee meeting overwhelmingly approved the official statement on national and foreign policy outlined below. It is a statement of principles, around which all California Democrats can rally for victory in 1948.

Under unanimous consent, I append hereto the statement mentioned above:

The statement on national and foreign policy covers such points as—

The Democratic Party of California, aware that developments of modern science have linked the far corners of the world and brought ever closer associations on our own continent, affirm our faith in certain fundamental principles.

First. We believe that human progress, individual liberties, and the "four freedoms" are most likely to be realized under the American form of democracy.

Second. We believe neither our own people nor new adherents elsewhere will continue to have faith in our democracy unless we prove conclusively that more than any other system it can secure human progress, individual liberties, and the "four freedoms."

Third. We believe that inasmuch as atomic power can easily destroy all civilization and humanity, the United States of America bears the heaviest responsibility in installing methods of peaceful mediation and settlement for the conflicts of peoples and governments.

Believing thus, we feel it is our duty to state clearly our alarm at domestic legislation which, under the guise of curbing the abuses of certain leaders and groups of organized labor, actually destroys the safeguards of economic and social liberty won so recently by the men and women of labor. We heartily commend President Truman for his veto of the Republican-sponsored Taft-Hartley bill, a measure primarily designed, not to correct abuses within organized labor, but to emasculate the legitimate safeguards of collective bargaining.

We believe also that the people should be told that under the guise of an attack upon a labor monopoly, the Republican Party is fostering an ever increasing corporation or business monopoly. It is an undeniable fact that the Federal Trade Commission has warned of a greatly accelerated pace of postwar business mergers and has ascribed high prices directly to them. * * * Monopoly waxes fatter than ever. Three companies account for 89 percent of American automobiles; gasoline prices rise, even at minute fractional changes, exactly together; four companies have 85 percent of our structural steel capacity; four more make all our prefabricated roofing shingles, and 10 percent of corporations control 90 percent of our corporate wealth. These are the sure signs that the Republican Party is making an attack upon labor the excuse for allowing our competitive system to become one of monopoly at the expense of every little business man and woman in the country. We, therefore, urge that the Democratic Party, nationally, put its full weight behind the legislation proposed by Senator O'MAHONEY and Representative KEFAUVER which would put some real strength in the antitrust acts, and we urge that the Department of Justice vigorously prosecute those who are menacing our competitive free-price system. We heartily commend the President for his courage and wisdom in vetoing the inequitable Knutson tax bill; now that the Republican leadership has reintroduced it in the Congress, we urge him to stand firm in again vetoing.

The Democratic State Central Committee of California believes that it has the responsibility to inform the national leaders of our party of constructive suggestions made in our State. Surely no man or woman today in public life has all the answers to the many complex problems which face us, most especially in the field of international relations. We feel that the greatest proof of our loyalty to our country is to give to President Truman the benefit of the considered thinking of the members of our party in this State.

We endorse wholeheartedly the President's stated principles that:

A. We should do everything within our power to bring relief to the suffering people of the world from hunger and economic want and that such relief should know no political boundaries.

B. That, as perhaps the only strong creditor nation left in the civilized world, we should insure that no peoples should be forced to adopt political ideologies of any nature whatsoever because of economic or armed aggression against them.

It is in the spirit of this idealism that we understand the Truman Doctrine to have been conceived.

In wartime it may not be possible to fully take the whole people into the confidence of the national leadership; in peacetime it must be done. We therefore urge that the President, the Secretary of State, and all other qualified officials publicly discuss the full implications of our foreign policy. The Democrats of California feel that it was under the leadership of our party, and here in our own State, that the United Nations was born as the key instrument to a lasting peace. We therefore insist that the strongest possible steps and the strongest possible active policy of cooperation with the United Nations Organization must come from our Democratic administration.

We urge that the United States take the initiative in every possible way for establishing adequate machinery within the United Nations Organization for achieving world peace and the economic recovery of the world.

Unilateral action in international matters must be abolished; only by so doing can that mutual trust among nations essential to lasting peace be fully achieved.

As the strongest of the nations and the one whose people have the highest standard of living, and which by the democratic processes have most nearly achieved the Four Freedoms, the United States has the obligation to maintain bold leadership in support of the United Nations.

We recognize frankly that some countries have not yet lost their fears of Old-World power politics. Russia in particular, struggling to rise from czarist serfdom and having suffered repeatedly from aggression, will be slow in accepting the unselfish idealism which must be the guiding principle for all members of the United Nations. However, we feel that eventually all nations, including Russia, must and will repudiate unilateral action and support wholeheartedly the principle of international cooperation. Any other course, inevitably means obliteration by atomic warfare.

Without the threat of war differing economic systems will be judged solely on their accomplishments for mankind; we confidently reassert our faith in the American way of life.

We endorse the principles of the Marshall plan both because these principles offer the most likely prospect for the stabilization of European life and because the plan itself clearly falls within the regional arrangements specifically authorized by the Charter of the United Nations in article 52. We regret the failure of the Russian Government to cooperate with the Marshall Plan and we urge that she reverse her decision and lend her influence and leadership in establishing a basis of mutual trust among all nations.

We respectfully suggest and urge that a definite policy for giving the people of the world factual information in regard to the working of American democracy via radio, the interchange of students and the encouragement of visitors, cultural and trade, to and from our shores should be given a most prominent place in our program.

We condemn the penny-wise policy of the Republican Party in curtailing the information service of our Department of State, especially when we realize that it has been merely proposed that we spend for the selling of democracy a sum of money smaller than the advertising budget of many of our national business concerns.

We reiterate again that the greatest assurance of lasting peace and the activation of democracy throughout the world will come from a steadfast and successful ecnomy here in our own country. The path of unemployment is the road to war.

We make these suggestions in order that the great body of people in our country desiring to achieve world peace and the principles of American democracy may know with certainty the position advocated by the Democratic Party of California.

Respectfully submitted.

GEORGE E. OUTLAND,
Chairman, Policy Committee.

Meretricious Pamphlet Sponsored by Upton Close Exposed by Former Secretary of War Patterson

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. SABATH. Mr. Speaker, everyone of us in America who clings to the ideals of Thomas Jefferson, of Andrew Jackson, of Woodrow Wilson, and of Franklin Delano Roosevelt has been dismayed by the rising tide of un-Christian, un-American, and undemocratic bigotry, discrimination, and prejudice in this country we love so much.

We have fought two terrible wars to preserve democracy, and yet within our own ranks there are those who would betray democracy.

In those two wars every racial and religious group in America fought with equal valor. They shared the burdens without stint. Every citizen of America owes an equal duty to his country; but to every citizen America owes equality of law and of treatment.

In time of war there is no difference in the duty owed and discharged by the *Mayflower* descendant and the immigrant not yet naturalized; the foreign-born, the sons of the foreign-born, and

the children of the first families of Virginia fight and work side by side for the country they love equally.

There should be and there must be no difference in peace. That is America.

We cannot touch filth without being dirtied; and in the days of our cold war against the Nazi aggressor there were some who fell into the trap of the Hitler-Goebbels propaganda line. Now that the war is over and American democracy has defeated Nazi abomination, those people have again dared to resume their feeding of un-American and seditious falsehoods and half-truths—the Peglers, the G. L. K. Smiths, the Merwyn K. Harts, and the vermin press generally—ever seeking to divide Americans, and trying to destroy our national strength and unity so much needed in these troubled times.

It is our duty, therefore, Mr. Speaker, to expose the falsity of these exponents of hatred whenever they appear.

Upton Close, whose record of opposition to all things democratic and progressive needs no further elaboration by me, recently issued a pamphlet called the Anti-Defamation League, by one Robert H. Williams. Mr. Close introduces the pamphlet with the innuendo that it was prepared by Maj. Robert H. Williams, Air Reserve, on the basis of information developed by Williams in the course of his military duties as a counterintelligence officer.

It is noteworthy that this publication of Upton Close was printed on the same press in San Diego on which Leon de Aryan prints the Broom; De Aryan was twice indicted for seditious conspiracy during the war.

An official letter from the War Department completely explodes this false insinuation. Former Secretary of War Patterson pointed out that Williams is no longer connected with the military service and that when he was in the Army his work had to do with "weather and air" intelligence and was not connected in any way with the investigation of subversive activity. This is what Secretary Patterson wrote to Justice Meier Steinbrink concerning Mr. Williams and the Upton Close pamphlet:

WAR DEPARTMENT,
Washington, May 28, 1947.

Hon. MEIER STEINBRINK,
National Chairman, Antidefamation League of B'nai B'rith,
New York, N. Y.

DEAR JUDGE STEINBRINK: I have had Closer-Ups Supplement No. 1—the Anti-Defamation League, by Robert H. Williams, carefully checked as a result of your letter of May 1, 1947. I assure you that nothing contained within that pamphlet referring to the character of Jews in the Army had been prepared as the result of any information gathered by Mr. Williams from any official records within the War Department while he was in the military service. His statements reflect the thinking of one individual and do not express any opinion or statement of the War Department.

Mr. Williams served as a major in the Army of the United States (Air Corps) during World War II. He was for a time an intelligence officer in an air squadron overseas, but he was not concerned, in that capacity, with the investigation of Communists or any subversives. His work had to do with weather and air intelligence. He is not now a member of the Air Reserve and is no longer connected with the military service.

Any statement made by Mr. Williams was not made as an agent of the War Department, but was made as a civilian without the consent of or prior approval of the War Department. His statements cannot be considered as reflecting the attitude of the War Department.

Under the circumstances the War Department can take no action, unless in the course of any statement made by Mr. Williams he discloses any information of a classified nature which he has obtained as the result of his service in the armed forces of the United States.

Our Army, made up of Catholics, Protestants, and Jews, brought us the greatest victory in our history, and any statement which would reflect unfavorably on the loyalty of any racial or religious group among them is utterly without foundation.

Contrary to the statement in the pamphlet, B'nai B'rith has a record for patriotic service which was recognized by both Army and Navy citations.

Yours sincerely,

ROBERT P. PATTERSON,
Secretary of War.

Remarks of Hon. Francis Case, of South Dakota, Before the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit the following remarks made by me before the thirty-seventh convention of the National Rivers and Harbors Congress on May 2, 1947:

Senator MCCLELLAN, distinguished guests and delegates to the thirty-seventh convention of the National Rivers and Harbors Congress, we return to the works of peace—we hope. The assembling of the National Rivers and Harbors Congress in Washington, again, is the sign that the National Congress is expected to give to control and conservation of our water the attention and the money that has lately been given to war.

The difficulty is that we have the war to pay for. We have a national debt of approximately $260,000,000,000. Before the war we though it was high when it climbed to fifty-five billion.

And a second difficulty is that the aftermath of the war is expensive, too. A few days ago Congress completed action on a deficiency bill to appropriate $200,000,000 to supplement the four hundred and twenty-five million previously appropriated to feed our late enemies, in this current fiscal year. And during the past week, the House of Representatives approved a bill to authorize $200,000,000 to supplement previous contributions through UNRRA for war-devastated countries. And next week, the House will consider another bill to authorize four hundred million for Greece and Turkey.

That is 300 plus 200 plus 400, or a total of $900,000,000 within a week or so—for relief and reconstruction abroad.

The latter part of this month, it is expected that the War Department Subcommittee of the Appropriations Committee of the House of Representatives will begin hearings on the budget estimates for the civil functions of the War Department. This is the bill in which you are interested, the bill which carries the money for the Army engineers to carry on authorized river-and-harbor and flood-control projects in the fiscal year beginning July 1, 1947, and ending June 30, 1948.

What are the budget estimates for fiscal 1948?

For rivers and harbors, $101,994,000.

For flood control, general, $163,356,000, plus thirty million of 1947 balances carried forward to 1948.

For flood control, Mississippi River and tributaries, $24,000,000.

For flood control, Sacramento River, $1,000,000.

How do these compare with prior years?

In 1940 for fiscal year 1941, on rivers and harbors, the civil-functions bill carried $67,000,000, against the $101,994,000 requested for 1948.

On flood control, general, in 1940 for fiscal 1941, there was appropriated $70,000,000 against the $163,000,000 of new money requested for 1948.

On Mississippi flood control, in 1940 for fiscal 1941, there was appropriated $30,000,000 as compared with $24,000,000 requested for 1948.

The President's budget for 1948 has been accompanied by the statement:

"The amount of construction provides for continuing or completing work on only those projects for which Congress has previously appropriated funds for construction. This does not provide for starting any additional projects."

That should be kept in mind in comparing the estimates for next fiscal year with the appropriations of 1940 for 1941. Heretofore, the funds appropriated have always embraced some new construction. What attitude the Appropriation Committees of the House and Senate will take on this point, I am not able to say, of course, but that is a point on which I will express my own personal opinion a bit later.

Of the $101,994,000 requested for rivers and harbors, $50,000,000 is for maintenance of existing works, approximately $25,000,000 is for carrying forward projects on which money has already been expended, and of the balance $20,000,000 is for operation of canals, $3,645,000 for examinations and surveys, and the balance miscellaneous.

Of the $163,000,000 for flood control general, $151,000,000 is for construction, $4,000,000 is for plans and specifications, $3,500,000 for preliminary examinations and surveys, and the balance for maintenance, salaries, and miscellaneous expenses.

Of the $24,000,000 for the Mississippi flood-control fund, one-half is for new work and one-half is for maintenance.

I have not been able to attend earlier sessions of this convention and I do not know how much of this information may have been brought to your attention. I note that the distinguished senior Senator from South Dakota, the Honorable CHAN GURNEY, has already spoken in behalf of the Senate Appropriations Committee on this subject and he may have presented these figures. Or, he may have simply speculated on what the House committee would do to these Presidential recommendations.

Appropriation bills originate in the House of Representatives as you know. That is, in the language of the very able chairman of the House Appropriations Committee, the Honorable JOHN TABER, of New York, "we operate on the budget estimates first."

If some of the current columnists can be believed it might be said that the House operates on the budget and sometimes the Senate revives the patient. Be that as it may, I think the record will show through

the years that the Appropriations Committee of the House of Representatives has shown a sound understanding of the values in the rivers and harbors and flood-control work carried on by the Corps of Engineers of the United States Army.

In that connection, it might be noted that the inland waterways of the country carried over 29,000,000,000 ton-miles of traffic in 1945 compared with 9,500,000,000 ton-miles in 1934, just 11 years earlier.

There are three questions of policy which Congress in one way or another is going to pass upon, which I think should be brought to your attention. They bear directly upon the water work in which you are interested.

First, I will mention the question of rates for electric power sold from Government-built hydro projects. Testimony developed during the recent hearings of the Appropriations Subcommittee for the Interior Department developed that there are very great variations in the rate charged for power sold from different dams.

Power is sold from the Bonneville Dam at an average of 2 mills. Within the same consumer area, power from Reclamation Bureau-built dams in the same transmission area is sold at varying prices up to 5 and 6 mills, depending upon the power component when the project's feasibility was passed upon.

When these powers compete, naturally the cheaper gets the market and it may be the market which is needed to maintain feasibility for a given project.

It is not my province to discuss the problem in all its ramifications this morning, but I mention it because some national policy must be decided as we proceed. The problem is involved in the Rockwell and Lemke bills before the Public Lands Committee and the Dondero bill before the Committee on Public Works. I am sure that your members are taking note of the implications for the future program of water use.

The second policy question which must be determined is whether the Congress will appropriate money to start new river and harbor or flood-control projects this yea . As I have noted, the President's budget does not contemplate money for starting additional projects. The amount recommended is only for projects for which Congress has previously appropriated funds for construction.

Is that policy to be followed by the Eightieth Congress? I urge that this Rivers and Harbors Congress of delegates from all over the country ponder the matter and express yourself in your resolutions and in your communications to the Congress of the United States.

I am not authorized to speak for anyone but myself; I do not know how other Members of our House committee feel on this matter. I think there is something to be said for finishing projects with dispatch, particularly flood control projects so as to begin deriving benefits from them. At the same time, for myself, I wish to say, that I do not think the urgency of a project can be measured by whether it has been begun before any given date or not. I have in mind some relatively small projects where the threat of floods to life and property is far greater than some projects where work has already begun. Personally, I think that the urgency of a project is something to be measured by individual examination and not by a blanket rule. I am sure, however, that the Congress will welcome your conclusions on that matter after you have deliberated and considered the projects presented to you.

The third question of policy which will be considered, perhaps not directly but nonetheless actually, is whether appropriations for the development of the United States in the way of improvements of rivers and harbors and control of floods and putting of water to beneficial uses will be abandoned or curtailed because of a demand for relief programs abroad.

In this connection, I call your attention to the lead article in the magazine World Report, for April 15, 1947. Under the head, "U. S. aid to democracies calls for huge investments abroad" the article starts off by saying "If the program is carried to logical end, $21,000,000,000 would be committed in loans and grants in 3 years." It goes on to say that financing at the rate of $7,000,000,000 a year for 3 years is the prospect of "the new U. S. Policy" whose implications have been checked with national and international experts.

Again, this is not the time or place to go into details of that matter, but I think we are warranted in pointing out that the entire amount of money spent on all river and harbor and flood-control projects in the United States from 1824 to 1944, inclusive, has amounted to only a little over five and a half billion dollars, or considerably less than the amount estimated as the cost of the new overseas program in a single year.

The figures, and I take them from a table recently used by Secretary of the Interior Krug, are these:

Existing river and harbor and flood-control projects (1824–June 30, 1944)	$3,996,608,356
Bureau of Reclamation projects (1902–44)	870,105,502
Tennessee Valley Authority (1933–43)	640,350,445
Bonneville Power Administration to Dec. 31, 1944	85,028,136
Total	5,592,093,439

In fact, you could add the original cost of the Panama Canal and still not equal the estimated cost of the foreign relief program for a single year.

I do not need to tell this group that many of these projects in the United States are directly reimbursable. The reclamation projects are. Many public works projects return revenues by the sale of electric power and service tolls. And all of these projects return dividends, whether in cash or other values. Presumably the foreign relief program will return dividends, and I am not seeking to start a debacle on the justification or lack of justification for that program. All of these projects belong to the people of the United States. All I seek to do, is to point out that the Congress and the Nation will of necessity determine how far we can go, and whether or not, the embarking on a very large program of foreign relief will require us to curtail our program of civil works at home.

As I said at the outset, we seek to resume the work of peace—or perhaps I should say the works of peace, the public works program of harnessing our rivers, of clearing our harbors, of preventing floods and of converting sources of damage and destruction into sources of blessing and more abundant living.

This is a constructive task to which we address ourselves. It is a program of which everyone who plays a part can be proud all his days.

Vigorous Upturn in Housing Construction

EXTENSION OF REMARKS

OF

HON. JESSE P. WOLCOTT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. WOLCOTT. Mr. Speaker, a new 20-year high in housing starts and completions was reached in June of this year, according to a recent Government news release. June 1947 starts of new permanent dwelling units totaled 77,000 compared with 64,100 in June 1946. Figures for July indicate a continuation of the favorable trend. In July 1947 there were 80,000 starts and 65,400 completions which compare with 62,600 starts and only 36,700 completions in July a year ago. For the first 7 months of 1947 there were 440,800 starts and 428,200 completions of new permanent housing units which compare with 402,700 starts and 165,300 completions in the first 7 months of 1946.

Last year's promising start in home building construction was checked by reimposition in late March 1946, of Government building controls. Contraseasonally, permits for new permanent dwelling units reached a peak in March and starts reached a peak in May. This year the home-building industry, freed from Government construction controls by terms of the Housing and Rent Act of 1947, is evidencing a vigorous upturn which holds every promise of continuing on into August in a normal, seasonal pattern.

This vigorous upturn in housing construction has been stimulated in many ways by legislation enacted by the Eightieth Congress. Of the 26 bills reported out of the House Banking and Currency Committee, 8 were concerned with various phases of housing and all except 1 of these bills were enacted into law.

The Housing and Rent Act of 1947 provided for the continuation of rent control in defense rental areas until March 1, 1948. It also recognized that termination of Federal Rent Control was inseparably linked with the question of an adequate supply of housing accommodations. Accordingly, steps were taken to free the housing industry from governmental controls and provide incentive for the production and rental of additional housing accommodations. As noted above the act removed the remaining governmental controls on the construction industry except that the Housing Expediter was given authority to require a permit as a condition for the construction of any building or facilities to be used for amusement or recreational purposes. Incentive was given to increasing the supply of rental housing through removing from rent control, housing accommodations completed or provided through conversions into additional housing accommodations, after February 1, 1947. Properties which had not been rented as housing accommodations—other than to members of the immediate family of the occupant—during the 2-year period February 1, 1945, to January 31, 1947, were freed from rent control in order to bring many of these properties on to the rental market. It has long been recognized that one of the deterrents to the provision of new rental units, especially in the case of the small property owner, was the lack of incentive to invest in new construction or supply additional units by converting existing properties due to the rigors of rent control.

Manufacturers of prefabricated housing accommodations were given assistance in the form of FHA guarantee of loans made through usual banking sources, up to 90 percent of the amount which the National Housing Administrator estimates to be the necessary current

cost of manufacturing such houses. Throughout the act, particular care was taken to assure veterans preference on housing accommodations built for sale or rental purposes.

Public Law 120 of the Eightieth Congress extended the provisions of title I of the National Housing Act, as amended, for an additional 2 years with respect to the authority of the Federal Housing Administration to insure home modernization and improvement loans. To date the title I program has assisted approximately 6,000,000 home owners to improve or repair their property. Operations under this program are comprised of character loans, generally unsecured, which have a relatively short maturity.

The proceeds of these insured loans aid the property owner in such work as repairing the foundation of his home, replacing his worn out furnace or heating system, improving the lighting or plumbing system, building a new barn, service building and many similar repairs or improvements. Many small businessmen dealing in lumber, plumbing, and heating supplies, paint and wallpaper, roofing, and hardware, and those engaged in the fabrication and installation of these materials benefit from this program.

During the war emergency, construction was deferred on many low-rent-housing and slum-clearance projects for which Federal Public Housing Authority had contracted to extend financial aid. In many cases, increased construction costs have made it difficult if not impossible for the local housing authorities to reactivate these projects within the cost limitations of the United States Housing Act of 1937, as amended. The FPHA, under date of April 16, 1947, submitted a list of such urban projects comprising 100 developments containing 16,386 units located in 71 cities in 27 States.

By virtue of the provisions of Public Law No. 301, these municipalities with which the FPHA had previously entered into a contract have the opportunity of going ahead with the project by simply absorbing the excess cost above the cost limitations in the act. Thus, these 100 projects for which Federal funds had previously been allocated could be completed and provide additional housing for the communities concerned.

Public Law 85 of the Eightieth Congress provided an additional $35,500,000 to further carry out the program of providing temporary housing for veterans in municipalities and at educational institutions. These additional funds will supply housing accommodations in projects which had been suspended in 1946 and early 1947 due to lack of funds and rising construction and labor costs. The housing provided by this measure is urgently needed for veterans and their families attending educational institutions, and to help relieve temporarily the housing shortage for veterans and their families in municipalities.

Public Law 372 liberalized the provisions of the Home Owners Loan Act of 1933 with respect to certain loans made by Federal savings and loan associations. It provides that such associations may invest their funds in loans insured under title I of the National Housing Act, home loans guaranteed or insured under the GI bill, and other loans for property alterations and repair. Additional assistance in the home-financing field was given by Public Law 311 which increased the maturity of mortgages, acceptable as collateral security for advances by Federal home-loan banks to member institutions, from 20 to 25 years. In view of the fact that many of the FHA insured mortgages and GI insured or guaranted home loans are for 25 years, they were ineligible for use as collateral for Federal home-loan bank advances.

The Housing and Rent Act of 1947 extended the time during which FHA title VI mortgage insurance could be granted from June 30, 1947, to March 31, 1948. When this legislation was under consideration by the House Banking and Currency Committee officials of FHA did not request any increase in the amount of insurance authorized. They anticipated the additional $1,000,000,000 authorization made available by the President in January 1947 would be sufficient to carry the program through March 31, 1948. It is significant that less than 4 months later there had been such an increase in mortgage-insurance applications that studies of FHA indicated the then existing authorization would probably be exhausted before the end of the year and that an additional amount of mortgage insurance authorization under title VI would have to be provided to carry the program through March 31, 1948. Public Law 366 increased FHA title VI authorization by $200,000,000 and gave the President the power to further increase the authorized amount by an additional $200,000,000 should the need arise.

Public Law 366 also contains a provision which makes available FHA title VI insurance in financing the purchase of Government-owned permanent war housing. It will make possible the means by which many veterans can obtain the financing necessary to acquire these war housing units at moderate prices. It is particularly desirable in view of the difficulties of veterans in obtaining housing in the current high-cost housing market. Mortgage insurance for this purpose was authorized in the amount of $750,000,000. There are approximately 166,000 housing units in this Government-owned war housing.

Summary of Major Legislation, Eightieth Congress, First Session

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a summary of major legislation of the first session of the Eightieth Congress.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF MAJOR LEGISLATION, EIGHTIETH CONGRESS, FIRST SESSION (JANUARY 3–JULY 26, 1947)

In this session Congress considered a total of 7,289 measures introduced in House and Senate and enacted into law 388 public bills and 131 private bills. The full list of public laws enacted appears in the final issue of the CONGRESSIONAL RECORD daily digest for August 15, 1947. Major legislation is reported below.

AGRICULTURE

Commodity Credit Corporation Extension Act of 1947

(Public Law 130. Approved June 30, 1947)

Congress extended the Commodity Credit Corporation as an agency of the United States until June 30, 1948, and restored its capital. The Commodity Credit Corporation is the lending institution created for the purpose of financing and aiding in marketing of agricultural products. It carries out the program for the support of farm prices.

Federal Crop Insurance Act of 1947

(Public Law 320. Approved August 1, 1947)

A sounder approach to the stabilization of rural economy was assured by placing the crop-insurance program on a county basis and extending such insurance only to counties in which income from insured crops is of primary importance. The Federal Government is thus enabled to study closely the operation of the program and extend coverage in accordance with experience and future needs. Insurance for the 1948 crop would be made through associations and cooperatives operating within local insurance areas.

Foreign Farm Labor Supply Liquidation Act of 1947

(Public Law 40. Approved April 28, 1947)

With the termination of war, extensive importation of foreign farm workers was no longer necessary, though farm-labor shortages still exist in some areas. This act of Congress provides for continuation of the program through December 31, 1947, and for liquidation thereafter. An adequate supply of domestic farm labor was encouraged by placing responsibility on the Secretaries of Agriculture and Labor to take such action as might be necessary to assure maximum cooperation between agricultural extension services of land-grant colleges and State public employment agencies.

Livestock disease control

(Public Law 8. Approved February 28, 1947)

In order to protect livestock and related industries of the United States the Secretary of Agriculture was authorized to cooperate with Mexico in eradicating foot-and mouth disease or rinderpest in Mexican cattle so as to prevent the disease from increasing and spreading across United States borders to western meat-producing States.

Marketing Agreements Act of 1947

(Public Law 305. Approved August 1, 1947)

This Act provides more flexibility in the financing and administration of marketing agreements and provides for a continuity of operation not authorized in prior laws. Formerly, minimum standards for quality and maturity of commodities were not continuously administered. The present law remedies this by providing that the Secretary of Agriculture shall maintain quality and maturity standards above or below parity and continue operations in the public interest.

Oils and fats production census

(Public Law 243. Approved July 25, 1947)

In order to aid in stabilizing the fats and oils production trades, Congress au-

thorized the Bureau of the Census to collect and publish monthly statistics on the quantities and kinds of oil and fat products processors have on hand or in transit to consuming establishments. The prior lack of current statistics such as are provided for the benefit of other industries hampered production and marketing of these basic commodities.

APPROPRIATIONS

All appropriations were carefully scrutinized to insure effective continuation of sound projects and to eliminate those which had doubtful value to efficient operation of the Government. Many reductions were effected by coordinating overlapping and duplicating programs thus making such programs more efficient by simplifying administration and centralizing operations. Without curtailing funds for the essential activities of Government, economy, and a better balance has been achieved between service rendered and the cost of such service. Following is an official table prepared by the Senate Committee on Appropriations showing the appropriations measures, together with the increase or decrease between the amount requested and the amount appropriated:

Summary of budget estimates, appropriations enacted, and savings effected by the 80th Congress, 1st session

Public Law		Budget estimate	Law	Actual increase or decrease
	PART I. REGULAR APPROPRIATIONS			
266	Agriculture	$802,360,608	$613,046,826	−$189,313,782
237	District of Columbia	95,793,160	95,504,737	−288,423
268	Government corporations	50,137,500	35,040,000	−15,097,500
269	Independent offices	8,500,497,759	8,188,822,927	−311,674,832
'47	Interior	295,463,060	194,587,859	−100,875,201
165	Labor, Federal Security	1,771,614,039	1,674,158,631	−97,455,408
197	Legislative	76,153,077	55,294,435	−20,858,642
267	Military	5,716,791,500	5,482,529,633	−234,261,867
202	Navy	3,513,000,300	3,268,766,100	−244,234,200
166	State, Justice, Commerce, and Judiciary	698,788,588	551,175,932	−147,612,656
147	Treasury, Post Office	4,099,123,500	3,216,500,450	−882,614,050
296	War, civil functions	619,727,100	502,123,912	−117,603,188
	Total, regular appropriations	26,239,450,191	23,877,560,442	−2,361,889,749
	PART II. SUPPLEMENTAL APPROPRIATIONS			
161	Emergency appropriation	5,750,000	6,180,000	+430,000
271	First supplemental	1,925,682,823	1,658,802,197	−266,881,626
256	Supplemental Government corporations	35,500,000	35,500,000	
299	Second supplemental	242,285,460	106,695,100	−135,590,360
	Total, supplemental appropriations	2,209,219,283	1,807,177,297	−402,041,986
	PART III. DEFICIENCY APPROPRIATIONS			
22	H. J. Res. 154	9,000,000	9,000,000	
25	H. J. Res. 159	243,714,587	243,255,607	−458,980
46	First deficiency, 1947	3,082,332,589	2,835,161,509	−247,171,080
76	Second deficiency, 1947	224,528,415	192,438,859	−32,089,556
20	Urgent deficiency, 1947	179,319,100	179,645,668	+326,568
122	Second urgent deficiency, 1947	61,778,758	72,236,258	+10,457,500
	Total deficiency appropriations	3,800,673,449	3,531,737,901	−268,935,548
	PART IV. PERMANENT APPROPRIATIONS			
	Total	5,951,309,846	5,911,309,846	−40,000,000
	PART V			
	Supplemental and deficiency estimates submitted but not considered	90,805,020		−90,805,020
	Grand total	38,291,457,789	35,127,785,486	−3,163,672,303

NOTE.—To the savings of $3,163,672,303 in the regular and deficiency appropriations above, there may be added $4,017,332,946 of rescissions of authorized and contemplated expenditures canceled by congressional action, making a total of $7,181,005,249 as set forth in detail by Senator STYLES BRIDGES, chairman, Senate Appropriations Committee, in the CONGRESSIONAL RECORD, Aug. 15, 1947.

AVIATION

Congressional Aviation Policy Board

(Public Law 287. Approved July 30, 1947)

Congress established a temporary Congressional Aviation Policy Board to survey and report on development of a national aviation policy adequate to meet the needs of national defense, interstate and foreign commerce, and the postal service; and to provide for formulation and clarification of national policies affecting aviation.

Surplus Airport Act of 1947

(Public Law 289. Approved July 30, 1947)

Under this act Congress permitted transfer of surplus airports and airport facilities without cost to any State, municipality, or tax-supported institution when used for the benefit of the public without discrimination. Harbor or port terminals including necessary equipment should first be offered for sale or lease to States or political subdivisions thereof. The Federal Government reserves the use of airports and facilities in case of national emergency.

CONSERVATION AND FLOOD CONTROL

Emergency Flood Control Act of 1947

(Public Law 102. Approved June 23, 1947)

The sum of $15,000,000 was authorized to be immediately expended by the Secretary of War, supervised by the Chief of Engineers, for emergency repair, restoration, and strengthening of levees and other flood-control works threatened or destroyed by recent floods.

Forest Pest Control Act of 1947

(Public Law 110. Approved June 25, 1947)

To preserve forest resources of the United States, enhance forest growth, and protect forests from the ravages of pests and diseases, the Secretary of Agriculture was authorized, directly or in cooperation with States, Territories, individuals, or organizations, to conduct surveys on all forest lands, appraise infestations and determine measures to remedy such infestations. Not only will this program retard forest losses and aid in flood control but lumber industries and employment of persons in lumber and allied industries will be made more secure.

Interstate Oil Compact Act of 1947

(Public Law 184. Approved July 12, 1947)

This act enabled oil-producing States to extend conservation policies with regard to oil and gas and by joint agreement to secure enactment of legislation preventing wasteful and destructive practices in production methods. The compact includes an interstate commission to foster these objects.

New England water pollution compact

(Public Law 292. Approved July 31, 1947)

Congress approved extension of the authority for the New England States to enter into an agreement to reduce pollution of interstate streams, ponds, lakes, and tidal waters.

Pacific marine fisheries compact

(Public Law 232. Approved July 24, 1947)

Consent and approval of Congress was granted to the fisheries agreement entered into by the States of California, Oregon, and Washington to promote better utilization and conservation of their Pacific fisheries resources by an interstate commission and other measures.

FINANCE

Export-Import Bank Act of 1947

(Public Law 89. Approved June 9, 1947)

To secure a more effective exchange of commodities between the United States, its Territories and insular possessions, and foreign countries, the Export-Import Bank was reincorporated as an agency of the Government, given broader financial powers and operation was extended through June 30, 1953.

Federal Deposit Insurance Corporation

(Public Law 363. Approved August 5, 1947)

This act authorizes the FDIC to retire its capital stock by payment to the Treasury retaining a capital surplus of $1,000,000,000 and the borrowing power of the Corporation is increased to $3,000,000,000 to provide adequately for continuation of bank-deposit insurance.

Federal Reserve banks

(Public Law 41. Approved April 28, 1947)

Federal Reserve banks were authorized to purchase and sell Government securities direct from the Treasury to permit the Treasury to obtain funds quickly to meet temporary situations or contingencies. This enables the Treasury to operate on a smaller cash reserve and results in a substantial saving of interest.

Reconstruction Finance Corporation Act of 1947

(Public Law 132. Approved June 30, 1947)

Under provisions of this act the RFC was extended with many changes in organization and powers for 1 year with lending authority of $2,000,000,000. Loans for domestic improvements, State and local, were authorized, including power to purchase surplus property for resale to small business, to obtain a wider national distribution of such surplus through small-business outlets.

GOVERNMENT COMMODITY AND OTHER CONTROLS

Consumer credit control

(Public Law 386. Approved August 8, 1947)

Consumer credit controls on installment loans (including Regulation W) are eliminated after November 1, 1947.

First Decontrol Act

(Public Law 29. Approved March 31, 1947)

Congress discontinued as of March 31, 1947, broad war powers granted to the President in the Second War Powers Act to control motor and water carriers, requisition property, assign priorities, and waive navigation

and inspection laws. Portions of the act were continued through June 30, 1947, to permit allocations to be completed on articles committed for foreign consumption prior to March 24, 1947.

Second Decontrol Act of 1947

(Public Law 188. Approved July 15, 1947)

A reduced list of materials and facilities in short supply at home and abroad were continued under control to promote production in the United States and to assist export of products required for production in foreign countries of critical material urgently needed in the United States.

Sugar Control Act of 1947

(Public Law 30. Approved March 31, 1947)

Sugar, remaining in scarce supply, was continued under moderate controls until October 31, 1947, in order to insure proper distribution. Inventory controls were authorized, except, for household users, until March 31, 1948. Allocation and pricing powers were placed under the Secretary of Agriculture who was directed to watch the sugar situation and to remove all controls when he determines that supplies are adequate.

Sugar Act of 1947

(Public Law 388. Approved August 8, 1947)

This act of Congress is designed to meet postwar adjustment problems in the production and distribution of sugar and to stabilize the sugar producing, refining, and importing industries by placing producers on a tonnage rather than a percentage basis. The United States market is divided among the several domestic sugar-producing areas. Allocations to certain foreign-producing areas were made in accord with their historic relation to the domestic market to stabilize their economy and for the best interests of the United States.

Termination of certain war emergency acts

(Public Law 239. Approved July 25, 1947)

This act of Congress ended a large number of war emergency measures rendered unnecessary by the termination of hostilities. Many of these measures related to authorizations for use of wartime appropriations.

GOVERNMENT ORGANIZATION

Commission on Organization of the Executive Branch of the Government

(Public Law 162. Approved July 7, 1947)

In order to secure more efficient service in the transaction of public business by Government bureaus, agencies, and boards, a 12-member bipartisan commission was created to study organization and methods of operation. The Commission is to be composed of 6 members from private life and 2 each from the Senate, House of Representatives, and the executive branch of the Government and will report its recommendations to Congress for action.

HOUSING

Federal Home Loan Bank

(Public Law 311. Approved August 1, 1947)

Congress broadened existing law by authorizing Federal home loan banks to accept mortgages having a 25-year maturity (present law 20 years) as mortgage collateral.

Housing and Rent Act of 1947

(Public Law 129. Approved June 30, 1947)

In order to spur the building of immediately needed housing, Congress removed Government controls on construction, except amusement building, and extended rent controls until March 1, 1948. To insure tenants against undue increases in rent after March 1, 1948, provision was made for negotiated rent increases not to exceed 15 percent in return for protection to tenants in their occupancy by a lease to run to December 1948. By that date it is estimated that supply will substantially balance demand making housing and rent controls no longer necessary.

Mortgage Insurance Act of 1947

(Public Law 366. Approved August 5, 1947)

In order to further relieve the housing shortage Congress authorized the Federal Housing Commissioner to increase mortgage insurance for private home building by $200,000,000. In addition $750,000,000 in mortgage insurance was made available to veterans to purchase permanent housing including housing built by the Government during the national defense and war period.

Low-cost housing and slum clearance

(Public Law 301. Approved July 31, 1947)

To enable local housing authorities to reactivate prewar projects for low-cost housing and slum clearance, Congress released such authorities from provisions of prior law which restricted building costs to low prewar levels.

Veterans Housing Act of 1947

(Public Law 85. Approved May 31, 1947)

Congress authorized expenditure of $35,500,000 additional for housing construction for distressed families of servicemen and veterans. The housing program for veterans' families in educational centers had been deplorably slow and provision was made in this act to speed up and complete construction for student veterans and their dependents.

INTERNATIONAL RELATIONS

Devastated Countries Assistance Act of 1947

(Public Law 84. Approved May 31, 1947)

Congress authorized expenditure of $350,000,000 to send essential supplies to War devastated countries. Such supplies were limited to medicine, food, clothing, fuel, fertilizer, pesticides and seeds. A substantial portion of this fund is earmarked for the care and feeding of children.

Greco-Turkish Aid Act of 1947

(Public Law 75. Approved May 22, 1947)

Congress authorized a $400,000,000 loan to Greece and Turkey, providing therein for cooperation with the United Nations.

International Refugee Organization Act of 1947

(Public Law 146. Approved July 1, 1947)

Membership by the United States in this organization to aid in the resettlement and reestablishment of persons displaced by the war was authorized by Congress with reservations providing (1) no person could be resettled in the United States, its territories or possessions without prior authorization by Congress; and (2) immigration laws were not superseded, suspended or abrogated by this act.

Institute of Inter-American Affairs

(Public Law 369. Approved August 5, 1947)

Congress reestablished the Institute of American Affairs and the Inter-American Educational Foundation, Inc., as a single government corporation. The Institute is organized to assist in strengthening the community of American nations and to improve social and economic conditions by concrete programs in the fields of public health, sanitation, agriculture and education.

Pacific islands trusteeship

(Public Law 204. Approved July 18, 1947)

Congress approved the agreement between the United States and the United Nations for United States' trusteeship of the Pacific Islands formerly held by Japan under mandate of the League of Nations. The islands under trusteeship are to be known as the territory of the Pacific islands.

Puerto Rico Organic Act of 1947

(Public Law 362. Approved August 5, 1947)

This act expands the powers of self-government of the people of Puerto Rico by authorizing them to elect their own Governor who is empowered to appoint the heads of all executive departments, except the auditor and members of the supreme court who will continue to be appointed by the President of the United States.

Shipping for foreign relief

(Public Law 127. Approved June 28, 1947)

Congress extended authority of the Maritime Commission to operate, sell, and charter Government-owned vessels until March 1, 1948, in order that grain, oil, and other supplies might be sent abroad through the winter for the relief and rehabilitation of war-devastated countries.

Treaties of peace with Italy, Rumania, Bulgaria, and Hungary

(Executives F, G, H, and I)

On June 5 the Congress ratified the treaties of peace with Italy, Rumania, Bulgaria, and Hungary which had been negotiated and signed at Paris on February 10, 1947, by the nations formerly at war with these countries. The subjects covered by the treaties include guaranty of human rights, limitation of armaments in the ex-enemy states, fixing of reparations, treatment of former Italian colonies and economic and commercial policies to be followed by those states. These treaties were represented to be the best which could be achieved by general agreement and their ratification was urged as a preliminary step for final settlement with Germany and Japan.

United Nations Relief and Rehabilitation Administration liquidation

(Public Law 164. Approved July 8, 1947)

Authorized appropriation of $2,370.000 from unobligated funds formerly appropriated for UNRRA to pay expenses of Government agencies in liquidating the activities of this organization whose work terminated on June 30, 1947.

United Nations Site Act of 1947

(Public Law 7. Approved February 26, 1947)

Contributions to be used exclusively for the acquisition of a permanent site in New York City for headquarters of the United Nations were allowed as deductions from income, estate, and gift taxes. Pursuant to this authorization, the Rockefeller family gave to the United Nations a six-block-long area on the East River, thus terminating the long and disturbing controversy regarding a permanent home for the United Nations.

NATIONAL SECURITY

Army-Navy Nurses' Act of 1947

(Public Law 36. Approved April 16, 1947)

A permanent Nurses' Corps was set up in the Army and Navy with a total authorized strength of 6 to every 1,000 of the personnel of the Army and Navy. A Women's Medical Specialist Corps was established in the Army Medical Department consisting of Dietitian, Physical Therapist, and Occupational Therapist Sections. All laws relating to nurses in the Armed Forces were coordinated and rewritten in this act to simplify administration and to expedite the permanent establishment of the Nursing Corps.

Cadet and Midshipmen Pay-Increase Act of 1947

(Public Law 96. Approved June 20, 1947)

The pay of cadets and midshipmen at the service Academies was increased from $780 to $936 per annum.

Coast Guard Personnel Act of 1947

(Public Law 219. Approved July 23, 1947)

To improve the administration of the Coast Guard and enable the service to make permanent plans for its duties in maintaining national security a permanent commissioned personnel strength was established with ranks distributed in the same percentages as prescribed by statute for the Navy.

Copper import tax suspension

(Public Law 42. Approved April 29, 1947)

Copper for industrial and defense uses remaining in short supply, the Congress suspended certain import taxes on that commodity until March 31, 1949, to encourage increased importation for use of the vital copper industry in manufacture of materials and products essential to commerce and national security.

Domestic Tin Production Act of 1947

(Public Law 125. Approved June 28, 1947)

In order to provide tin supplies adequate to meet pressing military, naval and industrial requirements, Congress provided for study and investigation of the advisability of maintaining a permanent domestic tin smelting industry and to investigate availability of supplies of tin. The Reconstruction Finance Corporation was authorized to finance research in tin smelting and processing and to buy, sell and transport tin and tin ore for the immediate needs of the Nation's armed services and industries.

National Security Act of 1947

(Public Law 253. Approved July 26, 1947)

Unification of the armed services was provided by Congress to bring to the military departments in peacetime a large measure of the unity and effectiveness existing in war. Under the law a single Cabinet member, Secretary of Defense, heads three separate operating departments: Army, Navy, and Air Forces. Other sections established a Central Intelligence Agency and provide for integration of the armed forces under civilian control and for coordination with all other departments of the Government in an efficient and adequate system for national security.

Naval Postgraduate School Act of 1947

(Public Laws 302, 303. Approved July 31, 1945)

Congress authorized establishment of the Naval Postgraduate School to be located at Monterey, Calif., for advanced instruction and training of commissioned officers of the Regular Navy and Marine Corps and the reserve components thereof.

Naval Vessels Conversion Act of 1947

(Public Law 319. Approved August 1, 1947)

In order to insure improvement of naval vessels by incorporating the latest technical and scientific developments, Congress removed the limitation on the amount which could be expended on each vessel to install modern and up-to-date equipment.

Officer Personnel Act of 1947

(Public Law 381. Approved August 7, 1947)

Congress enacted legislation establishing a comprehensive and permanent promotion system for the armed services in harmony with the needs and structure of the modern Army and Navy. Necessary improvements are made in the present Navy system of promotion by selection and the Army system of promotion by seniority is changed to a system by selection. Uniformity in the promotion systems of the two services and further improvement of the armed services career system has thus been advanced.

Panama Canal equipment

(Public Law 160. Approved July 1, 1947)

This act of Congress provides for transfer to the Panama Canal of surplus Army and Navy equipment of all types which may be effectively used. Materials, supplies, tools, structures, vessels, and floating equipment which might otherwise deteriorate can thus be put to immediate use to increase security at this vital point.

Rubber stock-piling

(Public Law 24. Approved March 29, 1947)

In the interest of national defense Congress is authorized to study and report upon the most effective method of creating an adequate supply of natural and synthetic rubber. Stock-piling and rotation of rubber reserves together with certain controls are authorized until such time as permanent legislation is enacted and provision is made for continuing manufacture and sale of synthetic rubber.

Submarine Experimental Construction Act of 1947

(Public Law 63. Approved May 16, 1947)

A sum not to exceed $30,000,000 is authorized by Congress for construction of experimental submarines for national defense.

Voluntary Enlistment Act of 1947

(Public Law 128. Approved June 28, 1947)

In order to establish a career service in the Regular Army for enlisted men, minimum age for enlistment is lowered to 17 with parental consent with terms of enlistment service made more flexible and attractive.

War and Navy Professional Personnel Act of 1947

(Public Law 313. Approved August 1, 1947)

The War and Navy Departments were authorized to create additional professional and scientific positions with salaries from $10,000 to $15,000 per annum for such work. The 30 positions in the War Department and 15 in the Navy Department so authorized are to be included in the classified civil service.

PRESIDENT

Presidential Succession Act of 1947

(Public Law 199. Approved July 18, 1947)

This act provides that in case of removal, resignation, death, inability, or disqualification of both President and Vice President, succession should next go to the Speaker of the House of Representatives and in cases in which the Speaker of the House could not qualify succession would devolve (1) upon the President pro tempore of the Senate and (2) upon the Cabinet, beginning with the Secretary of State.

Presidential term amendment

(Proposed twenty-second amendment to the Constitution)

The Congress passed House Joint Resolution 27 on March 24 proposing an amendment to the Constitution limiting the tenure of the President to two terms, and a Vice President succeeding to office for more than 2 years of the unexpired term would be limited to one additional elective term.

As of August 1, 1947, 18 States have ratified this amendment to the Constitution out of 36 States required to make this amendment effective.

PUBLIC WELFARE AND LABOR

Arbitration in maritime disputes

(Public Law 282. Approved July 30, 1947)

Title 9 of the United States Code concerning settlement of maritime disputes by arbitration is codified and enacted into positive law.

Disposition of materials on public lands

(Public Law 291. Approved July 31, 1947)

Congress authorized the Secretary of the Interior to dispose of materials on public lands such as gravel, clay, sand, stone, and timber, to States and political subdivisions or to persons or organizations not reselling for profit, provided removal thereof is not detrimental to public interest or prohibited by prior law.

Farm Labor Supply Camps Act of 1947

(Public Law 298. Approved July 31, 1947)

To aid localities to continue farm labor supply camps and facilities in the areas in which they are needed Congress authorized the Secretary of Agriculture to dispose of such camps and required purchasers to operate and maintain them for the purpose of housing persons engaged in agricultural labor.

Federal aid to schools

(Public Law 317. Approved August 1, 1947)

Schools overburdened with war-incurred enrollment were extended Federal aid not to exceed $5,000,000 until June 30, 1948, to assist in transition from war to peacetime conditions.

Labor-Management Relations Act of 1947

(Public Law 101. Passed over veto, June 23, 1947)

This act recognizes the mutual rights and responsibility of employers, employees, and labor organizations in labor-management relations by providing for protection of individual employees in their relations with labor organizations, for protection in collective bargaining, for enforcement of labor contracts, for minimizing strikes and labor disputes, and by insuring fair labor practices on the part of employers and employees in the interests of uninterrupted production, the smooth flow of commerce, and the public health, safety, and welfare. Among other things the law provides:

1. Unions may be sued for breach of contract and for damages inflicted by jurisdictional strikes and boycotts.
2. The closed shop is forbidden.
3. The union shop is permitted if a majority of employees vote to favor it.
4. New contracts can provide for union dues deductions from pay envelopes of employees only upon voluntary consent of union workers.
5. Unions are forbidden to spend money or make contributions in political campaigns for Federal Offices.
6. Welfare funds can be established only for specified purposes and only if the employer participates in their administration.
7. Unions become subject to charges of unfair labor practices for failure to bargain collectively, for coercion of employees, and other practices.
8. Unions are required to file financial statements.
9. Government may secure eighty-day injunctions against strikes endangering national health and safety.
10. Neither unions nor employers may terminate a contract without a 60-day notice. Strikes and lockouts are barred within this period.
11. The National Labor Relations Board is increased to five members and the review of cases is placed directly in the membership of the Board rather than as formerly in a review section; reorganized procedure and powers of the Board to investigate, hold hearings and carry out provisions of the act.
12. A new Federal Mediation and Conciliation Service is established as an agency, separate from the Department of Labor, to carry out provisions of the Act with regard to peaceful settlement of labor disputes.
13. A Joint Committee on Labor-Management relations is established in Congress to study the field of labor relations and the operation of the Labor-Management Relations Act.

Portal-to-Portal Pay Limitation Act of 1947

(Public Law 49. Approved May 14, 1947)

This act banned suits by employees against employers for time or overtime used in arriving at the actual place of performance of their principal work or payment for activities which are preliminary or postliminary to their principal work. In cases in which contracts, written or unwritten, or custom includes payment for such activities such payment is not forbidden. Present, past, and future claims may be compromised at not less than minimum wage rates in cases in which there exists, under contract or custom, a bona fide dispute as to the amount payable by the employer to his employee.

Postal Employees Pay Act of 1947

(Public Law 265. Approved July 30, 1947)

This act of Congress gives supervisory employees in the postal service compensatory time for work in excess of 8 hours per day.

REVENUE AND TAXATION

Excise Tax Act of 1947

(Public Law 17. Approved March 11, 1947)

Excise taxes were continued by Congress on certain luxuries, including jewelry, furs, toilet preparations, and distilled spirits.

Wartime Tax Adjustment Act of 1947

(Public Law 384. Approved August 8, 1947)

This act provides for wartime depletion exemptions on certain minerals and terminates tax deductions on charitable contributions or gifts to be used ouside the Unied States or its territories. The $1,500 tax exemption in the armed services for officers and full tax exemption for personnel under the rank of officer is continued until December 31, 1948.

ROADS AND HIGHWAYS

Federal-Aid Highway Act extension

(Public Law 100. Approved June 21, 1947)

This amendment to the Federal-Aid Highway Act changes the existing 1-year limitation on use of highway funds to 2 years to provide time to States and local areas for further building and repair of urgently needed roads.

SOCIAL SECURITY

Federal Bureau of Investigation Retirement Act of 1947

(Public Law 168. Approved July 11, 1947)

This act provides greatly liberalized retirement privileges for agents, inspectors, assistant directors, and the Director of the Federal Bureau of Investigation who have reached the age of 50 years with 20 years of service, in consideration of the rigorous and dangerous duties performed.

Government employees' annuities

(Public Law 263. Approved July 30, 1947)

Employees separated from Government service with less than 10 years of service are permitted to withdraw the full amount of money previously deducted from their salaries for retirement purposes with interest at 4 percent.

Government Utilities Supply Act of 1947

(Public Law 284. Approved July 30, 1947)

Congress authorized the War and Navy Departments to sell electrical power, steam, compressed air, water, sewage and garbage disposal service, gas, ice and mechanical refrigeration utilities and services to welfare activities and private persons in the immediate vicinity of Naval or Military Establishments in cases in which such utilities were not otherwise available.

Nurseries and nursery schools

(Public Law 123. Approved June 27, 1947)

Congress appropriated $150,000 for assistance to working parents with children by providing for continuance and maintenance of nurseries and nursery schools in the District of Columbia.

Old-age assistance payments exemption

(Public Law 131. Approved June 30, 1947)

To aid the aged, States were authorized to disregard until July 1, 1949, income earned from agricultural labor and nursing service in making old-age assistance payments.

Postal Service Substitute Personnel Act of 1947

(Public Law 35. Approved April 15, 1947)

In order to correct inequities arising from conflicting legislation, substitute personnel in the postal service upon appointment to permanent status were allowed credit in that appointment on a calendar basis rather than on a basis of hours of service as in prior law; promotion of substitute personnel was also placed upon a calendar basis, which in effect increased the rates of pay, insuring more adequate wage levels in this classification of postal employees.

Social Security Act amendment of 1947

(Public Law 379. Approved August 6, 1947)

Congress authorized continuation of social-security taxes paid by employees and employers at 1 percent through 1949; the rate would rise to 1½ percent in 1950 and 2 percent in 1952. Federal grants for assistance to the needy aged, blind, and to dependent children was continued to June 30, 1950.

Surplus property for flood damage

(Public Law 233. Approved July 25, 1947)

Congress authorized the President, acting through the Federal Works Administrator, to employ any articles, declared to be surplus under the Surplus Property Act of 1944, to alleviate damage, hardship, and suffering caused by flood or other catastrophe. The Federal Works Administrator is further authorized to act through any Government agency or State or local governments to carry out the provisions of this act.

Teachers' salaries, District of Columbia

(Public Law 163. Approved July 7, 1947)

A minimum salary of $2,500 per annum was provided for teachers in the District of Columbia; classification and assignment methods were liberalized and provision for automatic promotions and annual increases in salary were included.

SOLDIERS AND VETERANS

Beneficiaries of aviation officers

(Public Law 236. Approved July 25, 1947)

Additional beneficiaries were made eligible to receive lump-sum aviation bonuses in the event of the death of aviation officers receiving such bonus. By listing the beneficiaries in succession this act provided for a more equitable distribution of estates of deceased aviation officers who have no designated beneficiaries.

Dependents' transportation

(Public Law 151. Approved July 1, 1947)

This act amends existing law so as to authorize transportation of dependents and household effects of personnel of the Navy, Marine Corps, and Coast Guard to unrestricted domestic posts and to overseas bases.

Disabled veterans' subsistence allowance increase

(Public Law 338. Approved August 4, 1947)

Payments to disabled veterans with service-connected disability of 30 percent or more taking vocational rehabilitation courses were fixed at $115 monthly if single, $135 with one dependent, and $20 per month for one child and $15 additional for each additional child, and $15 per month for a dependent parent.

Federal Employees' Military Leave Act of 1947

(Public Law 153. Approved July 1, 1947)

In order to extend privileges to Federal workers equal to those extended to workers outside Government service with respect to military leave, Federal employees who are members of the Enlisted or Officers' Reserve Corps, the National Guard, or the Naval Reserve are placed in the same status as private employees to receive pay and allowances while on military leave as well as full protection in their employment.

Government Life Insurance Renewal Act of 1947

(Public Law 34. Approved April 15, 1947)

To enable veterans to provide a longer period of insurance protection, 5-year level-premium term insurance policies expiring at the end of any 5-year period were made renewable for a second, third, fourth, or fifth 5-year period at the premium rate for the attained age without medical examination.

Government Life Insurance Reinstatement Act of 1947

(Public Law 5. Approved February 21, 1947)

The National Service Life Insurance Act is amended to permit service personnel to apply for permanent or term insurance on enlistment. Removal of restrictions liberalized reinstatement of lapsed insurance; and term insurance held by totally disabled personnel who fail to apply for conversion is automatically converted to the ordinary life plan.

Homestead Entries Act of 1947

(Public Law 82. Approved May 31, 1947)

This act liberalizes the former homestead entry law by allowing up to 2 years' credit on service in the armed forces from September 16, 1940, and, in addition, both husband and wife having veteran status are permitted to count their services jointly in credit against homestead entries.

Institutional On-Farm Training Act of 1947

(Public Law 377. Approved August 6, 1947)

Veterans desiring to take agricultural courses while working their own farms or employed on farms may receive educational allowances of $65 per month for single veterans and $90 per month for married veterans with additional allowances for dependents. Courses are to be given by accredited institutions with 200 hours per year (at least 8 hours per month) attendance, and supervised work experience on the farm or other agricultura establishment is required.

Pension increase for Civil War and Spanish-American War veterans

(Public Law 270. Approved July 30, 1947)

Veterans and their dependents of the Civil War and Spanish-American War received a 20-percent monthly pension increase.

Prisoners of War and Internees Tax Reduction Act of 1947

(Public Law 310. Approved August 1, 1947)

Interned service men and women and civilian personnel who were citizens of the United States and who were removed by the Japanese from United States possessions to confinement outside such possessions were given tax-exempt status for the period of their internment.

Terminal Leave Bond Payment Act of 1947

(Public Law 254. Approved July 26, 1947)

Congress authorized cash settlement of bonds issued to veterans for terminal-leave pay at any time after September 1, 1947, together with interest computed to the end of the month in which payment is made.

Terminal Cash Payment Act of 1947

(Public Law 350. Approved August 4, 1947)

Congress provided that in lieu of terminal leave, cash payments would be made on base pay, plus longevity, and that reenlisted personnel may take a cash payment for accrued leave or transfer accrued leave to the new enlistment.

Vocational rehabilitation loans

(Public Law 115. Approved June 25, 1947)

To encourage returning veterans to take up vocational rehabilitation courses, a revolving fund of $3,000,000 was authorized to extend temporary loans to veterans who might not otherwise be able to enter upon such courses.

The Implications of Federal Aid to and Control of Education

EXTENSION OF REMARKS
OF

HON. RALPH W. GWINN
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 26, 1947

Mr. GWINN of New York. Mr. Speaker, all is not well with American education.

Can its ills be cured by Federal aid?

Millions of our citizens say "no" and assert that the sickness of the world is not due so much to the lack of money for education as it is to the lack of God in the instruction in the moral law. If so, Federal aid and control of education by the far-off Central Government would only more completely exclude religious disciplines from our educational enterprise and worsen our situation.

They believe that the Federal influence even now upon education and the political controls of education already exercised by the separate States must inevitably lead the people to put their faith in the false promises and harsh disciplines of the politics of a godless statism. This must lead to the arrest of freedom with its self-government under God's laws and the extensive substitution of compulsory government by mere men over other men.

They contend that if God and the moral law are thrown completely out of our public education, which Federal aid and control of necessity requires, there will be no other God to which the people can turn except the central state. It becomes the source of right and it determines what is wrong in the absence of self-government. This is true in Rome, Berlin, Moscow, and, to a great extent, in London, today. They ask, shall Washington follow?

How far have we gone? The individual States all force payment of taxes to support schools. They compel school attendance under threat of jail for the parents. Likewise, they exclude in most cases all religious disciplines by State administrative influence and compel the pupils to submit to the teachings and doctrines of many inefficient teachers whom the States force upon the local school boards by such measures as the compulsory tenure laws.

The practical effect is to compel, through taxation and State control, the great majority of parents to submit their children to pagan statism instead of the Christian disciplines. Needless to say, this kind of a system is contrary to the original American design for public education which was intended to be a Christian school under local controls and protected by the laws of the States. As a result of statism, millions of people are now protesting by sending their children to private and parochial schools. Such enrollments have risen sharply in the last 25 years from 7.3 to 10.5 percent of all students attending school. Public school enrollments have declined in the same proportions.

If education is supported and administered locally, the people in each place can presuppose God and continue to teach a faith in freedom of men under God. They can keep clear of the false promises of the political state. This way of freedom in education is according to the American design of local town, county, and city responsibility and control.

Even so, millions of our fellow citizens have come to have such faith in education by the political state that they see no ills in it except such as money can cure. All that is lacking is money. So they propose to subject our education to the healing strength of money and call on the compulsory power of the Federal Government to make the towns, counties, cities, and States do what the Federal Government thinks they should do.

Millions of American citizens have no fear of statism. Their faith is in it. They teach it. They crusade for it in the name of doing good for the people through the Government.

Admittedly, some of our States are poorer than others and find it burdensome to provide such educational advantages that neighboring States seem to have. At that, there is great disparity in educational opportunity even within the various parts of our richest States. It is also true that illiteracy is widespread, especially political, economic, and religious illiteracy. Those whose faith is in the governmental power of Washington, therefore, submit that ever the rich States need be prodded by Washington.

Will Washington money cure these evils? If it will, we should expect to find even now in our richest States—where the greatest appropriations are given for education—evidence of the highest level of spiritual, cultural, and political health. And then, what do we find, especially in our richest big cities? There we find the most deeply entrenched one-party political machines with the worst political corruption. These same wealthy cities nourish the greatest degree, by far, of personal inadequacy and dependence on the Central Government for food, shelter, health, education, and employment. Here, too, are found the great centers of communism and foreign ideologies, of a pagan faith in some form of the god-state and the most widespread denial of faith in the one true God and man's fitness for freedom and personal responsibility.

Thus, while it is a fact that such States spend more for education than the poor States they also spend four times more for liquor than for education, while $27 go for chewing gum for each dollar spent on books and $15 are spent to combat crime for each dollar they spend on church and charity. Here, too, is the highest rate of sickness and mental worry leading to a greater proportion of confinement in publicly supported institutions for the mentally sick than in the poor States.

It follows as a matter of course that many persons and pressure groups that descend on Congress in Washington from these rich cities will look to the same false god—the Central Government—for education. They look toward the same Central Government for the remedies to which most of all the peoples of the earth have lately turned to remedy mankind's slow progress.

They argue that the "free towns, cities, and county boards of education, and the legislatures of the individual States, have betrayed their trust of the education of the American youth. They show little educational insight. Washington knows better. Washington should tax and force them to do right by education.

"Without compulsion from Washington, the individual States will collect insufficient taxes for school purposes. Washington will make them spend what they should since the local authorities do not know how to get top-notch results from the school dollar. Washington should take their school dollars to the Washington bureaucrats and send part of them back with instructions as to how to get better education than they can manage for themselves. 'Thank God,' the educational federalists say, 'we can look to Washington.'" Their propaganda slogan is "Federal aid to education without control."

Nicholas Murray Butler once said:

> There is not enough money in the United States, even if every dollar of it were expended on education, to produce through Federal authority, or through what is naively called cooperation between the Federal Government and the several States, educational results that would be at all comparable with those that have been already reached under the free and natural system that has grown up among us.
>
> Unless the school is both the work and pride of the community it serves, it is nothing. A school system that grows naturally in response to the needs and ambitions of a hundred thousand different communities will be a better school system than any which can be imposed upon those localities by the aid of grants of public money from the Federal Treasury, accompanied by Federal regulations, Federal inspections, Federal reports, and Federal uniformities.

A free school in America, the only school worth while, is one that has its roots in the cultural ambitions of a free community. What of it, if the schools of Manhattan are different from those of Alabama or those of Minnesota different from the schools of Wyoming. In fact, the question needs to be raised whether there is not already too much uniformity in our American schools. For too long the emphasis has been on conformity and conformism rather than on local individuality and cultural independence. Whoever said that everything the urban professor of New York experimented with or dogmatically proclaimed must be aped and adhered to by teachers and school boards throughout this vast inventive, adventurous, creative, and multiform American Continent?

The conclusive and overwhelming argument against the lobby for Federal aid is that the American citizens, as represented by their local and State governments, are not now asking, and never have asked, for Federal aid in education. Witness the fact that this year no official request was made by a single State to the congressional committees in the House or Senate for Federal aid. Not one State showed inability to provide its own

education. All showed greatly increased appropriations for education. Nor did any taxpayers' group or chamber of commerce or board of education, from any State, county, town, or city appear, to request Federal aid from Washington.

At the governors' annual meeting at Salt Lake City, Utah, a majority of the governors of the United States expressed fear that the Federal Government would encroach upon the States' handling of public schools if Uncle Sam should move into the educational field through Federal grants-in-aid. The governors also opposed "any plan not first referred to the States officially for report of their need and of the States' inability to meet their needs." They held that, "if any field of government is strictly within the province of the State and locality it is that of education. Local self-government is doomed if it surrenders this responsibility."

The States are learning, as two State legislatures said by resolution, that Federal aid is no aid at all. Still another State recently passed a resolution in its State senate, stating, "The wealth that is taxed by the Federal Government is within the boundaries of the 48 States and could be taxed directly by them and the revenue spent by them and large sums saved thereby." One by one the States are asking for a redefinition of the functions of the Federal Government and for the restriction of its activities. Another said, in effect: "We have taken a good look at Federal dollars and find that they all lose weight on their journey to Washington and back home again."

If this is so, then who is it that wants Federal aid from Washington, and how do they go about getting it?

Anyone at all familiar with the old, old game of seeking the public good by political enforcement through the Central Government knows that every such political pressure movement usually has in it three more or less clearly defined groups. These groups know that since the Federal Government is the weakest link in our whole chain of government, it is also the easiest to attack and to corrupt with the promise of votes in return for favors. It now has little defense left, since the Constitution has been for the most part set aside. What is claimed to be for the general welfare must be considered by Congress, in spite of the constitutional limitations imposed on the powers and duties of Congress. So the pressure groups and lobbies, of which the administrative brand is by far the biggest, are ever present.

The first group in the education lobby which is in constant attendance on Washington consists of the organized educators themselves. Many of them have fallen prey to the false idea that if only education had the power of the Central Government back of it things would improve.

Fortunately, we are still able to count upon a majority of our teachers in the front line of defense of free teachers in a free education. American teachers realize that greater freedom in our schools does not lie in foisting Federal control upon them.

Next, there are those innocent idealists who are motivated by an intense humanitarian urge to give everybody a fair chance. Impatient of the attainments of our educational system and often skeptical of the capacity of a free society for improvement, they hope for the compulsion of Government to speed up the attainment of goodness. They suffer from a spiritual blindness which believes that one can legislate goodness and that not only in material affairs but even in the realm of the values of the spirit and the personality. Such people are the mere tools used by the politicians who execute the reforms and who use the misguided idealists to further extend the political power of a bigger and bigger Central Government. In great unsuspecting numbers they constitute the comfort to the enemies of a free society. In fact, they help the planners of the compulsory States, without being conscious of the crimes they are really committing against their own free society.

Daniel Webster very aptly stated this attitude, in the following words, in the early days of the Republic:

> There are men in all ages who mean to exercise power usefully, but who mean to exercise it. They mean to govern well, but they mean to govern. They promise to be kind masters, but they mean to be masters.

These active and always fanatic planners constitute the third group. They are, of course, the militant front guard of the present Washington lobby for Federal aid to education. Their jobs are often made secure at taxpayers' expense. They seek power for themselves over education. They know that money talks. They also know that once the Federal authority is foisted upon the American schools everywhere, there will be no retreat. On the contrary, there will follow a steadily growing infiltration and domination of the whole educational field by the Federal authorities. They intend to become themselves the authorities who will spend the Federal money and exercise the Federal control. They are in Washington, since they are turned aside by the State legislatures and local school boards—these bodies know them and are able to disprove their representations by giving the facts near at home.

Defeated at home, they descend upon Congress knowing that Congress does not have the facts and is not equipped to learn them. Congress is too far from the facts. Congress is like a court that sits to hear the facts presented, but those for the plaintiff expect that the defendant will supply the facts on the other side. But quite generally in matters of appropriating money, Congress hears only one side—the side of the plaintiff. The plaintiff is generally a Government department or bureau which makes out its own case with increasing cleverness. In this case, the plaintiff is a very old and well established lobby whose members are largely the beneficiaries of the appropriations sought. The defendant is the unorganized, inarticulate public, going about their daily affairs, practicing the arts of freedom. They do not appear before Congress and judgment is often taken against them by default on very inadequate, often untrue, and nearly always one-sided, presentation of the evidence.

For example, the Federal aiders came forward this year before the Committee on Education and Labor and presented the same old charts and the antiquated statistics that they have been presenting every year since 1925. This year, fortunately, opponents of these Federal aid bills—1947 editions—showed that the States have for the school year 1947–48 increased their appropriations by approximately a half billion dollars for the country as a whole. The towns and counties have probably added at least another half billion. The lobby for Federal aid apparently did not know this—at least they did not present these facts. Even 10 of the poorest States, over whose poverty the Federal aiders constantly weep, increased their school appropriations for the year 1947–48 by a total of $104,000,000, or a little over half of the $200,000,000 that the unauthorized planners were asking from the Federal Government for Federal aid to the 48 States.

A number of the States have already exceeded the appropriations for education that it was claimed necessary for the Federal Government to attain for them. Not only have the States of the United States become aware of the need of additional investments in education but a majority of our towns, cities, and counties throughout the Nation have likewise considerably increased their appropriations.

So it is apparent that the States have already provided for themselves more than what the Federal aiders asked the Federal Government to give them. This is true even in the poorest States, but the advocates of Federal aid have not wakened up yet to the extent that the States are helping themselves in the new school year 1947–48. At least they did not mention these facts to the committee. This leads one to question whether it is mere money that they want. It may be control—the very thing they deny. Can this be doubted in the light of the evidence?

In this connection, it is most enlightening to see how the lobby works and also to see revealed in its public statements the character of the people who expect to control the vast money power of Federal aid and control when and if it is ever granted.

The principal registered lobbyist for Federal aid is the National Education Association. It has a membership of 386,643 paying dues for the year ending May 31, 1947, of $1,138,100. Their headquarters and personnel are greater than the Republican and Democratic Party headquarters combined. It is one of the most active power lobbies in Washington and has been for many years. Through its Journal, of national circulation among teachers, it announces:

> Arrangements have been made to throw every resource of the NEA [National Education Association] back of the campaign for Federal aid to education. (NEA Journal, February 1943, p. 35.)

> Activities [summarized] of the director [Howard A. Dawson, director of rural education, NEA], in behalf of this bill [the Harrison-Black-Fletcher bill, 1937] as follows: Conducted negotiations for sponsorship and introduction of the bill in both Houses, through executive secretaries of State education associations and State chairman of the legislative commission arranged for controlling of candidates for Congress, for the United States Senate, and for governor in

a majority of the States. (NEA convention board, Cleveland, 1937 report, p. 946.)

The lobby speaks again:

We have powerful friends in Congress. * * * The power of the organized teaching profession has but begun to find expression and I predict that before next November 7 (election date) there will be many people in the Nation aware that the school children of America have a voice of justice and equity as well as a voice of power and of influence. (Dr. Howard A. Dawson, Appendix to the CONGRESSIONAL RECORD, 1944, p. A3937.)

Its Journal constantly hammers away for federalization, as follows:

October is an important month for the campaign on behalf of S. 637-H. R. 2849, because it is the month before election. * * * Candidates who oppose this legislation or who are indifferent to the public schools should be defeated wherever possible. (NEA Journal, September 1945.)

We observe that whether the year be 1937, 1943, 1944, or 1945 the partisanship and intimidation remained the same. Who believes that this self-righteous and haughty spirit might change in 1948 or any other future year when the will of this organized minority of "benevolent" seekers after goodness through Federal compulsion, exercised by Federal bureaucrats, has been imposed upon American education? Imagine them as the educational controllers in Washington dishing out billions, and staying content to exercise "no control." Imagine them as administrators of Federal education changing into bureaucratic lambs that would never think of encroaching upon the rights of free citizens to run their own schools, administer their own funds, and control the education of their own children in their own communities.

Then imagine what will happen when a million school teachers, tens of thousands of janitors and assistants, all educational personnel, have become the direct beneficiaries of appropriations which they might get by such organized pressure politics. Will they not quite generally support the candidates for Congress who make the biggest promises? Each succeeding election our Central Government will become more nearly controlled by employees and beneficiaries from appropriations. It is the vicious circle of statism. Add to the present 2,000,000 Federal employees a million Government-controlled or influenced teachers and public-school personnel. Then add a million tenants in the proposed Federal public housing and you have attained the socialized state, which you will probably have to keep indefinitely.

In the face of such a way of feeling and thinking, it is imperative that we remind ourselves of the brutal truth that the modern state today everywhere is killing off a free society. Wherever the government legislates and appropriates it curtails and extinguishes still another realm of personal and communal liberty, responsibility, and economic capacity. In all languages and among all peoples, big government, however created, means less freedom. The nation is always taken over, not by the good but by the roughest and toughest when the one-party overpowering police state is finally organized.

We should constantly remember that in our country, until now, two areas of the human spirit have been left alone by our Central Government. Two areas have been left free in which the citizens themselves have governed—namely, their religious institutions and their free schools. Protecting the religious area there is the specific provisions of the Constitution itself, forbidding the Government to make any laws restricting freedom in religious matters. Above any law of the state, man's obligation and loyalty to God stand.

Having thus safeguarded the religious freedom by explicit language, our Constitution proceeds to treat Federal interference in education with a dignified and eloquent silence. This silence reflects the fundamental faith of the early American Government in its free citizens as the proud and responsible custodians of their children's education. Until now, the individual States, their legislatures, counties, towns, and cities have stood fast in the maintenance of their constitutional liberty against each encroachment by Federal authority in the field of education. Since this is an established fact, the insidious pressure groups demanding the unconstitutional interference with local self-government of schools, based upon local support and responsibility, stand revealed as being unauthorized and unrecognized by any political subdivision of any of the States.

They must be stopped. They must be stopped by a growing passion for self-government and by a resulting fear of the power and propaganda of the Federal Government.

Modern history proves with tragic clarity that where a nation's education is placed under a federally controlled system, freedom dies out. May the Federal Bureau of Education never become the Federal commissar of education in America!

Twelve Months of Surplus Property Disposal Under Gen. Robert M. Littlejohn as the War Assets Administrator Is an Achievement of Which This Nation Can Well Be Proud

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. BOYKIN. Mr. Speaker, when your gavel called this House to order on Tuesday, July 22, 1947, it marked the beginning of but one more day in which to perfect the legislative program of the first session of this, the Eightieth Congress.

The time set for adjournment was but 96 hours away.

In the heat of the debate which here took place there passed unnoticed on that day a record of accomplishment by an administration of Government set up by this Congress that will forever live in the annals of our Nation as a year of work well done.

Mr. Speaker, I refer to the achievements of Maj. Gen. Robert M. Littlejohn in the first 12 months of his direction of the War Assets Administration. The true and trusted friend not alone of the Chief Executive of this Nation responsible for his appointment, he is the beloved friend and commands the respect of every Member of this Congress—not alone on both sides of the aisle but on both ends of the Capitol.

The question of the disposal of war surplus was a subject of national discussion. It was debated not alone by the Members of Congress in the midst of the war—it was a subject of discussion and debate by the soldiers in the foxholes of Bataan—on the very eve of battle.

The businessmen on the main streets of every town too well remembered the economic upset caused by the dumping of surplus items of clothing, shoes and what not—after the termination of World War I.

The workers in the auto and tire industry remembered how they stood in idleness waiting for the American market to absorb the surpluses of trucks, auto tires, and diverse other manufactures by the consuming public.

The elder statesmen in this body remember the hue and cries that went up at charges that the Army was lighting million-dollar bonfires to dispose of surplus war materials on the battlefields in France.

The Congress had long since decided that there would not be a repetition of those conditions after World War II.

Mr. Speaker, it is unnecessary for me to recapitulate the reasons why the Government in every branch of our armed services and other activities wound up World War II with the stock piles—the volume and value of which reached astronomical figures.

These comprehended not alone a multitude of miscellaneous mercantile articles but an enormous amount of personal and real property.

Much of this was and still is located in the heart of tropical jungles, on the sands of distant deserts—on scores of islands in the great south seas—in the frigid climes of both the Arctic and Antarctic—and in the other most remote parts of this earth.

Primarily these stock piles were due to the fact that the United States had more wealth and natural resources than any other nation in the world. Acting as the arsenal of democracy—in supplying our allies with the products of our mills, our mines, our factories, and our farms—the war's end found them scattered to the furthermost parts of the globe.

Secondly it was because we in America had developed mass production in practically every line of national endeavor to a degree that no other nation in all history had ever achieved.

Over and above all other reasons, however, was the fact that this Congress had made it clear on innumerable occasions—to every command in all our combat forces—that no single American life should ever be sacrificed—if bonds, bullets, or any other accoutrements of war,

if and when dissipated with the utmost abandon, would possibly save the life or the maiming of a single American boy—too many of whom in spite of all that could be done—had been called upon to make the supreme sacrifice.

I repeat that the Congress had declared that it would be better to end the war with new and a surplus of combat boots readied for every soldier in a foxhole; with a new bayonet or a gun for every man on the firing lines in every theater of operation; with more food, more ammunition, clothing and transportation facilities than would have likely been needed rather than risk that a single American boy who bared his breast for battle should go barefoot or hungry or unarmed or uncared-for insofar as the American people and the Congress could humanly prevent in providing instruments of war—guns, tanks, ships, planes—to prevent the loss of life against every possible contingency.

Mr. Speaker, as of July 22 of this year, 3 years had passed since the huge job of surplus disposal was started. It was anticipated that domestic surpluses alone would eventually reach the prodigious sum of $35,000,000,000 worth of surplus properties. The physical volume of merchandise to be marketed alone would have constituted an enormous job in normal times and under normal marketing conditions.

To channel them into private industry on the aftermath of war was a herculean task.

Normalcy would have insured among other factors contributing to the orderly marketing not alone the existence of a good organization for disposal but the evaluations of the failure or success of such a project purely in terms of dollar return from their disposal.

For two long years those charged with that task struggled under the enormity of the job. On top of the tremendous physical job they were faced with conditions created by the snowballing effects of organizational, personnel, and policy difficulties which repeatedly brought the sales program almost to the brink of collapse.

The Congress had long since extended priority to veterans for practically all goods on hand. Let me instance but one problem:

Large plots of lands upon which enormous sums had been expended to create air fields had values as air fields. Their national defense value for future use was far and above their appraised values as building sites for development into subdivisions for veterans' houses.

Yet they would cost enormous sums to maintain. The Army and Congress shied away from these maintenance costs. It was not economically sound to break them up into building lots. Each one project was a major problem unto itself and there were literally hundreds of such air fields subject to disposal.

As stated before, the shooting war was over and had been over for more than 2 years. After succeeding dilemma upon dilemma—or shall I say failure after failure—had manifested themselves, capable governmental administrators became unwilling to risk their reputations in such a stupendous and thankless task as the disposal of governmental surplus properties.

Capable businessmen no longer spurred by patriotic motives for which they had associated themselves with the Government in wartime were now returning to their private endeavors and enterprises.

It was in the face of these problems meeting with almost daily criticism in the Nation's press that President Truman, himself a captain in World War I, and mindful of the spendid work historically done by the United States Army, resolved to place the stupendous job of surplus disposal in the hands of the United States Army itself.

Mr. Speaker, July 22, 1946, was a truly momentous day. You, sir, stood with other great leaders of both Houses of Congress, members of the President's Cabinet and other high Government officials to observe and hear the oath of office of War Assets Administrator administered by Gen. Edward F. Witsell to Gen. Robert McGowan Littlejohn, formerly Chief Quartermaster of all the European theaters of operation.

The simplicity of the statement made on that memorable occasion by Gen. Bob Littlejohn, standing in the auditorium of the Social Security Building, was a statement typical of all great men. Humbly confessing his pride at having been selected by the Chief Executive as the Administrator of War Assets he said: "Mr. President, I shall give my best to do this job."

He then told of how as a cadet at West Point it was his good fortune to have been intimately associated with Tom Jenkins, the former heavyweight wrestler of many years ago. "Tom," he said, "taught me how to wrestle, and that," he continued, "was responsible for my winning the heavyweight title at West Point. Tom's philosophy which he expounded to all of us 'would be' Army officers was 'There ain't no hold that can't be broke.' "

Mr. Speaker, for 38 long years Bob Littlejohn had served his country in its Army. His life and career typified that philosophy.

The motto of the Quartermaster Corps serving in all theaters of operation was "It will be done" and I knew when he said that "I will give my best to the job" I knew that new job would be done and in a manner of which this Nation could be proud.

Mr. Speaker, what a job. I say, without fear of contradiction, that there has never been an article produced in history, a counterpart of which would not be found in some one of the thousands upon thousands of warehouses that sheltered the assets to be disposed of by General Littlejohn.

From bobby pins to camel-back locomotives, from the most finely ground precision instruments ever produced by the skilled hands of American workmen to the most tremendous caissons and bridge sections.

From canvas canoes to trans-Atlantic freighters, cargo and passenger vessels, oil refineries, lumber plants, smelters, rolling mills, entire chemical industries, with these items being restored to peacetime production the funds in the United States Treasury swelled each day.

Equipment and components that had come from the farmost corner of the earth to constitute the greatest stock of merchandise and the largest inventory of goods ever accumulated in the history of commerce began steadily to move into market.

Mr. Speaker, apart from the huge inventory of goods on hand when Gen. Robert M. Littlejohn took over on July 22, 1946, was the biggest realty selling job ever undertaken. Not alone was it the largest in physical extent and dollar volume but it consisted of an almost fantastic variety of surplus owned real properties, all subject to economic disposal, which had a cost value of $4,122,000,000.

It contained such divergent properties as Army chapels and airport systems, small schools and immense steel plants, sentry boxes and synthetic-rubber factories, octane-gas refineries, ordnance works, aircraft factories, power plants, coal mines, and pipe lines for both oil and gas, railroads and shipyards, dwellings and warehouses, hospitals and chemical warfare factories.

The holdings in size ran from city lots to 40,000-acre military reservations and included whole cities complete in themselves with all utilities installed.

The problems of realty disposal which confronted the new Administrator were many and varied. Skillfully marketed, buyers were found for many of the most desirable industrial properties and sites.

Legal priorities—technicalities—yes, even political considerations—and the lack of uniform procedures continued to hamstring the transfers of nonindustrial properties such as airports, schools, houses, hospitals to political instrumentalities, educational and health institutions and other nonprofit organizations of similar character.

Confronted by a situation grounded in confusion and impeded to slow motion, Administrator Littlejohn immediately took steps which have proven that "there ain't no hold that can't be broke."

Within 12 months after assuming his duties, Major General Littlejohn authorized the disposal of real properties in the amount of $2,875,000,000.

In like manner the merchandise inventories began to shrink as surplus sales were effected almost every minute.

As of July 1, 1947, a total of 1,057 parcels of industrial properties that had cost the Government $3,180,000,000 had been successfully negotiated. Of this total, authorized sales were approved for 806 properties worth $2,019,000,000 in original cost.

The dire forebodings that the Big Inch and the Little Big Inch pipe lines, used for the transmission of oil, the sale of which had administratively bogged down—destined to become two streaks of rust—were restored to a long and useful life.

Administrator Littlejohn actually negotiated their sale for the sum of $143,127,000.

Concerned though he was with respect to the sale of such items as the Inch pipe lines, the Republic Steel plant at

Chicago, the huge magnesium plant in Texas and other supermanufacturing facilities, General Littlejohn was all the while conscious of the declared purpose of Congress to serve the interests of small business corporations throughout the Nation.

He constantly stressed the importance of giving every possible consideration to the claims of small business—and with most significant results.

In the first 9 months, out of 792 industrial plants and the components therefor, 582 were disposed of to moderate-sized business concerns.

Such small business companies availed themselves of 66 out of the 93 plants which sold in the price range of from $500,000 to $1,000,000.

Of the 518 plants which sold for less than $500,000 small business companies obtained 440, or 85 percent of the total.

As a further inducement to small business and the development of plans to obtain utilization of portions of very large properties, the War Assets Administrator sponsored and instituted a number of multiple-tendency projects. Under this program designed to effectuate the declared purpose of Congress to give preference to the small business corporations, Administrator Littlejohn has made it possible for thousands of small concerns either to get started—or to attain their normal expansions unretarded by present-day building costs and shortages.

In the handling of this huge complex and colossal disposal task, General Littlejohn associated to himself as Deputy Administrator another professional soldier known and beloved by a great many Members of this Congress—his good friend and my good friend, Brig. Gen. James Mollison.

The many friends he made in my own city of Mobile, where he served as commander of Brooklyn Field, will always remember him as an indefatigable worker—a beloved and respected gentleman and officer—and a skilled administrator.

Prior to the time that General Mollison was called into the War Assets Administration he had served as the commanding general of the United States Army Air Forces in the Mediterranean theater. He brought to his office expert experience in the appraisal field not alone of aircraft from the standpoint of dollar value but with respect to the application of all such surplus craft to the greatest economic usage in both military and civilian applications and services.

His remarkable background in the Army air services as a flight commander as well as an administrator—his adept knowledge of military aircraft highly qualified him for this particular job.

To him as his deputy administrator, General Littlejohn assigned the job of disposing of all airplanes, airplane engines, other aircraft and aircraft parts which in dollar values amounted to approximately 45 percent of all Government surplus.

When General Mollison took over his task as deputy administrator on February 1 of this year the books of the War Assets Administration disclosed an inventory of in excess of $5,250,000,000 worth of bombers, fighters, transports, training planes, barrage balloons, kites, gliders, and an untold number of warehouses jammed to the eaves with spare engine parts and equipment of all kinds.

An indefatigable worker, General Mollison personally assumed the task of bringing the planes and all prospective buyers together to the end that the merchandise would be put to serviceable use while there yet was still a vigorous demand for that type of merchandise.

Organizing a task force of field men, he gave orders to screen out such material as could be used and to segregate all salable items. These he directed were to be handled by sales agents or sold direct from Washington or where housed at central warehouses.

His nearly 30 years as a pilot coupled with his administrative experience in the Army showed up in the way he tackled the job of disposing of over 20,000 combat planes with the same direct approach methods. Such as those whose chief value were as scrap were expeditiously offered for sale to the highest bidders so that the values of all recovered metals could be moved quickly into industry where needed for fabrication in the industrial reconversion then grossly suffering from material shortages.

In a public statement Deputy Administrator General Mollison recently stated that "Before fall we will have less than one and one-quarter billions in aircraft inventories as against the five and one-quarter billions with which we started less than 6 months ago.

Mr. Speaker, it is the teamwork of men such as Gen. Robert M. Littlejohn and Gen. James Mollison that enabled our Nation to win the war on every battlefront in World War II—whether it was on the land, under the water, on the water or in the heavens above.

Mr. Speaker, I recently came upon a publicized copy of a letter sent to General Littlejohn.

It is such a human document so replete with expression of honest sincerity and appreciation of work well done, I want to insert that letter in the RECORD that my every colleague may value and appreciate the splendid work accomplished in the first year by our good friend, the present War Assets Administrator:

THE WHITE HOUSE,
Washington, July 21, 1947.

Maj. Gen. ROBERT M. LITTLEJOHN,
Administrator, War Assets Administration, Washington, D. C.

DEAR GENERAL LITTLEJOHN: Just a little over a year ago, at my earnest request, you took over leadership of the war surplus disposal program.

Your wartime accomplishments in supplying our armies in Europe, and the ability and forcefulness demonstrated throughout the course of your Army career dictated your appointment as War Assets Administrator.

Neither of us had illusions as to the burden you were assuming. Action could not wait for detailed advance planning. The progress of reconversion depended to a considerable degree on the expeditious, orderly, and effective disposal of our war surpluses. Attainment of the varied objectives of the Surplus Property Act required speed, strength, and stamina.

The past 12 months have seen these requisites supplied. The record proves it.

Early this month the Nation was gratified to learn from the Secretary of the Treasury that receipts from surplus-property disposal in the past fiscal year totaled more than $2,000,000,000, the greater part of which was deposited by your agency. This is a fine record which I am sure you and the people working with you in the War Assets Administration are making every effort to maintain. Please express to your associates my appreciation for the job they are performing.

At the same time let me wish you continued success in your hard-fighting, unselfish service to our country.

Very sincerely yours,

HARRY TRUMAN.

In commenting upon the ability of the choice of Gen. James Mollison by Gen. Robert Littlejohn to be his Deputy Administrator, the Subcommittee on Military Affairs of the Senate Surplus Property Sales Committee recently reported as follows:

It is no coincidence that in one field in which the War Assets Administration has had a good performance record, namely, aircraft and aircraft parts, disposal activities were carried on under the direction of an unusually capable deputy who was permitted an adequate degree of autonomy, and who in turn understood the art of redelegating authority to those below him.

Statement of Hon. Styles Bridges, of New Hampshire, Chairman, Senate Committee on Appropriations, Relative to Work of His Committee and to Savings Resulting From the Economy Program of the Eightieth Congress

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Saturday, July 26 (legislative day of Wednesday, July 16), 1947

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement relative to the work of the Senate Committee on Appropriations in the first session of the Eightieth Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

At the close of the first session of the Eightieth Congress, as chairman of the Senate Appropriations Committee, I regard it as proper to report to the Senate and to the Nation a summary of appropriations action taken during the present session. At the same time I wish also to detail briefly various related accomplishments during that time.

In electing the present majorities in the Congress in November of 1946, the people of the Nation went on record as desirous of an economy in government that would curtail the cost of government, balance the Budget, reduce the national debt, and lower the present exorbitant tax rates. Of these four mandates the Eightieth Congress has accomplished three of its objectives. The cost of government has been markedly curtailed. The Budget has been brought into balance. The debt has been reduced. Only

the present exorbitant rate of taxation remains as high as it was during the height of wartime spending. As we all know, this is not the fault of the vast majority of the Members of Congress.

APPROPRIATIONS REDUCED

First, I wish to direct the attention of the Congress to its solid accomplishments, among the first of which would be its outstanding economy record. I am proud of that record. Total savings by the Eightieth Congress amounts to $7,181,005,249. This includes a reduction of $2,361,889,749 from the 12 major appropriations estimates of $26,239,450,191, reducing the total of these to $23,877,560,442; a cut of $402,041,986 in 4 supplemental estimates from an estimated $2,209,219,283 to an actual $1,807,177,297; a reduction of $268,935,548 in 6 deficiency estimates and joint resolutions from an estimated $3,800,673,499 to an actual $3,531,737,901; a reduction of $40,000,000 in permanent appropriations; a reduction of $90,805,020 in supplemental and deficiency estimates submitted but not considered; and a reduction of $4,017,332,946 as a result of rescissions during the present Congress. Total reductions for all these items amount to $7,181,005,249, and this does not include a total of $830,380,811 impairment of capital in the Commodity Credit Corporation which was not replaced by appropriations.

I have seen many statements of late containing differing amounts which have been saved by the Eightieth Congress. This is not surprising, for the ramifications and complexities of the subject lend themselves to differing interpretations. In one listing, permanent appropriations may be excluded. In another, deficiency appropriations made by the Eightieth Congress for 1947 appropriations may not be carried. Again, the amount of rescissions of appropriations made by previous Congresses may or may not be included. Under such conditions, differing conclusions are inevitable. These differences result not from disagreement as to the amounts involved but rather as to what has been included in arriving at totals. In this discussion all savings resulting from the regular appropriations bills, the supplemental bills and the deficiency bills are included. Also included are savings resulting from estimates submitted but never formally presented in appropriations bills, as well as reductions in permanent appropriations and amounts saved through rescissions of appropriations by other Congresses. With this in mind, the figures cited will be found to agree with savings indicated by other authoritative sources. These sources, however, do not include those who for political reasons are fearful of the favorable reaction of the country to the economy drive of this Republican Congress.

Summary of budget estimates, appropriations enacted, and savings effected by the 80th Cong., 1st sess.

Public Law		Budget estimate	Law	Actual increase or decrease
	PART I. REGULAR APPROPRIATIONS			
266	Agriculture	$802,360,608	$613,046,826	−$189,313,782
237	District of Columbia	95,793,160	95,504,737	−288,423
268	Government corporations	50,137,500	35,040,000	−15,097,500
269	Independent offices	8,500,497,759	8,188,822,927	−311,674,832
247	Interior	295,463,060	194,587,859	−100,875,201
165	Labor, Federal Security	1,771,614,039	1,674,158,631	−97,455,408
197	Legislative	76,153,077	55,294,435	−20,858,642
267	Military	5,716,791,500	5,482,529,633	−234,261,867
202	Navy	3,513,000,300	3,268,766,100	−244,234,200
166	State, Justice, Commerce, and Judiciary	698,788,588	551,175,932	−147,612,656
147	Treasury, Post Office	4,099,123,500	3,216,509,450	−882,614,050
296	War, civil functions	619,727,100	502,123,912	−117,603,188
	Total, regular appropriations	26,239,450,191	23,877,560,442	−2,361,889,749
	PART II. SUPPLEMENTAL APPROPRIATIONS			
161	Emergency appropriation	5,750,000	6,180,000	+430,000
271	First supplemental	1,925,683,823	1,658,802,197	−266,881,626
256	Supplemental Government corporations	35,500,000	35,500,000	
299	Second supplemental	242,285,460	106,695,100	−135,590,360
	Total, supplemental appropriations	2,209,219,283	1,807,177,297	−402,041,986
	PART III. DEFICIENCY APPROPRIATIONS			
22	H. J. Res. 154	9,000,000	9,000,000	
25	H. J. Res. 159	243,714,587	243,255,607	−458,980
46	First deficiency, 1947	3,082,332,589	2,835,161,509	−247,171,080
76	Second deficiency, 1947	224,528,415	192,438,859	−32,089,556
20	Urgent deficiency, 1947	179,319,100	179,645,668	+326,568
122	Second urgent deficiency, 1947	61,778,758	72,236,258	+10,457,500
	Total deficiency appropriations	3,800,673,449	3,531,737,901	−268,935,548
	PART IV. PERMANENT APPROPRIATIONS			
	Total	5,951,309,846	5,911,309,846	−40,000,000
	PART V			
	Supplemental and deficiency estimates submitted but not considered	90,805,020		−90,805,020
	Grand total	38,291,457,789	35,127,785,486	−3,163,672,303

REGULAR APPROPRIATIONS CUT

Budget estimates for appropriations under regular appropriations bills amount to $26,239,450,191. The Congress allowed $23,877,560,442 of this amount—a savings of $2,361,889,749. Not included in these totals are permanent appropriations which are treated separately in part IV of the accompanying table. It will be noted that substantial savings were accomplished in all items. In part I of the tabular form is the appropriation record for the 12 major appropriations bills.

SUPPLEMENTAL REQUESTS SWELL BUDGET ESTIMATES

In addition to the regular Budget requests for $26,239,450,191, the President asked for $2,209,219,283 in four supplemental appropriations bills for 1948, making a total request for new appropriations of $28,448,669,474. The Congress reduced these supplemental requests to $1,807,177,297, a savings of $402,041,986, and a total savings in 1948 appropriations of $2,763,931,735. These supplementals are included as part II of the table. Largest items in the supplemental requests are to be found in the First Supplemental Appropriations Act wherein substantial sums were appropriated for foreign aid because of the parlous world situation.

DEFICIENCIES REDUCED

In addition to these regular appropriations bills, four deficiency appropriations bills and two joint resolutions were enacted. Total estimates of $3,800,673,449 in these six measures were reduced to $3,531,737,901, a savings of $268,935,548. A summary of each of these, giving the estimate, the actual appropriation, and the amount saved or expended in excess of the estimate, is included in part III of the table. I shall speak further about deficiency appropriations and their abuse later in my discussion.

PERMANENT APPROPRIATIONS

Included as part IV of the table are permanent appropriations which, by reason of their nature, are not subject to the same amount of revision as are the regular annual appropriations. Budget estimates for these permanent appropriations amounted to $5,951,309,846, of which $5,911,309,846 was appropriated, a reduction of $40,000,000. Included in this amount is an appropriation for $5,000,000,000 applicable as interest on the national debt. When one considers that this $5,000,000,000 neither reduces the indebtedness of the United States nor provides any benefits to the nation, yet at the same time is equal to all expenditures of the Government in any year from 1922 through 1933, then one realizes to some extent the gaping hole in our financial resources, a hole which threatens to sweep away our economic stability.

BUDGET REQUESTS NOT CONSIDERED

Certain supplemental and deficiency estimates were submitted by the Bureau of the Budget but were not considered by the Congress. These amounted to $90,805,020 and are included as savings in part V of the table.

RESCISSIONS

In addition to the large-scale reductions in appropriations made during the current session, the Eightieth Congress has accomplished other economies. Rescissions to the amount of $4,017,332,946 have been effected. These rescissions, which return to the Treasury unexpended sums appropriated by previous Congresses, include the following:

Rescissions made by the 80th Cong.

First supplemental bill	$360,000
Navy Department bill	403,575,000
Independent offices bill	163,100,000
Second supplemental bill	389,496,970
War military bill	1,438,966,500
Agriculture Department bill	40,000,000
First deficiency bill	1,011,423,325
Second deficiency bill	2,500,000
Urgent deficiency bill	567,461,151
Interior Department bill	450,000
Total	4,017,332,946

FACTORS LIMITING REDUCTIONS

It is true that a year ago, even 6 months ago, many of us believed that these cuts could be larger, that the present Congress could accomplish even greater success in reducing the cost of maintaining the Federal Government. A number of contributing factors have delayed more striking curtailment of expenditures.

THE THREAT TO PEACE

One of these factors was the unstable foreign situation. With the major peace treaties yet to be written, with Russian obstruction blocking all efforts at world reconstruction, with the recently announced infiltration of Communists even among our own Federal employees, it would be foolhardy for the Congress to impair the necessary functions of the military arm of the Nation, and it has not done so. Appropriations for the Navy Department amounted to $3,268,766,100

and for the War Department for military functions $5,482,529,633, or a total of $8,751,287,733.

FOREIGN AID

As a corollary to large appropriations for national defense, new and additional appropriations for relief and other aid to friendly foreign countries were made. Total estimates for such aid requested by the President amounted to $1,626,431,400, of which the Congress appropriated $1,440,821,900. Originally the Budget request was for $725,000,000, of which $600,000,000 was appropriated. Later requests were for $901,431,400, of which $840,821,900 was appropriated. These items included a wide variety of aid, including the Greek-Turkish aid program, defense aid liquidation (lend-lease), relief assistance to war-devastated areas, care and handling of surplus property overseas, UNRRA liquidation and governmental relief in occupied areas.

Nor does this include previous commitments currently being expended. Of the British loan of $3,750,000,000, a total of $2,750,000,000 has already been spent. Of the $3,500,000,000 authorized for expenditure by the Export-Import Bank, only $820,000,000 remains uncommitted. And, in addition, the United States has provided the International Monetary Fund with $2,750,000,000 and the International Bank with $635,000,000, the latter amount being subject to an additional expenditure of $2,500,000,000 if necessary.

In appropriating these large amounts for foreign aid, the Congress has joined in the attempt to relieve poor, ravaged people, start reconstruction of war-torn areas, and assist smaller nations to withstand the menacing spread of communism. During the congressional recess members of the Appropriations Committee intend to survey personally the foreign relief and reconstruction scenes in preparation for an intelligent consideration in the next session of Congress of any request for funds which will be made to help stabilize other nations.

GROWTH OF BUREAUCRACY

A second factor contributing to limited reductions in appropriations was the course of Federal expansion pursued by the Government during the past four administrations. Since 1933 the administration has pursued a policy of an increasingly paternalistic Government which per se necessitated larger and larger expenditures as its functions increased in number and scope. During this time Federal personnel multiplied almost four times—from 563,000 to 2,178,000. Annual Federal expenditures rose from $5,000,000,000 to $42,500,000,000. Our debt increased from $22,000,000,000 to $258,000,000,000. The number of Government bureaus rose to 1,039, while the number of offices increased to 46,865 until there was one or more in nearly every American city and town. A vast variety of new functions previously administered by the States or by local units or by private enterprise was taken over by the National Government.

It is true that much of this increase in expenditure and size was caused, in part at least, by the exigencies of depression and war. But much of it was brought about by the administration's philosophy that the lives of its citizens could be better administered by a national government than by State, local, or private organizations. For example, between 1934 and 1946 Federal grants-in-aid to States have cost the taxpayer $29,000,000,000. Federal subsidies have totaled over $13,000,000,000 in the same period; Federal lending has amounted to almost $40,000,000,000. Irrigation, reclamation, crop control, rural development, socialized homestead projects, nationalized housing, power productions, transportation, communication, employment, education, medical research, social welfare, scientific development, insurance of virtually every sort, banking, publishing, and other fields of endeavor have all fallen in varying degrees under the control of the Federal Government, which has absorbed private initiative in public enterprise.

Most of these federally controlled or operated projects could not be abruptly terminated. Long-range Federal commitments must be honored. Furthermore, since most of these were established by legislation, they can only be abrogated by other legislation. It is not the function of appropriations committees to legislate and, during the present session, the committee has made every effort to avoid doing so. Consequently when appropriations were asked for these public enterprises, the measuring stick was our deliberative judgment as to the amount of money needed to carry out these projects most efficiently. Where we have cut appropriations, we have done so not to impair a function but rather because we believed that the function could be carried out as efficiently or more efficiently while practicing greater economies. Appropriations which were denied were only denied because basic enabling legislation was lacking. Appropriations drastically cut were only so treated when it was demonstrated that economy would not impair efficiency, or because, as in large-scale construction work, it was deemed good business procedure for the Government to delay such construction until costs would be lower. This not only is a sensible economy move, but by refraining from placing additional millions of dollars in circulation it acts as a brake on the inflationary trend which has had its effect on the cost of Government. Salaries have risen fully one-third as a result of two recent pay raises. Other administrative costs have increased similarly. Under such conditions prudence dictated that, wherever possible, expenditures must be limited, thereby providing a reservoir of planned construction against what economists have been predicting as an incipient recession.

IRONCLAD COMMITMENTS

Still another factor limiting reduction in appropriations was the inescapable necessity of honoring ironclad commitments. One of these is the interest on the public debt, for which $5,000,000,000 must be provided annually. Another is our obligation to the veterans of the last war and those of other wars. We have appropriated almost $7,000,000,000 for the Veterans' Administration for 1948—and this is not all inclusive. A third major item is the cost of our national defense, for which we have appropriated approximately $8,600,000,000. These three items alone will cost the American taxpayer over $20,000,000,000 in 1948.

Innumerable relatively small items, some of which were unanticipated yet urgent, swelled the total. I shall mention only a few. For example, in order to maintain the safety of air and sea transportation, additional funds were necessitated for ocean weather stations. Again, a marked increase in the infestation of cattle with the foot-and-mouth disease called for deficiency and other additional appropriations if we were not to delay and then spend a larger amount later for the same purpose. The international situation also called for additional appropriations to carry out the loyalty investigation program for Federal employees. It also called for the rebuilding of the Alaskan Railroad, vital to Arctic defense. The enervating drain on our national resources during the war necessitated emphasis on investigations for new supplies of critical minerals. Disasters in coal mines spotlighted the need for additional inspectors, and these have been provided. The necessity of placing large groups of Federal employees in isolated public regions called for the operation and maintenance of schools by Federal funds if the children of these employees were not to be illiterate. In all cases the Congress refused to allow its economy goal to degenerate into false economy.

PROPAGANDA BY GOVERNMENT AGENCIES

One of the greatest obstacles to our attempts at economy in Government, and the only one which was avoidable, was the arrogant refusal of many of the departments and agencies of the Government to cooperate with the Congress, through the Appropriations Committees, in effecting efficient, economical government. I regret to say that they have not only failed to cooperate, but that they have used every lawful and many unlawful methods of attempting to coerce the Congress into appropriating larger sums of public funds than the Congress, after careful investigation, believed either necessary or desirable.

These efforts have in the past been so outrageous that the President of the United States, late last year, sent a memorandum to the Director of the Bureau of the Budget stating that certain department and agency officials have shown a tendency to seek from the Congress larger appropriations than were contemplated in official budget estimates and calling upon him to remind the heads of the various departments and agencies to support only the President's estimates during the course of hearings. Thus these agencies have given evidence not only of directly disregarding the will of the Congress but also the expressed desire of the Chief Executive, and they have done this to an extent which necessitated Presidential action. Such action on the part of the President would have been more commendable, however, if he had himself been more mindful of the precarious condition of the public Treasury in making his own total budget recommendations.

This overt disregard of the prerogatives of the Congress is exemplified best by actions of an official and unofficial nature taken by the executive establishments during the hearings on the 1948 appropriations bills. We all know that under our present appropriations procedure the agencies have ample opportunity through their authorized representatives and witnesses to defend their budget estimates before the Congress. They have been given the chance to present at length any information which they regard as important or pertinent. But this year, under the aegis of what appears to be at times a coordinated plan of attack, many of those agencies which have had their estimates reduced by the House of Representatives have initiated pressure campaigns on the Senate and on the Senate Appropriations Committee, in particular, that far exceed any legitimate defense of budget estimates.

Naturally the people of this country have a perfect right to inform the Members of the Congress as to their opinions regarding congressional action of any sort, either proposed or concluded. Indeed, we Members of Congress welcome this spontaneous expression of views as it is one of the best means by which the representatives of the people can weigh the will of their constituents when legislative pressure keeps us here in Washington. But when Government departments and agencies at the taxpayers' expense attempt to propagandize the American public into applying tremendous pressure on the Congress, then I strongly affirm that these establishments are exceeding their authority.

The Senate Appropriations Committee has in its files concrete evidence that much of the hue and cry, much of the pressure that was exerted on the Congress, was not the spontaneous expression of individual taxpayers but rather the well-organized attempts of Government officials and employees to restore funds without which they would be in danger of losing their jobs.

Various methods were employed. Federal employees were in some instances organized in groups as soon as House cuts were announced. Each group was given specific objectives designed geographically to exert the maximum pressure on the Congress. Newspaper aid was sought, not only through news channels but through importuned editorials,

which, through no fault of the press but because Government officials deliberately exaggerated effects of curtailment of services, alarmed the public. Not content with this, attempts were made to elicit support of civic groups, State and local officials, chambers of commerce, labor organizations, business houses, veterans' organizations, brokers, farmers, and railroad executives.

One favorite method was to announce in the press that House cuts necessitated the firing of a large number of employees. Dismissal notices were then sent to employees—preferably veterans—in a number far in excess of the number actually to be released. This was done knowingly and deliberately by the agency, which subsequently rehired large numbers of these employees without publicity. The most audacious of these propaganda stunts was that perpetrated by a group of public officials—in widely scattered parts of the country and all at approximately the same time—to blame the Congress in press releases for employee lay-offs which were not occasioned by appropriation cuts but by administrative financial errors within the department over which the Congress had no control or knowledge.

These attempts to pressure the Congress into submission to departmental dictates were not the work of a few disgruntled employees. In most instances they were instigated with the full connivance or knowledge of highly placed officials with a full comprehension and an utter disregard of their responsibilities. Furthermore, they were carried on at Government expense, on Government time, using Government vehicles and Government equipment, including the use of the Government free-mailing privilege. I doubt if at any time in our history has Federal money been so widely used to circumvent the will of the elected representatives of the people. That it did not succeed is a tribute to the level-headed attitude of a public which refused to be panicked and to the determination of the Congress to represent the will of their constituents and not the desires of officials in the executive branch.

DEFICIENCY ABUSE

There have been other ways in which the departments and agencies of the Government have flaunted their disregard of the will of Congress. One of these is their continued refusal to limit their expenditures to the funds with which the Congress provides them for a given year. Proof of this is only too evident.

In addition to the regular appropriation bills, the Congress has been called upon in 2 urgent and 4 other deficiency bills to pass more than 650 measures involving $3,531,737,901 in deficiency appropriations. In practically every one of these 650 instances in which deficiency apropriations were requested, the Congress was powerless to deny the requests because of its interest in the welfare of the American people. Many of these requests were caused by Pay Act increases for which the agencies were not responsible, but in many other instances the additional appropriation resulted from the failure of responsible officials in the executive branch to apportion properly their 1947 appropriation. Rather than apportioning these appropriations equitably over the four quarters of the fiscal year, many agencies, with and without the approval of the Bureau of the Budget, have arbitrarily decided that they, and not the Congress, are the best judges of what should be spent and, once having made this illegal decision, have proceeded to apportion their available funds so that these become exhausted long before the end of the fiscal year. They have then come to the Congress and demanded more money. I use the word "demanded" advisedly, for in at least one instance an agency, in requesting a deficiency appropriation, had the unmitigated gall and temerity to state flatly that they had decided, upon the advice of their attorneys, that Congress had no control over the amount to be expended by that agency for a specific purpose. The Congress, through its Appropriations Committees was then faced with the choice of either acceding to these illegal demands or refusing additional funds and thus forcing the agency to curtail or eliminate essential services. Since the latter course would have brought about severe inconveniences to the American public as well as precipitating the firing or furloughing of large numbers of faithful employees, many of whom would have been rehired or replaced on July 1, the Congress had nothing to do but accede to the self-imposed authority of the executive departments and agencies.

No one is so utterly sanguine as to suppose that we can remove the necessity for all deficiency legislation. National emergencies call for immediate action in which normal anticipated budget requirements may need to be disregarded.

But this condition of Executive usurpation of congressional power which has plagued the Congress since 1793 must be corrected unless the function of appropriating moneys is to become an atrophied appendage of the Constitution. Since 1931 through 1946 there have been a total of 3,649 items in 477 measures calling on the Congress to provide $146,295,000,000 in deficiency and supplemental appropriations. A few of these were anticipated by the Congress; others were caused by emergencies arising from the economic recession and the war. But vast numbers of them were occasioned through no other cause than the disregard for legislative mandate and the apparent belief that the departments and agencies were beyond the law. John Randolph in 1806 said the following:

"Appropriations have become a matter of form or less than the shadow of a shade, a mere cobweb of defense against expenditures. You have fixed limits, but the expenditure exceeds the appropriation; and those who disburse the money are like a saucy boy who knows that his grandfather will gratify him and overruns the sum allowed him at pleasure. As to appropriations, I have no faith in them. We have seen that so long as there is money in the Treasury there is no defense against its expenditure."

With 150 years of American history at our backs, we can afford to view Randolph's fears as exaggerated. Yet the problem has continued and still remains, as is only too evident through the intervening years of congressional attempts to regain and maintain its hold on the purse strings of the Nation. From this standpoint the record since 1934 has been a sorry picture indeed, posing the question at times as to whether Congress still possesses control of the Treasury.

I am happy to state, however, that steps have already been taken which, it is hoped, will prevent recurrence of this widespread and flagrant disregard of the mandates of the Congress. Each agency, upon presentation of its deficiency request, has been warned that the committee in the future will look with extreme disfavor at all such requests not involving emergency measures. Hearings have been held probing the cause of recurring deficiencies. The committee staff has been conducting an intensive investigation of all the ramifications of this problem. As a result, with the assistance of the Bureau of the Budget and the General Accounting Office, I intend to present a bill early in the next session of the Congress which will amend the antideficiency law in order to correct this malodorous condition.

REDUCTIONS ACCOMPLISHED

Thus, despite the unanticipated postwar conditions which have necessitated huge appropriations to maintain an adequate Army and Navy, despite the drain of monetary aid which we have proffered foreign countries for relief and economic rehabilitation, despite the necessity of maintaining enlarged functions of public enterprise, despite inflation, the interest on the debt and the obligation to the veterans, despite even the insistent attempts of departments and agencies to continue and even expand their war-swollen pay rolls, despite all these, we have accomplished economies amounting to $7,181,005,249.

NO IMPAIRMENT OF FUNCTIONS

We have done this without impairing the functions of a single Government establishment, although this was not easy. The refusal of many of the departments and agencies to cooperate with us would have been ample excuse to make horizontal slashes in budgets that were obviously top-heavy in structure and gilded with superfluous personnel. The expenditure estimates made by the House and the Senate for the first time as a result of a provision of the Reorganization Act of 1946 might have proved a further incentive for greater cuts. Wisely, the Congress rejected this course, although political advantages would have been gained thereby. Instead the Congress has pursued a temperate policy of deliberative economy, wherein each item of expenditure has been carefully weighed on a counterbalance of benefits and cost.

TRIBUTE TO COMMITTEE MEMBERS

I believe that I can speak for each member of the Appropriations Committee when I say that in completing the investigating, the reporting, and the passing of the 12 major apppropriations bills and the 10 deficiency and supplemental appropriations acts this session, we have done the job with a thoroughness that has never been surpassed in the United States Senate. This thoroughness was occasioned by the unprecedented demands of Executive departments and agencies for restoration of cuts made by the House. In each instance the committee examined the subject completely, regardless of the pressure of time, until it was completely satisfied that the best interests of the country had been served.

In so doing we were motivated by two major considerations of equal importance. One was the taxpayers' demand for economy in government. The other was the recognition that it would be an ill-advised economy gesture which would curtail functions essential to the welfare of the Nation. To achieve the former without impairing the latter was a cause over which every member of the committee labored long and sincerely.

REASON FOR DELAY

To accomplish our purpose required a staggering amount of painstaking labor and time. Fortunately the Appropriations Committees have been provided with an increased staff which has been of aid to us in the tedious job of fact finding. The Senate Appropriations Committee held 168 sessions on a total of 113 days. We heard 2,085 witnesses complete 11,477 pages of testimony. The intensity of our investigations is revealed when I tell you that our first four hearings this year contained more testimony than did all 12 a year previous.

When some of the appropriation bills were not reported out of committee by June 30, the end of the fiscal year, I heard criticism regarding our progress on this very floor by an esteemed member of the committee. I would be the first to thank that member for his constructive criticism were it not that I believe he has overlooked one very important factor. For just as bills cannot be acted on by the Senate until they are brought out of committee, so the Senate Appropriations Committee cannot hold hearings and report on bills which have not cleared the House of Representatives. And this year, for several good reasons, the House passed its appropriation bills at an unprecedented late date. The Reorganization Act required elab-

orately new machinery, administered, as it happened, by a new majority. Undoubtedly the thoroughness of the hearings plus the recalcitrance of Government officials caused further House delays—just as they did in the Senate. Whatever the reason, the Senate received the appropriation bills at a later date than in any previous year which our investigation has disclosed. To exemplify this I chose 1938 as a typical prewar year. In that year all but two of the major appropriations bills had been passed by the House of Representatives prior to May 1. This year only three had passed the House by that date, leaving nine for subsequent action. In 1938 the first bill—the independent-offices measure—was passed by the House on February 3; this year it passed the House on June 18 and the first bill—the Treasury-Post Office bill—was passed on March 11. In 1938 the last two bills were passed on May 20 and June 15, one in each month. This year, three bills were passed by the House in May, four in June, and two in July—one of these 9 days after the beginning of the new fiscal year. Under the circumstances, it seems to me that criticism of the Senate Appropriations Committee for delays in reporting these bills is unfounded, overlooking as it does a rather well-known fact that the Senate Committee cannot take action until the bills have passed the House—unless we ignore the traditional appropriations procedure and initiate appropriations action in the Senate. For these reasons I regard such delay as there has been, which has inconvenienced but a few people, as unavoidable—even laudable—considering the amount we have accomplished.

PERSONNEL SITUATION

Much has been said and written recently about reduction in Federal personnel, and since this matter relates so intimately to appropriations, I wish to say a few words about the current situation. The scare headlines in the newspapers, emanating from the various departments and agencies of the Government would lead to the conclusion that Federal personnel has been decimated as a result of congressional action and that overworked skeletal staffs are operating at top speed to carry out their essential functions.

Nothing could be further from the truth. In June of 1945—the peak employment of all time—there were 3,737,896 Federal employees. As of May 31, 1947, the latest figures available, there were 2,178,092 employees. This is a very sizable reduction of 1,559,804. The question is, Where did this reduction take place? Well, in that same June of 1945 there were 2,634,078 employees in the War and Navy Departments while in May of 1947 there were just 913,225 such employees, a reduction of 1,720,853. This reduction, you will note, is greater by 161,049 than the over-all reduction in all agencies.

In other words, while the military establishments decreased their personnel since the June 1945 peak, the rest of the Government has increased 161,049. Consequently, the oft-iterated statement that the Federal agencies have suffered violent reductions in employees is not substantiated by the facts.

It is true that in certain agencies of the Government there has been a slow, orderly reduction during the past 6 months, but this reduction has not been rapid nor has any agency suffered impairment of its essential functions through the loss of personnel, unless it be by the action of the agency itself in an attempt to embarrass the Congress.

Mark this carefully: Since VJ-day, of the 55 departments and agencies now in existence, 37 have increased their personnel and 18 have decreased their employees. Six of the 10 departments show increases in employment and 23 of the 32 independent agencies show similar increases. Only the five remaining war-emergency agencies have reduced personnel. And in the meantime there have been eight new postwar agencies created. Thus two-thirds of the Federal establishments have been increasing employment since August of 1945, despite the fact that these agencies had all justified increased employment during the war period as needed for war work.

A comparison of personnel with that of the prewar period is even more illuminating. In 1932 there were 563,000 Federal employees. In 1939 there were 928,000. Today Federal employment is over 230 percent of the 1939 figure, an increase of 1,249,256.

Examining this comparison more closely, one finds that the War and Navy Departments have increased their personnel 691,089 since 1939 and the rest of the Government has increased employment by 559,167. With due regard for understandable increases resulting from certain postwar functions, such as those of the Atomic Energy Commission, the Veterans' Administration, and the temporary War Assets Administration, it is still readily seen that the other agencies of the Government have, in fact, and unfortunately, retained many of their war-found gains and in some cases surpassed that total.

I have dealt in detail with this astounding personnel picture because I do not believe that the American public has been given a true picture of the growth of this swollen bureaucracy made up of many agencies who have not only thus far retained their increased employment gained during the war, but who, in a number of cases, have even increased their wartime gains since then.

I believe that with these facts in mind most of you will agree with me that continued reductions in personnel are called for.

THE PROBLEM AHEAD

I have given a great deal of thought during the present session of the Congress to the problem of ever-mounting expenditures in the Federal Government. It strikes me as extremely significant that each of three items in this year's budget exceeds our entire expenditure figure 15 years ago. These three items—military appropriations for the War Department, the Veterans' Administration appropriation, and the interest on the public debt—are likely to remain high for a considerable period. In addition to these, we have other normal and abnormal appropriations which total, in themselves, several times our entire appropriations of a little more than a decade ago.

Occasions necessitating new appropriations are constantly arising. For example, since the submission of the original Budget estimate for 1948 the President submitted to the Congress additional requests for $2,025,252,216. Among these items were requests for over $900,000,000 for assistance to foreign countries. Another was a request for $200,000,000 in appropriations and contract authorizations for the stockpiling of strategic materials. An investigation of the loyalty of Government employees by the FBI was estimated by the President at $8,740,000. Another $16,160,000 was requested for the Civil Service Commission for similar work. A new appropriation request for the Veterans Administration would call for $98,174,800. The spread of the foot-and-mouth disease among cattle brought another request of $74,000,000 to help fight this danger. Another $10,000,000 was asked for the farm labor supply program. The National Labor Relations Board asked for $4,025,300 to carry out additional functions under the new labor law. The Federal Mediation and Conciliation Service asked for $2,650,000. A few days ago we received a request for $250,000,000 for additional flood-control work. These are all new items which did not appear in the 1948 Budget, and there are more. In all, I repeat, they total $2,023,252,216.

These figures did not include the many other new appropriation requests which did appear in the Budget. Larger items totaled over $470,000,000, and even this was not all-inclusive. The larger amounts included requests for $250,000,000 in contract authorizations for the newly created Atomic Energy Commission, $19,749,000 for ocean weather stations to aid navigation, $73,361,400 for an International Refugee Organization, and $65,000,000 for the Federal Aid Airport program and other matters.

Many of these items have not received appropriations as requested, but the mere recitation of them should suffice to indicate the overwhelming problems in connection with curtailing Federal expenditures. For these are all new items, moving in the opposite direction from reduced costs of Government.

I have already mentioned the effect that the rise of bureaucracy has had on Federal expenditures, of the new functions and new services which the Federal Government has imposed and superimposed on existing State and local facilities, thereby pyramiding organizational costs. If we are to reduce adequately the cost of government, many of these functions must be returned to their rightful administrators.

Furthermore, mere lip service to economy in government will not suffice. As elected representatives of the people of the various States, we must, of course, protect their interests. But we must all realize, just as our constituents must realize, that their interests and our interests are first of all in a government that is financially sound. We have a national debt which is beyond the comprehension of the human mind, graphically illustrated as to magnitude when we remember that if we began paying the debt off today at the rate of $1 a second, it would take over 8,000 years to balance the books. We intend to honor that debt. The bondholders of the Nation have confidence in the Federal Government's ability to meet the interest payments on the debt. That confidence must, in the long run, be built on the Government's willingness and determination to put its financial house in order. But this cannot be accomplished if we continue to expand the functions of our Government. Those services which rightfully are the responsibility of the States must be returned to them. We must gage our national expenditures not solely by the yardstick of whether a particular program would be beneficial, but whether, as a Republic struggling to maintain its fiscal equilibrium, such a program is absolutely necessary on a national level, whether we can afford such a program, and whether it might not be more properly administered by the several States.

The voters will support such a philosophy, once they have clearly defined the issues at stake. It is all too human for each of us to desire the enactment of special legislation which will help ourselves. But on a country-wide basis this course can only lead to chaos. If we, as the people's representatives, will stand firm in our unselfish resolves, I am sure that they, the electorate, will wholeheartedly subscribe to this policy.

No one can foresee the future. The uncertain international situation, the need for further rehabilitation of other nations, possible economic reverses at home—these must not be overlooked in our estimates of the future. The Congress has provided for these contingencies to the extent of its power. It has done this not only by appropriating for those measures which it deems requisite to the national security but also by placing the Government on a businesslike basis through the elimination of wasteful spending and the duplication of effort. Much more can and will be done on this score in the ensuing year. Savings accomplished in this present session have already marked us as an "economy Congress." As such, by balancing the budget, making an initial payment on the debt, and reducing the cost of Government, we have started to restore public confidence in the solvency of the Federal Government.

This confidence will be augmented as further economies are accomplished. As a result a strengthened America will face the future with renewed courage and resolve.

The Activities of the Pennsylvania Delegation in the House of Representatives During the First Session of the Eightieth Congress

EXTENSION OF REMARKS
OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. SIMPSON of Pennsylvania. Mr. Speaker, with permission of the House, I extend my remarks dealing in part with the legislative record, of Members of the Pennsylvania Republican delegation in the first session of the Eightieth Congress.

This is a report to the people of Pennsylvania at the close of the first session of the Eightieth Congress, referring particularly to some of the activities and interests of the Republican membership in the Eightieth Congress from Pennsylvania. It is necessarily limited in scope, though an attempt is made to include the major activities of our delegation.

Unhappily the work of the first session of the Eightieth Congress has been beclouded by Democratic efforts to belittle its accomplishments. The executive branch of the Federal Government is controlled by Democrats. They seek to make political capital by misrepresenting with their propaganda machine, paid for with taxpayers' money, the high quality and effectiveness of legislation thus far passed by the Eightieth Congress. We of the Republican delegation from Pennsylvania in the House of Representatives, want the people of Pennsylvania to know the truth, firmly believing that our constituents will approve our efforts, made in the face of continued Democratic opposition, to fulfill the Republican pledges of 1946, upon which we were elected. Had we enjoyed a degree of the cooperation pledged us by the President, following the elections of 1946, more good could have been accomplished; however, instead of cooperation, we had to overcome Democratic opposition in every instance.

At the congressional election, on November 5, 1946, the people of Pennsylvania sent 28 Republicans to the House of Representatives. This was the largest Republican delegation from our State since the 1932 election, when 32 Republicans were named. The 1946 election was in sharp contrast with that of 1936, when the Pennsylvania Republican congressional delegation reached its lowest ebb. The election in 1946 clearly reflected that the people of Pennsylvania desired a change; they had had enough regimentation and control under the Democrats. They wanted economy, lower taxes, less interference with their daily lives by government; in short, they wanted less and not more government. The Eightieth Congress controlled by the Republican Party is fulfilling its pledge to the people.

Our delegation very early in the session adopted a policy of holding frequent conferences and with this in view effected an organization electing the following as delegation officers: RICHARD M. SIMPSON, chairman; HARVE TIBBOTT, secretary; LEON H. GAVIN, whip.

We were saddened during the year by the death of one member of our delegation, the Honorable Charles L. Gerlach, of the Eighth District. Mr. Gerlach was one of the hardest working and most conscientious men in Congress. The delegation is desirous of paying this tribute to his memory. We now have but 27 members in our delegation, but will be back to full strength following the special election in the Eighth Congressional District on September 9, 1947.

One of our earliest and most important jobs was to secure appropriate assignments for members of our delegation to membership on one of the 19 standing committees of the House of Representatives. We were highly successful and now have representation on 18 of them. Because of the size of our delegation we have dual representation on 14 exclusive committees.

I am listing herewith the names of the 27 Pennsylvania Republicans, now in the House of Representatives, their congressional district, home addresses and the committees on which they serve:

E. WALLACE CHADWICK, Seventh District, Rose Valley, Judiciary Committee.

ROBERT J. CORBETT, Thirtieth District, Bellevue, House Administration and Post Office and Civil Service.

WILLIAM J. CROW, Twenty-third District, Uniontown, Veterans' Affairs.

PAUL B. DAGUE, Ninth District, Dowingtown, Agriculture.

IVOR D. FENTON, Twelfth District, Mahanoy City, Appropriations.

JAMES G. FULTON, Thirty-first District, Dormont, Foreign Affairs.

JAMES GALLAGHER, First District, Philadelphia, House Administration.

LEON H. GAVIN, Nineteenth District, Oil City, Armed Services.

WILSON D. GILLETTE, Fourteenth District, Towanda, Interstate and Foreign Commerce.

LOUIS E. GRAHAM, Twenty-fifth District, Beaver, Judiciary.

CHESTER H. GROSS, Twenty-first District, York, Agriculture.

MITCHELL JENKINS, Eleventh District, Trucksville, Merchant Marine and Fisheries, Expenditures in Executive Departments.

CARROLL D. KEARNS, Twenty-eighth District, Farrell, Education and Labor.

JOHN C. KUNKEL, Eighteenth District, Harrisburg, Banking and Currency.

SAMUEL K. MCCONNELL, JR., Sixteenth District, Wynnewood, Education and Labor.

JOHN MCDOWELL, Twenty-ninth District, Wilkinsburg, Un-American Activities and District of Columbia.

FRANKLIN J. MALONEY, Fourth District, Philadelphia, Foreign Affairs.

ROBERT N. MCGARVEY, Second District, Philadelphia, Public Works and District of Columbia.

FREDERICK A. MUHLENBERG, Thirteenth District, Wernersville, Public Works.

ROBERT F. RICH, Fifteenth District, Woolrich, Rules, Expenditures in Executive Departments.

GEORGE W. SARBACHER, JR., Fifth District, Philadelphia, Veterans' Affairs.

JAMES P. SCOBLICK, Tenth District, Archbald, Post Office and Civil Service.

HARDIE SCOTT, Third District, Philadelphia, Banking and Currency.

HUGH D. SCOTT, JR., Sixth District, Philadelphia, Interstate and Foreign Commerce.

RICHARD M. SIMPSON, Seventeenth District, Huntingdon, Ways and Means.

HARVE TIBBOTT, Twenty-sixth District, Ebensburg, Appropriations.

JAMES E. VAN ZANDT, Twenty-second District, Altoona, Armed Services.

II

Work in our national legislature is, of course, on a national level. While local interests and localities receive direct benefit, it is intended that all legislation be for the good of the whole country.

Hence it can be said truthfully that in passing laws, beneficial to the State of Pennsylvania, we at the same time are benefiting the entire Nation.

We shall consider our delegation's work in the first session of the Eightieth Congress in two classifications:

(a) Those laws of specific application to Pennsylvania.

(b) General legislation.

For the considerable success we have had during the first session, the delegation desires to express its thanks to the following:

Our delegation and State is indebted to Senator EDWARD MARTIN for his capable and efficient work. Senator MARTIN has cooperated in every way possible with the delegation. He attends our weekly meeting and conferences and particularly assists in expediting House bills, which have reached the Senate. Senator MARTIN, as every Pennsylvanian knows, has spent many years in close association with our legislative bodies in Harrisburg and Washington. He is entirely familiar with the legislative process; Pennsylvania's and our Nation's needs; he is an untiring and willing collaborator with your Representatives in the Congress. As a result of his careful attention to our legislation in the Senate, I am pleased to say that every bill in which members of our delegation were interested was passed, following favorable House action.

We extend our thanks to our House leadership. Our Speaker, the Honorable JOSEPH W. MARTIN, JR., our majority leader; the Honorable CHARLES A. HALLECK, and our Republican whip, the Honorable LESLIE C. ARENDS. We likewise give our thanks to the Republican Steering Committee; for its members are highly cooperative with our delegation in connection with legislation of special interest to our State. Each of them, in spite of his many duties, found time to be unusually helpful to the 14 new members of our Pennsylvania Republican delegation.

We are likewise indebted to others who helped make us known as the unique delegation of Congress. At the beginning of the session we set up the practice of having weekly meetings, at which Members would report on the status of legislation in their respective committees. This gave the entire delegation an up-to-the-minute picture of what was developing, making us one of the best-informed delegations in the Congress. To these meetings, which Senator MARTIN regularly attended, and in whose deliberations all took part, we included Maryland's two Republican Representatives, EDWARD T. MILLER and J. GLENN BEALL, and Delaware's sole Representative, J. CALEB BOGGS, together with Delaware's two Senators, C. DOUGLASS BUCK and JOHN J. WILLIAMS.

With the opening of any new session of the Congress, particularly when the party control changes, as it did in the Eightieth Congress, certain delays are always encountered. At the opening of the Eightieth Congress, two changes occurred, one by reason of a change in party control and the second through application of the Legislative Reorganization Act, effective January 1, 1947.

Any shift of congressional majorities slows the start of a new Congress. Historically, this has been true, whether the Democrats or Republicans take over after an election. There is a necessary shake-up of committee chairmanships and committee assignments. That was not the only situation which faced the Eightieth Congress on January 3, 1947. The Reorganization Act involved cutting down the number of committees to less than half their previous totals, the merging of work of several former committees into one committee, and the reorganization of the work in the committees. It limited assignment of a Member to one of the so-called exclusive committees, and, consequently, all former Members of Congress serving on more than one committee had to determine which committee assignment to surrender and which to retain.

As the Democrats were shifting from the majority to the minority party, their change-over of activities was even more drastic than that of the Republicans. The Democrats were much longer in making their committee selections and therefore in many instances committees were unable to function for a considerable time after the Republican membership was completed. The Democrats were not ready.

The Democratic propaganda machine has said that this Congress was unusually slow in getting started. If that be true, let the record show why.

Throughout the session, we of the delegation fought for and urged economy. We know that our "first line of defense," both in peace and in war, is an efficient national economy, a satisfied and happy people, a Nation where the citizens run the government as contrasted with the nations of slaves to the tax collector. We recognize that some of the "fancy spending" of New Deal years must be stopped, while at the same time, by wise and careful spending worth while and necessary government projects should be continued.

In its work for Pennsylvania, the delegation introduced and supported bills which would help the State as a whole or in part. It also worked actively for the defeat of any legislation which might be contrary to the interest of the Nation and the commonwealth. We present some of the highlights of these activities. It must be noted that where an appropriation is involved, double legislation is always required. First, a legislative committee must approve the project. Then the Appropriations Committee must provide the funds in a separate bill. Thus, it is necessary for members of the delegation to work actively on two separate propositions, pushing them not only through committees but also, through the House itself. Then, when the legislation reached the Senate, our colleague the Senator from Pennsylvania, EDWARD MARTIN, would take up the play from that point.

One of the most important jobs of our delegation this past session was obtaining money for continuance of necessary flood control in the State. Working with Senator MARTIN we were instrumental in securing $5,200,000 for the Conemaugh Dam. An additional $2,236,000 was obtained for flood-control work in or about Williamsport, with another $1-339,000 for the Susquehanna watershed near Sunbury. Likewise the Congress appropriated $1,000,000 for the Clarion River flood-control project $400,000 for Punxsutawney and $200,000 for the Dyberry-Prompton Reservoir project in the Lackawaxen Basin. A start has also been made on planning for the channelization of the upper Delaware River. Partly as a result of your delegation's efforts the benefits of flood control were spread over the entire United States and were not confined to limited areas, as the President desired. We successfully fought an effort to confine flood control to the Missouri-Mississippi Valley, as had been suggested by President Truman. Especially active in flood control work were Congressmen TIBBOTT and FENTON, of the Appropriations Committee, MUHLENBERG, and MCGARVEY, of Public Works, together with western Pennsylvania representatives, who continually pushed for the completion of projects within their areas of the State.

The Pennsylvania delegation sought an appropriation of $75,000 for a reforestation laboratory in eastern Pennsylvania. It would be of importance both toward improving the State's forests, and for flood control, especially in the Delaware River Basin. The project did not get through Congress this year, but we are hopeful of securing favorable action in 1948.

The Congress made an appropriation of $450,000 for the construction of an anthracite laboratory in the anthracite fields of Pennsylvania. Research work there should bring economic benefit to the entire anthracite coal region of Pennsylvania.

In the closing days of the session we were successful, with the cooperation of the New Jersey delegation, in securing passage of legislation implementing a compact entered between New Jersey and Pennsylvania. This legislation enlarges the jurisdiction of the Delaware River Joint Toll Bridge Commission by granting additional powers to build bridges and acquire approaches.

We secured passage of a law transferring a parcel of land in Norristown, Pa., from the Federal Government to Montgomery County, as the site of an annex to the courthouse in Montgomery County.

We secured passage of legislation authorizing the Pennsylvania Power & Light Co. to erect a low dam on the Susquehanna River for use with a steam power plant, which will provide electric current for residents of the Sunbury area. When completed, this steam power plant will consume over 1,000,000 tons of anthracite coal a year and will be of great advantage to peoples whose livelihood depends upon continued operation of the anthracite coal mines.

At the request of the Blair County Bar Association, we were successful in securing passage of legislation transferring Blair County from the Middle to the Western Judicial District of Pennsylvania. The legislation was introduced by JAMES E. VAN ZANDT, of the Twenty-second District, and handled by LOUIS E. GRAHAM, of the Twenty-fifth District in the Judiciary Committee and before the House for passage.

Still pending and very much alive is legislation introduced by GEORGE W. SARBACHER, JR., of the Fifth District, for a new national cemetery for Philadelphia to supplement the old cemetery there which has been in use for many years.

Pennsylvania will benefit by a law extending for an additional year the life of the Federal Aid Highway Act of 1944. Our State receives approximately $75,-000,000 for its road program under the provisions of the 1944 act. The extension is to pemit Pennsylvania and other States to use up all the funds allocated to them, even though under the original law the money would be returned to the Federal Government if not utilized by the end of 1947.

The delegation has been actively pushing legislation for stream-pollution abatement. We firmly believe that there is a good likelihood of favorable action upon this legislation during the second session of the Eightieth Congress.

Likewise the delegation was pleased to push and secure the passage of legislation providing funds for some of the State's publicly owned airports.

In addition to supporting legislation before the Congress, we found it necessary to oppose certain proposed legislation which we recognized as adversely affecting our State.

Thus we succeeded in delaying House action on a bill having committee support which would move the research and development laboratory of the Quartermaster Corps in Philadelphia to Boston. Despite the united opposition of our delegation, and the active work of our colleagues, LEON H. GAVIN, of the Nineteenth District, and JAMES E. VAN ZANDT, on the Armed Services Committee, the committee recommended passage of the bill. The delegation remain united in its opposition to the legislation particularly because research work can be done more efficiently in Philadelphia and the Government will save $6,000,000 if the

transfer is not made. Likewise, should this service be moved to Boston, those working with the laboratory and who wish to remain with their work would be forced to leave Philadelphia. We will continue to strongly oppose this unreasonable proposal.

Likewise our delegation is united in its opposition to the construction of the Beaver-Mahoning Canal, which could not be of value to our State or the Nation. It would aid the steel mills in other localities at the expense of the Pittsburgh steel mills and could not help our national economy in any way.

While the delegation has not taken formal action on the proposed St. Lawrence waterway, most of the delegation oppose it. It would adversely affect shipping from the port of Philadelphia, our transportation systems, and our steel and other industrial areas, without a compensating benefit to the Nation. It is particularly objectionable at the present time as it would cost some hundreds of millions of dollars. Our Federal Treasury is in no condition to justify this unnecessary expenditure.

The House Education and Labor Committee through a subcommittee headed by SAMUEL K. MCCONNELL, JR., of the Sixteenth District probed both the so-called beer war of Pittsburgh and labor racketeering in the Dock Street wholesale-produce section of Philadelphia. He was ably assisted by JAMES GALLAGHER of the First District who turned up a number of important witnesses who testified during the sensational Washington and Philadelphia hearings. The information obtained from these hearings was important in shaping the new Taft-Hartley labor law, which protects the rights of the workingman and his employer from labor racketeers.

Our distinguished Senator, EDWARD MARTIN, is chairman of a subcommittee in the Senate which has received national attention following its discovery of the steel gray market. The information and corrective steps taken as a result are vital to the well-being of one of Pennsylvania's greatest industries.

JOHN KUNKEL, of the Eighteenth District, was named at the close of the session as a member of the Select Committee on Foreign Aid. This committee will undertake to secure at first hand, information relative to the need of foreign nations for aid and what is equally important, to ascertain the extent to which our country can assist, without serious damage to our economic life. For many years, the Congress has been forced to accept reports and recommendations on these matters made by the Department of State. Through the Select Committee on Foreign Aid, Congress hopes to secure its own and unbiased findings.

The Pennsylvania delegation has been an influence in the shaping of legislation during the session. Our regular conferences with committee members' reports, reflect the delegation's reactions to current proposals. Thereafter, our opinions may be brought before the legislative committees and bring about desired changes in proposed legislation. When this occurs, the usual result was that our delegation with its 30 votes could and did support the committees' bills unanimously.

Any study of the accomplishments of the first session of the Eightieth Congress may properly begin with the question "What did the Pennsylvania delegation do toward fulfilling their campaign promises?" We are willing and anxious to meet that one head on. Here is the record.

These were our major promises:

First. Tax reduction.

Second. Economy in government.

Third. Labor legislation.

Fourth. House cleaning of communists from government.

Fifth. Veterans' legislation.

Sixth. Limitation of Presidential tenure of office.

Here is what we did:

Twice the Republican Congress passed tax-reduction bills. Both were vetoed by the President and therefore the low-income-bracket taxpayers will not save approximately one-third of their income taxes this year nor will those with larger incomes save one-fifth or one-tenth as the case may be of their income tax. We did the best we could, but due to the Democratic administration's determination to tax and tax and spend and spend, it appears there can be no relief for the taxpayer, under a Democratic President.

Our delegation supported all attempts to eliminate waste and unnecessary spending so evident in the President's budget of the $37,500,000,000 for fiscal 1947. Over almost united opposition of the Democratic Party, we did succeed in saving the taxpayer approximately $3,000,000,000 without hindering any essential Government service. The House and Senate Appropriations Committee ran into stone wall after stone wall when they sought the help of department heads for budget reduction. We soon learned it was the Democratic administration policy to keep Federal pay rolls as high as possible in preparation for the 1948 Presidential election. We deplore such tactics. Had the Democratic leadership cooperated in a sincere effort to save your money, more billions would be available for debt and tax reduction.

Pennsylvania is a great industrial State and our delegation was convinced that the people of Pennsylvania, whether members of unions or not, recognized some amendments were necessary to our labor laws. Consequently, the Pennsylvania delegation gave its support to the passage of the Taft-Hartley labor Law over the Presidential veto. That bill amends the National Labor Relations Act to provide a fairer and truer balance between the employer and his employees. The pendulum which had swung far to the left has returned close to dead center. Some loose-tongued labor leaders and radical politicians have cried out that this is a "slave labor" bill. Such statements are ridiculous and the true answer is already on record. Already under the Taft-Hartley law, the United Mine Workers, including many thousands of workers in Pennsylvania have obtained the best contract they have ever had. Good contracts have been negotiated under it in other parts of the country as well. The thoughtful citizen should remember that over 75 percent of all Members of Congress, Democrats as well as Republicans, voted for this law. Certainly any thinking American will realize that 75 percent of the Members of Congress would not vote to enslave 60,000,000 men and women who work for a living in this country. All know that the unjust strikes which plagued our country had to be curtailed. It is submitted that the Taft-Hartley law will bring about highly satisfactory results for the average workingman, even though it does restrict the arbitrary and unreasonable actions of radical labor leaders.

The Republican Party promised last fall that we would fire Communists off the Federal pay roll. Work along that line has already been started and in the executive branch of the Government, the Federal Bureau of Investigation is handling the investigation. It is significant that the Democratic administration, under President Truman, which ridiculed the idea of their being Communists on the Federal pay roll and are discharging them by the hundreds. Though they may have been on the Government's pay roll for years, nothing was done about it until after the American public spoke in the election last year by electing a Republican Congress.

One member of our delegation, JOHN MCDOWELL of the Twenty-ninth District, serves on the House Un-American Activities Committee. Mr. MCDOWELL is making an excellent record on that committee. He is exceedingly fair and is directing the investigations not only of the subversives of the left, but also those of the extreme right. He has investigated the remnants of the German-American Bund in New York and the rebirth of the hate groups in the South. He is currently a member of the subcommittee probing communism in Hollywood.

This has been an important session for veterans' legislation, notwithstanding President Truman's statement of January 6, 1947, when he told Congress that except for minor adjustments, "I believe that our program of benefits for the veteran is now complete." The Republican Congress did not believe this and have passed some necessary veterans' legislation. For example, the Congress has authorized enlisted men to cash the outstanding $1,800,000,000 in terminal-leave bonds, effective September 1, 1947, instead of being forced to wait 5 years. As there will be a surplus in the Federal Treasury to apply on the national debt, Congress simply directs that this surplus be applied toward the payment of that part of the debt held by the returned soldier. Thus the national debt will be reduced, while at the same time the soldier, due to the action of the Republican Congress will benefit. Our delegation gave this proposed legislation its united support.

The Veterans' Administration received an appropriation of $6,964,467,000 for the next fiscal year which is the largest item in our budget.

Pensions of Civil, Spanish-American War veterans and their dependents were

equalized to meet the present high cost of living.

Automobiles were provided for amputees not covered in previous laws.

The time limit for the reinstatement of national service life insurance policies was repealed.

Provision was made for the refund of income taxes, paid in behalf of service men for the year during which they died in service.

Certain national cemeteries were established.

Thirty-five million, five hundred thousand dollars was provided for veterans' emergency housing.

The revolving fund of $100 loans to veterans taking vocational training, was increased from $1,500,000 to $3,000,000.

Priorities were provided for veterans and their families in obtaining housing materials and rentals.

Two of the veterans in our delegation, WILLIAM J. CROW and GEORGE W. SARBACHER, JR., of the Fifth District, served actively on the Committee on Veterans' Affairs. Mr. CROW is a member of the special investigating committee which checked into complaints at veterans' hospitals. Difficulties were cleared up in several institutions due to his work.

Mr. SARBACHER is a member of the subcommittee investigating reports of irregularities in the Veterans' Administration. From this committee will come recommendations for legislative changes which will prove beneficial to the veteran seeking his rights.

The Republican Party likewise promised a constitutional admendment which would limit Presidential tenure of office to two terms. It was introduced and promptly approved and passed by this Republican Congress. Already about half of the required number of States have ratified this proposed amendment, which in due course will doubtless become a part of our Constitution.

It is not possible within a reasonable space to list all of the other laws passed by this Republican Congress. Some of the highlight measures are selected and briefly outlined.

Two of our Pennsylvania delegation, CHESTER H. GROSS, of York, who is known in Congress as the spokesman for the practical farmer, and PAUL B. DAGUE, of the Ninth District, serve on the Agriculture Committee which originates legislation dealing with the farmers. That committee prepared legislation to protect United States livestock from disease, revised the Federal Insecticide Act to better aid farmers, overhauled the law to provide more protection for forest lands from insects and disease, made Federal crop insurance self-sustaining, and promoted other benefits to the Nation's agriculture. The forest lands bill is of particular importance to Pennsylvania, since no less than 195,000 of the State's citizens privately own parcels of forest land. Both Mr. DAGUE and Mr. GROSS made a regulation for advocating economy in Government—they both strongly opposed the payment of subsidies on such things as wool and sugar.

The Congress passed the important armed services merger bill. This legislation is desired to bring about greater efficiency in the operation of our Army and Navy, while at the same time insuring the permanent and independent status of the Marine and Aviation Corps. Of greatest importance is the belief that in time of emergency this unified control will prove invaluable.

JOHN C. KUNKEL, of the Eighteenth District, is a member of the Banking and Currency Committee. He is generally regarded as the man who first recognized the great oversupply of sugar and who urged the lifting of rationing on sugar to the housewife. After a Republican bill was introduced and due to be acted upon, the Secretary of Agriculture finally canceled sugar rationing. The Honorable HARDIE SCOTT, of Philadelphia, also a member of the Banking and Currency Committee, together with Mr. KUNKEL, gave our delegation excellent representation on that committee. The Banking and Currency Committee this year originated legislation continuing the Reconstruction Finance Corporation for an additional year, but with greatly limited powers. They, likewise, recommended legislation which is now the law, eliminating certain wartime controls over installment purchasing.

The committee also initiated legislation to continue rent control, but provided for its end, unless another extension proves necessary by the next session of Congress. The rent-control law provides for a gradual rather than sudden removal of control and recognizes that control of rents is essentially a State and local matter.

This is in keeping with the views of the Republican Congress that the Federal Government must not permanently move into areas which properly belong to the States and municipalities. The Federal Government wartime temporary powers should be surrendered as soon as practicable. It is to be noticed that home building under the new program and with the lifting of Federal limitations and restrictions has now reached its highest level since before the war.

SAMUEL K. MCCONNELL, JR., was very active in the formation of the Taft-Hartley law and has been named chairman of the subcommittee to undertake a study of the wages and hours law. This committee will be active during the second session of the Eightieth Congress and may have legislation for action at that time.

CARROLL D. KEARNS, of the Twenty-eighth District, is another member of the House Education and Labor Committee. Mr. KEARNS has been very active on the committee and is now chairman of a subcommittee which has been investigating James C. Petrillo, president of the American Federation of Musicians. Presently Mr. KEARNS is conducting hearings in Hollywood in an effort to settle long-drawn-out jurisdictional strikes plaguing the movie studios in Hollywood.

Congress early passed a law terminating what threatened to become a racket in lawsuits, for so-called portal-to-portal pay. The stability of many firms and entire industries was threatened by these retroactive portal-to-portal pay claims, which were not anticipated during the period the work was performed. They have now been outlawed.

The delegation also gave its support to a law providing for the National Science Foundation, which President Truman has vetoed.

We supported legislation continuing the rights of Federal mine inspectors to go into mines for inspection purposes, after making certain that this legislation will not violate the rights of States, such as Pennsylvania, with high safety codes and inspection services of their own.

ROBERT F. RICH, of the Fifteenth District, is a member of the important Rules Committee which determines what legislation shall have the right of way for action by the House. He and the Honorable MITCHELL JENKINS, of the Eleventh District, serve on the Committee on Expenditures in the Executive Departments, which prepared the legislation to eliminate Communists from the Government and which handled the important legislation known as the unification bill.

In the foreign-affairs field, Congress and the administration cooperated to a greater degree than is normal, when they are under different political party control. The Congress was forced to accept the administration's recommendations in many instances, because the Congress has no means of learning directly about conditions which exist in foreign lands. Hence, we must rely upon the executive branch of the Government, which is charged directly with conducting our foreign affairs, though, in self-defense, the Congress has now named a committee, mentioned above, which is studying certain phases of our international problems.

We joined the International Refugee Organization, a branch of the United Nations; we set up the United States trusteeship of Japanese mandated islands; provided funds for UNESCO, and we provided limited money to continue the Voice of America program. Our policy in general is to recognize our leadership in world affairs and to assume our obligations, while remembering always, that there is a practical limit beyond which even our great country dare not go.

The Honorable JAMES G. FULTON, of the Thirty-first District, and FRANKLIN J. MALONEY, of the Fourth District, are our representatives on the Foreign Affairs Committee. Mr. FULTON has been extremely active in the committee throughout the session and has effectively expressed our delegation's viewpoints. Mr. MALONEY was named to the committee very late in the session. He has just been named to a subcommittee charged principally with matters affecting the Middle East and will probably be sent overseas this fall to investigate matters there.

WILSON D. GILLETTE, of the Fourteenth District, and HUGH D. SCOTT, JR., of the Sixth District, serve on the important Interstate and Foreign Commerce Committee. Both serve on the subcommittee now considering a national air-policy program, which is of vital importance in our long-range air-line policy. The committee also provided for voluntary railroad reorganizations by the Interstate

Commerce Commission. This bill passed the House, but has not been acted upon in the Senate. Our members of the Interstate and Foreign Commerce Committee gave their support to legislation of particular interest to Pennsylvania, which authorized the United States Food and Drug Administration to seize spoiled food in warehouses. Newspapers in Pennsylvania have carried a large number of stories on seizure of large quantities of Federal surplus food which was sold to dealers in Pennsylvania for human consumption, although the food was not fit for use.

Pennsylvania is ably represented on the very important House Judiciary Committee. The Honorable LOUIS E. GRAHAM, of the Twenty-fifth District, and the Honorable E. WALLACE CHADWICK, of the Seventh District, serve on this committee and were active in that committee's legislation before the House. In particular, they supported and helped prepare legislation which would limit Presidential tenure of office to two terms, as well as the new Presidential Succession Act, which provides that the Speaker of the House of Representatives is in line for the office of President of the United States after and if the Vice President becomes the President.

Mr. GRAHAM was very active in support of further legislation codifying our Federal laws. One provision of a bill which has passed the House of Representatives and which is of great interest to every taxpayer establishes as a part of our Federal judiciary what presently is the Tax Court. It is expected that this legislation will pass the Senate next year and will become law, and it is certain that its passage will be advantageous to citizens appearing before our courts seeking relief from tax injustices.

The Congress did not overlook American shipping. It has launched an investigation to protect our maritime position and has continued the authority of the Maritime Commission. Because of certain spot shortages which have developed at home and the uncertain international situation, we have provided controls over export of gasoline and petroleum products. The Honorable MITCHELL JENKINS, of the Eleventh District, is Pennsylvania's able representative on the House Committee on Merchant Marine and Fisheries, which has jurisdiction over maritime matters.

A score of new laws came from the Post Office and Civil Service Committee. The Honorable JAMES P. SCOBLICK, of the Tenth District, was principally active in legislation amending the Veterans' Preference Act, so that decisions of the Civil Service Commission shall be mandatory on appeals of veterans. This important committee, upon which ROBERT J. CORBETT, of the Thirtieth District, is a leading committee member, also provided for retirement for Federal Bureau of Investigation operatives after 20 years of service. This legislation was requested by J. Edgar Hoover as a means of helping his agency retain many of its best men, who otherwise would leave Government service for private employment. A Federal employee loyalty bill and an amendment to the retirement laws, providing that anyone who leaves the Government service within 10 years of employment may withdraw his contributions, was also acted upon by this committee and the Congress.

While the efforts of Congress to reduce personal income taxes attracted the most public attention, the Ways and Means Committee of the House, where all Federal tax legislation must originate and of which the author of this statement is a member, was also engaged in other important work.

The Ways and Means Committee have jurisdiction of the reciprocal trade agreements law. The committee conducted lengthy hearings in preparation for possible extension of that law when it expires in 1948.

It originated the law which freezes the Federal security tax at 1 percent until 1950, thereby saving employers and employees each $1,000,000,000 annually. The committee recommended and secured passage of certain legislation to suspend the duty on copper until 1950, because of the need of American industry for more copper. It is presently conducting very important hearings designed to bring about legislation revising the entire Federal tax laws. Our tax laws have not been revised since 1926 and many changes are doubtless advisable. Probably legislation to accomplish this purpose will be introduced after the first of the year and acted upon during the coming session of the Congress.

Our Republican congressional delegation from Pennsylvania looks to the future. We keep before us our pledges made to you who elected us as your representatives. Individually and collectively, our interest and desire is to have only those laws that may be necessary, to assure that every man and woman in Pennsylvania and our Nation, truly enjoys the benefits of free government. We renew these pledges and devote ourselves in the future to what we believe is for the best interests of all.

The Revival of Germany

EXTENSION OF REMARKS
OF
HON. CHARLES J. KERSTEN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 26, 1947

Mr. KERSTEN of Wisconsin. Mr. Speaker, the stench from the murder factories of Dachau, Buchenwald, and Oeschwein will linger a long time in the nostrils of human history. The "scientific" purification of European blood by barn-yard genetics and slaughter-house technique by a self-deified Hitler will be set down in the encyclopedias of the future as barbarities that match those of any would-be world conqueror of the past. The war machine by which the hearts of peaceful people were booted and tractored on the land and stung from under the sea and from the sky will probably always be remembered as the great deadly gift of the German Junkers. Yes, the dark cloud of the Nazi scourge has cast its shadows across the German Nation. It will be many years before the sky will clear over that land.

And yet, America is called upon in this historic hour to make a decision for Europe—for the world. The decision must be made with alacrity, with firmness, and with justice.

Shall we sentence 65,000,000 people to a form of semislavery that the late government of those same people sought permanently to impose on at least all other European people, if not the world?

It is comparatively easy to enter judgment in the affirmative. We are far removed from the physical scene of that country with 60 percent of its city homes destroyed, 20,000,000 people, including 4,000,000 children, homeless and most of the population on the edge of starvation. It is comparatively easy because it would satisfy the basic passion of revenge. At first glance, it would also seem to remove the threat of German militarism. It would also require less painful thinking.

It is harder to answer in the negative because that requires the difficult process of distinguishing the really deliberately culpable and those who went on were dragged along by the pressure of events. Of course, the Nazi leaders were dealt with at Nuremburg. And there are other trials. There are many behind barbed wires.

How are we to judge the mass of the German population? There are the remains of the Hitler virus that will stay with many of the youth of Hitler's day. But what of the mass of the people?

Consider the German, as such, removed from the immediate circumstances of domination by a Junkers class and the mad ambitions of the Nazi chief or of a Kaiser Wilhelm—removed from the tensions of middle Europe during the last decades of the nineteenth century and the first half of the twentieth.

Is the person of German race fundamentally different from the person of other western nations?

The answer can be found in America. Apart from irrelevant variances in racial characteristics, the German people who immigrated to the United States and whose descendants we count by the millions are as good and fine a part of our population as any other. Their members are among the front rank of our citizenry as are those of all other national groups, the Poles, the Irish, the Italians, Scandinavians, Jewish, Czechs, English, and all the others who have become a part of our composite people.

The average German American has not the slightest idea of the destiny of Teutonic blood to rule the world.

The proof is that in our two late wars against aggressive German governments, Americans of German origin fought and died to stop those aggressors as valiantly as any other.

The grand spectacle of America has proved many things but none more important than that ordinary people no matter from what race, are pretty much

the same, when their dignity as human beings is protected from despotic forces.

Some will say that every German is a suspect: That every German because he is German desired or connived at world domination by the Kaiser or the Nazis. To those I point to the gold stars opposite the names of German boys on the honor rolls of World Wars I and II all over our land. It is not easy to take up arms against the nation of one's ancestry. Yet, the call of ancestral voices was not heeded by Americans of German origin. Why? Because the great mass of German people in the United States recognized as quickly as any other the vice of aggressive war. Germany is not the only country in which despotism has arisen and from which governmental cruelty has come.

A British government bathed Ireland and other smaller countries with the blood of its defenseless people. A French provisional government turned France into a charnel house and it became fashionable on the streets of Paris to carry a purse made from the tanned skin of an aristocrat and a prostitute was set up in the church of the Madeleine as the Goddess of Reason.

And today the police state of the Government of the Soviet engulfs a large part of humanity.

You could not condemn the English people, the French people, the Russian people or any other people among whom despotism arose to an indeterminate term of semi-slavery.

But now we are confronted with the question of permitting the rise of the point where that nation can support itself and contribute to the adjoining nations that by custom have depended in part on the German economy. Our State Department advocates that rise. Others oppose it. We are in a position to make the decision despite the opposition.

The crux of the revival is the coal, the iron ore, and steel making of the Ruhr Valley. The neighbors of Germany fear a revival of German militarism in the revival of the Ruhr. The danger of another attack is feared in permitting Germany to rise above the level of an agrarian people.

Truly, civilization cannot stand another world war. But, on the basis of the facts now at hand, from where does the danger of a world-devastating war come? It comes from man's recently acquired knowledge of weapons of mass destruction, atomic energy, disease bombs, guided missiles, the conquest of the air.

After hearing the testimony of over 200 experts, the President's Advisory Commission in May of this year stated:

> For a period estimated by responsible scientists at not less than 4 years and not more than 10 years, we can expect immunity from such attack because we alone possess the atomic bomb. After that, the signal for a war against us will, it is to be expected, be a large-scale, long-distance onslaught with atomic explosives against our principal centers of population and production.

If the greatest danger of war is an attack against us and by atomic weapons, what do we propose to do about the danger of atomic energy? Do we propose to the world that the use of atomic energy be outlawed? No. Our plan, the Baruch plan, is to set up an international authority to outlaw the bomb and to control the use of atomic power by the nations for peaceful purposes. The plan provides for inspection of the uses of atomic energy.

If international inspection of atomic energy is considered a safeguard against the dangers of its use for an attack by an aggressor, why is not an international inspection of Germany's industries a safeguard against the revival of German militarism?

Providence has placed within the knowledge of man an energy which could destroy us if it is used for warlike purposes. We propose to control it, to inspect its use, to guard against its warlike possibilities, but we propose its use for the benefit of mankind.

Providence has also placed with us the technical and economic genius of the German people. It should be our purpose and the purpose of the United Nations that that genius be used for the benefits of the German people and of mankind.

By fostering the revival of German industries to their best and most purposeful use along nonmilitary lines a very valuable precedent can be set for enduring peace. It will not be an easy project. It will require close inspection and constructive guidance. The industrial dies to make washing machines and plowshares should never be recast into dies for machine guns and tanks. But if we can now superintend the reemergence of a strong nation along peaceful lines the world will be having its first concrete lesson in practical and constructive disarmament.

It will be a vital precedent. By demonstrating that a powerful and inventive people can really be directed into the path of peace without crushing them our earth will learn a major lesson in civilization.

The world can learn no lesson by destroying the German genius. By intelligent direction of that genius we can, with the help of God, create a precedent that all countries could ultimately follow—dedication of a nation's strength to peace.

It is true we cannot at this time disarm. In fact, we must increase the military strength that we have allowed to fall into temporary abeyance. This is true primarily because might is still the determinant of right in the world. People the world over are yearning for universal agreement on morality, human rights.

But despite this gloomy state of affairs, we must act with faith and courage. We are, by the providence of God, in a position of world leadership. We must demonstrate our ultimate purpose and good will, exercising great wisdom and world statesmanship by guiding the resurrection of Germany. We must assist Germany to arrive at its true dignity, chastened of the errors of its aggressive governments, but strong and capable of taking care of its own needs and the needs of others by nature dependent on it. Above all we should not encourage Germany to make a god of science. The terrible sin not only of the German people but of a great many other people in the world is to look to science for the answer for all the needs of man. Man is a material being only in part. His most important part is spiritual. His greatest needs—now of all times—are spiritual. The passion for scientific development and invention should at all times be subservient to those spiritual demands. When a man or when a government forgets the spiritual nature of man—forgets God—that man and that government is dangerous.

The Law and Government

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, November 17, 1947

Mr. WILEY. Mr. President, it was my privilege to address the annual convention of the American Bar Association at Cleveland on September 24. I ask unanimous consent that the text of this address be reprinted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LAW AND GOVERNMENT

Permit me to express my gratitude for the opportunity to address this distinguished assemblage. I feel that this is almost a homecoming for many reasons. First, because it has been my pleasure and privilege to know many of the distinguished lawyers and jurists here; second, because you and I have been working together toward common objectives in advancing the welfare of the American legal profession and of our Nation itself.

ASSISTANCE FROM BAR

I want also to express my sincere gratitude for the wholehearted cooperation which has been extended to me as chairman of the Senate Judiciary Committee by your president, my good friend and fellow Wisconsinite, Carl Rix, by your other officers, and by your members. In your letters and telegrams to the committee, endorsing the nonpartisan objectives of the committee, in your suggestions and counsel, we on the Judiciary Committee have found an unending source of assistance for which we are deeply grateful.

The American Bar Association Journal, edited by Judge William L. Ransom, is in particular to be congratulated for its extensive and outstanding coverage of the news on Capitol Hill as it affects the American legal profession and for its constant crusade on behalf of a stronger, sounder judicial system.

EUROPEAN TRIP EXPERIENCES

As you may know, I have just come from a short visit through several European countries. It seems particularly appropriate that we consider for a few moments now the subject, "Law and Government", on which I found it possible to make many observations during my trip. These observations, unfortunately, brought out many contrasts between unhappy conditions of the law which I found in the Old World and the blessed conditions which we enjoy in the New World.

ALTERNATIVE RELATIONS BETWEEN GOVERNMENT AND LAW

You and I know that there are many alternative relationships between law and government in the world today. Let us consider a few of them:

1. We may have government by adequate law. This, I believe, is the government which characterizes our United States of America, where law reigns rather than men. Here, we enjoy civil liberties, trial by jury, freedom from unwarranted search and seizure, habeas corpus, as well as the dearly prized freedom of speech, religion, press, worship. We as individual citizens cannot be made the helpless victims of the ambitious or capricious whims of a chief of state or of his secret police henchmen or any malicious fellow citizen. Ours is indeed a government by adequate law and it is our intention to make it ever more so.

We have not yet achieved the condition of which W. A. Gilbert wrote:

"The law is the true embodiment of everything that is excellent."

We still have a long way to go toward the codification of our law, toward the elimination of statutory deadwood, toward the integration of hitherto unrelated and uncoordinated laws. But we are on our way toward those objectives.

No one of us here can be complacent when we consider, for example, many inadequate laws on the municipal level, obsolete housing codes which serve to sabotage our construction effort by requiring excessive labor, needless materials, etc. These moth-eaten codes are but a sample of the problems we still face at the State and National levels.

The Supreme Court has enunciated the great principles of law concerned with safeguarding fundamental American rights. Chief Justice Waite of the Supreme Court in October of 1875 in the historic case of *U. S.* v. *Cruikshank et al.*, said:

"The equality of the rights of citizens is a principle of republicanism. Every republican government is in duty bound to protect all its citizens in the enjoyment of this principle, if within its power."

That same month and year Chief Justice Waite, in the celebrated case of *U. S.* v. *Reese et al.*, said:

"Rights and immunities created by or dependent upon the Constitution of the United States can be protected by Congress. The form and the manner of the protection may be such as Congress in the legitimate exercise of its legislative discretion shall provide. These may be varied to meet the necessities of the particular right to be protected."

In the October term of the Supreme Court in 1921 the Supreme Court said:

"Our whole system of law is predicated on the general, fundamental principle of equality of application of the law—'All men are equal before the law'—'This is a Government of laws and not of men'—'No man is above the law'—are all maxims showing the spirit in which legislators, executives, and courts are expected to make, execute and apply laws."

These, then, are the principles which we mean when we speak of a government by adequate law. It is then up to us to determine whether lynching, poll-tax requirements, and acts of omission by State officers which might sometimes cost a man his life, are compatible with the great principles of adequacy in the law.

The exceptions to the adequacy of our laws should not, however, blind us to the rule of their adequacy.

GOVERNMENT BY INADEQUATE LAW

2. Now there is a second condition in which there is government by inadequate law. By that I mean a government which is morassed in a statutory quicksand, however able may be its administrators. Under that condition, the law is a means not for progress, but for paralysis. Law becomes not an aid, but an enemy of freedom. We know that there are many countries of the world whose national advancement has been limited and restricted by a spider's web mass of antiquated statutes handed down from generation to generation without heed as to modern needs.

Most European nations ravaged now by two disastrous wars within a generation, with their moral code eaten away by enemy occupation and/or by, the struggle for bare existence, present a lamentable picture of obsolescent law choking rehabilitation efforts.

It would perhaps be appropriate for me to make some reference to the fact that while free speech is a great traditional right under the Constitution, there is no real and conclusive corresponding protection against group libel.

In the October term of 1936 in the case of *De Jonge* v. *Oregon*, the Court pointed out that freedom of speech and of press are fundamental rights which are safeguarded by the due-process clause of the fourteenth amendment of the Federal Constitution. Here the Court commented:

"These rights may be abused by using speech or press or assembly in order to incite to violence and crime. The people, through their legislators, may protect themselves against that abuse. But the legislative intervention can find constitutional justification only by dealing with the abuse. The rights themselves must not be curtailed."

In the October term of 1918, the Court said:

"The first amendment, while prohibiting legislation against free speech as such, cannot have been, and obviously was not, intended to give immunity for every possible use of language."

It is evident that in a field such as this, where we are properly intent upon safeguarding the sacred right of free speech, we may perhaps be overlooking the proper safeguards against group libel, and in this connection it might be possible to enact legislation requiring:

(1) The right to reply.

(2) Criminal prosecution against concerted activities which breach the peace as was the case when certain groups allied to embark upon a program of racial persecution.

The only alternative to the two foregoing suggestions would, of course, be some kind of continued education.

INADEQUATELY ADMINISTERED LAW

3. There is a third relationship between law and government, and that is government with adequate law but inadequate administration. Under such conditions the laws of the land may be capable of serving as splendid aids for advancing of the welfare of a people, but their administration may be lagging sadly through inadequacy. Those who are entrusted with the power to execute the law may be characterized by corruption, by procrastination, or by all the other ailments to which bureaucracy is heir.

You and I know that even in our own land, the science of administration has hardly advanced to such a degree that the efficient administration of the law of the land can be taken for granted. Europe, with its administration structure decayed by bribery, by favoritism, by red tape, by political appointments, could hardly present a better picture than it does today, even were its laws perfect from the standpoint of reason and justice.

You will remember that Rufus Choate thus defended the law:

"The absolute justice of the state, enlightened by the perfect reason of the state; that is law."

Would that this description could characterize the law of the nations today.

Justice Stevens, the celebrated English jurist, once said:

"The only thing which prevents the English people from seeing that law is really one of the most interesting and instructive studies in the world is that English lawyers have thrown it into a shape which can only be described as studiously repulsive."

I wish I could say that that is no longer true. Unfortunately, however, as this group knows, there is still an element of truth in this statement.

Since 1789, when Congress first met, there have been enacted more than 66,000 laws, and while some of them have been repealed, there still are tremendous numbers on the books. The old idea that any man, even one not necessarily versed in the law, was presumed to have a knowledge of the law, is very much a legal fiction today. Frankly, even the lawyers can't accurately tell you what the law is today, and certainly when the lawyers get into the field of administrative law, it would be extremely difficult for them to know precisely what the law was. I mean no irreverence when I say that the Good Lord himself would have great difficulty in telling you what the administrative laws of the land are. The entire field of administrative law is a complex no-man's land, with very few guide posts, and I think the Congress must be continuously concerned with this problem.

It is, as I pointed out in my opening comments, entirely possible to have good law, and inadequate administration. One illustration of this may perhaps be found in the field of antitrust legislation.

Frankly, the Senate Committee on the Judiciary is approached with suggestions for various enlargements of the existing antitrust legislation. Usually, on scrutiny, it is found that the law on the books is already adequate, which leaves us with one possible conclusion; namely, that the law, though adequate, is perhaps inadequately administered.

TYRANNICAL ADMINISTRATION

4. The fourth relationship, I am sure, has already been suggested to you, and it is, of course, government by adequate or inadequate law, but with tyrannical administration. This is the condition which epitomizes the dictatorships of modern and ancient times.

It makes no difference, it is all too apparent, whether the printed laws of, for example, the Soviet Union, are wise and just, whether they are well codified and streamlined, or whether they are unwise or unjust and badly organized, so long as there is rule by men rather than by those laws, so long as tyranny is the order of the day, and a fuehrer or dictator or similar chief of state rules.

Law, under these circumstances, is a hollow mockery, a sham, and a subterfuge. So long as one man in the State is considered above the law, all men are open to violations of the law.

Communists and their fellow travelers have long boasted of the Soviet Constitution which they hold up as a model of modern law. They neglect to add, of course, that said Constitution is no more than a showpiece to the world, marking a brutal dictatorship of a slave state.

PERVERSIONS OF LEGISLATIVE ENACTMENTS

We could perhaps add a fifth category, and that might be perversions of legislative enactments of the Congress by the courts and by administrative agencies. It is not my intention to dwell on this last category at length, but I can point out, for example, in the field of labor relationships, that the Norris-LaGuardia Act of 1932, which guaranteed and protected union self-help against judicial control by means of the injunction, was originally an attempt to cancel out a small host of what might be called judicial perversions.

The Fair Labor Standards Act of 1938 was an attempt by Congress to exercise its constitutional authority to unburden commerce. It was never intended that the act should be the vehicle whereby impossible burdens would be imposed upon commerce for the

benefit of any one group—labor or any other group. Again there was a perversion.

It has been contended that many recent decisions of the Wage and Hour Act have not been in accord with the fundamental principle of statutory construction; namely, that legislation must be construed to work reasonable, not absurd, results. Here again it has been alleged that it is a perversion of the original intent of the legislation.

In the Senate Committee on the Judiciary we drafted legislation which we felt would cancel out interpretive perversions which have been applied to the Wage and Hour Act.

Apart from all of the foregoing, I should perhaps be remiss if I did not discuss briefly with this fine group the fact that the American Bar Association has cooperated with the Committee on the Judiciary not only in the field of judicial nominations, but also in supplying valuable advice and counsel relating to the general legislation relative to judicial improvements which has been pending before the committee.

I am extremely proud of the fact that the Committee on the Judiciary was able to report out a bill to codify and enact into positive law title I of the United States Code on General Provisions; title 4 of the United States Code entitled "Flag and Seal, Seat of Government, and the States"; title 6 of the United States Code relating to official and penal bonds; title 17 of the United States Code on Copyrights; and title 9 of the United States Code entitled "Arbitration."

There are still pending before the committee bills which seek to revise, codify, and enact into positive law title 18 of the United States Code, entitled "Crimes and Criminal Procedure," and title 28 of the United States Code, entitled "Judicial Code and Judiciary."

A subcommittee of the Judiciary will be working on these latter two codes throughout the summer, and I am hopeful that early in the next session they can be enacted into law.

You will recall also that our committee has been successful in reporting out a bill which would establish qualifications of jurors in the Federal courts—a bill which met with widespread approval from the bench and bars of the Nation.

In connection with this bill, we still have pending a related measure concerned with the payment of fees, expenses, and cost of jurors, and one other related bill which would provide for a jury commission for each district of the United States, and which would regulate its compensation and prescribe its duties.

Other bills pending before the committee and currently being studied which would be of interest to lawyers relate to the regulation of habeas corpus proceedings in the courts of the United States; a bill seeking to incorporate into the Judicial Code the provisions of certain statutes relating to three-judge district courts; a bill amending the Judicial Code, as amended, to increase the limit of the Federal district courts' jurisdiction of claims against the United States; a bill requiring the designation of another judge to sit in the place of a judge against whom an affidavit of personal bias and prejudice has been filed.

These are only a few of the many bills relating to judicial matters currently being studied by the committee, and I might add also that there are quite a number of bills pending before the committee which would make permanent various judgeships and repeal various prohibitions against the filling of vacancies in several of the Federal district jurisdictions.

On all of these now the committee welcomes the valued counsel of members of the bench and bar, and here, as elsewhere, I know that our mutual cooperation can result in constructive legislation.

CONCLUSION

Coke says: "Reason is the life of law." Reason, unadulterated, shows the way to truth and justice, and man-made laws should reflect the same. Our job is to refine human law. When reason goes berserk we get dictatorial trends unless we have in healthy operation the system of checks and balances—not simply in government but in the hearts of men.

Was it not Demosthenes who said: "What we have in us of the image of God is the love of truth and justice."

Paul speaks of "the law of the spirit of life, which saves from the law of sin and death."

Mortal power, as history demonstrates, tends toward corruption. This is all too apparent to us in this age.

We on this continent have evolved the finest of all human systems—the American way. We know that eternal vigilance continues to be the price of liberty. In these days particularly, eternal vigilance is necessary not simply to maintain America adequate to meet the impact of physical force, but so that America will be adequate to meet the impact of unreason, of false ideologies, of isms, that would corrupt.

James A. Farley, University of Wisconsin Centennial

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable James A. Farley at the University of Wisconsin centennial dinner, Hotel Commodore, New York City, on October 17, 1947:

An easterner, like myself, holds it an honor to be invited to a gathering of this world-famous western State university. When we meet to discuss education, two kinds of experience meet: both thoroughly American, and both of them significant.

In the East, the typical youngster goes to a public school and high school. Then, if he is college material, he finds ways and means to attend a college established and maintained by private funds and private generosity, for these dominate. Most eastern universities are not supported by the taxpayer, and consequently are not free. Our eastern boys and girls, if they have the ability, frequently work their way through; or are helped by their families or friends, perhaps with further help from scholarships. The typical western university is State supported; and only recently has the East learned from you the practical place of tax-supported higher education.

We on the Atlantic coast can fairly say that we gave to the country, indeed to the whole world, the first example of primary and high school education, making it possible for a boy or girl to be trained free of charge through high school. That began in colonial Massachusetts, and was picked up by my own State, New York, after the Revolutionary War. This was a great American contribution to civilization: no other country had done it before, and many have not done it yet.

But if eastern colonists contributed the base, I think the credit for making higher education generally available goes to the Western States. This University of Wisconsin, perhaps more than any other university in the United States, opened the best of academic and technical training to a whole people as freely as our forefathers had made literacy possible for all.

As you all know, I am not an educator. The field in which I am best known is politics, and I can speak to you from that humble but very practical angle.

As an American, and, if you will allow me, as a Democrat, I like to remember that the early hero of the great and continuing drama of American education is Thomas Jefferson. Again, if you will allow me, I am proud, as a politician, to remember that Jefferson accomplished this great mission through straight political means. At a time when politics and politicians come in for more abuse than analysis, it is worthwhile remembering that Jefferson, besides being a great philosopher, was a very practical district and State party leader. It was as a party leader that he created the pattern for State universities when he brought into existence the University of Virginia. It is well to remember that it was Jefferson, the national politician, who provided for the support of education throughout the western territory he got for the United States by the Louisiana Purchase—and that he did it by a straight political appeal. On that base was later built the system of State universities which now are the jewels of the American way of life from coast to coast. Many of them, like Wisconsin, need not be ashamed of the fact that they, too, owe their lives to politics, for you owe much to the La Follettes, skilled and capable politicians all.

Many of us wish the history and achievements of universities like Wisconsin were better known outside the United States. I have the doubtful privilege of being on the mailing list of about every propaganda outfit in this country. One publication I see from time to time is the Information Bulletin of the Soviet Embassy in Washington. It has pictures of the schools and universities set up by various divisions of the Soviet Union, creating the false impression that free higher education was available to all only in Communist Russia. Someone ought to distribute, far and wide, a bulletin showing the extent and work of the American State universities. It would be an eye-opener to some people abroad who talk loosely about the failure of the American way of life. For that matter, it might even open the eyes of some critics of America here at home to learn that the wildest dreams of our Communist friends, or perhaps, since the new Belgrade Comintern, our Communist opponents, never included a system of State-supported higher education, available to everyone, which compares remotely either in quantity or quality with the American system of State universities, so brilliantly typified by Wisconsin.

For the fact is that the greatest single factor in the strength and success of America has been our State-supported education. This factor undoubtedly outweighs every other cause, and perhaps outweighs all others put together. It is true that our country is large and has great natural resources; but that is true of other countries, which nevertheless remain backward. It is true that great scientific discoveries have made great development possible; but these developments were equally open to other great countries which proved unable to use them as effectively. It is true that until recently we were free from the greatest burdens of military defense; but other parts of the world have enjoyed a similar advantage. The distinctive resource of the United States was, and is, an educated, trained population. This began as mere elementary training in reading and writing, followed by the creation of a system of free public high schools and crowned, as it is here, by a system of

college education open to any boy and girl with capacity to use it.

The result was a great reserve of highly trained men and women. This proved of vital importance both in war and in peace. By reason of it, Americans were able to make use of their natural resources where an uneducated people would have been unable to unlock the natural wealth around them. As scientific and industrial research opened new possibilities, trained men and women could be found to organize and staff enterprises, public and private, by which these could be practically used. In time of crisis, specialists were available in practically every field from finance to chemistry, from social work to engineering, so that new methods could be devised to meet new problems. In time of war, a trained population has been mobilized twice in my lifetime to form, in each instance, the most effective and most modern military organization the world has ever seen.

None of this could have been done without a people so educated that leadership is available on call, all the way from foreman to managing director in industry, or from corporal to general in an army. Her millions of educated men and women are the greatest resource of the United States.

Today, we are proposing an experiment which promises still further to enrich the American educational scene. The proposal is to supplement state funds by private generosity. It is interesting to recall that a generation ago many people in Wisconsin considered this proposal and disliked it. They feared that dependence on private generosity might injure the freedom of the University of Wisconsin, might make it subservient to moneyed interests which could give or withhold support. Their solution was a purely State-sponsored institution, forbidden to accept outside assistance.

We can thoroughly respect this desire and pay honor to those motives. But we can also recognize that they were meeting this question at a time when the great strength and reputation of this university had not been fully established. Perhaps, there might have been danger that the State of Wisconsin would yield to the temptation of lightening its own budget by seeking private gifts. Perhaps they thought that the financial tycoons of the day indeed might have sought to take advantage of their wealth in the manner they feared. But I think today few of us would consider that danger real.

In our time we have seen the rise of forces seeking to control public institutions through politics; and a tragic Europe has shown us that politicians on the loose can work against freedom of education with far greater violence than has been dreamed of by any millionaire. Both Hitler and Stalin have taught us that power over education can be abused as can the power of private wealth. Both the Nazi and the Communist have proved that, in a manner we are never likely to forget. There is room, in our system, for both public and private support, and perhaps that combination is our best guarantee of freedom.

I happen to be in favor of Federal aid to education where it is sought and is necessary. But I am utterly opposed to any attempt to tie political strings to that aid and I hope the Congress will provide such aid. I am in favor of public universities accepting private gifts; but I would oppose to the last ditch any attempt by a donor to control educational or intellectual policy thereby, and no reputable institution would tolerate any such attempt.

The true guaranty of freedom in education lies not in the form of the aid, but in the determination of Americans to maintain their universities as citadels of the free mind, as well as places of training for youth. The American battle to individual freedom, with responsible concern for the whole community, has been unending since the beginning of our history. To my mind it is foolish to think that a Federal appropriation to help public schools in, let us say, Arkansas, can bind that State to policies contrary to the wishes of the good people of Arkansas, just as it is impossible to think that the University of Wisconsin could be controlled by any private gift if the citizens of Wisconsin maintain their traditional and proud insistence on the right to develop and think freely.

You have a mighty fortress of freedom here in America, whose fate is now linked with the world.

As St. Paul observed long ago, no man lives to himself or dies to himself. In the modern world, certainly no great university exists without powerfully affecting the thought of a great part of this earth. Today we are engaged in a massive contest between that philosophy which unites free men, and that philosophy which insists that human progress can be achieved only at the cost of freedom. In that contest, the light of Wisconsin and all our glorious higher institutions of learning must shine with a brilliancy that will illuminate not only America but the nations beyond the seas.

Some of us have worked in our various ways toward safeguarding and strengthening the American ideal, through war, and crisis, and again through war. Much of this I have seen. I was privileged to take part in some of it. Lest you have forgotten, let me remind you that I am a politician; and I remember that universal education was a politician's gift. I am proud to recall that a number of great Wisconsin politicians made possible this stately and noble achievement of American life, the ever-glorious University of Wisconsin.

Peace With Justice

EXTENSION OF REMARKS
OF
HON. WALLACE H. WHITE, JR.
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, November 17, 1947

Mr. WHITE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the senior Senator from Michigan [Mr. VANDENBERG], President of the Senate and chairman of the Senate Foreign Relations Committee, at the University of Michigan, in a special convocation, November 3, 1947, honoring the centennial of the organized Dutch settlements in western Michigan. The distinguished Senator used the occasion to make a swift and cogent summary of his views on current problems of foreign policy. It is a matter of such importance that his widely approved address should be made a part of the permanent record, that I am asking consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great joy to return to my alma mater under these generous auspices. I acknowledge the privilege and the honor with deepest gratitude. The decades since my student days have been rich in dynamic progress for the University of Michigan. Its preeminence is certified not only by Saturday scoreboards, but by every test that may be applied to its cultural leadership, its splendid faculty, its cosmopolitan student body, and its potent contributions to the life of the Republic. Here stands one of the greatest institutions of our time. I constantly find myself in the invigorating mental status of a proud and loyal cheer leader for the yellow and the blue. May this great university continue to move forward to ever greater achievement and glory in enlightened service to humankind.

I am glad to welcome the distinguished Ambassador from the Netherlands, my longtime friend, Dr. VanKleffens. We have been "peacemongers" together upon several international missions. Like the rugged country from whence he comes, he always reflects bold and courageous integrity in his international viewpoints. Like Dutch-American relationships through unbroken years of friendship, he symbolizes hands across the sea—not bricks. His country cooperates with the United Nations. It has recognized the good offices of the Security Council of the United Nations in the internal conflict in Indonesia. The United Nations called for a truce looking toward pacific settlement. The Netherlands promptly acquiesced, as did the Indonesian nationalists. A United Nations mission is now in Indonesia seeking to implement the truce that it may lead to a just peace. There have been mutual charges of breaches of the truce. The place to settle such charges is in the United Nations. I confidently expect the Netherlands to take this view since it has set the tremendously vital and honorable precedent of promptly admitting the United Nations to the exercise of its peace-making function. I expect this to be the attitude of the United States with a frank and fair assessment of the facts.

It is fitting that the Ambassador should be with us at this convocation which gratefully salutes the centennial of the epochal Dutch invasion of Michigan and other Western States in 1847. This centennial is a tremendously significant event in the American way of life. It acknowledges sturdy Dutch traits that are woven into American character. It marks the one-hundredth anniversary of the advent to Michigan of a vigorous people who, since the earliest days of New Amsterdam, have contributed immeasurably to the spiritual, social, economic, and political life of our free citizenship. America needs, in 1947, those same sterling qualities of courage and fighting faith which came to us with our Dutch forebears. We need these same fidelities to God and freedom which those intrepid souls personified. In such a pattern America will ever remain the world's great champion of individual liberty under law.

The Netherlands continue appropriately to be the home of the International Court of Justice, which builds toward the substitution of equity for force in the affairs of nations. In this aspect, it is an eternal lighthouse beckoning escape from the jungle fogs of yesterday. In the presence of this blessed fact, and remembering civilization's debt to the Netherlands for its long leadership in the evolution of international law, I think I can best recognize our old Dutch inheritance this morning by a brief discussion of today's crises in international relations. Therefore, I speak about liberty under law in some of its current aspects.

I wish to speak of peace with justice in a sane and liberated world. It is the dream for which we joined in fighting two World Wars. Frequently the dream becomes a nightmare. But even dreams are not enough. Every prayer in our souls—every resource at our command—must continue to strive toward the reality.

We dare not surrender to discouragements. Too much is at stake. Equally, we dare not surrender the objectives for which we fought. Again, too much is at stake. Science has foreshortened this world to an ominous degree which denies us the luxury of living unto

ourselves alone. The next war could be relatively a matter of minutes instead of months. Yet grim reality warns us that Allied unity has split apart. We must face all of these facts. Intelligent American self-interest cautions us to keep our feet upon the ground. Meanwhile, intelligent American self-interest equally warns us to keep our eyes on the horizons. We cannot run away from the responsibilities of leadership unless we are ready to accept the dreadful price of its loss. It is not leadership for conquest. It is leadership for a just, a permanent, and a collective peace. We have no right or wish to dictate the free decisions of others. Our interest, faithful to the universal pledge of the grand alliance in the recent victory, is solely that these decisions shall be free. Otherwise there is only another truce with aggression. Otherwise there is no peace.

The reality of peace with justice was hopefully patterned in the Charter of the United Nations. It was built on the assumption of substantial and essential unity between the major powers. Their veto in the Security Council was to be sparingly used—according to their own textual pledge at the time. Thus they themselves recognized its potential menace when they created it. It has, indeed, been even less than sparingly used—never by us and only twice by others—except by the Soviet Union which, acting strictly within its legal rights, have virtually paralyzed the Security Council by their 20 vetoes. Any analysis must stem from this current prophetic fact.

There is no veto in the General Assembly. Full freedom for this town meeting of the world fortunately was preserved at San Francisco and it can never be overemphasized. But usually when there are divisions in the General Assembly and in its commissions (which is most of the time) the Soviet Union and its satellites are similarly upon one side and the balance of the world is a heavy majority upon the other. There are occasional refreshing examples to the contrary which suggest the ease with which the world could recuperate if this East-West rift could be cured. But the usual division is five or six to one.

Majorities are not necessarily always right. But it is a hard strain upon elementary logic to believe that these heavily preponderant voices from the conscience of the world could always be so continuously and so consistently wrong. I do not believe they are. But it would be an equal denial of logic to ignore the hazard in this persistently significant alinement. The rights of minorities can be faithfully protected without making our peace institutions impotent to function. At some point in every human institution there must be decision.

This poses the basic issue. But it is by no means so simple. The issue is persistently underscored by world-wide Communist attitudes which most of us believe are incompatible with the peace we all solemnly pledge time and time again. On the one hand, it involves the subversive infiltration of other nations. On the other hand it involves the forceful imposition of the rigors of the police state wherever communism gets control. The question here is not what we would like. The question is the right of free self-determination as promised by all of us in every statement of our war aims and our peace purposes.

This east-west cleavage comes home to us in the most amazing anti-American vilification which ever belabored the ears of the world. It is said that we are Fascists—we who maintain free speech, free assemblage, and free votes even for those who revile us and for whom there is no such Siberia here as would swallow comparable critics behind the iron curtain. It is said we are economic imperialists—we who lend-leased fabulous billions to our Allies, including, for example, an unsettled net account of nearly 11 billions to Russia—we who paid 72 percent of UNRRA's bounty. We are economic imperialists—we who ask not one foot of expanded territory. Our Pacific Islands trusteeship is under the United Nations by unanimous vote, including Russia's. We are economic aggressors—we who ask not one penny of reparations and who have voluntarily relinquished our war booty. We are said to be economic aggressors—we who have made vast and usually doubtful loans to our former Allies in response to their desperate petitions. We are said to be war mongers—we who demobilized our war strength faster than any other major power and with a passion for peace which I fear may have been misunderstood by those who still count their armed divisions by the hundred. We are war mongers—we who possess atomic bombs and yet beg the world to join us in conclusively outlawing atomic warfare everywhere forever. We are curiously called Hitlerites by critics who seem to forget that they, not we, were once in communion with him.

This bitterly illustrates the extent to which suspicion and distrust subvert the restoration of those friendly relations which peace and rehabilitation so desperately need and which America must always be found eager to reciprocally encourage on a two-way street. For all our sakes, the situation needs a heavy dose of total truth. If humanly possible, we all need a successful attack upon misunderstanding. We must be as ready as others in this connection to face the scriptural injunction about motes and beams. Let that be clear. I wish that peace and total truth might have an honest clinic with all the cards face up before the world.

I want a live and let live world if peace with justice can thus be found; and, despite discouragements, I decline, voluntarily, to give up the quest. I want honorable friendship around the earth. I want global disarmament dependably protected against bad faith. I want to rely dependably on the United Nations to keep the peace. But pending reliable evolution in these directions, I want a totally adequate American national defense. Unshared ideals can be a dangerous delusion. I am opposed to appeasements which aggravate the dangers from which they vainly seek escape. So are the people of the United States, according to the latest Gallup poll. This is a tremendously important fact lest our attitudes be miscalculated either at home or abroad. But I am sure we crave decent and honorable agreements. I decline to proceed on the tragic theory that war is inevitable. World War III might destroy even its victors. Only madmen could deliberately want it or neglect honorable methods to prevent it. I still have patience—vigilant patience. But I have no patience with helplessly drifting into the prolonged chaos and deliberate confusion upon which freedom's disintegration thrives.

We should continue vigorously to support the United Nations, taking scrupulous care to respect its authority as faithfully as we demand respect from others. Despite its birth-pangs and its impaired youth, it has demonstrated tremendous values and is still the basis of the world's best hope. So long as we are talking things out, no matter how angrily, we are not shooting things out. I ask those Americans who would dismiss the United Nations as a total loss to remember this. Without the United Nations, the Communist design for a postwar world, which is the chief cause of friction, certainly would have been no less aggressively belligerent. Without the United Nations the design would have matured relatively in the dark. It would not stand out where he who runs may read. It would not be confronting the organized judgment of mankind. Without the United Nations the Soviet Union and its satellites would have gone their own way to their own ends. So would we. So would others. The greater the difficulties which surround the peace, the greater the need for this consultative device, for our sake, for their sakes, for all our sakes. If it does not save the peace, it will fix the crystal-clear responsibility for its loss. This moral verdict of mankind finally is the greatest power on earth. Has this been worth while? Can there be but one answer?

We should continue to urge curative changes in the Charter. The "veto" should apply solely to the use of armed force. At that point it is a constitutional necessity even with us. But it should never apply to pacific means for the settlement of situations and disputes. It was a mistake, demonstrated by events, to do so in the first place. I have always said that 98 percent of the Charter's genius is in these pacific chapters. No peace-loving nation—better say, no peace-living nation—should hesitate to give peace-making this untrammelled, democratic chance. Acting strictly within the Charter, the unified republics of the Western Hemisphere blazed this new and glorious trail at their recent inspiring Pan American Rio conference. A two-thirds Pan-American vote controls all pacific decisions in this regional arrangement. There is no veto except each individual nation's right not to contribute to armed force against its will. Here lies the inviting, enlightened road. Time and events will have to decide ultimately whether any other road will be worth its upkeep.

But the problem which the world confronts is not confined to the United Nations. Other imperative factors—beset by kindred difficulties—are indispensable to stability and peace. Among many such, including a long-merited Austrian peace, my time permits reference only to the typical need for a German peace.

Germany's restoration to viable autonomy is at the core of Europe's rehabilitation. Economic unity of the occupied zones, promised at Potsdam, has been frustrated by our Soviet associates. As an unavoidable alternative, we have linked the American and British zones—with the door always wide open for the Soviets and France to join. This is the nucleus upon which we must build. Germany's twice-ravished neighbors must have complete protection against the re-erection of another Axis threat. To this end we have demonstrated our good faith by offering a 40-year promise of instant military support against the recurrence of a Nazi threat. France and the contiguous low countries have other vital interests which must be resolved. But I am unable to believe that a German Peace Conference could not preponderantly find common ground. If the Council of Foreign Ministers still deadlocks this winter, it seems to me it had better adjourn sine die. The peace conference should be called by those who do agree—open, however, to all interested states whether they agree or not—to write a practical, reasonable peace for the German areas within its jurisdiction. It is infinitely preferable for the Council of Foreign Ministers to come to united terms. But I am saying that disagreement—here or elsewhere, cannot be allowed to postpone peace, rehabilitation, and self-government forever. Peace must have priority.

I conclude with a quick reference to pending fuel-and-famine aids to Europe this winter, and to the so-called Marshall Plan. The former involves elemental human survival in a free society. America will have lost its traditional character if it refuses such relief under appropriate auspices. The latter, the Marshall idea, involves long-range aid to implement self-help and self-sufficiency. If self-help and self-sufficiency can be made to work, this objective may well be

a bargain. We must find reasonable promise of this success because we cannot indefinitely underwrite the world. We must know the total bill, including China. We must frankly canvass our own resources lest we impair our own economy and thus vindicate the sinister hopes of those who expect our economic collapse to end all democracy for keeps. We must be sure of sound administration and adequate cooperation. But within these practical limitations I agree with Secretary Marshall at Boston when he describes the supreme, underlying issue as follows:

"Whether or not men are to be left free to organize their existence in accordance with their own desires or whether they are to have their lives arranged and dictated for them by small groups of men who have arrogated to themselves this arbitrary power."

In any event, we must take one of two calculated risks. There is the calculated risk if we proceed. But let's be honest enough with American destiny not to ignore the calculated risk if we do not proceed. Secretary Marshall correctly says it involves "the danger of the actual disappearance of the characteristics of western civilization on which our Government and our manner of living are based."

And now, this is my final comment. Foreign policy is a legitimate subject of frank debate by our citizens. Foreign policy belongs to the people. It is a legitimate subject of partisan contest if there is deep division. But I raise the fervent prayer that we may ever strive for an unpartisan American foreign policy—not Republican, not Democratic, but American—which substantially unites our people at the water's edge in behalf of peace with justice and liberty under law.

And my last word reverts to the Dutch centennial which richly inspires this occasion. I give you the challenge of the Dutch Dominie, Albertus Christian Van Raalte, leader of the 1847 pilgrimage to Michigan, speaking at the twenty-fifth anniversary which now lengthens to a century. Said he: "To our successors to whom we entrust our inheritance we wish to say—forget not; it is God who pointed it out to us."

How Europe Wastes Food Supplies

EXTENSION OF REMARKS

OF

HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the November 4, 1947, issue of World Report entitled "How Europe Wastes Food Supplies":

HOW EUROPE WASTES FOOD SUPPLIES

(Reported from Berlin, Paris, Rome, London, and Washington)

Europe's wasted food is lost before it reaches the consumer. Hungry Europeans leave clean plates. The food losses begin on the farms. Leaks are frequent along the distribution pipe line.

Food lost includes both home-grown edibles and supplies sent to Europe from the United States. Some waste is inevitable. Other misuse is due to the weakness of European governments threatened by inflation and harried by political enemies.

On the farm, Europe's peasants are trying to get the largest returns they can from the food they produce.

In Britain, Switzerland, and a few other countries, most farmers respect government controls. In the rest of Europe, they are devoting much of their time to schemes to avoid controls. Farm products in large quantities go into illegal markets. The resulting waste is enormous.

"The German farmer is the worst wastrel of food in Germany," says World Report's staff correspondent, Thomas H. Hawkins, in a radiogram from Berlin.

"At least 1,000,000 tons of potatoes are going into the black market this year. That is about 10 percent of the crop. More potatoes and other foods are used to fatten pigs and cattle for illegal sale. Much food hoarded for black markets spoils before it reaches the consumer."

Dispatches from Paris, Rome, and other capitals give similar reports of waste on the farm.

Grains allocated for seed are much higher in proportion to size of harvests than in America. One reason is that much seed is lost on ground that has not had sufficient fertilizer since the beginning of the war. But large quantities of grain meant for seed are escaping into the black markets, thus reducing the amount sown.

Shortage of manpower at harvest time is a cause of crop losses in many European countries. Lack of farm machinery produces food waste throughout Europe. Shortage of tin plate for canning is responsible for the spoilage of much food grown last summer.

Allocation of all grain and other basic foods is managed by governments. But factors beyond the control of individual governments affect the distribution of grain and other foods in all countries.

Use of home-grown grain in 13 countries of Western Europe for the 1946–47 crop year is shown on charts. Distribution of United States production for the same period also is shown. Controls in America at that time were limited to the licensing, purchasing, and transport of grain for export.

Grain and flour that Europe imports from the United States can be used only for human food. That is a condition of United States exports. As a result, Europe uses home-grown grains to build up export enterprises such as dairying and distilling.

Several countries, like Denmark and the Netherlands, which normally export dairy products, are trying to build up dairy herds with home-grown grains. Grain is allotted to breweries in Germany only for beer utilized by occupation forces and for export.

Edwin J. Drechsel, World Report staff correspondent, says in a dispatch from London:

"Whisky distillers in Scotland now must export 75 percent of their output, compared to 55 percent last year. At first, they got only 50,000 tons of barley from the 1946 harvest. Now they are working on an additional 75,000 tons of grain with the understanding that all whisky produced from this amount will be exported to hard-currency areas. As a result, whisky is hard to get in Scotland and in the rest of Great Britain."

Beer and ale in Britain are listed as foods. Calories in both are counted in the nation's food consumption. Beer now is weak and difficult to find.

Transport, or the lack of it, takes a heavy toll of Europe's food. Postwar shortages of railroad cars limit the transport of green vegetables and other foods to cities. Much grain is lost to weevils and rats due to inadequate storage and to transport in contaminated cars.

High prices for black-market foods add to transport hazards. Information from Rome is that whole carloads of food, particularly grain and wheat, have vanished in transit to cities from rural areas or ports. Some of the food spoils in hiding. Most of the rest ends up on the black market.

At flour mills, European governments are trying to get more bread out of short supplies of grain. As supplies dwindle this winter, the rate of extraction of flour from grain will rise. Average extraction rate for flour in western Europe now is close to 90 percent. Current rate of extraction in the United States is about 70 percent.

Some European governments say that America is wasting food by sending flour milled at the United States rate of extraction to Europe. But the residue from American mills goes to feed domestic cattle. Cattle raisers deprived of this source of feed would turn to grain purchases, thus reducing the amount available for export.

Extraction rates vary widely in Europe. Austria, where bread grain is scarcer this winter than ever before, is reducing the extraction rate for wheat to 90 percent from 96 percent. Austrian doctors reported a steady rise in illness due to indigestible materials left in rationed bread at the 96-percent rate. Denmark holds its rate of extraction down to 80 percent in order to provide feed for dairy cattle.

Wheat content of Europe's bread is going lower this winter. Bread in France frequently contains only 20 percent of wheat and rye. The rest is made up of flour from corn, barley, soybeans, oats, and potatoes. Dutch bread contains some flour extracted from sugar beets.

Much of the savings made by the use of substitutes and high-extraction rates is offset by increasing waste in flour mills. Most of Europe's flour mills are small, old, and inefficient. Some millers boost the use of wheat substitutes to get flour for illegal sale.

Bakeries share in the wasteful production of black-market bread. In addition, Europe's bakeries are small. They use old methods considered wasteful in America to produce the hearth-baked bread that Europeans prefer to the pan-baked bread used in the United States. Loss of food value through gases that escape in baking is higher in Europe than in America. Most of Europe's bread is baked by hand.

Rationing in Europe never worked as well as in the United States during the war. Europe has had food rationing for 8 years. Efforts to crush black markets by appeals to patriotism have failed in many countries, particularly those in which patriots encouraged black markets during German occupation

Rationing is generally successful in Britain, Switzerland, and the Scandinavian countries. Reports from Paris say that the rest of Europe is suffering from insecure rations because of countless leaks in the system. Underpaid officials try to meet the cost of living by accepting black market bribes of food.

City dwellers suffer the most from uneven rations. Farmers suffer least. In Portugal, for example, the Government permits farmers to keep the same amount of food that they consumed in normal times. The Portuguese Government frankly told the International Emergency Food Council that any attempt to make farmers share shortages with city dwellers would only lead to fraud and decreased output.

War on waste, due to Europe's desperate need for food this winter, is being waged on both sides of the Atlantic.

In the United States, the goal is to boost exports by about 3,000,000 tons of grain through voluntary savings. Distillers and brewers are reducing the use of grain. Bakers have agreed to halt the competitive system of delivering more bread to stores than the stores can sell. But most of the savings in food is counted on to come from clean dinner plates.

In Europe, dinner plates are cleaned and garbage is combed for food. Governments trying to cut down food waste are going

back along the distribution system to the farms, trying to plug up leaks and cut waste.

Britain, united in an austerity drive to save food, collects about 360,000 tons of waste food a year. Bins for pig food are set up in every block of residential areas. But much of the rest of Europe is suffering from inflation and black markets that are likely to encourage an increase, not a decrease, of food waste this winter.

The Western Hemisphere in the World of Today

EXTENSION OF REMARKS

OF

HON. ROBERT J. TWYMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. TWYMAN. Mr. Speaker, the following address by James S. Kemper entitled "The Western Hemisphere in the World of Today" contains some very good thoughts, which I hope will be read by the Members of the House:

THE WESTERN HEMISPHERE IN THE WORLD OF TODAY

(By James S. Kemper)

I

You are met here in the First Hemispheric Stock Exchange Conference. That evidences your interest in closer collaboration in your own work. It also evidences your realization that forces are operating to bring American republics into a progressively closer relationship.

We of the Western Hemisphere are disturbed about many things. One of them is Russian aggression. We are upset by the ruthless and successful drive of the Soviet Union for military power and political advantage. Only yesterday Hungary lost her independence overnight. Her government was virtually kidnapped. Hungary had committed no offense. Her land and her people were locked behind the iron curtain in order to increase Soviet power. Poland, Bulgaria, Rumania, and many other ancient states have suffered an identical fate.

Today it is Hungary or Poland. In a decade or two the thrust of Russian aggression may menace the Americas. Hence, the reasonableness of that deep anxiety felt from Canada to the Argentine as Stalin out-Hitlers Hitler in his bid for world domination.

Another thing that disturbs the people of the Americas is the record and especially the prospects of United Nations. Will it preserve peace for us or will it fold up like the League of Nations? Thus far the obstructive attitude of Russia has reduced United Nations to a mere debating society.

Equally disturbing is the plight of Europe. Large areas of that continent are deteriorating at an alarming rate. Today Europe as a whole is perhaps nearer to a complete breakdown than at any time since the fall of Rome.

II

What is the origin of these great factors that dominate our time? What can we do about them?

Speaking in New Orleans in June 1944, I pointed out that the Atlantic Charter had raised men's hopes that we were entering a new era. Millions believed that the end of the war would see redeemed the Charter pledge that all nations would have the right to live under a government of their own choosing. I emphasized that a number of hopes and pledges contained in Wilson's Fourteen Points were thrown out the window after World War I. Then I asked: "Are we to experience the same disillusionment again?"

"It is not a pleasant thing," I added, "but it is the cold, blunt truth that when this war is over, Europe will be right back at the old game of power politics."

Power politics on a vaster scale than ever before is now the order of the day. Instead of the beautiful one world we have at least three worlds with which we are most concerned at present:

1. Communistic Russia and her slave and half-slave satellites.
2. Socialist England, France, and Italy.
3. This Western Hemisphere which still upholds the banner of freedom.

The Russian world has been made possible largely by our stupidity, plus effective use by Russia of U. N. forums for the purpose of confusing the issues, while at the same time she went ahead with her program of absorption and enslavement.

It has become common for speakers in the political arena to denounce Russian aggression and infiltration. But I shall never understand why it took them so long to appraise the obvious implication of things like, for example, the decision to invade Europe by way of Normandy rather than through the Balkans; or the stop order to our troops to permit the Russians to enter Berlin first—to mention but two of dozens of indices.

Now that the Russian program has become crystal clear, we meet the critically serious situation in Central Europe by ministering to the needs of Europe's extremities while the vital problem of Germany (the heart of Europe) is left unsolved.

In my humble judgment we cannot save Western Europe unless we have an entirely new approach to the German situation. There we shall win or lose the fight we are waging to preserve something for the desperate European peoples facing tragedy in all directions.

The plan to reduce Germany to a pastoral state obviously did not make sense. A grammar-school student with a list of European production, imports and exports for the 5 years before the war, could demonstrate to anyone that elimination of Germany as a producing and exporting nation easily could wreck the whole European economy.

It was equally stupid to set up the so-called level of industry plan for Germany on a basis that made it impossible for her even to produce the food necessary to feed her own people. So this hemisphere is being called upon increasingly to make up the deficiencies.

The German problem further is complicated by the policies of the Socialist Governments of England and France. In the bizonal area, the British are endeavoring to nationalize industry. Since German marks are worthless in international trade and are constantly shifting in value within Germany itself, it is small wonder that the German farmer would rather barter what surplus he has for family necessities than sell it for marks.

III

The situation is handicapped by what is going on in England under its Socialist Government. For example, before the war England was a large exporter of coal. Britain's coal provided a much needed product for other European countries and gave her funds with which she could buy things she needed.

But since the Socialist Government of England inaugurated the 5-day, 35-hour week, England's coal production has declined to the point where little, if any, exportable surplus remains. So the workers of this hemisphere are asked to put in longer hours to supply the shortage. The strike of 40,000 English coal miners because they were asked to dig 2 feet more of coal per day evidences the paralyzing influence of socialistic doctrine. By any measuring stick the Utopia simply has not materialized.

Meanwhile on the political front little is being accomplished toward making peace. And right at this point may I add that unless the Foreign Ministers' meeting in November results in agreement for the right sort of peace treaties with Germany, Japan, and Austria, the countries of this hemisphere should act independently.

In other words, we should announce forthwith that we no longer will tolerate continuance of the present policy of delay and obstruction. That announcement should carry with it the statement that we intend to proceed at once with the negotiation of separate peace treaties, inviting all of like mind to join us.

Every so often one hears the query, "But how can we permit Germany to resume manufacture without risking the possibility of a rearmed Germany—again a threat to world peace?" The best information I can get from those qualified to answer is that, having no army and navy, the policing of German industry could be handled—easily handled—by not over 10,000 men.

If that is true, and even if it takes 100,000 men, what are we waiting for? Every day that goes by adds to the chaos, which fertilizes the communistic program, removes hope from the hearts of men, and makes readjustment more difficult and more costly.

IV

Money alone is not the answer. Bad loans never made good friends. They destroy character when what is needed is a rebuilding of character, of faith, and of courage.

I recall a letter I received from a very dear and a very astute English friend shortly after the United States made the loan. He wrote:

"Well, you made the loan, and with it you settled our debt to you for 2½ cents on the dollar. Very generous, I should say, and quite sporting. But what have you done to us? Time alone will give the final answer. But you have part of it already in the announcement of the closing of the Liverpool Cotton Exchange. That evidences that our Socialist government waited until your cotton States Senators had voted for the loan before they stopped the relationships of decades which our textile people had with your cotton producers.

"You'll find that's just a beginning, and you have underwritten it by making this loan. But more than that, and worse still, you have undermined British character.

"What sort of a position does it put us in to accept 97½-percent discount from you when we're not sure we can get even 33⅓-percent discount from our own Empire countries? And what chance have we to save old England if you save our Socialist government? Far better if you had let us stew in our own brewing at least until my people had awakened to the hopelessness of nationalization of industry and returned to the only kind of government that ever has ensured freedom and plenty.

"Don't misunderstand me, please. You did what you did because of your long-time friendship for my country. And you did what those responsible for my Government asked you to do.

"But you now are the strong Nation. Our relation to you is that of a child to a parent. And as you and I, as fathers, know so well, we do not give our children everything they ask of us. We protect them from themselves.

"This is the first time in our many years of friendship that I have undertaken to lecture you. I write as I do only because I wanted you, my best friend in the States, to have the true picture, one that I fear your propaganda services as well as ours are not presenting to your people.

"I hope I am wrong because it will be a sorry world for all of us if we can't stand together and work together for the things we know are right. If England can recapture the old-time fundamentals, we'll come out on top and be ready to help you as we should. But please don't bribe us to be quitters by making any more loans."

That letter was written 14 months ago. A little less than 2 weeks ago Lord Beaverbrook expressed himself on the same general subject. After indicating that Britain blamed the Socialists for the "mess Britain is in," he added: "But it is not the Socialists alone who are responsible for the present state of affairs. The basis of our being in the present condition instead of being well on the way to recovery is the loan and the conditions under which it was accepted. It provided easy money for Britain. It destroyed our prospect of reconstructing our economy on sound lines."

And even more recently Britain's wartime Prime Minister, after commenting on "the incapacity of the Socialist government" and its "strange, un-British doctrines," observed: "I am convinced that the first step to insure our survival must be the expulsion from power of those who have mismanaged, mauled, and maltreated their native land."

On the same day, John J. McCloy, American president of the World Bank, stated that Americans were beginning to question whether dollar loans were the answer to Europe's problems.

If these appraisals are correct, the recent suggestion that the United States pass around some of its gold would not provide the answer. And that regardless of the fact that the United States' excess of gold over liabilities and necessary reserves is much less than generally is realized.

It just may be that the right answer can be found in the old adage, "The Lord helps those who help themselves."

Certainly help which makes mendicants rather than self-respecting, hard-working, frugal citizens is the worst possible kind of help for men and for nations. And always there is the additional factor of the resources of the donor. Certainly United States resources are not inexhaustible. And no lover of freedom could view with anything but genuine alarm the possibility of an insolvent United States in this critical period in the world's history.

V

What should the over-all attitude of the businessmen of this hemisphere be in this difficult time? I shall not attempt to chart a course. I prefer merely to give you some thoughts on the basic problems that may stimulate your own thinking.

In the first place, the pact of Petropolis again demonstrates that we of this hemisphere can cooperate. That stems from the fact that we are willing to give and take for the good of all. If we cannot have that same spirit from others, the sooner we realize it and quit fooling around the better off we and the rest of the world will be.

I suggested earlier that if the foreign ministers come up with another dud, we should then negotiate a separate peace with Germany, Japan, and Austria. That would pave the way for a changed policy toward Germany. Such a policy should completely shackle her against any disturbance of world peace. But it would restore her productive capacity to the great benefit of western Europe and the world.

At Potsdam, Russia agreed that a united Germany should emerge after peace treaties were signed. Whether that agreement is worth any more than the others she so callously has repudiated remains to be seen. In November she should have her last chance to make good on this promise. I believe, furthermore, that we should insist that all the countries asking aid put their own houses in order. At least to such extent as their elections have been free, it is not our business what sort of governments they choose. But if these governments by unsound fiscal policies and unsound economic doctrine negative the aid we give, that aid should be withdrawn.

VI

The world is suffering from the malady of too much government. People, misled by self-seeking demagogues, have come to believe that in government they can find the cure-all for every ill. And in too many cases—and the Western Hemisphere is not free from this symptom—the slogan is "more money for less work."

I am reminded of Lincoln's advice to his indigent half-brother when he wrote:

"DEAR JOHNSTON: Your request for $80, I do not think it best to comply with now. At the various times when I have helped you a little, you have said to me: 'We can get along very well now'; but in a very short time, I found that you were in the same difficulty again. Now, this can only happen by some defect in your conduct. What that defect is, I think I know. You are not lazy, and still you are an idler. I doubt whether, since I saw you, you have done a good whole day's work in any day.

"This habit of uselessly wasting time is the whole difficulty. It is vastly important to you, and still more so to your children, that you should break the habit. It is more important to them, because they have longer to live, and can keep out of an idle habit before they are in it, easier than they can get out after they are in."

That sort of homespun advice is what the world most needs. Unless the leaders of European thought and government can instill some of that philosophy into their people, all the gold in the world will not save them.

But you may ask, what should the American Republics do if we fail to get cooperation from our late allies? That in my opinion would be most unfortunate because then we might have to withdraw from the European scene, limiting ourselves to the donation of such food and other surpluses as we could spare.

Even this would be preferable—unfortunate though it would be—to a go-along policy which in the end would wreck this hemisphere along with Europe. Because eventually Europe must see the light and when that time comes we would have something with which to help.

My hope, and I am sure your hope, is that the Foreign Ministers' meeting in November will bring results. That probably is the only thing that will save the United Nations and make possible at this time any sort of cooperation on a world basis.

VII

In the field of business and enterprise the Inter-American Council is today the Congress of the businessmen of the Americas. The Council feels deeply honored in sponsoring this First Hemispheric Stock Exchange Conference. In welcoming you I wish to express our deep appreciation to the United States Inter-American Council, the Stock Exchange and the Curb Exchange of New York for their most effective support.

By promoting friendship and understanding among the men in the stock exchange fraternity and among your customers, you of this Conference can contribute much to the over-all objective.

I have great faith in people. Given the facts they usually will find the correct answers. I have particular faith in our peoples of the Western Hemisphere. For decades we have furnished a shining light to troubled nations everywhere.

Let us then hold fast to the things we know are right and true. Let us not be afraid to speak boldly for honor and decency, for integrity, for frugality and for fair play. Then regardless of the measure of success we achieve, we shall know we have done our part to preserve Western Christian civilization.

Candidacy of Sam H. Jones in Louisiana

EXTENSION OF REMARKS

OF

HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Monday, November 17, 1947

Mr. OVERTON. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by me in behalf of Hon. Sam H. Jones, candidate for Governor of Louisiana, on November 10, 1947, and which was broadcast over the State of Louisiana.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am not going tonight to speak to you specifically in behalf of the candidacy of Sam H. Jones or Earl K. Long or Bob Kennon, and, Heaven knows, of Jimmie Morrison. I shall rather talk to you in behalf of the State of Louisiana, which has honored me by electing me to the United States House of Representatives in 1931, and to the United States Senate every 6 years since 1932. My appeal goes forth to those people of Louisiana who are sincerely devoted to the best interests of our beloved State.

I think that you and I may arrive at a conclusion as to whom to support for Governor by a process of elimination rather than, possibly, by any other means.

It is useless to discuss the candidacy of Bob Kennon. I have been in politics long enough to know that it is fruitless for anyone to devote his time and energy either for or against a candidate who has no possible chance of success. And Bob Kennon has less than a possible chance.

I know Earl Long well, better perhaps than any other candidate. I have no particular criticism to make of him, and certainly do not intend to indulge in any abuse of him. I have been criticized by some of the Earl Long supporters because they believe, or affect to believe, that by my failing to back Earl I have deserted the cause and organization of the late Huey P. Long.

There is, alas, my friends, no longer in the State a Huey P. Long organization. It died shortly after his death. It fell into hands unworthy of the trust and confidence that the masses of Louisiana had freely given Huey. There is, therefore, no Huey Long organization back of any candidate for Governor in this approaching January primary. So long as there was a Huey Long organization, officered and manned by the great Governor and illustrious Senator, I stood, as you know, by that organization and its candidates through thick and thin.

I presided over Huey Long's opening meeting in Alexandria in 1928, and I helped to elect him Governor. Huey Long himself declared, as recorded and printed in a United States Senate committee hearing, that "JOHN OVERTON made me Governor, and in turn I made him United States Senator."

Huey said he wanted me in the United States Senate and that I belonged there. He desired me, in 1930, to run against Senator Joseph E. Ransdall. I refused to do so. Two years later I, at his behest, opposed Senator Edwin Broussard and was elected. I gave up a law practice of some $30,000 per year to take an office which paid me $10,000, a net

loss of $20,000 per annum. I have never regretted this financial sacrifice which placed me in a position to try to serve our State and our country.

When, after Huey's election, the effort was made to impeach him and the Louisiana House of Representatives had filed impeachment charges against him in the Louisiana Senate, and his fair-weather friends were leaving him like rats deserting a sinking ship, I went to Baton Rouge, found Huey seated alone in his room in the Heidelberg Hotel, and told him that I had come to enlist in his cause for the duration of the war. For the first and only time I saw Huey's eyes fill with tears.

Our first step was to get up a State-wide meeting in Baton Rouge, which was addressed by Judge Gaston Porterie, by Huey, and by myself. In the course of the speech I made I said in effect:

"My fellow citizens, I am no fair-weather friend. I am no deserter. I am no fence straddler. And when I see Huey surrounded and attacked by his enemies and many of his former friends now turned tailcoat, when I see him with his back to the wall, standing undaunted and unafraid, fighting like a gladiator and his keen blade flashing in the sunlight, I want to say to you that I have also unsheathed my sword, and when the smoke of battle clears away, JOHN OVERTON will be found either standing or lying by the side of Huey P. Long."

To that promise I adhered throughout Huey's eventful career, and until the angel of death called him away from the scenes of his earthly struggles. May I not, without criticizing anyone else, make the factual statement that I am among the few outstanding political leaders of Louisiana who stood always by the side of Huey P. Long.

You may recall that in the early thirties Huey was forsaken by his own brother, Earl K. Long, now running for Governor. You may remember when the effort was made to unseat me as United States Senator after my conceded nomination by an overwhelming majority and my election without opposition, baseless charges were made to prevent me from taking a seat in the Senate. What actually was happening was an endeavor to whip Huey P. Long over my shoulders.

The picture rises vividly in my memory of Earl K. Long seated cheek by jowl with the opponents of Huey Long and myself day by day at the United States Senate Investigating Committee hearings and counseling with the opposition and of his taking the witness stand against me and indulging in a vituperative and terrific attack against his brother. The whole unsubstantiated charges ended, as you know, by the United States Senate unanimously rejecting them and giving their unanimous consent to my continuing as a United States Senator from Louisiana. But let me ask you, who, in that tragic hour, forsook Huey P. Long? Was it I or was it Earl K. Long? Who, including his own brothers, gave to Huey Long more loyal and unswerving cooperation than JOHN OVERTON?

Why should I be called an ingrate or a traitor because I am not supporting Earl Long, who, in words that were quoted in every big daily throughout the United States, undertook to strike down his brother and besmirch his character at the very time when Huey was entering upon his national career that might, in time, have landed him in the White House?

Did Jimmie Morrison ever render any noteworthy service to Huey or openly espouse Huey's candidacy or the candidacies of the Long organization? If he did I do not recall it. And I dare say neither do you, my friends.

Let's consider Jimmie Morrison in a little more detail. I have no personal knowledge of it, but I am asking him will he take the people into his confidence and either affirm or deny the charge that has been made that when he was a candidate in the primary election for the governorship 8 years ago and was eliminated in the first primary, he offered to support Jones against Long for a consideration of some $60,000, and when rejected by the Jones people he accepted $20,000 in cold cash from the Earl Long people to keep silent and to make the public statement that he was "going fishing" on election day?

I was not an eyewitness to it, but will Jimmie Morrison affirm or deny the charge that 4 years ago when again he was a candidate for the governorship in the Democratic primary and was again eliminated in the first primary, he accepted some $50,000 or $60,000 from the Lewis Morgan crowd for his active support?

It is incumbent upon him either to affirm or deny these charges. If he admits them, or they are otherwise established, certainly no self-respecting Louisianian will cast his ballot to elect as Governor of our great State one who will sell his political honor and political influence for a moneyed consideration.

What has Jimmie Morrison to say in answer to the general report that he is being financed in this campaign by the gambling fraternity of New York and the gambling gang of New Orleans? If he is getting such support he will be necessarily under an inescapable obligation to these racketeers, and the State of Louisiana will be in a worse plight than it was when the old Louisiana lottery, like an octopus, had its tentacles around the throat and heart of our State. Thank God, in those days there arose a Murphy J. Foster who freed Louisiana from this shame and iniquity, and I pray to high heaven that in this day there will be enough Louisianians of moral stamina and fiber to prevent the State from again becoming a byword and a reproach throughout these United States.

Let me say to you that I am proud of my unfaltering support of Huey P. Long, and I hope that the great majority of those who followed his banner—and, may I add, my own standard—will rally with me in this fight for the election of Sam Jones. I appeal to them to do so in the interest of Louisiana and its good government.

Jones never opposed Huey Long as a candidate. He never opposed me as a candidate. He never villified me or sought to besmirch my character.

What other reasons have I for supporting Sam Jones? It is not merely, as I have pointed out in a press interview, that he is the most likely candidate to defeat Morrison. In addition, I am supporting him because he has the native ability; he has the understanding of State problems; he has had the experience of 4 years in the Governor's chair, and 4 more years of intense study of Louisiana's problems. I know that he may make mistakes in the future as he has made mistakes in the past, and so have all the other Governors of Louisiana, but I do know that he is going to do his very best for you and for me and for Louisiana.

As you know, my specialty in Congress is flood control and river and harbor and stream-improvement legislation. In this vast work, so intensely valuable to Louisiana, I never received as much wholehearted, generous, unqualified support as I did when Sam Jones was Governor. What, among other things, I am doing is briefly to have the Federal Government spend millions of dollars annually in Louisiana, through the trained corps of Army engineers, to make the streams of our State flood-proof, navigable, free of malaria, protected against salt-water intrusion, and, above all, to make the main streams the basis and backbone of great irrigation projects and vast drainage systems.

Take, for example, the channel rectification, deepening, enlargement, and the removal of snags on the streams of northeast Louisiana known as the Macon, the Tensas, the Boeuf, and the Lafourche; take, for example, the Overton Canal, extending from the mouth of Red River to Shreveport; the Bayous Rapides, Roeuf, and Cocodrie project; the backwater area of the Red River; the Mermentau Basin; the Teche and Vermillion Rivers; and the entire Atchafalaya and Red River Basins.

In this strenuous work I want continued cooperation of Sam Jones as our Governor. He has inaugurated huge drainage systems connecting up with the main streams improved by the Federal Government with the result that millions of acres will be reclaimed for farm production and other valuable uses.

I am appealing to you, my friends, who are interested in flood control and navigation, land reclamation and irrigation and stream improvement, and who have heretofore given me your valuable aid, to help me now in continuing this tremendous battle for the people of Louisiana by replacing in office a governor who has done more in the interests of stream improvement than all the other governors combined in the history of the State.

Sam Jones has, in newspapers, on the stump and over the radio, given to us his platform. It is unnecessary for me to undertake either to repeat or outline it—you should know it by now. I think that he will carry out his platform as he did, in almost every detail, the platform on which he ran as a candidate 8 years ago. He makes no promises of huge appropriations for this and for that, as do some of the other candidates—promises that can never be fulfilled without bankrupting the State treasury and placing an unsupportable burden of taxation upon the already overtaxed people of Louisiana.

Finally, I appeal to all Louisianians to forget the hatreds and bitterness and animosities of the past, and, standing unitedly behind the ablest candidate for governor, march forward to the glorious destiny which the potentialities and possibilities of Louisiana hold for her.

Successful Foreign Relief Demands Strength at Home

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. MILLER of Maryland. Mr. Speaker, today, the President has called upon us to consider two emergencies simultaneously. Hardened as we have become to these cries since the advent of the New Deal some years ago, the double emergency is an innovation. We are called upon to appropriate $597,000,000 for food, fuel, and the like for France, Austria, and Italy, as interim aid to tide those countries through the next four and a half months. At the same time we are asked to pass legislation to block inflation, relieve monetary pressure by reducing consumer credits, to channel the flow of scarce goods, and to vote powers to the Federal Government to control inventories, transportation, and even to reestablish consumer rationing and price ceilings on basic cost-of-living items, especially food and rents. In other

words, to provide for a controlled economy at home while resisting it abroad.

I do not believe that Congress will accept without protest the role of whipping boy to absorb the wrath of an indignant people because of the unfortunate position in which we find ourselves. The truth is that Congress cannot repeal the fundamental laws of supply and demand any more than it can alter the ebb and flow of ocean tides by legislation.

Although many of the postwar problems were unavoidable, some of our worst difficulties have been aggravated by a fumbling administration and a confused policy which has followed one course one day and another another, while various departments and bureaus of the Government, often have worked at cross purposes. These failures, misrepresentations and miscalculations have not been chargeable to the legislative branch. The responsibility rests squarely with the executive departments and Congress will not willingly share the blame.

The suggested renewal of price controls will certainly encounter bitter opposition. The American people remember too clearly the black markets and scarcities occasioned by the price-control system enforced during the war years. They have noted that even before controls were lifted in regard to sugar, for example, the mere fact that the date for removal of controls had been set made it possible for people to again buy sugar. They now see, although the controls have been completely removed, that prices have not gone up unduly in the case of this commodity because of the fact there is sufficient sugar in the country to meet reasonable needs. If price controls are reestablished, the door will be open for the return of the black marketeer, and although official prices may be lower, the American housewife will again be confronted with empty shelves in the grocery store.

Congress made a determined effort during the past session to reduce the cost of living by substantial income-tax reduction, which the majority firmly believed would start a chain reaction of reduced costs all along the line. This program was blocked by the veto of President Truman, who is now calling for reduced prices, high wages, and billions in loans or gifts abroad all at the same time. He has given no intimation of any change in his insistence on the continuation of high wartime tax rates.

It would seem fundamental that if large sums are expended for buying relief supplies for Europe, that our domestic prices will tend to rise rather than to be reduced.

It may well be that our own self-interest, not to mention humanitarian reasons, dictates that the starving peoples of Europe must be fed. It does come as a shock, however, that such urgent and immediate needs have developed, and one cannot but wonder whether or not the administration has made a proper estimate of the present situation. Only a few months ago a rather unwilling Congress voted the funds that the administration said would be necessary to meet this crisis, and already we are told that far greater sums are needed this winter. Clearly the administration was greatly in error in its estimate of requirements a few months ago. One wonders how accurate the present estimates may be.

The American people have been placed in the position of a purchaser who makes the down payment on a car or refrigerator without knowing what price he will eventually be expected to pay or how long the payments must continue. Clearly, this is not good business. Our Government agencies, although crying bitterly against the high costs of living, by their very method of making purchases, have forced up prices here at home. A private buyer who is confronted with the necessity of buying large supplies of some commodity does not rush into the markets and announce the total of the purchase he is going to make if he is a wise businessman. Instead, he places numerous small orders in different markets and encourages his agents and brokers to buy wherever possible without advancing the price level. It is not so with the bureaucrats who run our big Federal business. A ballyhoo is started even before the wheat, rubber, coal, or other commodity is available as to the huge quantity the Government will need for shipment abroad or for some other governmental purpose. The inevitable result is sharp advances in the domestic price and increased costs to all private buyers.

It would seem that the most important problem to be solved is to determine the full amount of foreign relief that will be necessary to accomplish, with reasonable certainty, the rehabilitation of the areas now threatened by communism and then to determine whether or not it is within the capacity of our economy to meet this need, even though it will entail an increase in the costs of living at home. If we are able to meet the requirements, we must then determine whether we are willing to do so and pay the heavy cost involved. Unless we are prepared to go through the whole program and it has reasonable prospect of success, it is indeed foolhardy to weaken our own position at home. As I see it, the resistance of the sweep of communism with dollars may be successful, and then again it may not.

There is another approach toward maintaining our national security, and that is adequate military preparedness. It would seem to be good insurance for us to take this problem very seriously and to insist on immediate implementation of a sound program. We have been drawn into many wars in the past, and we have never been prepared. It is more than a possibility that if we reverse the procedure of the past and are reasonably prepared for the worst we may have no wars. Unfortunately, today we are not adequately prepared, if one can ever be in the atomic age. Certainly this is no time to procrastinate on what our policy is to be in that regard, whether we attempt to buy security abroad or whether we do not.

Two things I feel confident should be done. We should prepare our land, sea, and air forces so that we have a strong and capable defense, not on paper but in actuality, and at the same time, we should show the world by our every act and deed that our greatest desire is for world peace and that our military strength is assembled primarily for that purpose.

For centuries Britain dominated the seas. Her fleets patrolled the oceans and not only protected the island kingdoms from invasion but served as a stabilizing influence all over the world. Until the supremacy of British sea power was undermined by the development of the submarine and the airplane, a full-scale World War was not possible unless Britain acquiesced or participated. Today, air power has to a large degree supplanted sea power as the means by which the arteries of travel and frontiers of the world may be safeguarded. Overwhelming air power supplemented, of course, by the necessary ground troops and naval detachments, in the control of a truly united group of nations, can maintain the peace of the world regardless of the veto, or willful action of any aggressor.

If the danger to the world and to our free institutions is as great as appears on the surface and from the reports of our statesmen, it would seem that common sense dictates that this Nation should meet its responsibility now. This is the time to establish a strong and ready system of national defense to back up the United Nations while that organization is in the formative period. It is during this postwar period of reconversion and rehabilitation that the danger is greatest. If we act firmly now and make an all-out effort for fair and friendly relation with all nations of the world, the skies will begin to clear. Such part of the taxpayers' money as may be allocated to this program will not be a gamble. Surely the peace of the world should be bought at any price compatible with honor and decency. I fear that foreign gifts and loans, unless backed up by potential military strength, are a gamble. When there is danger of fire, it is not the time to let insurance lapse on one's dwelling. Unpleasant as the reality is, it seems necessary that whatever the solution may be for foreign aid, we should put our armed forces in a position of immediate readiness.

In every war in the past, the fighting strength of our Nation has been drawn primarily from civilian components of the armed forces. In a nation, such as ours, a large standing force of professionals is neither economical nor in accordance with our national traditions. Our citizens would be loathe to see such a development. The alternative, therefore, is to give every consideration and encouragement to the practical development of our National Guard and Organized Reserves. These elements, so important in time of war, are usually neglected in time of peace. It is to the interest of us all to encourage and contribute our personal efforts to the establishment of these forces on a sound and efficient basis immediately. The country is rich at the moment in millions of fine war-trained veterans and they should be helped and encouraged in the present task of molding these reserves into an effective force. They should be sorted

and assigned to units without more delay. A reasonable proportion of these organizations should be called to active training this coming year before the individuals that would comprise them have rusted into obsolescence. At the moment we are either losing track of these veterans that are physically fit and ready, or they are tucked away in paper organizations or composite groups that amount to little more than a not-too-accurate mailing list.

For a number of years before World War II, I commanded an Infantry Regiment of Reserves. The plan in those days called for the regiment to be able to take the field 6 months after D-day. In this age of rockets, radar, and bombers that fly at speeds approaching 600 miles per hour, with cruising ranges of nearly half the circumference of the world, the time of readiness for Reserves should be before D-day, not after.

We should also decide without further delay, the question of whether or not we are to have compulsory peacetime military training. How otherwise can our planners work out a long-time program. But let us remember that, if we adopt such a plan, it will not suffice unless followed through to the point of organizing the trainees into Reserves of which a sufficient number are fully equipped and ready for immediate action.

Our foreign-aid program will have a much better chance of succeeding if backed up by military strength that is immediate as well as potential. So will the United Nations. Under such circumstances our patience will not be misconstrued into playing for time. If we are prepared and powerful at home, we can be more tolerant and less aggressive abroad.

Now, You Tell Us, Mr. President

EXTENSION OF REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Sun of November 14, 1947:

NOW, YOU TELL US, MR. PRESIDENT

On Monday next, at the call of the President of the United States, Congress will meet in special session. Custom requires of the President that he shall then submit a message explaining the purposes of that extraordinary convocation.

We should like, with all respect to his high office, to inform him that the country is fed to its teeth with blah and blarney and buncombe. We should like to tell him that we are now looking for facts and for dependable information. Above all, we should like to apprise him of the inconvertible fact that a vast number of his informed fellow citizens expect from him at this time a compact and comprehensive statement about whither the Nation is drifting and about what it may expect when it gets there.

Fifteen long years of bombastic rhetoric have made our people utterly sick and tired of rhetoric. We want only the cold, hard, unquestionable truth.

To put it another way, a steady diet of undigested and indigestible reports has afflicted us all with an intellectual stomach ache. These reports have been so numerous, the President's own accounts of them so unsatisfactory, as to give rise to a lively suspicion that Mr. Truman has not himself thoroughly studied or understood them, but has rather accepted them in their predigested form as prepared for his personal use by advisers whose competency often has been open to question.

We have had the so-called Anderson Report (by a Cabinet Committee on Food Problems) made public on September 26, when the Citizens Food Committee was appointed.

We have had the so-called Krug Report on world needs and United States capacities, made public on October 19.

We have had the so-called Nourse Report (by the President's Council of Economic Advisers) published on November 9.

Other reports submitted to Mr. Truman or to Congress have been the Wedemeyer Report on China (for some mysterious reason never made public); the Additional Report of the Joint Committee on Reduction of Nonessential Federal Expenditures, Congress of the United States; the report of the Emergency Economic Commission for Europe; the report on the Luckman operation; and, now at least, the voluminous Harriman Report.

Out of this accumulation rises, as the genie in an ancient tale arose from a bottle, a monstrous impression that instead of operating under some clear and integrated program, the administration at Washington has been groping through mists of shadowy recommendations presented by persons who were not sure of what they were talking about, and who rarely agreed among themselves—who had neither final authority nor any intermediate power of collective persuasion.

Yet the country is calling for a clear and authoritative statement on foreign policy and a convincing affirmation telling what the domestic policies of the administration really are.

The time has come for President Truman to submit a factual statement on what his administration has done, and proposes to do, especially with respect to the coordination of European aid (under the Marshall plan) and on the granting of at least a measure of relief from the intolerable burdens of inflation and taxation under which the people of the United States are now groaning.

The general public has been patient with discussion, debate, and prolixity at Washington to a point at which patience has ceased to be a virtue. It is thoroughly disgusted with the multiplicity of what seem to be undercover maneuvers bearing upon the Presidential campaign of 1948.

Public attention has centered upon an amazing build-up designed to bring our people to a plunge into additional billions of dollars for the relief of Europe. But we do not know, because the administration has never told us, to what extent, or to what end, this dive will submerge us, our children, and our children's children unto remote generations. We cannot even obtain precise information about what we are now shipping abroad or on the probable effects of those shipments upon our domestic cost of living.

Bureaucrats toss off suggestions of millions, even billions, as a grindstone throws off water under a sharpening blade. But the American people are beginning to ask what are the axes which are thus being whetted. If the President and his fuzzy-minded advisers think that this process is going to continue indefinitely, they utterly misinterpret the present ground swell of public sentiment.

The President and his executive departments alone are in position to coordinate the conflicting data of innumerable unsynchronized departmental reports. But he and his advisers seem reluctant to impart such information as the planners may have. To cite a single example, we have yet to receive from the White House a clear statement about the reckless and ill-timed buying for export by governmental agencies. We do know that the Government bought 19,000,000 bushels of wheat on one day and that, as a result, the price of wheat advanced a dollar a bushel. Then the President set up the Luckman committee.

This country is glad to help alleviate the suffering of others, but among the things which our people would like to know is how we are going to finance aid to Europe to the tune of twenty billions without further boosting our own cost of living. How will this affect taxes? Why do we not propose to tap the $15,000,000,000 already held in the United States in gold reserves and investments by nationals of the very countries we expect to help? Are we to continue to advance political subsidies for the purpose of holding up domestic prices until after the votes have been counted next year? Shall we waste additional billions to be squandered in Europe's black markets?

We respectfully suggest to the President that before he submits that message to Congress he give serious thought to the hunger of our American people for the truth and for a concrete and practical program.

Housing Problem in Connecticut

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. MILLER of Connecticut. Mr. Speaker, last week I requested the legislative counsel to prepare a bill that would prevent the Administrator of Housing and Home Financing from disposing of the so-called Lanham Act permanant housing in areas where the housing shortage is acute. Due to the rush of committee work, the legislative counsel could not have the bill prepared for introduction today. It will, therefore, be introduced at a later date.

During the recent congressional recess, I had numerous conferences with members of the local housing authorities throughout Connecticut. Last month Mr. Raymond Foley, Administrator of Housing and Home Finance Agency, issued a new regulation, known as Public Regulation No. 1, which sets forth the procedure to be followed in the disposal of Lanham Act housing. If this regulation is put into effect, hundreds of families now residing in these Lanham Act projects will be subject to possible eviction upon 90 days' notice.

Mr. Foley contends that his new regulation carries out the intent of Congress. He determines this intent from language found in the Wolcott bill which passed the House late last spring. This bill, however, did not secure the approval of the Senate.

The only law on the subject of disposal of Lanham Act housing is the Lanham Act itself. Under the Lanham Act the Administrator is supposed to dispose of the housing as expeditiously as possible and in the public interest, following the end of the war emergency. No one can

successfully contend that it is in the public interest to dispose of these projects at a time when thousands of families are trying to secure rentals in any of these projects.

On October 22, 1947, I attended a meeting in Hartford, Conn., at which there were present 42 representatives of housing authorities and local disposition committees of 12 municipalities in the State of Connecticut. In these 12 municipalities there are 3,807 units of permanent war housing, all of which are fully occupied, and there are on file with the respective housing authorities 11,760 applicants.

I shall insert as part of my remarks a resolution adopted at this meeting, which contains the thoughts of Connecticut residents who have lived with this housing problem for the past few years. I am also including a copy of a letter addressed to Mr. Raymond Foley, Administrator of the Housing and Home Finance Agency, written by Mr. George T. Holbrook who acted as chairman of the Hartford meeting to which I have referred.

To the thousands of families involved, this is just as great an emergency as that of providing relief for Europe. I hope it will be possible during this special session for the House Banking and Currency Committee to report out legislation that will prevent the sale of Lanham Act housing at this time.

It is well to bear in mind that no subsidies are involved in this type of housing. In most cases the projects are more than self-supporting and the local communities receive adequate funds in lieu of taxes.

Every member of the Connecticut House delegation, supported by Senator RAYMOND E. BALDWIN of Connecticut and Governor James L. McConaughy, have urged Mr. Foley to hold up the sale of the housing units to which I have referred.

The resolution and letter follow:

At a meeting held at the Heublin Hotel, Hartford, Conn., October 22, 1947, at which were present 42 representatives of housing authorities and local disposition committees of 12 municipalities in the State of Connecticut, it was unanimously resolved, that:

"Whereas in said municipalities there are 3,807 units of permanent war housing, all of which are fully occupied; and

"Whereas the seriousness of the shortage of rental housing is evidenced by 11,760 applications on file with the respective housing authorities, as follows:

Housing authority	Number of units	Number of applicants
Bristol	200	151
East Hartford	650	805
Glastonbury	200	319
Hartford	202	4,200
Manchester	200	428
New Britain	800	1,500
New Haven	300	500
Stratford	400	795
Waterbury	300	850
West Hartford	300	1,800
Wethersfield	130	252
Rocky Hill (Wethersfield)	125	160
Total	3,807	11,760

Whereas any sales at the present time will result in the eviction of a large majority of tenants, which will complicate an already desperate situation in such 12 communities: Therefore be it

Resolved, That we, 42 representatives of housing authorities and disposition committees of the following municipalities in the State of Connecticut, embracing Bristol, East Hartford, Glastonbury, Hartford, Manchester, New Britain, New Haven, Rocky Hill, Stratford, Waterbury, West Hartford, and Wethersfield, hereby petition the Congress of the United States to enact necessary legislation to postpone the sale of all Lanham Act war-housing properties in the afore-mentioned municipalities until the present acute and critical housing shortage has been abated; and be it further

"*Resolved,* That copies of this resolution shall be sent to the Connecticut delegation in Congress, Gov. James McConaughy, and Housing and Home Finance Administrator Raymond Foley."

HOUSING AUTHORITY,
TOWN OF WETHERSFIELD,
Wethersfield, Conn., November 6, 1947.

RAYMOND FOLEY,
Administrator, Housing and Home Financing, Washington, D. C.

DEAR SIR: This letter is written as chairman of a committee of representatives of 12 communities in Connecticut in which war housing was built and hence are interested in disposition.

Attached hereto is a resolution and petition passed at a meeting held on October 22. At that meeting were present three Congressmen, together with representatives of the Governor and Senator BALDWIN.

It was also desired by the committee that I write you concerning this situation.

The petition has been deliberately worded to limit action to the 12 communities named. The committee feels that local determination as to disposition is of paramount importance. It feels that any community that desires war housing sold at this time should have that privilege, but in respect to the 12 communities, that the sale of such property at this time is a grave error and will result in very serious community problems.

Public regulation No. 1 changes the priority of purchasers in event of sale, giving veterans generally preference over tenants who are not veterans. As a large majority of tenants are nonveterans, sale will result in the eviction of such tenants. Housing conditions in these communities are such that they will be unable to find housing there, and the situation in Connecticut generally is such that no housing is available elsewhere. You will in effect put a great many hundreds of men, women, children and babies on the street with no shelter whatsoever, and with winter approaching you will create a condition which we believe will be without parallel in this country.

The housing shortage in Connecticut is greater than at any time during the war. During the war a great many temporary units were built but were not occupied because war workers refused to live in them. Some of these were torn down, but the majority are still here. Every one of these units is now occupied, and there is a large waiting list of veterans who are willing to move in at any time. It is to be remembered that these units are substandard and ones in which war workers refused to live, and hence is a very good example of the acute shortage of housing now existing throughout the State.

The vast majority of the veteran tenants in war housing are unable or unwilling to buy. A great many veterans are occupying units which will be altogether too small to meet their needs when their families increase, and, hence, be a very poor investment. Indeed, the addition of children to some of the families makes a condition now unsatisfactory and which will be entirely bad before very long. Practically all of the veterans will have to avail themselves of their GI loan privileges in order to buy. A great many of such veterans are contemplating going into business for themselves after obtaining training and experience in the work that they are now doing, and, hence, are unwilling to use up their credit in buying a house, because they will need it when they go out into the business world for themselves. Hence, the same condition exists as to veteran tenants being dispossessed as is a case of nonveterans. If you go through with the sales you will force some of these veterans to buy in sheer desperation, which will result in building up a large volume of opinion adverse to Federal housing generally.

Should the last order be rescinded and the former order giving priority to present tenants be reinstated it is probable that there would be somewhat less disruption resulting from sales, but in our opinion that is not the proper procedure. We feel that no action should be taken to sell war housing at this time. However, if it is sold we feel that before doing so you owe the duty to each local community to consult with it as to the sale, due to the change in priority, in order to get the best possible advice as to disposition, and your failure to do so will be a violation of the promises made many times to the communities to the effect that they will be consulted. We feel that the change in the order as to sale was made without consultation, and hence you should again confer with the communities before taking definite action.

It has been intimated that your action in proceeding with sale of war housing is because Congress has indicated its desire that such should be done, and have apparently based this upon the provisions of the Wolcott bill. Frankly, this seems strange to us, since the Wolcott bill has not passed the Senate, and, hence, we feel cannot be deemed an expression of the wishes of Congress. It is urged that you get from Congress a much more definite expression of its desires than appear to exist at present before proceeding further.

Most of the 12 communities are now engaged in consideration of building under the Connecticut State Act passed during the last session and which permits construction of housing for veterans. The work involved is very considerable and is taking up a great deal of time. Because of that fact the local housing authorities and disposition committees cannot give too much time to an over-all consideration of disposition of war housing. It is the desire of the committee to consider disposition generally and to suggest general procedures which will meet local conditions with minor variations where necessary for a particular community and which we feel will be of considerable benefit to you. We feel that it is absolutely essential that disposition be orderly, so that there will not be disruption in the smaller communities which is bound to result through wholesale dumping of housing on the market. We are not in a position to discuss this phase of the question at this time but will give you the benefit of our work as soon as it is accomplished. We are sorry that there will have to be some delay, but can assure you that it is because of conditions beyond our control.

It may be that the conditions in Connecticut as to housing are much worse than in other parts of the country. We cannot help but feel that the true facts of the situation here have not been presented to you, or have been presented in a form which did not bring fully into focus the condition with which we are faced. When the Wolcott bill was under consideration by Congress, Public Housing felt that it should be defeated because it did not show sufficient knowledge of housing conditions. As a result of suggestions from Public Housing, a

delegation of tenants and citizens of Connecticut appeared in protest of that bill. A good many of the people who made the sacrifice of appearing have definitely expressed the opinion that they have been double-crossed by Public Housing, because of the change in priority of sale and because you appear to be forcing sale of war housing at a time when it will cause extreme distress to the people involved, as well as to the community in which it is located. The tenants, whether veterans or not, their families and friends in the communities and elsewhere are up in arms over the sales. In fact, it is not exaggeration to say that they are becoming enraged. A result is that your action is building up the mass of opinion adverse to Federal housing generally and includes every phase of your activities. It is my opinion that you are causing the creation of a group of people who will actively oppose any efforts of your agency and may well be a group whose opposition will make that which you have heretofore encountered seem very mild by comparison.

We are fully appreciative of the fact that you have the duty of complying with the laws under which you operate, and that you have the further duty of trying to follow the express desires of Congress, whether formerly enacted into a law or not. However, we also feel that unless directed specifically to do something that will result in harm to the community involved, you should interpret your duties insofar as you can to meet the desires of the community, and should give each community the opportunity to be heard, and to appeal to Congress if that is their only remedy, awaiting the reaction of Congress to such appeal before taking any drastic action such as you are doing.

Again I want to emphasize that we feel that sale should occur in any community where it desires sales, and a delay should occur only at the request of the community involved. We feel that each community should be informed of the proposed action and given a reasonable opportunity to express an opinion before sale actually takes place, and then only if the community consents to the sale.

We are requesting an opportunity to appear before the Gamble committee, the request being made through Senator BALDWIN at his suggestion. I feel sure that the communities will want to be represented in any hearing that may take place.

As suggested above, we want the continued opportunity of presenting at least general plans for disposition. In the larger cities the problem of war housing occupies but a small portion of the time of the Housing Authority and its staff, their interest being centered in slum clearance and similar projects. Hence those authorities will be glad to be relieved from duties respecting war housing. Nevertheless, as you will see from the petition, the cities of New Haven and Hartford feel that sales at this time will create problems in those cities so serious that disposition should be delayed.

The commissioners of housing authorities in smaller communities undertook the work involved as a small contribution to the war effort. The time spent by the commissioners has been considerable and practically all of us would be delighted to be relieved of such obligations, except for the present housing conditions. We feel that our duty to the veterans and community is greater now than at any time in the past. Continuation of war housing in status quo, until the present desperate situation ends, will be a contribution of something, far too little, to the boys who served us. The smaller communities want their war housing sold at the proper time and under proper procedure. These communities do not desire continuation of war housing any longer than needed. However, the time and manner of sale is of utmost importance because of the effect on them, and they feel emphatically that sales should not take place now.

We feel that our situation in Connecticut has not been adequately presented to you, or you would not have ordered sale of any project over the protest of the community involved. It may be that the conditions here are unique and that special consideration is needed. We have no information upon which to base an opinion. We urge upon you to have a very thorough investigation made as to conditions in these 12 communities, and until such is completed and the conclusions discussed with the communities, you hold in abeyance all action looking toward any sales affecting them. We stand ready to give you every possible assistance.

We feel that you have the right and power to stop the sale of war housing in any community which protests, certainly until you have made an investigation, and hence the responsibility for failure to do so rests solely wtih you and will be in violation of the promises of your predecessors in office. If you are unable to agree with that conclusion, we respectfully request that opportunity be given to appeal to Congress for appropriate relief before sales take place.

Respectfully yours,

GEORGE T. HOLBROOK,
Chairman.

Witnesses' Rights

EXTENSION OF REMARKS
OF

HON. JOHN McDOWELL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication published in the Washington Post of November 14, 1947:

WITNESSES' RIGHTS

A COMMUNICATION

I have read with much interest your November 5 editorial, Speaking of Americanism. This editorial is in line with many other comments which you have published with regard to the activities of the Thomas Committee on Un-American Activities. In spite of many conciliatory phrases in your articles, and an evident willingness on your part to compromise to a certain extent on these issues, it remains true that your views, as expressed on this subject, are based on what I can only regard as fundamental misconceptions.

The most plausible argument in defense of the recalcitrant attitude of some of the persons summoned before the Thomas committee is that they were in substance being asked to incriminate themselves in violation of their constitutional rights and immunities in that regard. The main objections were raised over the simple question addressed to several of these reluctant witnesses, "Are you a Communist?"

Now committees of either branch of Congress, duly empowered to make investigations, have the clear legal authority to summon witnesses, and in general at least to require truthful answers to questions relevant to the authorized investigation. These committees, like the courts, must respect the provision of the fifth amendment to the Constitution, which requires that "No person * * * shall be compelled in any criminal case to be a witness against himself." But the key to the true meaning of this provision in the fifth amendment is to be found in the phrase "in any criminal case."

As has been stated by the Supreme Court in a leading case: "The object of the amendment is to establish * * * that no one shall be compelled to give testimony which may expose him to prosecution for crime. It is not declared that he may not be compelled to testify to facts which may impair his reputation for probity or even tend to disgrace him; but the line is drawn at testimony that may expose him to prosecution." (*Hale v. Henkel,* 201 U. S. 43, at p. 66.)

It is not a crime under the laws of the United States for any person to hold beliefs in accordance with the tenets of communism. Neither is it a crime under the laws of the United States for any person to be a member of the Communist Party. Neither is it a crime under the laws of California or of any other State to hold such beliefs or such party membership. Therefore, the inquiry before the Thomas committee as to such beliefs or such membership is not, as a matter of plain common sense, or as a matter of technical legal reasoning, an instance of compelling any person "to give testimony which may expose him to prosecution for crime."

The fifth amendment does not protect witnesses either in judicial courts or before congressional committees from inquiries that "pry into their private affairs," or tend to embarrass them or disgrace them thoroughly in the opinions of others, or even that expose actual criminality in cases where such criminality is no longer punishable legally, as in the case of crimes that have been effectively pardoned, or which have been outlawed by the statutes of limitations. As the Supreme Court stated in Hale against Henkel, "the line is drawn at testimony that may expose him to prosecution."

A moment's reflection ought to convince anyone that parties in legal actions (and witnesses who are not parties and who have no present interest to be served by the litigation) are constantly called upon to give testimony about shady transactions, unethical and unconscientious dealings on their own part, breaches of contract occurring without any moral excuse, negligence more or less gross and ridiculous, all of which may lead to substantial or even ruinous legal liability to make reparation or to pay damages.

And as to compulsory inquiries by governmental bodies, the briefest reflection about our tax system, or about investigations by the Federal Trade Commission, or the National Labor Relations Board, should demonstrate to one that there is no general immunity in favor of persons who feel that their "private affairs" are being pried into or who point out that the questions may greatly embarrass and truly disgrace them.

Your editorial takes the view that the Thomas committee's method "has the effect of denying rights which are implicit in our constitutional philosophy." But our constitutional philosophy is based on a balance of interests as between governmental power and private right or immunity. The legislative power given to Congress is extremely important and it is better that legislation should be based on information rather undertaken in ignorance of actual situations. This implies that Congress and its committees have the right and duty to use compulsory methods to secure appropriate information. This conclusion has been several times emphatically supported by Supreme Court decisions. (See, for example, *McGrain* v. *Daugherty* (273 U. S. 135); *in re Chapman* (166. U. S. 661); *Jurney* v. *McCracken* (294 U. S. 125).)

The recognition of the appropriateness of these inquiries is certainly a part of our constitutional philosophy, and indeed not primarily to render impregnable selected individual legal immunities, however historic, but rather, as the preamble to the Constitution itself states, "in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common

defense, promote the general welfare, and secure the blessings of liberty" for all the people.

To determine accurately what measures will adequately insure domestic tranquillity or provide for the common defense, the Houses of Congress must make many choices, among alternative possible courses of action. It seems obvious that it will be better to have these choices founded on concrete information rather than guesswork. Since the function of Congress will often be to ward off dangers that menace our domestic tranquillity or that threaten to deprive us of the blessings of liberty (that is, of the benefits of our present liberties), these inquiries of Congress and its committees may frequently be addressed to minority groups and crusaders, who are thought by Members of Congress to be potentially dangerous.

The dominant purpose and the characteristic effect of these inquiries and investigations are to obtain helpful information. The effect on individual witnesses is one of the inconveniences of living in a highly organized society.

Obviously, some tribunal, rather than the recalcitrant individual, must be the ultimate judge of the propriety of the questions asked.

Primarily this tribunal would seem to be the House of Congress itself that authorized the investigation. And in a practical sense the ruling of the investigating committee may be controlling. But in the present instance the relevancy and propriety of the questions about Communist Party membership and Communist beliefs seem to me to be hardly debatable from a logical point of view, whatever tribunal is called upon to decide the issue. It is not a question really of relevancy or of limitations on the legislative power of Congress in the premises, but rather of alleged immunities of the individual as against the power of the Government of the United States, acting in a preliminary way to safeguard by adequate factual investigations the great interests committed to it.

But how is the scope of these individual immunities to be determined? We must indeed draw a line of demarcation between governmental power and private rights in this field as in many other fields. But in relation to this particular problem of compulsory testimony, the Constitution has itself drawn the line, and has used the criminal case concept as the basis and the limit of the constitutional immunity.

The line thus drawn is not essentially technical, but practical and popular. The line of demarcation has been drawn so as to balance the needs of practical government, based on massive democratic forces, against the claims of the individual. To extend the immunity of the fifth amendment beyond that conception would not be to carry out the spirit of the Constitution as against the letter, but would be to upset the balance between great conflicting needs which the letter of the Constitution was intended to reconcile.

The true philosophy of the Constitution is to be found in what the fifth amendment does not say, as well as in what it does say. The specification of certain cases of immunity from testimonial compulsion implies that that immunity does not attach in other situations. Obviously, the literal provisions of the Constitution must all be taken into account, and not merely one set of them. But it is equally true that our reasoning about the philosophy of the Constitution, the spirit of the Constitution, and the general purposes of the system must be based on all the provisions handed down to us, and not merely on certain selected passages.

CHARLES S. COLLIER,
Professor of Law,
George Washington University.
WASHINGTON.

Address Before Convention of Americans for Democratic Action

EXTENSION OF REMARKS
OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a speech made by me before the Indiana-Ohio regional convention of the organization, Americans for Democratic Action.

This speech was made last Saturday afternoon at Wilberforce University, Wilberforce, Ohio:

I am thankful for this opportunity to speak to the delegates attending this Ohio-Indiana regional convention of students for democratic action. It is especially gratifying to know that this convention is being held at Wilberforce University, one of America's great educational institutions that has done so much for the youth of the country.

The officers and members of your organization are to be congratulated for the service which you are rendering in educating and informing the youth of America on the important problems confronting our Government, both from a domestic and international standpoint.

Two world wars have been fought within the lifetime of the older people now living. After World War I, we experienced gigantic reconstruction problems. At that time, numerous mistakes were made by our national and international leaders in trying to solve those great problems. We are at present involved in the solution of more gigantic problems, caused by the aftermath of a far more devastating conflict than we endured 30 years ago. It is highly important that the American people should not make the same mistakes which we made after World War I. In order to avoid these pitfalls, the Congress and the leaders of your Government need the advice and guidance of organizations such as yours and other groups throughout the country, both collectively and individually. Your elected leaders will always readily respond to public opinion in the solution of these governmental problems.

For over 5 years the economy of the world was torn asunder by the greatest war in all history. This economy cannot be returned to normalcy in a few months or a few years. It will take time, work, solemn thought and sound judgment on the part of your national and world leaders to bring us successfully through this trying period.

HIGH COST OF LIVING

Millions of Americans are more interested in an immediate lowering of the high cost of living than any other problem. The responsibility for the present high prices can be directly placed on the doorstep of World War II.

Since Pearl Harbor our Nation's leaders have had the responsibility of controlling our economy through emergency regulations, until we can again attain a normal peacetime production. When the Japs made their malicious attack in 1941 our President and Congress immediately inaugurated artificial controls in order to carry us through the hazardous wartime period. These emergency regulations kept down the cost of living to a remarkable degree for over 5 years, in spite of inflationary pressures from selfish interests and politicians. It is estimated that price controls during that period saved the American consumer over $8,000,000,000.

Immediately after VJ-day, lobbyists and profiteering groups converged on Washington to pressure Congress and spread propaganda throughout the country that price controls must not be extended.

We have discovered, to our sorrow, that the termination of the shooting war did not restore our economy to peacetime operation.

It is the duty of the American people to devote some sound thinking to our economic danger and not blindly follow self-seeking interests for the solution to their problems. Had the people throughout the country realized this a year ago last June they would not have allowed the Congress to sabotage price control and launch us into this maelstrom of inflationary high prices. Artificial controls kept the cost of living down successfully during the war, and they should have been continued until we recovered from the war upheaval.

Today we hear and read statements from radio commentators and some newspapers blasting forth false propaganda on who is responsible for high prices. The consuming public is more concerned with legislative remedies which will bring the cost of living back to normal. The American people well recollect the full-page advertisements which were placed in the newspapers throughout the country 18 months ago, urging Congress to "eliminate price controls, all price controls, including those on food, and production on all the things we need will step up fast. Prices will quickly adjust themselves to reasonable levels." If you have forgotten those advertisements of 18 months ago, and the people responsible for them, go to your local newspaper and ask to see their files.

President Truman has on several occasions asked this Eightieth Congress to take constructive steps against inflation and to curtail monopolistic profits, but without result. It is my earnest hope that when the leadership and Members of this Eightieth Congress return to Washington for the special session next Monday they will realize that the rising cost of living threatens our whole economy and the peace of the world.

Congressional Members should visit homes in industrial and metropolitan areas where the heads of some families are trying to feed from 5 to 10 people on 92-cent butter, dollar pork chops, 80-cent eggs, 20-cent milk, 14-cent bread, and other necessities relatively high. I hope our legislators will be convinced that veterans, who are selling their war bonds to buy the above necessities, cannot go on doing this forever.

It is astounding to learn that many industries right now in the middle of great prosperity are hedging against overproduction and curtailing output. Too many manufacturers think prosperity rests on a planned scarcity as a means of sustaining prices rather than on expanded demand caused by cutting prices. Can it be that certain monopolies are desirous of feathering their own bed so that they can rest comfortably in a depression that will be sure to come if this "boom and bust" economy is not curtailed?

The farmers of the Midwest should be particularly aroused over a repetition of their experience after World War I. They can easily detect the same legislative tendency that gave them the lean, poverty-stricken years during the 1920's and led them into the dark depression of the early 1930's. It was the crippling of the consuming purchasing power of that period that brought 12-cent corn and 30-cent wheat with its accompanying foreclosures and lack of prosperity. When the industrial workers cannot purchase the farmers' products in abundance agriculture will start into an economic tailspin. The propaganda machine of the special-interest group has succeeded in driving a wedge between the

farmer and the wage earner. The welfare of the farmer and labor is interdependent—prosperity for the one means prosperity for the other.

All our economic groups—labor, industry, agriculture, business (both large and small)—should stop, look, and listen. Unselfish cooperation of all segments of our economy is essential to defeat this inflationary tailspin in which we are now embroiled.

The American people will always rally as one in a critical emergency. We have arrived at that emergency now.

EXTENSION SERVICE

I have introduced a labor extension service bill in Congress. This bill will aid in extending useful and practical information among wage earners and increase the resources and facilities available to them. It will establish a Labor Extension Service in the Department of Labor, administered by the Secretary of Labor. It will also greatly aid the creative capacities of workers who together with the farmers, comprise the Nation's basic productive assets. It would set up a cooperative plan between the Department of Labor, colleges, and universities, so wage and salary earners could take advantage of these educational facilities. This would comprise classes and discussion groups so they could learn more about their everyday problems in industry and in their communities. Under this plan, workers would be able to secure teachers in labor history, labor economics, collective bargaining, labor journalism, labor-management relations, and other essential problems. This facility will be available to any and all groups of workers who may apply for these services. It would operate under a State Labor Extension Board consisting of at least 9 and not more than 15 members, working in cooperation with approved institutions. Standards would be set up by the Department of Labor for these services which would have to be met by the various educational institutions.

UNFINISHED LEGISLATION

This legislation is only one of numerous bills which the Congress should consider and enact for the progress and welfare of the great mass of our people. I could briefly mention some of the pieces of legislation which can be classified as unfinished business. This Eightieth Congress has neglected much-needed legislation to provide homes for millions of veterans and other groups throughout the country. Full employment, minimum wage, antiinflation, antilynching, FEPC, flood control and river development, and public health are other important and necessary legislative problems which this Congress should consider and enact before adjournment next year.

ANTI-POLL-TAX LEGISLATION

The anti-poll-tax legislation is highly necessary at this time because it will give the franchise to almost 10,000,000 citizens of our country of all races.

The enactment of this legislation is more necessary and essential today than at any time in our history. Our Government has assumed the leadership of the world. Our democracy must radiate practical examples of liberty and freedom for all the world to emulate. If we are to spread democracy abroad, the finest and most effective way to bring that about is to encourage the spread of democracy at home.

We could well pattern after Australia in practicing true democracy. In that great country there is a poll tax, but it is a poll tax in reverse The citizen who pays the tax is the citizen who fails to discharge his patriotic duty of voting. If a poll tax existed at all in relation to the right to vote, it should be inflicted as a penalty for not voting and applied to every man and woman in America of voting age.

In this critical period of world history our Congress should now and forever unshackle, as far as we are able, unfair, unfortunate, and unpatriotic restrictions and give to all people of our country in the very fullest degree the right to vote.

The passage of this legislation will give to over 10,000,000 people the right and the privilege to vote without paying a poll tax. It will free from this handicap and limitation, approximately 7,000,000 white citizens and 3,000,000 citizens of the Negro race. Moreover, it will stimulate an interest in government. It will make for better citizenship. It will bring about more intense representation on the part of elected officials. By giving this great segment of our population the right to vote it will eventually bring about legislation that will improve housing conditions, health, education, employment, and other progress which will improve the American way of life.

Millions of persons today cannot vote on these important issues, and by reason of the poll tax they are not receiving the representation to which they are justly entitled.

We must remember that these 10,000,000 disfranchised citizens were not barred from donning the uniform of their country and offering their lives to preserve liberty and freedom, not only in this country but throughout the entire globe. It occurs to me that if the man has the right and privilege of defending his country in battle he merits the right to cast his ballot for the men and women who will represent him in his National Government.

Let us pass this anti-poll-tax legislation and give to a great segment of our own people the right to full, free, and complete citizenship, within the confines of their own country, and that will be the most effective message of democracy that we can send out to the other nations of the world. It will inform them that we not only stand for democracy abroad but we are practicing it at home.

PRESIDENT'S COMMITTEE ON CIVIL RIGHTS

One of the greatest accomplishments of President Truman's administration was the creation and successful functioning of the President's Committee on Civil Rights. This outstanding committee of representative Americans, after months of sincere and conscientious deliberation, recently submitted their report and recommendation to the President and the Congress of the United States. This committee elaborated on and made practical and factual recommendations for legislation that will improve and further the American way of life to millions of individuals and numerous groups in our population. This committee interpreted new meaning into the Bill of Rights of our Constitution.

Its work was confined principally to the following four basic rights, which is the Magna Carta all Americans love and revere.

1. The right to safety and security of the person

In referring to the first of these great rights, this Committee stated that freedom can exist only where the citizen is assured that his person is secure against bondage, lawless violence, and arbitrary arrest and punishment. Freedom from slavery in all its forms is clearly necessary if all men are to have equal opportunity to use their talents and to lead worth-while lives. Moreover, to be free, men must be subject to discipline by society only for commission of offenses clearly defined by law and only after trial by due process of law. Where the administration of justice is discriminatory, no man can be sure of security.

2. The right to citizenship and its privileges

In regard to the second, it is a purpose of government in a democracy to regulate the activity of each man in the interest of all men; it follows that every mature and responsible person must be able to enjoy full citizenship and have an equal voice in his government. Because the right to participate in the political process is customarily limited to citizens, there can be no denial of access to citizenship based upon race, color, creed, or national origin. Denial of citizenship for these reasons cheapens the personality of those who are confined to this inferior status and endangers the whole concept of a democratic society. To deny qualified citizens the right to vote while others exercise it is to do violence to the principle of freedom and equality.

3. The right to freedom of conscience and expression

In regard to the third, in a free society there is faith in the ability of the people to make sound, rational judgments. But such judgments are possible only where the people have access to all relevant facts and to all prevailing interpretations of the facts. How can such judgments be formed on a sound basis if arguments, viewpoints, or opinions are arbitrarily suppressed? How can the concept of the marketplace of thought in which truth ultimately prevails retain its validity if the thought of certain individuals is denied the right of circulation? The committee reaffirms our tradition that freedom of expression may be curbed by law only where the danger to the well-being of society is clear and present.

4. The right to equality of opportunity

In regard to the fourth, it is not enough that full and equal membership in society entitled the individual to an equal voice in the control of his government; it must also give him the right to enjoy the benefits of society and to contribute to its progress. The opportunity of each individual to obtain useful employment and to have access to services in the fields of education, housing, health, recreation, and transportation, whether available free or at a price, must be provided with complete disregard for race, color, creed, and national origin.

RECOMMENDATIONS

In order to carry out the recommendations of the President's Committee on Civil Rights, the Congress should, at the earliest opportunity, reorganize the Civil Rights Section of the Department of Justice and also establish regional offices and bring about expansion and greater use of civil sanctions.

The Committee also recommended the establishment, by various State governments, of law-enforcement agencies to work in cooperation with a permanently established Civil Rights Commission under the Executive Office of the President.

Millions of Americans today are demanding that definite and permanent steps be taken to initiate the practical workings of true democracy within our country. This democracy must apply to all Americans, including majority and minority groups, collectively and individually.

What greater example of representative government could be presented to the backward nations of the world than to have this great Republic radiate the torch of free democracy by practically applying it to every man, woman, and child within our borders?

The People's Mandate and the Convening of Congress

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. NIXON. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following editorial from the San Marino (Calif.) Tribune of October 30, 1947:

THE PEOPLE'S MANDATE AND THE CONVENING OF CONGRESS

The American people are about to witness, at the very beginning of the next session of the Eightieth Congress, assembling at the President's call on November 17, the opening act of a national drama, titled "The People's Mandate," of which the first session staged the prologue only. The number of acts, what feelings the audience, the American people—who decreed the writing of the drama last November 5—will evince during the performance, what will be their verdict and status at final curtain fall, all hinge upon how genuinely representative of the audience, with what conviction to reestablish and maintain American standards, the actors, Senators and Representatives, have learned and will act their parts.

The crisis, now and for long past menacing the Nation, is an all-inclusive crisis, of which the President's two-way crisis of soaring prices at home, and demands upon American resources from abroad, is but a part, an aspect, a verse in a whole chapter. This all-encircling crisis, impending, very real, has to do with American fiscal and economic stability, and implies our very survival.

Let the forthcoming Congress, then, meet this all-inclusive crisis head-on—while there is yet time—by making its chief aim and purpose the reestablishment and maintenance of national financial and economic soundness. Let the Congress proceed, instanter, so to do, with conviction, and without reservation, equivocation, backing and filling, playing politics, election campaign planning, or compromise with bureaucracy—bureaucracy, itself largely blameworthy for the present, over-all crisis, which it fosters and seeks to perpetuate. Compromise is intolerable when the safety, stability, the very endurance, of the United States of America is at stake. The issue is joined—the People versus Bureaucracy.

There can be no mere treatment of symptoms if a permanent cure of this Nation's complication of ailments is to be brought about. Treatment must reach and attack the cause, not the symptoms.

To this end let the Congress desist from feeding the people palliatives and resort to the one indicated, specific remedy, fiscal and economic restoration. Let the Congress set its foot upon Government extravagance, inordinate spendings, deficit financing, and waste of both money and resources; let it fearlessly relegate bureaucracy to—the street; root out communism, and every vestige of it, from public office; stabilize the currency; cut down presently confiscatory taxes; take government out of business and stop its trafficking in food and commodities, thus opening the way for incentive, initiative, capital, to find their way into industry and trade, under American free enterprise; and with savings and gains thus brought about, reduce the national debt.

Anything less than this will not suffice. Anything less will be but a travesty on the people's mandate. Anything less will make of all other acts and doings of Congress, and of the Congress itself, a sounding brass or a tinkling cymbal.

The action herein urged need in no way militate against nor interfere with helping Europe's starving people through the coming winter. Congress can act speedily to provide food for immediate needs, leaving any long-range program—within our resources and Europe's willingness to help itself—for consideration with congressionally ascertained facts as a foundation.

California's irrational, confusing system of entering candidates' names on the ballot so that voters of all faiths may be corralled, has been getting an overdue and highly deserved drubbing from some of the State's political leaders.

Chairman John Barcome, of Los Angeles County Republican central committee, recently warned fellow Republican chairmen that stability of the two-party system is being jeopardized by this overlapping, leading to a personalized government which in most respects is as evil as anything ever produced under a system of boss rule. Candidates make personal appeals for election, and no appeal whatever upon party principles. They are trying to be all things to all men.

Chairman Hanley, of the San Francisco Republican county committee, has been trying for several years past to get the obnoxious cross-filing law repealed. Lt. Gov. Goodwin Knight has declared against the practice and pledged himself to back any campaign to do away with it.

The wonder is that this cross-filing law, fittingly named because it works to such cross-purposes, has been so long permitted to endure. It rests upon the thesis that the electorate votes for people rather than principles and that, anyway, party principles are enough in accord so that they may be combined in the selection of any one candidate, which, obviously, they are not, else is there no sense in a two-party system at all. Cross-filing is merely a vote-catcher.

There is a vast difference between the crossing of party lines by Congressmen and legislators as to, say, any single issue, and the seeking of votes from all parties on all issues at election time.

It is the responsibility of parties to clearly set forth their tenets and purposes, and the business of voters to choose between them and vote for the candidates who stand, respectively, for them. Cross-filing is a straddlers' refuge.

The Man Who Got Rich

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 17, 1947

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release by Hon. Samuel B. Pettengill, former Representative from Indiana:

THE MAN WHO GOT RICH

(By Samuel B. Pettengill)

This is the story of a man who got rich giving his money away. Of course, you will want to know how he did it.

He was a kind-hearted, soft-headed, old chap who ran a little grocery store down by the Harry Hopkins High School in Nuttown. Sometimes he did pretty good, and then, again, not so good. So he got to thinking and thinking. Morning and night the boys and gals tramped by his store on their way to school. But they didn't buy anything much. So he asked them, how come? And they said, "We suffer from a dollar shortage."

Well, right then the big idea was born. Uncle Sam (for that was what we called him) went to the People's Bank of Nuttown and borrowed a hundred bucks, in one-dollar bills, all crisp and crinkly like. He gave a dollar to each of the first hundred school kids who went by. But he made them solemnly promise that they'd spend the dollars in his store. They all promised.

Well, sales boomed all day. Uncle Sam never had so much business and was pleased as all get-out. Come night, he showed his wife his cash box jammed full of those dollar bills and bragged about his brains no end. He was sure tickled with himself. He said he planned to do it that way every day. And so he did. Of course, he ran up some big bills with his wholesalers because the school kids kept getting his money, and not them. Howsomever, he settled up with them by signing a flock of I O U's.

Well, Uncle Sam passed his grocery-store plan on to President Truman, and Harry was pleased as punch with it. Harry had run a store once himself and hadn't done so well. But back there, he hadn't known how to do it—how to get rich by giving his dollars away.

So Harry called in his advisers, Marshall and Krug and Harriman, and told them how Uncle Sam had filled his store with customers. They all said, "Wonderful" and bounced right back with a plan. It got to be known as the Marshall plan, but betwixt you and me, it was the grocery-store plan, but on a world scale.. It was going to make all poor people rich by never letting them suffer from a "dollar shortage," and it was going to make us rich, perpetual-like, by having no end of customers with dollars to buy at our store.

Congress asked a lot of fool questions, so they had to start the Marshall "grocery store" plan on a small scale—with only $19,000,000,000. But we made our foreign friends promise to buy at our store. They promised.

So the ships left New York loaded with 19,000,000,000 dollar bills. And when they got to Southhampton and Cherbourg, they turned plumb around and brought the dollars right back, same as the school kids, with orders for iron ore and coal and petroleum and boxcars and lumber and meat and butter and everything. And boy, how the plan did work.

We felt so good that we expanded the plan ten times over for the Chinese and East Indians and Hottentots—1,000,000,000 folks, in all—who were so much worse off than the Europeans that they could help us get rich, just no end, buying at our store.

And that is how we went on the biggest binge in history. It was just like Thanksgiving the year round. Everybody got so much Turkey and I O U's that they almost choked.

Review and Outlook

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, November 17, 1947

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of October 27, 1947:

REVIEW AND OUTLOOK

PLANNERS' LAST STAND

Since early summer it has been common knowledge that Europe faced a food deficit which would tax American food supplies. The fact was freely discussed in this and many other publications and in Washington news dispatches.

After 3 months of discussion, on September 25 President Truman appointed a Citizens' Food Committee, headed by Charles Luckman. It was supposed to frame a program for voluntary food conservation.

The committee members—at least, most of them—took their assignment seriously. They began to make individual studies and to mobilize their own experience to the task. These ideas were to be brought together and whipped into a program—so committee members supposed, anyway.

But before this could be done and less than 2 weeks after the committee was named, President Truman and Mr. Luckman went on the radio. This was on October 5. The President, asking voluntary action, nevertheless, devoted himself to abuse of the grain trade, and Mr. Luckman announced a food-saving program.

That program was not the work of Mr. Luckman's committee. It was handed to Mr. Luckman. Not only were the committee and Mr. Luckman bypassed, but the Secretary of Agriculture was bypassed. What was the source of the program and who are its authors this newspaper has been unable to ascertain. It was imposed on Mr. Luckman and the Secretary of Agriculture.

To sum up, 3 months are allowed to pass. Then a committee is named. Before it can act and over the head of the Government department best equipped to handle food matters, there is given the country a hastily drawn program of unknown authorship.

The character of the program is just what its genesis would lead one to expect.

It is a small thing, perhaps, but indicative; people are bidden not to eat poultry on Thursday. This is announced to the country with all solemnity. Then it is discovered that the three poultry consuming holidays—Thanksgiving, Christmas, and New Year—all fall on Thursday. Would any man or group that had been giving the matter real thought have made that error? At least they could have read the calendar.

The program is foolish on its face. If it were followed, which it will not be, it would not accomplish its purpose of saving grain. It would back up the slaughter of meat animals which consume grain. The Secretary of Agriculture knows that, although he dare not, of course, say as much.

Because the program is so foolish, the people regard it coldly; many mayors and some governors even refrain from giving it lip service by merely disregarding the message asking their cooperation. We hear voluntary action has failed.

So to carry on the summary; after 3 months of delay, there is a great fuss and flurry with shouts of emergency. There is handed down a hastily drawn and foolish program and almost immediately its failure is hailed. So we must have Government controls.

Well, there is the meat in the coconut. The voluntary program was meant to fail. Even before it had been announced its failure was predicted and Washington bureaus were at work drawing up compulsory measures.

Now, we come to another strange circumstance.

Ten days ago Washington thought it had found existing funds and authority to provide the help for Europe. Even those who had been urging a special session of Congress had come to the conclusion that one would not be necessary because the means of help were available without further congressional organization. But while some of Mr. Truman's intimate advisers were saying that and while his own legislative leaders were advising against a special session, the President determined to call one.

And what is this special session to do? Two things:

Give authority and funds to aid Europe, which authority and funds are at hand.

Vote Government controls over the economy.

The latter is the real purpose.

To summarize as we go; voluntary measures are sabotaged, compulsion is called for. Compulsion requires congressional authorization and so Congress is called into session. There is little other reason for calling it.

Ensuing acts of the drama are readily predictable.

Europe is starving. The Communists are ready to overrun the continent. They will then come right over here; you will be asked to imagine their hot breath on the nape of your neck. For the sake of humanity, for the love of country, who are you to cavil when the bureaucrats reassemble in Washington and begin to tell you what to do and how to act? Of course government controls flopped before, but it will be different this time; just a little control.

Look under the bed and behind the bushes. There is much too much evidence that it is being "planned that way."

Now let's look at this proposed program of compulsions and see if some place we have not met it before.

There's power to set margins on commodity exchanges; that's one phase. It has been tried and it did not reduce grain prices; neither will it. But in case you have forgotten, there is a program put forward at a recent international conference to place all grain trading in the hands of Government and to make all grain raisers surrender their product to Government.

Another proposal is to allocate domestic use of key commodities. This also is aimed at big grain users. Also it fits the plans of the international food boondogglers, who have ably assisted the forces of starvation wherever they have appeared. It's part of the plan for Government to monopolize grain.

So there are a couple we have met before.

Another proposal is to subsidize dairy products and livestock which might encourage farmers to market cattle and hogs before they reach top weight. Very ingenious. However, the livestock industry is the largest in the United States and this is a proposal to gut it by draining it of supplies.

Let's go on. There would be authority to revive some wartime powers over transportation and these might include regulations to speed up delivery of steel to freight-car makers. There's control of the steel industry. And not even the Socialist government of Great Britain has yet found out how to nationalize the steel industry without nationalizing everything, because so many things depend on steel.

And then perhaps there will be some price-fixing authority. No return to over-all price fixing and rationing; perish the thought. Just a few commodities and the President will use powers over them very sparingly and reluctantly. In measured terms any such representation is a lie. You cannot shorten supplies by rationing and allocations and avoid price fixing and you cannot have price fixing of some things unless you have over-all price fixing.

Well, let's get on with the program. No tax reduction. How nicely the idea of helping Europe fits in with the things that the administration wants to do. Must have taxes to fight inflation and all that. The fact is that taxes contribute to high prices and demands for higher wages.

Also there would possibly be a revival of the excess-profits tax. For the parentage of that one look to the CIO and the Communist platform.

And maybe controls of consumer credit should be retained. Marriner Eccles, the head of the Federal Reserve System, has been fighting tooth and nail to hold that authority. Now, will Europe go to pot if it is removed from his hands?

What we see proceeding in the name of assistance of Europe is the last stand of the bureaucrats. The managed economy advocates who think that they know what is best for people better than the people know, the pinkish contingent which has romped Washington for a dozen years, the stuffed shirts who fear—and rightfully—that another year will oust them from prominence, the drooling incompetents who have infested Government bureaus see big government as their salvation. They have no intention of giving up without a struggle. They exploit human misery. They exploit a situation which might involve their country in a war.

These same people misled Mr. Truman into advocating wage advances. They induced him to write his veto of the Taft-Hartley Act. They induced him to his tragic course in relation to price control. They have maneuvered him into another emergency of their own making.

When Congress meets let it first determine what the United States can spare for Europe. There are people in Washington who can tell them.

Then let Congress put the job of mobilizing food shipments where it belongs, in the hands of the Secretary of Agriculture.

And finally let Congress declare once and for all the idiocy—the criminal idiocy—of trying to fight communism by regimenting the only really free people on the globe.

Preposterous

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 17, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD I note that the President's Advisory Committee on the Merchant Marine has recommended a 4-year program for the construction of 46 passenger-carrying vessels, and, in addition, the committee said national security recommendations required that this program be supplemented by the building of a number of high-speed dry cargo and tanker vessels.

On the same day that the report of the President's committee was released, I was not surprised to read an article in the Washington Times-Herald by Jack Doherty stating that the Government had sold 96 oil tankers to foreign purchasers despite an impending east-coast fuel-oil shortage caused by lack of tanker transportation.

Mr. Speaker, I stated above that I was not surprised at this announcement, as this is in keeping with the inconsistency of our Government in most of the programs since the war, in sending the substance and resources of this country to foreign nations.

Mr. Speaker, you will recall that I have consistently called to the attention of the Congress the fact that we should always and at all times think of our own country and provide for our people first, and thereafter, if there were surpluses over and above the requirements for our own people, that then it would be most proper for us to assist foreign nations to the fullest extent. Self-preservation is the first law of nature.

Mr. Speaker, I represent one of the largest oil-producing States in the United States, and my district is one of the largest oil-producing and refining districts in Louisiana, and I was informed by some of the officials of the large oil refineries in my district and in Louisiana that they do not have sufficient tankers to send their products to all parts of the United States and that they made every effort to purchase the tankers owned and operated by the Government during the war, but their offers were not accepted.

Mr. Speaker, from the article referred to it is noted that there is some question as to the legality in the sale of these 96 surplus tankers which are so critically needed to transport oil to our own people in the North and East, and I hope that the Attorney General will find that those responsible for the alleged transfer of these tankers were without authority to consumate the transaction as these tankers are so badly needed by our own country now, and to replace the same would require years. If we lose these tankers to foreign nations, our own citizens will suffer. Mr. Speaker, I am including in these remarks the article to which I refer above which is as follows:

UNITED STATES TO COMPLETE SALE OF TANKERS VITAL TO AMERICA

(By Jack Doherty)

Defense Secretary Forrestal and Navy Secretary Sullivan yesterday said the Government is morally obligated to complete the sale of 96 oil tankers to foreign purchasers, despite an impending east coast fuel-oil shortage caused by lack of tanker transportation.

Testifying before a Senate Small Business Subcommittee, Sullivan said the tankers were sold to foreign nations in the hope that this might ease transportation problems for oil in the Middle East and prevent depletion of American supplies.

PRICE TOO HIGH

Forrestal declared that no consideration, long- or short-term, is more important to this country than oil in the Middle East. At the time of the sale, he pointed out, no United States firms offered to buy the tankers because they felt the price was too high.

Senator WHERRY, of Nebraska, subcommittee chairman, charged that there is obviously a conflict of purpose and judgment somewhere in the picture, adding it was urgent that all available tankers be kept under United States flag operation in coastwise shipping to ease the imminent east coast fuel shortage.

LEGAL QUESTION

WHERRY asked Forrestal whether the Government was legally committeed to sell the tankers. "Gentlemen's agreement are usually kept." Forrestal replied, "even in Wall Street."

Both Forrestal and Sullivan said they were awaiting a decision by the Attorney General on the legality of the tanker sale. WHERRY has charged that the sale is in violation of the Merchant Ship Sales Act and endangers national security.

Peacetime Conscription—Let the People Decide

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am including herewith a radio address delivered over radio station WOW, Omaha, Nebr., November 8, 1947:

Fellow Nebraskans, as you know, Congress has been unexpectedly called back to Washington for a special session. Before leaving, I want to report to you on a question which will probably be before Congress in the near future.

Almost 2 years ago I was at this same microphone, reporting to you about the British Loan scheme. On that broadcast, in January 1946, I expressed this fear: "A loan to finance an English venture into socialism will do them no good in the long run—and it will pour gasoline on the fires of inflation in America."

You know what has happened. The loan was rammed through Congress, despite the majority opposition of the American people. The British have moved far into socialism—their humble people are hungry—high prices have resulted in America—and the solemn pledges of the loan agreement itself are in the wastebasket.

Now the same administration is scheming to shackle us with Europe's deadly militarism.

That is the subject of this broadcast—peacetime conscription. As your Congressman, I have always tried to keep you informed of my views on the vital issues before America.

Currently a highly organized and well-financed campaign to steamroller conscription through Congress is going on, using the New Deal emergency methods. Certainly on an issue of this magnitude you should know my views.

As some of you have undoubtedly discovered, the administration is pushing this drive from many quarters. Already powerful political and financial groups have pressurized every Congressman in America to make him promise to vote for peacetime conscription.

Tonight I have only time enough to take up three angles of this conscription demand, which the proponents try to soften up by calling it universal military training. In Germany it was called Hitler youth camps.

My first proposition is that conscription does not provide national defense. The second is that conscription is not actually wanted for national defense—that actually its real purpose is to carry out the global plans of internationalist groups, who want American boys to police the world like Caesar's Roman legions.

My third and most important point is this: Conscription should be passed on by the people through a constitutional amendment.

First, let me dispose quickly of a couple of the many erroneous arguments for universal military training. The claim is frequently made that a gigantic military program that includes conscription will make us immune from attack.

You and I know that claim has been used by the war-making groups in every big country in Europe. Like the idea of a perpetual motion machine, it has never worked out that way.

And let me make this fact clear at the outset. As your Congressman, HOWARD BUFFETT is for a strong national defense. But I want the genuine article, not a counterfeit, and conscription in peacetime does not fill the bill.

You have heard some people say that the Pearl Harbor disaster would not have happened if we had been prepared.

The simple truth is that we were adequately prepared there. We had defensive power that could have blown the Japs clear out of the water, but the Washington command that was seeking war needed a disaster that could only occur if our forces were caught unawares. Were they caught unawares at Pearl Harbor because Washington planned it that way, or was it criminal stupidity?

Could any system of peacetime conscription prevent top officials from repeating that performance, whether it was betrayal or bungling? I don't believe so.

Now, let's analyze conscription from the standpoint of national defense. Is universal military training in peacetime necessary or desirable for an adequate national defense? On that claim rests the whole case of its advocates.

If it is necessary for our national defense, then we should adopt it. Or if it even seemed advantageous in order to contribute to a strong national defense, then I would be inclined to favor it.

But on this question there is no need to guess or experiment. To appraise the value of conscription for national defense we can find the complete record in the history books.

Compulsory military training is not a new idea. It's as old as the battlefields of Europe.

Modern conscription started in France under Napoleon. For a few short years Napoleon overran Europe. Then he was decisively beaten at Waterloo, and France has never itself won another major war.

The Prussians in Germany were the next to take on compulsory military training. Germany has since been involved in two world wars, both of which they lost disastrously.

Russia under the czars, modern Italy and Japan were the other major powers who resorted to peacetime conscription. All of them have gone down to defeat and misery.

That, friends, is the unbroken record of compulsory military training for major nations—defeat in war and reduction to a second-rate power.

With this deadly record of disaster, most certainly there are other reasons why this administration is trying to fasten conscription on the American people.

From my post in Washington, I am convinced that one of the reasons behind the cry for universal military training is not defense of America, but continued foreign intervention.

Already it is leaking out how plans are being made to send American boys to police Palestine as the British troops move out. How many Americans in military uniform have already been sent to Greece and Turkey?

How many are now on their way there in ships that pass in the night other ships carrying home the lifeless bodies of American boys, boys who were sent out to die by political leaders piously orating about the Atlantic Charter? Only the militarists in Washington can tell you and they are silent.

How many American boys are already guarding either oil fields or Army airfields strangely located in Saudi Arabia? Again only the Army can tell you and they are silent. You must consider the implications of these questions now. Listen!

Will your boy, happy and full of life on his eighteenth birthday, be policing the streets of Jerusalem a year or two from now, subject to a hidden bomb or a sniper's bullet? Or will he be lying wounded along some corporation's oil pipe line in Saudi Arabia, crying for help while his life's blood slowly soaks into the hot desert sands, thousands of miles away from his native land?

Every mother and father in America should be facing this prospect now, before the internationalists shackle us with conscription. Then they would have the life and death power over your son. If this bill is passed, your chance to protect your boy's life is gone. He is then a pawn and tool of an administration trying to interfere and meddle all over the world.

Here is a sample of their thinking: Not many weeks ago I listened to an administration leader in Congress boosting for the school free-lunch program. His principal argument was the advantage of feeding our youngsters well so that they would make good fighters in future wars.

In other words, today in power in Washington there are those who consider your children like cattle in a feed lot.

Another hidden purpose of the conscription drive is the desire of the administration and its military leaders to indoctrinate

and regiment the thinking of our youth. They want the youth for the same reason that Hitler demanded the youth—to indoctrinate them with militarism and goose-stepping regulation, at a decisive point in their formative years.

Now we come to the most important argument against this high-pressure conscription drive. My appeal here is directed to the many honest and sincere proponents of universal military training. I respect their convictions on this matter. Because they are unquestionably patriotic and sincere, I am hopeful that they will consider this point. Compulsory military training would eliminate a vital part of the freedom guaranteed in the Declaration of Independence. That sacred document guarantees to each American certain inalienable rights, including life, liberty, and the pursuit of happiness. Peacetime conscription would destroy two of these: the right of liberty and the right of the pursuit of happiness for our youth at the most critical time in their lives.

Such a complete change from the freedom guaranteed by the Constitution is a vital decision that only the people should make.

The prohibitionists had the integrity to take the route of a constitutional amendment. When they proposed that abridgement of liberty, the people decided the issue. Are those promoting compulsory peacetime training willing to let the people decide? Their actions indicate that their answer is "No."

But if they will not submit this proposal to the people by the orderly method of constitutional amendment, you and I can only conclude that they do not believe in government by the people, and that they have already succumbed to the Hitler and Mussolini concept that the people cannot be trusted. Under the American form of government this is a basic issue of freedom that only the people themselves should decide.

The reactionary promoters of conscription who are afraid of the people will immediately cry that there isn't time to take this issue to the people. You and I know that alibi is false.

Today we have about 8,000,000 well-trained men who would be available immediately in a true emergency. These trained Americans make certain that we have sufficient time to consider this fundamental change by the legitimate method of constitutional amendment. Isn't that more American than to force conscription through a Congress largely terrorized by military pressure groups?

In closing, let us pessimistically assume, like the militarists do, that we are in danger of sudden attack from Russia.

Well, you folks know my record of opposition to the gigantic handouts to Russia—opposition when the big boys now hollering for conscription were giving everything to Russia and licking Joe Stalin's bootstraps in the bargain.

Then these administration leaders were hailing Russia as a great democracy. Were they fools or liars? You decide—I can't. But now let us accept their claim that world peace is not assured for any extended period.

That means that the United States must be able to defend itself. On that we are all agreed. But compulsory military training, on its record, is a failure at defense.

We must continue to have a sure-fire method of winning. That means the best and most advanced scientific research, an unparalleled air force, a strong Navy, a global intelligence service, a strong mechanized striking force, and a strong National Guard and ROTC, vigorous and dynamic enough to attract our youth on a volunteer basis.

We have the atomic bomb. We have a navy larger than all the rest of the world put together, and no sustained military attack can be brought to American soil without naval supply. We have, roughly, 100 aircraft carriers; the Russians are reported to have none.

Considering this colossal American military power right today, I wonder what is up. Is the administration afraid of the shadow of its own power, or is its leaders secretly planning to precipitate war to continue themselves in public office?

Must there be a war under every Democratic President?

America must remain strong, productive, and free. In any event, I want you and all the American people to have the decisive voice on this basic issue. That is the American way.

I trust the people.

I challenge the promoters of peacetime conscription to trust the American people.

Let the people decide.

Commentator George Reedy Poses Real Question on European Recovery Program

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit an analytical commentary which I heard this morning at 8 a. m. on the European recovery program, or, as it is known to the people, the Marshall plan.

The discussion, by George Reedy, veteran Washington correspondent and commentator of WOL, the Mutual Broadcasting System station in Washington, was, no doubt, heard also by a great number of Members of the Congress, and should have been heard by all of them.

Therefore, I have secured a copy of that part of his broadcast and present it herewith. It should prove interesting reading for the Congress and the country.

The American Congress is meeting today for one of the shortest but most critical sessions in our history. Within the space of a few brief weeks, it is being asked to find strong locks and bars to the doors that safeguard western Europe from the wolves of communism.

The basic issue is simple. It is the threat to the few remaining nations of the Old World that have decided to stick with democracy. We are told they cannot survive without help. That help can come on a large scale only from the United States.

Americans have always been a generous people. But in this case we are asked for the aid in the name of our own self-interest. It is not just a question of feeding and clothing Europe. It is a question of preserving friends for help in a show-down with communism.

At the moment, the aid under consideration, is only temporary. It is intended to take France, Italy, and Austria through the coming winter. But it has been made clear that this is only the beginning. We are asked to meet an immediate situation.

If, however, the President's advisers are correct, the future of our country and possibly the world rests on the decision. They believe that those three nations will go to pieces without American help. The people who will pick up the pieces are the Communists.

That would represent the beginning of the end. It would be impossible for other democratic nations of Europe to hold out against the Soviet Union. One by one they would fall. Even England, for all its stout independence would be hard-pressed.

There is no doubt that the American people have set their faces sternly against communism. In this country it has succeeded in gaining no more than a toehold. Even that is fast disappearing. We are a nation that believes in the rights of the individual over all.

Therefore a Communist Europe would bring us in direct conflict with a world dominated largely by our enemies. Our only allies would be too weak to be of service. Their geographical position wouldn't even make them buffers against any direct onslaught.

The temporary aid to France, Italy, and Austria will not, of course, stop this process. It is intended only to prolong it and give us time to consider more realistic and thoroughgoing measures. The Marshall plan will be the basis for hammering out the long-range program.

The measures which we hope will preserve a world in which we can live comfortably will not come up until the regular session of Congress. That is when the soul-searching decisions must be made. We must determine just how far we can safely sacrifice to attain our ends.

It isn't easy to determine the amount of aid we can give. There are dangers in sending too much and there are dangers in sending too little. The one would bankrupt us and the other would be a waste of time, money, and goods.

Any program that falls short of giving the western democracies a chance for independence is worse than no program at all. It merely places our wealth in a strategic location where it can be grabbed by the Communists.

On the other hand it will do no one any good to send too much and bankrupt ourselves. We cannot lead the world unless we have a functioning economy at home. The job we have set for ourselves comes to no less than leading the world out of its misery.

There are signs that we can defeat communism decisively if we play our cards right. The spreading wave of riots in Italy and France could well be a sign that the Communists know the people are turning against them. In desperation they may be resorting to violence.

If this is true, we must play our hand with especial care. This is a critical moment in our history. If we are found wanting, we stand to lose all that has made our Nation great.

Inconceivable

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. LARCADE. Mr. Speaker, I thank you for the privilege to extend my remarks in the RECORD, and since we are assembled in extra session to consider making additional appropriations to foreign countries, I feel it is my duty to my constituents to call to the attention of the Congress the fact that the State Department and the Army has refused to

use surplus farm and surplus farm products in the relief programs thereby affecting the farmers of America and naturally resulting in affecting the entire economy of our country.

Mr. Speaker, I made every effort to induce our governmental agencies charged with the administration of the relief programs to give consideration to our own farmers and the economy of our own country by utilizing the surplus farm and farm-canned agricultural products, and with your permission I wish to include below copies of a letter dated August 1, 1947, addressed to the Honorable the Secretary of State, and also a copy of a statement issued by me on September 6, 1947, as follows, to wit:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 1, 1947.

Gen. GEORGE C. MARSHALL,
Secretary of State,
Department of State,
Washington, D. C.

DEAR GENERAL MARSHALL: I am taking the liberty to write you and call to your attention an amendment by Senator TYDINGS which was added to section 302, part III of H. R. 4269, making an appropriation for relief purposes, etc., and with the administration of which legislation your agency is concerned.

The amendment added to this legislation was as a result of the demand of taxpayers of the country generally, who put up the money for the appropriations, and who have surplus farm and food products which should be used in these programs. At the instance of Congressman EDWARD T. MILLER, of Maryland, and the writer, the Subcommittee on Food of the Committee on Agriculture of the House of Representatives, presided over by Congressman AUGUST H. ANDRESEN, of Minnesota, held hearings on this problem. The hearings are now being printed and I would suggest that you obtain a copy of the same, and if so, I believe that you will realize the seriousness of the situation as it affects our farmers and taxpayers and that their demands are proper and should be complied with.

There is no longer administration by Executive order and it is my opinion that Congress will insist upon their wishes being complied with and the letter and spirit of the legislation adopted by the Congress administered in compliance with the same. The economy of this country and consideration for its citizens, the taxpayers, and their industries should be paramount in the administration of the program herein discussed rather than the fancies or idiosyncrasies of the beneficiaries of the largesse of our taxpayers.

I represent the largest sweetpotato-producing area of the United States—Louisiana—and my section is critically affected by a tremendous surplus of sweetpotatoes, and the entire industry is in distress as there is a surplus of over 2,500,000 cases of canned sweetpotatoes, and while I am in favor of utilizing other surplus foods my obligation is first to my own constituents. The resistance from those charged with the purchase and distribution of food insofar as sweetpotatoes are concerned was that sweetpotatoes did not contain sufficient calories and vitamins, etc., and that foreigners did not know how to use or prepare sweetpotatoes, etc. For your information I am enclosing a statement showing the caloric and vitamin content of sweetpotatoes, and all that is needed to use same for food is to open the can with a can opener, hatchet, or ax. Also, sweetpotatoes do not require anything added to them in order to eat them, whereas wheat or other grains require costly additions.

Another bureaucratic argument has been that foreigners did not know how to eat sweetpotatoes. In answer to this, when the UNRRA was to use sweetpotatoes which were dehydrated, we had them prepare labels printed in eight foreign languages to place on the cans giving instructions. The same can be done with canned sweetpotatoes.

I am respectfully calling to your attention these facts in regard to the administration of the funds of the United States taxpayers appropriated for the relief programs, and I further respectfully request that the same be given consideration with a view to utilizing sweetpotatoes in these programs and to feed our armed forces in the occupied countries, and if not, my State and the entire sweetpotato-producing area of the United States will face disaster as the new crop is now coming on, and if the surplus is not utilized for relief purposes, there will be no market for the new crop.

It is my opinion that this situation is comparable in other sections of the United States where there are surplus food and farm products, and it is my opinion and the opinion of the Congress that the funds appropriated should be used also to give relief to our own people, the taxpayers.

Very respectfully,

HENRY D. LARCADE, Jr.
Member of Congress.

WASHINGTON, D. C., *September 6, 1947.*

STATEMENT BY HENRY D. LARCADE, JR., REPRESENTATIVE FROM LOUISIANA, ON THE FOOD SITUATION

It is my opinion that the Government administration of the relief and other programs is largely responsible for the unprecedented high prices for food in this country. These programs for relief of Europe, Asia, and the areas occupied by our country are being administered by the State Department and the Army, and as a result of that administration, which I think is a short-sighted and intransigent policy, and by their refusal to heed the mandate of the Congress by not purchasing supplemental surplus farm products because they claim that some of these surplus foods do not contain an equal amount of calories as do grains and fats and oils, they are responsible for the increased prices of food to the American consumer.

There used to be certain fundamentals which prevailed, such as prices were based upon supply and demand, and that there was a cause for every effect.

I still believe that these fundamentals prevail in regard to the present food situation, and the disregard for the same bring about the present situation due to the arbitrary and unreasonable policy of those in charge of the purchasing of the foods used in the present relief and other programs by the purchase of only the basic and high-calorie-content grain, fats and oils, and other items, and which results in the skyrocketing of the prices that the American consumer has to pay in competition to the Government. In other words, the more of these foods that the Government buys, the higher up goes the price and the more money the product costs the American taxpayer. Last year the Congress appropriated approximately $9,000,000,000 in these programs, and as a result of the policy of the administrators the cost of a comparable amount of food purchased was doubled in price, thereby doubling the cost of these items to the American consumer.

During the last year the United States exported to all foreign markets nearly 1,800,000,000 pounds of meat and edible fats, 306,341,000 bushels of wheat, fruits and vegetables valued at $296,877,000, and dairy products and eggs valued at $450,206,000.

Another factor in addition to the cost of the basic and selective foods taken away from the American consumer is that it increases the price of other foods. As an example, with a decrease in the production of 1,000,000,000 bushels in the corn crop, with the use of grains in the Government programs, the cost of corn is increased as a consequence, and following the price of meat goes up sky high, as corn is used to feed cattle and hogs which produce meat, etc.

Practically every State in the Union has surplus farm products which would be used in these programs and the utilization of these surplus farm products would help the economy of the entire United States, and instead of ruining the American farmer who produces the food, and who puts up the money that Congress appropriates by paying the cost of the same by paying taxes, the utilization of farm products would protect our own domestic economy and provide some stabilization for farm products.

Those in charge of the programs have disregarded completely the mandate of the Congress in their instructions to the governmental agencies charged with the purchase of these foods for relief purposes, for as a result of hearings held on the subject before the House subcommittee on foods of the Committee of Agriculture headed by Representative A. H. ANDRESEN, of Minnesota, an amendment was included to the food relief bill directing the Government to purchase as far as possible and practicable, farm surplus commodities in the spending of the money appropriated by the bill. The carryover of surplus canned foods of all kinds throughout the United States from last year may well upset the economy of the country unless some of these canned foods are purchased in the relief programs, and the fact that there is so much of these surplus canned foods is due to the Department of Agriculture and other governmental agencies calling upon the farmers of the country to increase and expand production as these foods were critically needed by the Government. The farmers responded and now they cannot sell the foods asked to be produced by the Government. In the meantime, another crop is being harvested, and the processors and distributors will not buy these new crops as their warehouses are full of canned foods from last year.

I have been in Washington for a week with a constituent from my district, Mr. J. F. Dexauche, the largest sweetpotato handler in the United States, who contacted all of the governmental officials and agencies who make purchases for these programs, and Mr. Dexauche offered sweetpotatoes in cans which contain high calorie and vitamin value at a rate and price delivered in Hamburg, Germany, lower and below the cost of delivering the same potatoes in Chicago, Ill., but they were not interested, notwithstanding that the Department of Agriculture recommends that sweetpotatoes be utilized in these programs to the fullest extent.

The Department of Agriculture recognizes the seriousness of the situation as the same affects the American farmer, as for instance, in the sweetpotato industry under discussion, the new crop is now being harvested and growers complain of a very limited demand; therefore the Department of Agriculture under the Steagall amendment will be forced to purchase these fresh new crops of sweetpotatoes at the support price and as the fresh sweetpotatoes do not keep, the American taxpayer will make another contribution and take a loss, as no doubt, the potatoes will have to be dumped as was the case with Irish potatoes some time ago.

In other words, the potatoes will not be purchased by the buyers until they dispose of their present stocks of surplus canned sweetpotatoes.

This is only one illustration of the seriousness of the situation, and other farm products and industries are likewise affected.

I am sure that the Members of Congress are greatly disturbed about the present high costs of food and with the administration of the relief-food programs, and with the announcement that a special session of Congress will be convened to consider the matter, I feel that they will do something about this situation.

It is my opinion that the Congress may reorganize the whole existing set-up for relief purposes by taking the administration away from the present administrators, or discontinue the program entirely unless the economy of the United States is taken into consideration, and unless this is done, it is my further opinion that the Congress will refuse to appropriate any further funds for these purposes as the taxpayer who puts up the money through taxes must be given consideration, for apparently, as I have stated, no consideration has been given either to the utilization of farm surplus farm products, canned and uncanned; nor has any attention been paid to the imposition of increased prices for the American consumer which has been brought about by the use of the scarce and critical basic foods which are essential to the American consumer; and further, in the administration of the program, no attention has been paid to the mandate of the Congress under the Tydings amendment providing for the utilization of surplus farm products.

Normally, bread used to cost the domestic consumer from 5 to 6 cents a loaf; now the American housewife has to pay 15 and 16 cents for a loaf of bread, and other foods are proportionate in cost, all due to the Government insisting on utilizing only the best and basic foods for relief and other purposes.

Mr. Speaker, I also ask permission to include in these remarks a copy of a newspaper article quoting the Honorable STYLES BRIDGES, the Republican Senator from New Hampshire, which was published in the Washington Times-Herald, of date November 15, 1947, which is as follows:

MAKE SURE RELIEF SUPPLIES REACH NEEDY, BRIDGES URGES—SENATOR ON EUROPEAN TOUR SAW "MILES OF AMERICAN GOODS SPOILING ON DUMP"

CONCORD, N. H., November 14.—Senator BRIDGES, Republican, of New Hampshire, said today the United States should halt aid to Europe until certain the material is reaching the proper recipients and should investigate what he called wholesale European misuse and destruction of American relief goods.

BRIDGES, chairman of the Senate Appropriations Committee that just returned from an inspection of the European area, recommended a "sort of reconstruction finance corporation" to make certain relief goods reach the common people for whom they are intended.

SAW UNITED STATES GOODS ON DUMP

He said he saw "miles" of American goods spoiling on a dump where they had lain a year or more, and charged that Communist guerillas in Greece were wearing clothes and using weapons sent under lend-lease to the Greek Army.

German war plants in the American zone, he said, were being dismantled and shipped to Russia and her satellites, "the greatest potential threats at this time."

BRIDGES said it was inconceivable that Congress should be asked to appropriate $500,000,000 for the occupied areas in Europe "while at the same time we are allowing the destruction of the only chance to get Europe on a self-supporting basis."

CALLS POLICY ASININE

The United States, he said, is doing in Europe "some of the most asinine things I ever heard of any country doing."

He said money and food would not solve the immediate problem in Greece because of the current loose methods of distribution. He urged the United States send Army officers to work with the Greek Army against the guerillas or withdraw all aid from the country.

Before approving funds for European aid, BRIDGES said, his commission would investigate several asinine and stupid situations.

The senior New Hampshire Senator said the United States should insist that European countries put their houses in order and install new methods of taxation to replace their present weird and loose system.

URGES CURRENCY REFORM

European currencies should be stabilized, BRIDGES said, and the United States should first appraise the home situation and determine what can be spared and then decide where it can be used most effectively.

Throughout Europe, he said, was "the shadow of the threat of communism."

Fifty-Year Pastorate of Rev. T. J. C. Stellhorn

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. WEICHEL. Mr. Speaker, not too many have a golden anniversary in the service of God, but few provide the spiritual need of the church in the same community for half a century.

Mr. Speaker, I want to pay tribute to Rev. T. J. C. Stellhorn who is celebrating his golden anniversary of spiritual service to his people in the same parish, and I want to include a newspaper item covering his 50-year pastorate at Zion Lutheran Church, Sandusky, Ohio:

DR. STELLHORN'S ANNIVERSARY TO REVIEW RESULTS OF HIS 50-YEAR PASTORATE HERE

(The fiftieth anniversary celebration of Dr. T. J. C. Stellhorn's pastorate at Zion Lutheran Church will feature a review of some of the tangible fruits of his 50 years of faithful and untiring service. The festival service at 11 o'clock Sunday morning at the junior high school and the testimonial banquet following at 1:30 will dramatically present these visible evidences of his ministerial activity.)

During Dr. Stellhorn's 50-year pastorate at Zion Church, he has founded and established three Lutheran congregations, and given considerable assistance in the establishment of another Lutheran congregation in the Sandusky area. When Dr. Stellhorn first arrived in Sandusky in 1897, the parish of Zion Church extended from east of Huron to what was then known as Mustcash, which is now known as White's Landing. In addition to his duties in Zion Church, he was in charge of a small congregation which had been established many years before at Mustcash. In 1901 Dr. Stellhorn gathered the Lutheran people in the village and country surrounding Castalia into a congregation and founded Grace Lutheran Church of Castalia. The work at Mustcash was later on combined with Grace Lutheran Church in Castalia.

Then, Dr. Stellhorn turned his attention to the need for a Lutheran Church in Huron. In 1902 the Zion Lutheran Church of Huron was founded and served by Dr. Stellhorn until 1907. At this time this parish was combined with the St. John Lutheran Church at Union Corners and called its own pastor. As soon as these two parishes had been established, the need for a Lutheran Church was recognized in the Venice area. Sunday schools were conducted at Venice in the town hall, and at a small red brick schoolhouse at Brick Mill, a mile and one-half south of Venice, and also in the town hall at Bay Bridge. These three Sunday schools were eventually combined into one when Zion Lutheran Church erected what was first known as the chapel at Venice in 1914, which has been since 1926 the self-supporting Trinity Lutheran Church of Venice. In the years 1905–06, Dr. Stellhorn gave considerable time and effort in helping the St. Paul Lutheran Church of Sandusky to become solidly established as a congregation.

Besides this work in the Sandusky area, Dr. Stellhorn saw the opportunity to establish a Sunday school at Vickery. This has since been incorporated into the St. Paul Lutheran Church parish of Clyde. These three flourishing Lutheran congregations, Grace of Castalia, Zion of Huron, and Trinity of Venice, and in addition St. Paul of Sandusky, give dramatic evidence of the unflagging missionary zeal of Dr. Stellhorn. These congregations and their pastors, the Reverend C. J. Renner, of Castalia, the Reverend Wm. R. Lucht, of Huron; the Reverend Norman H. Schellhase, of Venice; and the Reverend J. A. Griffith, of Sandusky, are all uniting with Zion Church in the festival service at 11 o'clock at the junior high school.

EXERTS CHRISTIAN INFLUENCE

Another evidence of the great Christian influence which Dr. Stellhorn has exerted upon countless numbers will be dramatized in the presence at the fiftieth anniversary celebration of the men who were led to dedicate their lives to the service of God during these 50 years of Dr. Stellhorn's pastorate. At present these men are scattered far and wide in the church, from Baltimore, Md., to Appleton, Wis. They will march in an impressive processional of clergy along with the pastors of the local Lutheran congregations at the festival service at the junior high school. At the testimonial banquet at 1:30 these men will be presented and will be given the opportunity to briefly testify of the influence of Dr. Stellhorn in their lives. The following are the names of those who have dedicated their lives to the Lord's service during the 50 years of Dr. Stellhorn's pastorate at Zion Church:

The Reverend George Hein, Baltimore, Md.; the Reverend Walter Wietzke (deceased); the Reverend William F. Schmidt, D. D., Youngstown; the Reverend Frank Reuter, Appleton, Wis.; the Reverend Lecnard Ludwig, D. D., Niagara Falls, N. Y.; the Reverend Arthur Knupke, Payne, Ohio; the Reverend Theodore Stellhorn, Jr., Sandusky; the Reverend August Gysan, Alexandria, Va.; the Reverend Ralph Piper, Columbus; the Reverend Maurice D. White, Lima; the Reverend William Kiether, Oregon, Ill.; Prof. Magnus Payson (deceased); seminarian, Earl T. Knaus, Jr., Philadelphia, Pa.; and vicar, Richard Gast, Detroit, Mich.

During these same 50 years, a considerable number of young women who were reared in Zion Church have left their home congregation to help their husbands in the service of the Lord. They are Mrs. Martha Vandersee Harman, Cleveland; Mrs. Lena Lehman Knauer (deceased); Mrs. Luella Ley Hein, Baltimore, Md.; Mrs. Ida Baum Allwardt, Fort Wayne, Ind.; Mrs. Christine Baum Woelke, Pidgeon, Mich.; Mrs. Helena Gundlach Ludwig, Niagara Falls, N. Y.; Mrs. Cora Knupke Doermann, Tirupati, India; Mrs. Doris Gundlach Giese, Cessna Park, Ill.; and Mrs. Mary Shellhorn Hacker, Shippenville, Pa.

These daughters of Zion Church have also been invited to return for this fiftieth anniversary celebration and will be presented at the testimonial banquet.

HAS ACTIVE PASTORATE

It is impossible even to arrive at anything near an accurate figure as to the number of worship services which Dr. Stellhorn has conducted during these 50 years, or of the sermons which he has preached. He has preached at least twice each Sunday on the average throughout these years; this would mean that he has conducted and preached for at least 5,200 worship services. However, the records of the official ministerial acts which Dr. Stellhorn has performed during his 50-year pastorate presents a tangible and impressive evidence of the very busy and active pastorate which he has had. He has administered the sacrament of holy baptism to 3,548 persons; he has confirmed 3,173 children and 613 adults into the Lutheran faith after having carefully instructed them; 1,874 couples have been united by him in the bonds of matrimony, and he has officiated with the comforting message of God's word at 2,555 funerals.

William E. Didelius will serve as the organist for the festival service at the junior high school. He has chosen to play Prelude on Ein Feste Burg, by Faulkes, as organ offertory, Priere, Suite Gothique, by Boellmann, and as postlude, Jubilate Deo, by Silver.

The choirs of all of the churches participating in the celebration are to form a large chorus of 125 voices for the festival service. Harold Parker, the director of the senior choir of Zion Church, is directing this mass choir. They are singing two favorite anthems of Dr. Stellhorn, My God and I, a Latvian spiritual arranged by Sergei; and Unfold Ye Portals, by Gounod. Miss Laura Long, the organist of Zion Church, will accompany the choir anthems on the piano.

Many inquiries have been continuing to come in for additional reservations for the testimonial banquet. All of the 700 places at the banquet tables have been spoken for. However, those who have been unable to obtain reservations may hear the program by being seated in the balcony of the junior high school.

Navy Day Address of the Secretary of the Navy

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. HÉBERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Navy Day address by Secretary of the Navy John L. Sullivan before members and guests of the Navy League of the United States, Roosevelt Hotel, New Orleans, La., October 27, 1947:

I have many reasons to be happy at this opportunity to meet with you here in observance of Navy Day. First, I recall a long and cordial association with the Navy League and its councils throughout the United States. The outstanding manner in which the Navy League conducts this annual observance is a conspicuous token of the loyalty that your organization bears to the Navy; and I know too that this loyalty and support prevail not only on Navy Day, but every day.

I am also very happy at being introduced to the wonders of the Crescent City. New Orleans is a city of fabulous memory in the history of American civilization. All the elements of its being—its founders, its culture, its resources, its very geographical location—make it unique among American cities. More than that, this great metropolis was in the forefront during the war among those communities that gave the Navy the wherewithal to vanquish the enemy.

But, above all, I am grateful for this opportunity to discuss with you the importance of ensuring public consciousness of the role of the Navy in the framework of National Security and as a potent factor for world peace.

We know the pride which this part of the country has for the United States Navy, and I want you to know that the Navy is proud of the help you have rendered to it through the years.

Today is the twenty-sixth observance of Navy Day, and I believe it has very special significance for us and for the United States.

For the first time, our comrades in arms of the Army and of the Air Force are participating in Navy Day throughout the United States. This unity of purpose which has existed between the services, but which previous administrative arrangement served to obscure, is now evident to all. I believe that Navy Day affords all of us a splendid opportunity to reaffirm this unity, which now finds true legal symbolism in the National Security Act, which has set up, under a Secretary of Defense, the organization we know as the National Military Establishment.

Somewhat like the Three Musketeers, we are "all for one and one for all." In this we reflect—as our lasting unity as a nation does—the true meaning of the motto of the United States, "E Pluribus Unum."

I am sure I do not need to point out to you that there is no feeling on our part that we were more than a partner in the great struggle from 1941 to 1945. It is not the implication of the Navy Day slogan, "Victor in War—Guardian in Peace" that we were the sole victors and that today we are the sole guardian.

Everyone knows what a magnificent part our Navy played in winning the war. This can be said of the other services as well, because it was the close teamwork among the Army, Navy, Air Force, Marine Corps, Coast Guard, and our valiant merchant marine which gave us the final victory. This triumph was not alone the feat of the military which bore the brunt of physical assault on land, on sea, and in the air. It was founded upon the support of our citizens at home who carried on the battle of production in industry and in agriculture. The cordial bonds between the Navy and American industry are fittingly symbolized by the contribution of your great city of New Orleans, whose industry gave the Navy ships and equipment with which to meet the enemy in all theaters of war.

This spirit of teamwork is perhaps the most conspicuous characteristic of the American citizen. Our military services, supported by industry at home, united their efforts to form the undefeatable team. These forces engaged the enemy wherever he could be found with a unity of action which made final victory inevitable. This coordination—proven in practice—is now made complete and permanent by the law of the land which gives being to our new National Military Establishment.

It is my firm belief that this legislation provides all the elements essential to the formation of an integrated force adequate for our national security. With a Security Council under the chairmanship of the President of the United States, our national aims may be effectively evaluated with respect to the risks and the stakes which involve. We are indeed fortunate that this new organization was created during the administration of the present encumbent of the White House who is deeply interested in giving this country a security system as perfect as men can make it. Every time we meet with him, I am surprised at the detailed knowledge he has of the organization and functioning of all three of the armed services. I doubt if any President of the United States has ever known more about the services or devoted so much of his time to their welfare as our present great President, Harry S. Truman.

The Munitions Board and the National Security Resources Board will determine how these commitments may be reconciled and integrated with the requirements of the civilian economy. With the counsel and cooperation of all other agencies of the Government we shall be able to make a realistic evaluation of our national security in terms of foreign policy, international trade, and the preservation of world stability through protection of the rights and interests of free nations everywhere.

I cannot leave the subject of our newly formed Military Establishment without tribute to its great leader, the first Secretary of Defense, Hon. James Forrestal. I know that all of you here today share a special pride that the first Secretary of Defense should have been called to that position from a long and successful term of service to his country. As his successor, I realize all too well the high standard which he set as Secretary of the Navy, a standard constituting a challenge to any man who follows him in that office. Consequently, for my part, it is not only with pride but with humility and determination that I undertake the duties which have been so capably executed by my predecessor.

The confidence which I feel in the new integrated military establishment, however, and the great leadership under which it is administered, does not alter the fact that laws and leadership are but a part of the total requirement. To all these, there must be added the backing and support of loyal citizens. By the National Security Act of 1947, the coordination of the Navy's activities and operations with her sister services has been clearly established, but the armed services cannot maintain authorized complements of manpower without the active support of the citizens of this country. Speaking for the Navy I can tell you that this problem of manpower procurement is at present most urgent. The need for personnel is more critical than at any time in the history of the Navy.

This crucial condition is the result of a combination of circumstances unique in our history and the remedy lies only in adequate appreciation of the role of sea-air power in supporting the foreign policy of the United States. In the 2 years since VJ-day, the Navy has lost manpower in such enormous numbers as to render normal operation difficult. In the light of world conditions, this shortage of personnel is a matter of concern to every American citizen. The Navy League must encourage the youth of this country to take active part in safeguarding our national security.

Pernaps it is only natural that following a hard-fought war there should be a slackening of interest in military service. We are not a belligerent people and the peaceful ways of civilian life tend to distract us from our duties toward national security. But it is especially dangerous at a time like this to be lulled into a false sense of security and to lose our awareness of the need for preparedness. We must stimulate this awareness among our people. We must recognize that there are forces loose in the world today which are inimical to our Government and to our way of life—forces whose ideologies are at cross-purposes with the democratic processes of peace-loving people. We must be prepared, if necessary, to defend our freedoms whenever and wherever they are challenged.

In the possession of ships and equipment, our Navy is large. Yet mere possession avails us naught unless our ships and equipment can be ready for use in time of need. Most of

our ships are in storage, preserved in the so-called "mothball" fleet, which is maintained as a reserve against any emergency. If this fleet is to be of value, the Navy must have enough trained men in its regular and reserve ranks to man these ships and place them in effective operation within a reasonable time. I ask your support in helping us solve this manpower problem.

I believe you will recall the folly of scrapping our Navy after World War I. We shall not repeat this folly. As members of the Navy League, you have a patriotic duty to create a live public consciousness of the need for adequate sea-air power. The integrity of the national defense organization and the security of our country and our very homes depend upon the support of the people. That is why I take this occasion to impress upon you, the members and friends of the Navy League, the seriousness of the problem and the responsibility which you share in solving it.

Sea-air power is a potent factor in the maintenance of world peace. The Navy has become an integral part of the coordinated services but its mission and its functions remain the same: to protect the coasts of the United States, to support our forces of occupation in former enemy countries, to protect our peaceful commerce on the seas, and in all appropriate ways to support the foreign policy of the United States.

Now the very nature of sea-air power makes it a potent factor in international relations, because its chief characteristics are mobility and flexibility. Therefore, it is inevitable that the Navy should maintain itself always abreast of happenings in far-off places. It must provide defense of our own sea approaches. This is no small task when you consider America is virtually an island surrounded by two great oceans. We must have naval forces adequate for control of these approaches.

But our responsibility does not end here. The United States must share in the responsibility of maintaining the peace of the world. To accomplish this, we must have free access to world waterways at all times and be able to deny such access to the enemy in time of war. The magnitude of this task becomes apparent when you consider that 70 percent of the earth's surface is water. There is no possible way of fulfilling this obligation without adequate sea-air forces in being and trained personnel to man them.

The disastrous consequences of inadequacy have been graphically illustrated in recent history. At the beginning of World War II, naval weakness invited attack in the Pacific. The result was Pearl Harbor and temporary loss of control which prolonged the war at great expense in lives and national wealth. Aggressor nations have always been tempted to attack any country whose defenses are so weak as to make the gamble worth while. We must make certain that there will be no future repetition of such perfidy. America is universally acknowledged to be the leading nonaggressor nation. Immediately after World War II, with the greatest Army, Navy, and Air Force team in history, we accomplished the fastest demobilization the world has ever known. We granted the Philippines their independence on time. We have committed ourselves unswervingly to the principles of the United Nations. The smaller nations of the world look to us as the greatest bulwark for peace in this war-weary universe.

Developments in the world today emphasize our responsibility and our need for sea-air power adequate to fulfill our obligations.

The health and vigor of this Nation, its very life, depend upon the exchange of goods we are able to make with the rest of the world and thus furnish our economy with the lifeblood of raw materials we do not ourselves produce.

No one who lived through World War II can ever forget the degree to which our military production is dependent upon the importation of critical materials. Unfortunately, very few of us realize the extent to which our peacetime nonmilitary industrial production depends upon these same imports.

We Americans have been prone to boast of our self-sufficiency, but if the steady flow of even a few raw materials were interrupted for just a short time the economy of this country would suffer a ruder jolt than it received in the early 1930's.

Not a ton of steel can be manufactured without manganese. Yet we depend upon imports for 97 percent of our needs.

High-speed tools require alloy steel which derives its hardness at high temperatures from tungsten. We import 60 percent of our tungsten requirements.

Chromium is used as an alloy in the making of stainless and heat- and acid-resistant steel. These steels are indispensable to the oil and chemical industries. We depend almost entirely on imports for essential material.

Before and during the war the United States consumed about 45 percent of the world production of tin. It was all imported.

During the war the United States produced 27 percent of the world output of lead, but we consumed 50 percent of the world output.

The figures are almost the same for zinc.

The drains upon our reserves of copper and iron ore are well known to the American public, as is also the fact that both of these commodities are now being imported in great volume.

At the very peak of our war effort, during the second quarter of 1945, the daily consumption of petroleum products for the military services and domestic consumption was a little over 5,500,000 barrels per day. Today, that consumption is almost 6,000,000 barrels per day.

It should be obvious to all Americans that the steady, peaceful flow of commerce over the seven seas is a vital necessity to this country. Without it, our economy would retrogress 50 years.

To no one would such an event be more calamitous than to the armed services. We know that there can be no real military strength that is not based upon a strong economy. Our industrial potential, our resources and mass production methods, and the skill of our manpower have combined to make us the great Nation that we are. National foresight must keep pace in order that a strong national economy be assured. Your Navy will never be a partner to any action which in any way tends to undermine it. On the contrary, we will continue to be zealous in the cultivation of an ever-stronger economy and a dynamic industry of ever-increasing tempo.

The establishment of a new world system is not going to be accomplished overnight. At the best, there will be delays, irritations and seemingly endless disappointments. We must not permit them to discourage us. In the trying years that lie ahead, when we feel that our zeal and our determination is flagging, we might remind ourselves that we are asked only to work for something for which many men died.

We must wage peace as we waged war—with everything we have, with all our strength, all our skill, and all our heart.

I am among those who believe that to secure the peace until it works we must be militarily strong. The strength of all the resources which have made America great is only valid when properly insured against destruction by any possible enemy. When the chips are down we have only what we can effectively protect.

We have had an example of this within very recent memory. We became the victims of aggression 6 years ago because we had not fully learned the lesson which World War I should have taught us and our guard was down, even though we knew that international banditry was on the loose in Europe and Asia.

Conversely, 2 years ago, when our military, naval, and air strength was at its peak, we exerted an influence in international affairs commensurate with our position as the greatest democracy in the world. In the months since VJ-day we have pared this strength down to but a shadow of its former self, and day by day, as demobilization progressed, as we closed strategic bases or put the major part of our fleet in "moth balls," our representatives in the council of powers which we call the United Nations have found their tasks increasingly difficult.

The time has come to be firm with ourselves if we wish to give meaning to the firmness we would assume in democracy's defense abroad. The time has come when we must count it a privilege to be among those who would be as bold in the pursuit of peace as we were daring in our recent battle for survival.

The opportunity which lies before us may be our very last if we do not seize it eagerly and pursue our peaceful purpose with all our zeal.

While I bespeak the Nation's need for strength, I pray God that the day may come when there is no longer any need for a navy, or an army, or an air force—when the argosies of the sea and the land and the air shall be the peaceful convoys of commerce.

I trust that that blessed day of real and total disarmament will come during our lifetime. But until it does, we must not defeat ourselves through unpreparedness. We must be strong so that we may effectively champion peace throughout the world.

I am confident that Americans, with one voice, will affirm with me, on this day, the necessity for an army, an air force, and a navy capable of snuffing out any threat against the just and enduring peace for which the entire world yearns.

In unity there is strength and in our strength lies the peace of the future and the salvation of humanity now and for the far tomorrow.

Some Thoughts on Foreign Aid

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Detroit Free Press, Detroit, Mich., of November 2, 1947. This is one of the great newspapers of Michigan and the Middle West. Whether any individual is for or against foreign aid, the views expressed by this great editor, John S. Knight, are food for thought and worthy of the most careful consideration.

FOREIGN AID PLAN SHOULD BE JUDGED ON FACTS—NOT PROPAGANDA

Before Congress meets in special session on November 17 to consider President Truman's recommendations for stop-gap aid to Europe, there is time to evaluate the potency of the long-range Marshall plan as an effective weapon in our undeclared war against Russia.

State Department advisers to the President declare that immediate help for Europe is necessary to prevent starvation and civil unrest, particularly in France and Italy. They believe also that an annual outlay of from five to eight billions a year under the Marshall plan is the only practical way to prevent communism from enveloping Europe.

There can be little quarrel with the appropriation of funds for purely humanitarian purposes. No American with the slightest tinge of conscience is unwilling to help feed the hungry, clothe the naked, or furnish fuel to keep little children warm and comfortable.

There is, however, grave doubt in our mind as to the wisdom of pouring billions of dollars into Europe every year to route communism and "contain" Russia. That doubt would not exist if there were good and sufficient reasons to believe that such a plan can, in the long run, succeed.

With their abiding and naive faith in the dollar as a cure-all for our ills, Americans are not seeing the European situation in its true light. In their childlike trust they cling tenaciously to well propagandized fallacy and fiction while disregarding the hard and unpalatable facts.

Here are a few of the current illusions that are badly in need of airing:

1. The illusion that billions for Europe will bring about a permanent improvement in living standards.

The facts are that while American dollars will bring some temporary relief to the needy, the promise of an unending flow of dollars has actually retarded European progress in a sense of self-help. George Weller, of the Chicago Daily News foreign service, says the truth is "that European nationalism is inefficient, greedy, mendicant, and plain lazy."

Europe is sure that America's resources are unlimited and cannot be drained. Our failure to develop a realistic method of combining aid to Europe with strong American controls has checked hunger but retarded badly needed internal reforms.

2. The illusion that Italy and France will go Communist if the United States doesn't pay their bills.

The facts are that this is a form of political blackmail to get more American dollars. No nation in Europe has turned to the Communists for this reason. Not one of the seven Communist-dominated states, Poland, Czechoslovakia, Yugoslavia, Albania, Bulgaria, Hungary, or Rumania welcomed the Soviets because the masses were starving.

They turned to Russia because its political agents, backed by the Red army, forced them to capitulate.

3. The illusion that the late President Roosevelt was the only American who could "get along" with Marshal Stalin.

The facts are that Roosevelt got along so famously with Stalin because he conceded practically every point at issue. As the result, Russia now has nine-tenths of the Balkans and military bases in the Pacific 1,600 miles closer to San Francisco than our outer defenses at Guam.

4. The illusion that our neighbors in Europe are making a valiant fight to get their economic houses in order and will succeed if more American aid is forthcoming.

The facts are that many wealthy people in France are living in luxury, and reports of starvation have been grossly exaggerated in both Italy and France.

The British socialist government is afflicted with a hopelessly inefficient bureaucracy. Nearly 2,000,000 civil servants are riding on the backs of the sturdy British people. In one of Britain's best-managed coal mines under private ownership absenteeism now runs as high as 50 percent on Mondays.

American loans are supporting this burdensome bureaucracy which might have been overthrown long ago had we refused to pay the bills.

5. The illusion that communism is really a revolt of the masses.

The facts are that the Soviet leaders are shrewd, calculating dictators whose ultimate goal is world conquest.

The "masses" are merely the human pawns of a rigidly disciplined police state.

6. Lastly, and most tragic, is the illusion that we can buy peace.

The facts are that Russia is simply biding her time, waiting until America is bled white before striking her mortal blow.

The more money we spend, the longer a shooting war may be delayed. But when the money is gone and we can give no more, the Russians will be ready for world war III.

Former Secretary of State James F. Byrnes advocates using "measures of last resort" if Russia refuses to conclude a just peace treaty with Germany and withdraw her troops.

What the Secretary overlooks is that neither we, nor any combination of nations, can match Russia's present armed strength.

To back up our tough talk are 10 army divisions; Russia has 180, plus 60 from her satellite powers.

The United States has 1,720 combat planes, and 144 very heavy long-range bombers. Russia has 44,000 combat planes, many of them necessarily obsolete, and little strength in bombers.

Our naval and cargo ships number 3,060; Russia has 200 submarines.

Her reserve troops outnumber ours 5 to 1.

Our great superiority lies in the possession of the atomic bomb and the vast potentials of our war industries when fully mobilized.

Russia's unlimited manpower is neutralized by her lack of industrial plants.

What all this adds up to is that we could throw an effective atom armada against Russia but probably could not prevent her troops from overrunning Europe. Such a war might result in a stalemate until Russia was able to match us in atomic warfare. In that eventuality, the world would be reduced to rubble.

What, then, can we do?

While no plan of action can be devised that will insure us against war, the following steps would seem to be logical steps in our endeavor to prevent war:

1. Retain and develop our moral leadership in world affairs.

2. Rebuild our air force to a point of terrifying superiority in numbers and technological development.

3. As a condition of our economic assistance, demand strategic air bases throughout the world from which attacks can be intercepted.

4. Strengthen our regular military forces in troubled areas of occupation, depending upon universal military training, if necessary, to furnish the men for domestic duty.

5. Institute a program of rearmament which will give us the military strength to back up our tough talk with something more than words. In other words, let's speak the only language that Russia can understand.

All of these points have been urged in this column for more than a year. We are not enthusiastic about universal military training, but if voluntary recruiting fails, it may be the only method of reconstituting our armed forces.

Such a program can be called imperialistic and an open invitation to war.

To us, it presents fewer risks than exhausting our resources at the rate of $12,000,000,000 a year in what we are convinced will be a vain effort to buy a lasting peace.

The irony of the present situation is that anyone who questions unlimited aid to Europe is promptly labeled an "isolationist," but if he thinks internationally in terms of military strength, he is tagged as an "imperialist."

It seems to be the commonly accepted view in official Washington circles that war with Russia is inevitable.

If that be true, what George Weller calls a foreign policy of patching up the world's pants with billion-dollar checks had better be revised in favor of smaller European checks and bigger American airplanes.

The checks can't fight.

JOHN S. KNIGHT.

As It Was Then—Is Now

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit excerpts from an editorial from Harper's Weekly, of New York, under and of date October 10, 1857, and which I think might be of interest at this time, as follows:

THE LESSON OF THE DAY

It is a gloomy moment in history. Not for many years—not in the lifetime of most men who read this paper—has there been so much grave and deep apprehension; never has the future seemed so incalculable as at this time. In our own country there is a universal commercial prostration and panic, and thousands of our poorest fellow citizens are turned out against the approaching winter without employment, and without the prospect of it. In France the political cauldron seethes and bubbles with uncertainty; Russia hangs as usual, like a cloud, dark and silent upon the horizon of Europe; while all the energies, resources, and influences of the British Empire are sorely tried, and are yet to be tried more sorely, in coping with the vast and deadly Indian insurrection, and with its disturbed relations in China.

It is a solemn moment, and no man can feel an indifference—which, happily, no man pretends to feel—in the issue of events.

Of our own troubles no man can see the end. They are, fortunately, as yet mainly commercial; and if we are only to lose money, and by painful poverty to be taught wisdom—the wisdom of honor, of faith, of sympathy, and of charity—no man need seriously despair. And yet the very haste to be rich, which is the occasion of this widespread calamity, has also tended to destroy the moral forces with which we are to resist and subdue the calamity.

It is no time for idleness or trifling, for forgetfulness or selfishness. The complexion of every country, and of the world, rests at last upon the character of individuals. If men are false and timid, affairs, the course of events, are tainted by the cowardice and falsehood. It is every man's business, therefore, to keep his heart and his hands clean—to be brave, and hopeful and very humble. Extravagance, vanity, the lust of luxury, are crimes in the men of today. At home we shall have direct appeals to our sympathy in the swarms of honest laborers for whom there is no work. Abroad, the appeal will be more indirect, in the extremity of a friend and ally.

Good friends, let our conduct prove that the call comes to men who have large hearts, however narrowed their homes may be; who have open hands, however empty their purses. In times of peril we have nothing but manhood, strong in its faith in God, to rely upon; and whoever shows himself truly a God-fearing man now, by helping wherever and however he can, will be as blessed and beloved as a great light in darkness.

Veterans' Homestead Act of 1948

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave granted to me yesterday to extend my remarks in the CONGRESSIONAL RECORD and include therein a bill which the American Legion asked me to introduce, I submit the following:

The National Housing Committee of the American Legion met in Washington, D. C., October 8–10, 1947, to arrive at decisions that were necessary because of existing mandates of the national convention to the committee.

In the report of the national housing committee to the national executive committee, American Legion, May 5–7, 1947, the national housing committee stated:

> This year it is not likely to be the shortage of housing that will deprive a veteran of a satisfactory home as much as it will be the high cost of adequate housing.

This statement has become fact during the past months and is becoming an increasing problem which, if the veteran is to be adequately housed within the scope of his ability to pay, must be solved.

After extensive and comprehensive study the national housing committee developed a plan which they sincerely believe will provide veterans with homes for rent or for sale at a monthly carrying charge within their means to pay. A general explanation of this plan follows:

The national housing committee has discovered that the American Legion community-action program for housing veterans is successful in many communities throughout the United States in providing good homes for veterans at prices they can afford. By enlisting the hard work and unselfish idealism of outstanding veterans who are leaders in their own home town, it has been possible through nonprofit corporations sponsored by American Legion posts to erect comfortable homes within the income of World War II veterans.

After much careful study and evaluation, the committee became convinced that this technique was one good answer to the veterans' housing problem if it could be formalized, given adequate supervision, and arrangements made for favorable financing. Furthermore, it has the tremendous advantage of letting veterans of World War II assume the leadership in solving their own housing problems once they are given the proper tools.

The report of the committee continues:

> Preliminary drafts were discussed with the best brains in investment banking, commercial banking, mortgage banking, real estate, Veterans' Administration, building supplies, home builders, and other agencies of Government, and the housing industry; also, the committee employed as a professional consultant Mr. Frederick M. Babcock, of Washington, D. C., one of the outstanding authorities in the field of construction and financing of housing.
>
> The committee found that there was uniform agreement among all these diverse groups that it was feasible and highly desirable to proceed to the specific development of legislation along the indicated lines as set forth in the recommendation below.
>
> B. RECOMMENDATION
>
> 1. That the national executive committee of the American Legion meeting at Indianapolis, Ind., on October 30–31, 1947, do adopt and approve and direct the legislative director of the American Legion to introduce into the Congress of the United States at the earliest practicable date, and in no event later than January 15, 1948, a bill known as the Veterans' Homestead Act of 1948, to embody the following principles:
>
> (a) Administrator of Veterans' Affairs shall be authorized to issue Federal charters to nonprofit corporations upon application of five honorably discharged veterans of World War II having suitable ability, character, and responsibility.
>
> (b) Such veterans' homestead associations would:
>
> (1) Construct and purchase housing to be sold to veterans for occupancy by themselves, their families and dependents.
>
> (2) Construct, purchase, maintain and operate housing to be rented to veterans.
>
> (3) Make loans to veterans for the purchase of housing.
>
> (c) These associations would have all specific powers to enable them to achieve their objectives as set forth above.
>
> (d) The Administrator of Veterans' Affairs would supervise the operations of such associations and inspect their financial records and establish rules and regulations for their guidance.
>
> (e) No veteran could become a member until he had at least $100 in the hands of the association.
>
> (f) No association shall construct or purchase housing costing in excess of a sum equal to the product of the total number of family units multiplied by $10,000 or in excess of either (1) the number of members of the association, or (2) the number of veterans in the community who are prospective purchasers or tenants.
>
> (g) Suitable provisions shall be made to prevent speculation in the sale or rental of such housing by purchasers or occupants.
>
> (h) The permanent financing of property acquired or loans made by such associations shall be done by the medium of bonds sold by the Veterans' Administration as the fiscal agent of such associations and with the guaranty of payment by the United States Government. Not more than $2,000,000,000 of bonds may be sold. The income derived by the purchasers of such bonds from the bonds shall be exempt from Federal, State or local taxation.
>
> (i) The interim financing for such associations, pending the issuance of bonds, shall be provided by loans from the Veterans' Administration upon the non-negotiable note of the association. Such loans will be made from a revolving Veterans' Administration fund of $100,000,000.
>
> (j) Such associations shall make new loans and acquire property for sale or rental only for ten (10) years from the termination of World War II. After that they will remain in existence for such period of time as required to liquidate their affairs.
>
> (k) If associations are improperly operated or cannot meet their obligations, the Veterans' Administration may step in and operate their affairs until they get back on their feet.
>
> (l) The Federal Works Administrator is to be given $200,000,000 to make not in excess of 50 percent grants-in-aid to States, cities, counties, or other political subdivisions or associations for provision of streets, sidewalks, utilities, fire protection, street lighting, schools, recreational facilities, etc.

The legislative draft of the bill, which I introduced today, is as follows:

A bill to amend the Servicemen's Readjustment Act of 1944, as amended, to provide homes for veterans, through veterans' homesteads associations and the public facilities essential therefor

Be it enacted, etc., That the Servicemen's Readjustment Act of 1944, approved June 22, 1944, as amended, is amended by adding at the end thereof the following new title:

"TITLE VII—VETERANS' HOMESTEAD ACT OF 1948

"CHAPTER XVI—GENERAL PROVISIONS

"SEC. 1600. Short title: This title may be cited as the 'Veterans' Homestead Act of 1948.'

"Declaration of policy

"SEC. 1601. In enacting this title to alleviate the existing housing shortage, it is the intent of the Congress to provide means of ownership and financing, within the framework of our private enterprise system and without vast expenditures of public moneys, whereby veterans themselves, associated together within their own communities, can build, buy, or rent homes upon terms which veterans can afford; and to provide the public facilities essential to such homes without the imposition of additional financial burdens upon veterans who may be owners thereof or tenants therein.

"Definitions

"SEC. 1602. As used in this title, except where the context otherwise requires, the term—

"(a) 'Administrator' means the Administrator of Veterans' Affairs in the Veterans' Administration.

"(b) 'Association' means a Veterans' Homestead Association chartered pursuant to this act.

"(c) 'Housing' means permanent-type housing with modern sanitary and sewerage-disposal facilities; does not include transient housing such as tourist cabins, motor courts, or apartment hotels; but may include multiple-family dwellings or groups of single-family dwellings constructed or operated as units, or constructed for sale or sold for operation as cooperative enterprises by the tenants thereof.

"(d) 'Improved' as applied to real property shall include (a) grading, landscaping, and any other site development; and (b) construction, repair, remodeling or demolition (whether for salvage or reuse), of buildings and other structures thereon.

"(e) 'Real property' means land, whether or not improved, and any buildings or other structures thereon, including fixtures and other personalty attached thereto.

"(f) 'State' means any State of the United States, any Territory or Possession thereof, and the District of Columbia.

"(g) 'Veteran' means (i) any person who shall have served in the active military or naval service of the United States at any time after September 16, 1940, and prior to the termination of the present war, and who shall have been discharged or released from active service under conditions other than dishonorable, after active service of 90 days or more, or (ii) the surviving and unmarried spouse of any such person.

"(h) 'Note' means a short-term obligation maturing in 12 months or less, issued by an association pursuant to this title.

"(i) 'Bond' means a long-term obligation, maturing over a period of more than 1 year, issued by an association pursuant to this title.

"(j) 'Public facilities' includes public highways and parks, roads, streets, curbs,

gutters, and sidewalks, bus stations and bus stops, water storage, purification and distribution works, sewage, garbage and refuse collection, treatment and disposal facilities (including trunk and lateral sewers), fire stations, fire equipment and fire plugs, street lighting facilities, schools, community centers, and recreational facilities.

"Separability

"SEC. 1603. If any provision of this title, or the application thereof to any person or circumstances, is held invalid, the remainder of this title, and the application of such provision to other persons or circumstances, shall not be affected thereby.

"CHAPTER XVII—VETERANS' HOMESTEAD ASSOCIATIONS

"Organization authorized—Administrator to issue charters

"SEC. 1700. The Administrator is hereby authorized, subject to the provisions of this title and under such rules and procedures as he may prescribe, to provide for the organization, incorporation, examination, operation, and regulation of associations to be known as 'Veterans' Homestead Associations' and to issue charters therefor pursuant to such standard form thereof as he may prescribe.

"Chartered associations subject to rules and procedures

"SEC. 1701. A Veterans' Homestead Association to which the Administrator shall have issued a charter pursuant to section 1700 hereof, and which shall have accepted such charter, shall thereafter, so long as such charter remains in effect, be eligible to all the benefits of this title and shall be subject to all the provisions of this title and the rules and procedures of the Administrator issued hereunder.

"Qualification for membership

"SEC. 1702. Five or more veterans, of ability, good character, and responsibility, as determined by the Administrator, may organize a Veterans' Homestead Association. Each association shall determine its own rules of eligibility for membership therein subject only to the conditions that (a) membership shall be limited to veterans; (b) no veteran shall become or remain a member unless and until his accumulated payments to the association, in accordance with section 1707, shall equal or exceed $100; and (c) the number of members, at all times, shall be at least five.

"Primary purpose of associations

"SEC. 1703. Each association shall be organized and shall operate on a nonprofit basis. It shall have as its primary purposes (a) the construction or purchase of housing to be sold to veterans for occupancy by themselves, personally, together with their families or dependents; (b) the construction or purchase and operation and maintenance of housing to be rented to veterans for occupancy by themselves, personally, together with their families or dependents; and (c) the making of loans to veterans for the purchase of housing to be occupied by them, personally, together with their families or dependents. To this end, and pursuant to rules and procedures issued by the Administrator, each association shall provide maximum opportunity and priority for the purchase or rental of such housing, first, to members of such association and, second, to other veterans.

"Number of associations

"SEC. 1704. The Administrator may, in his discretion, charter one or more associations in any locality; and he may, in his discretion, refuse to charter any proposed association upon his finding that the veterans in the locality in which it is proposed that such association would operate are or will be adequately served by an association or associations then already chartered for operation in such locality.

"Powers of veterans' homestead associations

"SEC. 1705. Under rules and procedures issued by the Administrator, each association shall have the following powers:

"(a) Subject to the provisions of section 1708, to purchase, or otherwise acquire, any real property or leasehold or other interest therein, whether improved or unimproved, to subdivide, construct improvements on, repair, modernize, renovate, maintain, and operate any such property, and to purchase, or otherwise acquire, any personal property necessary or desirable for any of the foregoing;

"(b) Subject to the provisions of section 1709, to hold, sell, or contract for the sale of, lease, rent, mortgage, or otherwise deal with, encumber, hypothecate, or dispose of any acquired property, all on such terms and conditions as may be deemed proper;

"(c) Subject to the provisions of section 1708, to lend money to veterans to enable them to finance the purchase of or construction of residential properties for occupancy by themselves, personally, together with their families or dependents: *Provided*, That in no case shall the maturity of any such loan exceed a period of 30 years;

"(d) To purchase, construct, improve, or otherwise provide, to receive grants for, and to maintain and operate public facilities (which shall include for this purpose gas and electric distribution lines and facilities) reasonably necessary or desirable for the housing provided by or of the association, where such public facilities are then not otherwise available for such housing: *Provided*, That no association shall operate any mercantile establishment or other commercial enterprise or operate any amusement enterprise for which any admission or fee is charged;

"(e) To make, issue, sell, and deliver its bonds and notes in the manner and to the extent provided in this title;

"(f) To build up and maintain reasonable, permanent reserves, under rules and procedures to be issued by the Administrator and subject to his semiannual review, which shall not exceed in the aggregate, however, 3 percent of the total principal amount of bonds and notes of such association outstanding at the time; and

"(g) To make, adopt, repeal, and amend bylaws, to employ and to pay reasonable salaries to the officers and other employees of the association for services performed (which officers and employees need not be veterans), and such other powers, not inconsistent with this act, as are customarily enjoyed by nonprofit corporations and are necessary or convenient for the conduct of the business of the association.

"Annual and other reports of associations

"SEC. 1706. (a) Every association shall file, with the Administrator, not later than 90 days after the close of its fiscal year, an annual financial statement and shall also furnish to him such other financial statements at such other times as he may require. All such reports shall be in such form and in such detail as may be prescribed in rules and procedures issued by the Administrator.

"(b) The Administrator shall make, annually and at such other times as he deems necessary, an examination of the financial books, records, and affairs of each association, in the manner customary for supervision of fiduciary institutions.

"Payments by association members

"SEC. 1707. Members of an association shall not be required to pay dues. Each association shall provide in its bylaws for the payment by each prospective member, periodically, by installments or otherwise, of the sum of $100 to be accumulated on the books of the association to the credit of such person. The sums so paid shall not bear interest. Each such sum shall be entered on the books of the association as a credit to the member making such payment for possible application either:

"(1) as payment on a home purchased by such member from the association; or, (2) as security for rent on a home rented from the association by such member. Each association shall provide further, in its bylaws, that a member may voluntarily withdraw from such association at any time and may receive back an amount equal to the amount of his accumulated payments to the association (unless such payments shall have been applied as payment on a home purchased by such member from the association) but only after one year following the date of the initial payment and then only upon 60 days' notice to the association.

"Limitation on cost and amount of housing

"SEC. 1708. (a) No housing shall be constructed or purchased by an association unless, in the opinion of the Administrator, the estimated final cost of such housing when completed (exclusive of related real property designed for commercial operation), as determined by the amounts of firm contracts for the acquisition of real property, the improvement thereof, the construction of buildings and the acquisition of related personal property, plus an amount equal to 5 percent of such contracts plus an allocable share of the estimated indirect or overhead costs and expenses of the association, fairly attributable to such housing, shall not exceed a sum equal to the product of the number of family units in such housing multiplied by $10,000.

"(b) No association shall maintain and operate as rental property any housing (exclusive of related real property designed for commercial operation) having a depreciated cost exceeding a sum equal to the product of the number of family units in such housing multiplied by $10,000.

"(c) No association shall construct or purchase, or contract for the construction or purchase of, or otherwise acquire or contract to acquire, a total number of family housing units in excess of either (i) the number of members of such association, or (ii) the number of veterans in the community who may reasonably be considered, in the opinion of the Administrator, prospective purchasers of or tenants in such units.

"(d) An association shall not make any loan to any veteran for the acquisition or construction of housing (i) if such housing includes more than one family unit; (ii) if, in the case of acquisition, the current market value of such housing is, in the judgment of the association, less than the amount of the loan; (iii) in excess of $10,000, plus necessary closing costs; (iv) which in the opinion of the association is beyond his ability to repay.

"Sale or rental of housing

"SEC. 1709. (a) All housing of an association shall be sold or leased for such prices or at such rents, as the case may be, as shall reasonably represent the actual cost thereof to the association, including (i) all costs of acquisition, construction, or improvement; (ii) the reserves to be provided in accordance with section 1705; (iii) interest on and amortization of bonds or notes of the association fairly attributable to such housing; (iv) direct costs of operation and maintenance of such housing; and (v) an allocable share of the overhead or indirect costs and expenses of the association fairly attributable to such housing.

"(b) Any deed or other instrument made by an association for the sale of its property or any mortgage or other instrument supporting a loan to a veteran for the construction or purchase of housing shall provide that such property shall not be sold or otherwise

disposed of within 10 years from the date of acquisition of such property by such purchasers or borrower unless it shall first have been offered for sale back to the association at the original price paid to such association by such purchaser or at the acquisition cost to such borrower, less any depreciation which shall have occurred by that time and plus the fair value of any improvements which such purchaser or borrower shall have made to such property.

"(c) As a condition to (i) every sale of housing by an association to a veteran and (ii) every loan by an association to a veteran for the purchase or construction of housing, such veteran shall furnish to such association an affidavit stating that (i) he has not theretofore purchased any housing from any association which has not been offered for sale back to such association and (ii) he has not theretofore obtained any loan from any association for the purchase or construction of housing and sold the property thereby acquired without first offering it back for sale to such association; (iii) he does not have outstanding any loan obligation to any association chartered under this title; (iv) he does not own any housing acquired from any association chartered under this title.

"(d) The terms of any sale of housing made by an association shall, among other things, grant to the purchaser the right to pay at any time the full amount of the purchase price or the full amount of any mortgage given in connection with such sale.

"(e) Every lease made by an association shall contain a prohibition against subleasing.

"(f) Every sale or loan made by an association shall contain a prohibition against leasing without first giving the association the right to select the lessee and fix the consideration and conditions of the lease.

"Loans by Administrator to association

"SEC. 1710. In order to provide interim financing for associations, pending the issuance of bonds as herein provided, the Administrator is hereby authorized to make loans to associations to provide—

"(a) Initial working capital for an association;

"(b) Development expenses preliminary to the commencement of actual construction of housing; and

"(c) Funds to enable an association to make loans to individual veterans for the purchase or construction of housing, preliminary to the completion of such purchase or construction.

"Each association to which any such loan may be made shall make, issue, and deliver to the Administrator its note in the principal amount of such loan. Each such note shall be a nonnegotiable unconditional obligation of the association, issued against its general credit, and payable from its general assets, shall bear interest at the rate of one-half of 1 percent per annum payable semiannually and shall be payable within such period (not exceeding 12 months from the date of issuance thereof) as the Administrator may determine. Upon application by an association the Administrator may, in his discretion, renew any such note, for successive periods not exceeding 12 months each, in the event he determines that, at the time of the application for such renewal, the issuance of bonds would not then be to the best financial interest of such association. Payments of interest on and principal of such notes shall be made to the Administrator, and the money so paid may be used by him for the making of further loans hereunder.

"Bonds of associations

"SEC. 1711. (a) For its permanent financing every association is hereby authorized to, and shall, issue its long-term bonds. The bonds shall be negotiable unconditional obligations of issuing association, payable from all its assets and secured by a mortgage or other lien upon all or any part of the real or personal property or assets, or revenues and income of such association as shall be specified in said bond.

"(b) The bonds shall be in such forms and denominations, mature serially within such periods, not exceeding 40 years from the date of issuance thereof, bear such rates of interest, be payable as to both principal and interest at such times, but subject to such other terms and conditions and be issued in such manner and sold at such places as may be authorized by the Administrator, pursuant to rules and procedures issued by him.

"(c) Under rules and procedures issued by the Administrator, (i) bonds may be issued under and secured by an indenture or trust, and (ii) the bonds or indenture may provide for the addition, release, or substitution of security.

"(d) To the extent appropriate, as determined by the administrator, the proceeds received by an association from the sale of its bonds shall be used to redeem its notes.

"(e) No association shall issue any bond if the issuance thereof would bring the aggregate of the principal amounts of all bonds of such association, then issued and outstanding, to a total sum in excess of the aggregate amount derived by multiplying $10,000 times each of the family housing units constructed, purchased, remodeled, or financed, or otherwise acquired, or financed by such association, for subsequent sale as housing units or for subsequen maintenance and operation as rental housing units, or acquired by veterans under loans from such association, exclusive, however, of property designed for commercial operation.

"(f) The aggregate principal amounts of all bonds issued by all associations shall not exceed the sum of $2,000,000,000; and the Administrator shall not authorize the issuance of any bonds in violation of this subsection.

"(g) No association shall issue any notes or bonds except as authorized by the administrator, pursuant to rules and procedures issued by him.

"Guaranty of bonds

"SEC. 1712. (a) The bonds of any association, issued pursuant to Section 1711, shall be fully and unconditionally guaranteed upon their face by the United States of America as to the payment of both principal and interest, and in the event that such association shall be unable, or shall not, make any such payment upon demand when due, payments shall be made to the lawful holder of such bond by the administrator. To the extent of such payment the administrator shall succeed to all rights of such lawful holder.

"(b) The bonds of any association, issued pursuant to Section 1711, shall be lawful investments and may be accepted as security for all fiduciary, trust and public funds, the investment or deposit of which shall be under the authority or control of the United States of America or any officer or agency thereof.

"Tax exemptions

"SEC. 1713. (a) Notwithstanding any provisions of the Internal Revenue Code or any other law to the contrary, the interest payable and paid on any bond of an association, issued pursuant to Section 1711, shall be exempt from all taxation now or hereafter imposed by the United States of America.

"(b) Notwithstanding any provisions of the Internal Revenue Code or any other law to the contrary, the net earnings of any association shall be exempted from all taxation now or hereafter imposed by the United States or by any State, county, municipality, or other local taxing authority.

"(c) Subject to the provisions of section 1713 (b), no State, county, municipal or other local taxing authority shall impose any tax upon any such association or its charter and franchise, capital, reserves, property, surplus, loans, or income, greater than that imposed by such taxing authority on other similar local non-profit associations.

"Sale of bonds

"SEC. 1714. The Administrator shall act as fiscal agent for every association in the sale of bonds. He shall, in his discretion, determine whether such sale shall be by negotiation or by open competitive bidding, and shall issue rules and procedures governing the conditions of the offer, the receipt of bids, and the sale. In no case shall any bonds of any association be sold for a sum less than the aggregate principle amounts thereof. The Administrator shall charge no brokerage fee in conection with such sales of bonds, but he may withhold from the proceeds of any such sale an amount equal to his actual costs of handling the offering and sale of such bonds. The moneys so withheld may be used by the Administrator for the making of loans to associations pursuant to section 1710.

"Funds of associations

"SEC. 1715. The funds of an association may, as provided by its by-laws and in accordance with rules and procedures issued by the Administrator, be deposited in any bank or banks. No association shall invest its funds in any securities except obligations of the United States of America, or obligations unconditionally guaranteed by the United States as to the payment of both principal and interest, or obligations of a State, and, in any event no such investment shall be made except with the approval of the Administrator or pursuant to rules and procedures issued by him.

"Distribution of earnings—Dissolution of association

"SEC. 1716. (a) At the end of any fiscal year any net earnings remaining to an association, after fully providing for the payment of all debts and obligations of such association, then due, and after providing for the reserves then currently required, shall be set aside in a special account to be used (1) for the purchase or redemption by the association of its notes and bonds then outstanding, or (2) with the express approval of the Administrator, for any other lawful purpose of the association.

"(b) If the members or directors of any association shall knowingly violate, or knowingly permit any of the officers, agents, or servants of such association to violate any of the provisions of this title, the charter, and all the rights, privileges, and franchises of such association shall be forfeited. Such violation shall, however, be determined and adjudged by a proper District Court of the United States in a suit brought for that purpose by the Administrator, in his own name, before such association shall be declared dissolved.

"(c) Any association may, at any time, apply to the Administrator for its voluntary dissolution, and if, in his judgment adequate provision shall have been made for the payment in full of all debts and obligations of such association, he shall promptly effect such dissolution.

"(d) Upon any dissolution, whether voluntary or involuntary, the net assets of an association, remaining after payment in full of all its debts and obligations, shall escheat to the United States.

"Regulations of Administrator

"SEC. 1717. (a) The Administrator shall have power to issue general rules and procedures for the effective implementation and administration of this title, pursuant to the provisions hereof and not in conflict herewith.

"(b) The Administrator may by rules and procedures provide for such supervision of associations as he may deem necessary to the proper administration of this title and the protection of holders of bonds and notes.

"(c) The Administrator shall have full power to provide in the rules and procedures herein authorized for the reorganization, consolidation, merger, or liquidation of any association or associations, including the power to appoint a conservator or a receiver to take charge of the affairs of any such association, and to require an equitable readjustment of the assets, liability, and surplus of the same; and to release any such association from such control and permit its further operation: *Provided*, That in any case where the Administrator appoints a conservator or a receiver for any association, such conservator or receiver shall act primarily for the protection of holders of bonds and notes issued by such association.

"(d) The Administrator may delegate and authorize successive redelegation of any authority conferred upon him by or pursuant to this title, to any official or employee of the Veterans' Administration. The Administrator shall not act through, or delegate any such authority to, and any other agency or any official or employee thereof.

"CRIMINAL PROVISIONS

"SEC. 1718. (a) Whoever (1) falsely makes, forges, or counterfeits any bond, note, or other document in imitation of or purporting to be a bond or note issued by an association, or (2) passes, utters, or publishes, or attempts to pass, utter, or publish, any false, forged or counterfeited bond, note, or other document purporting to be a bond or note, issued by an association, knowing the same to be false, forged, or counterfeited; or (3) falsely alters any bond or note issued or purporting to have been issued by an association; or (4) passes, utters, or publishes, or attempts to pass, utter, or publish, as true, any falsely altered or spurious bond or note, issued or purporting to have been issued by an association, knowing the same to be falsely altered or spurious, shall be punished by a fine of not more than $10,000, or by imprisonment of not more than 5 years, or both.

"(b) Whoever, being connected in any capacity with an association, (1) embezzles, abstracts, purloins, or wilfully misapplies any moneys, funds, securities, or other things of value, whether belonging to it or pledged or otherwise entrusted to it; or (2) with intent to defraud an association, or any other body politic or corporate, or any individual, or to deceive any officer, auditor, or examiner of the Veterans' Administration or of an association, makes any false entry in any book, report, or statement of or to the Veterans' Administration or an association, or, without being duly authorized, draws any order or issues, puts forth, or assigns any bond, note, or other obligation, or draft, mortgage, judgment, or decree thereof, shall be punished by a fine or not more than $10,000, or by imprisonment for not more than 5 years, or both.

"(c) Any veteran who makes any false statement in the affidavit required by section 1709 (c) to be furnished by him to an association in connection with his purchase of housing from such association, or in connection with any loan which he may obtain from such association shall be punished by a fine of not more than $10,000, or by imprisonment for not more than 5 years, or both.

"APPROPRIATIONS AUTHORIZED

"SEC. 1719. There is hereby authorized to be appropriated to the Veterans' Administrator—

"(a) for each fiscal year such sums as may be necessary to enable him to carry out his administrative functions under this chapter;

"(b) for the making of loans to associations pursuant to section 1710 the sum of $100,000,000 to remain available until expended; provided, however, that, upon the expiration of authority to make such loans, any balance then remaining, together with all moneys from time to time thereafter received from associations in payment of such loans, shall be covered into the Treasury as miscellaneous receipts;

"(c) such sums as may be necessary to make guarantee payments on bonds as provided in section 1712.

"TIME LIMITATION

"SEC. 1720. The authority of the Administrator hereunder (i) to issue charters to associations, (ii) to make loans to associations, and (iii) to authorize the issuance of guaranteed bonds hereunder, shall end 10 years after the termination of World War II as declared either by Presidential proclamation or by concurrent resolution of the Congress.

"CHAPTER XVIII—PUBLIC FACILITIES ESSENTIAL TO VETERANS' HOUSING

"Grants by Federal Works Administrator authorized

"SEC. 1800. The Federal Works Administrator is hereby authorized to make grants to States, political subdivisions thereof, other public bodies, and to associations for the construction, repair, improvement or extension of public facilities wherever the Administrator of Veterans' Affairs shall find that such public facilities are necessary for or will facilitate the more effective use within the community of housing provided and to be provided for veterans under chapter XVII hereof.

"Amount of grant

"SEC. 1801. The amount of any grant made hereunder shall not exceed 50 percent of the cost, as determined by the Federal Works Administrator, of the public facilities provided therewith.

"General conditions of grant

"SEC. 1802. No grant shall be made hereunder unless—

"(a) The public facilities for which such grant is made shall be determined by the Federal Works Administrator to conform to any applicable over-all State, local, or regional development plan approved by competent State, local, or regional authority; and

"(b) The public body or association to which such grant is made shall give assurance, satisfactory to the Federal Works Administrator, that (1) it will adequately maintain the public facilities for which such grant is made; (2) the assessments or other charges which would otherwise be imposed for the provision of such public facilities will be reduced by an amount equal to the grant; and (3) in the case of a public body, it will make available, for the housing for which such public facilities are provided, all other public facilities it then provides for other housing generally, and upon like terms and conditions.

"Special conditions of grants to associations

"SEC. 1803. No grant shall be made hereunder to any association unless (in addition to the conditions specified in sec. 1802)—

"(a) The Federal Works Administrator shall determine that the type of public facilities for which such grant is made are, under applicable local law or practice, customarily provided in the first instance by real-estate developers or builders; and

"(b) Such association shall agree to transfer such public facilities after completion, without compensation, to an appropriate local public body, if and whenever any such local public body may be willing to dedicate such public facilities to public use and to maintain them under the conditions specified in section 1802.

"Delegation of authority

"SEC. 1804. The Federal Works Administrator may delegate and authorize successive redelegation of any authority conferred upon him by or pursuant to this chapter, to any official or employee of the Federal Works Agency.

"Appropriation authorized

"SEC. 1805. There is hereby authorized to be appropriated to carry out the provisions of this chapter and for administrative expenses in connection therewith not to exceed $200,000,000 to remain available until expended."

The President's Message

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. SMITH of Ohio. Mr. Speaker, President Truman's message should leave no doubt in the minds of the American people respecting the intentions of his administration. The powers which the President asks the Congress to grant him, together with those which he already possesses, would for all practical purposes be as great as those which Mussolini and Hitler were able to inveigle their countrymen into surrendering to them.

The President stated that price inflation threatens our entire program of foreign aid; that we cannot abandon foreign aid; and that we cannot abandon our people to the ravages of unchecked inflation.

He well knows that much of the present inflation in the United States is being caused by providing foreigners with billions of dollars which they are using to buy our goods and, in so doing, bid up domestic prices. To prevent further inflation, he asks to have price control and rationing restored. Among other things he also asks for the power to seize the grains held and owned by the farmers so that he may ship them to foreign countries. To cure the inflation which the administration's foreign give-away policy is causing, President Truman asks the American people to surrender their liberty and divide their standard of living with practically all of the rest of the world. I, for one, shall not go along with this program.

McLemore Is Glad He Saved Cap To Tip to Marines

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by

Henry McLemore which appeared in the Evening Star, Washington, D. C., Monday, November 10, 1947:

McLEMORE IS GLAD HE SAVED CAP TO TIP TO MARINES

(By Henry McLemore)

I am glad I saved my little soldiers' cap.

I threw away my trousers, my coat, and my combat boots. The Government took up my M1 rifle, my carbine, and my long drawers.

But out of it I saved my little cap. It's ringed with the blue ribbon of the Infantry. I'm glad I saved my little cap because I want to tip it today. I want to take off that cap in honor of the only fighting organization in the world that is better than the Infantry.

I want to tip my cap to the marines.

MARKS CORPS' ONE HUNDRED AND SEVENTY-SECOND YEAR

Today the Marine Corps observes its one hundred and seventy-second anniversary. From the time the marines were authorized by the Continental Congress up until today they stand as America's finest fighting men.

Any man who fought for his country has pride for the outfit he was in. Men who flew planes will swear to you that the Air Force had the best guys. Men like me who walked down the dirty long road will argue all night that the rough end of the stick belongs to the Infantry. Sailors will tell you that the Navy won the war and that sea power is everything.

Yet when a marine walks into the room you gotta shut up, because his heart beats to the tune of a song that's been proved to be on the level. Let the children sing "Near You" but when a marine sings or whistles he whistles or sings of a story of bravery that has been matched, perhaps, but never outdone.

NEVER HAD SAFE LANDING

The marines walked into Guadeloupe in 1798 and they didn't spare the blood. They added The Shores of Tripoli in 1804, and in 1847 they wrote Montezuma into their hymn. I could get very sentimental about the marines, but I'd rather put it this way:

The marines never land after a place is secured. They never come in with cans of fruit cocktail in their pockets and they have never known in time of war what it is to assault a volley ball court. The marines, if you are following me, are the gents who come in first. When they lower the boats the marines jump in. If you don't know how dangerous or rugged the coral is, the marines can tell you. They have been there. The fresh blood and plasma is late but the marines don't wait until it gets there. They are the Americans who look at it, don't like it, and say to themselves, "Let's get a toehold for the other boys."

This may be treason to the blue that I wore on my cap but the marine is a better soldier than the infantryman. He's meaner, and that's what makes for a good soldier.

WAR MEMORY DIMMING

World War II is slipping into the mist of yesterday and we Americans are forgetting what so many men did for us. Even the dismal honk of the ship bringing back the war dead does not arouse us. Men who gave their lives for this country are being buried while we fret over meatless Tuesdays and eggless Thursdays.

Yet I declare that in any marine encampment in this country, or wherever marines are stationed throughout this world, shoes are shined, rifles are cleaned, and the bugle's call will send them to the fullest fulfillment of a citizen—the defense of his country.

The marines' motto, if my Latin teacher didn't lie to me, is Semper Fidelis. To my knowledge a marine has never violated that motto.

I hope that this is a tribute to the marines. If I had a son, and he lived up to the marine tradition, I, as a father, could ask no more, because I would be the father of a man.

Controls Will Retard Oil Production

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. VURSELL. Mr. Speaker, the President's message on European aid and the administration's report on the reduction of tariffs on gasoline and refined byproducts by 50 percent struck a twofold blow against greater oil production in the United States.

The President advocates a return to price control and an interference in the oil industry and in other industries that will create confusion and cause a decrease in production. He asks for the power to control exports which would give him the authority to export under the Marshall plan all the steel and oil he deems necessary to implement such a plan. To do this he will, of course, have to take these commodities away from the American people.

The danger in such a move is best illustrated by how the administration has used the power of export control with reference to steel casing and oil pipe line products during 1946 and 1947. During the third quarter of 1946, in a free market without the use of controls we were only exporting 32,000 tons of steel casing and oil pipe line to Europe and other countries. About July the President put into operation export controls compelling a greater amount of this steel to be channeled into foreign export. From July 1946 to June 1947 steel casing and oil line pipe being exported increased from 32,000 to 95,000 tons. These exports controlled by the President increased 300 percent. They propose, under the Marshall plan, to export not only more steel casing and oil line pipe but millions of gallons of gasoline and refined products more than in the past to implement the plan. And, in addition, they propose to export whole and complete refineries ready to be set up and put in operation in Europe at a time when we are short on refinery capacity and these refineries are needed here at home. It must recall to the minds of Members of Congress and the American people the complete refineries so freely given Russia during the war.

They are proposing for interim aid that we ship $60,000,000 worth of oil to France and Italy; that pattern will be suggested for various other countries by the administration. They ask for these controls so that they can ship these natural resources to foreign countries at a time when oil products are 3½ percent lower today than they were a year ago when oil stocks for power and heating purposes on the east coast are 17½ percent less, or 11,700,000 barrels less than a year ago. There will be suffering of people in their homes on the east coast and a slowing down of our economy because of this shortage of oil and oil products.

There is a shortage of all oil products in the Middle West of 3½ percent, or 1,800,000 barrels.

There is an increase in oil supplies in only one section of the United States, the Gulf coast, of 3½ percent. The reason of this increase is the lack of oil tankers to transport this small amount of oil through the Gulf and up to the Atlantic to the east coast. This shortage of tankers has been brought about by the administration selling to various countries our oil tankers at a fraction of their real cost and at a time when we are short of steel in this country with which to rebuild such tankers and a shortage of steel which is preventing the building of railroad oil tank cars and railroad cars generally. This country needs today the immediate construction of big steel oil and gas pipe lines from Texas to the North and East, and the steel for these pipe lines is unavailable.

In the face of this steel shortage, the Government has recently agreed to supply and ship to Arabia for the building of a 1,000-mile pipe line some 300,000 tons of 30- and 31-inch big oil-line pipe. With export controls, the Administration can channel not only steel, oil, and oil products, diverting them to Europe, but can divert practically any commodity it chooses at will.

This is a tremendous power to place in the hands of subordinate bureaucrats delegated to them by the President.

The second blow struck at the oil interests by this administration was the announcement by the State Department that under reciprocal trade agreements recently consummated at Geneva, Switzerland, the duty on gasoline and refined oil byproducts had been reduced by 50 percent. This will discourage exploration and production of oil throughout the United States and the hundreds of thousands of barrels of gasoline shipped into this country will prevent the employment of labor and capital from refining this gasoline in the United States. It will slow down oil production, make it less profitable, and displace labor. They have opened our door to the monopolies of other countries and other monopolies that will be builded by the pipe line in Arabia to invade our markets to the detriment of those investors and employees of our oil industry here from the top man to the lowest-paid laborer.

We must not lose sight of the fact that these controls establish the ability to transfer oil discovery and exploration from the United States to anywhere in the world that a few men in Government may decide fits best that which they refer to as our foreign policy.

This power to furnish the supplies for the drilling of wells, for pipe lines, and the steel for construction of refineries in foreign countries is now being used. When such projects are completed, we find that such foreign exports are accommodated by our having reduced the tariffs by 50 percent this week, which furnishes a ready market for their products in our country.

Problems of Small Business

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. CRAWFORD. Mr. Speaker, we have had considerable experience in this country in recent years to the effect that the more Government controls operate the less chance small business has for survival. As Government bureaus are created to carry out powers delegated to the President by the Congress and which powers deal with economic controls, the Government bureaus find their jobs more administratively possible through channeling the volume of business through great centralized units, the few heads of which can be called to Washington and dealt with. The more we move into a regimented or centrally controlled economy the less chance the small businessman has for survival.

Yesterday the President, in the summary of his recommendations, requested the Congress to extend to him peacetime economic powers which go beyond anything yet experienced by our people, even in wartime. The National Federation of Small Business, incorporated under the direction of George J. Burger, director, must have sensed some of the things which are now known when, under date of October 25, it addressed a telegram to President Truman at the White House, signed by the federation's president, C. W. Harder, and on October 28 released to the press a statement inquiring why the administration had not yet appointed small-business representation on Government agencies as called for in Senate Concurrent Resolution 14, adopted by Congress almost 5 months ago.

The economy which has made this Nation as great as it is and which will have to continue such production as may flow for the benefit of the people of this country and other countries has heretofore very substantially relied upon small business, and in the future it will have to be founded on that particular stone.

To think in terms of successful big business without the cementing and binding influence of small business would be an economic fallacy which would soon destroy the economic fabric of our people. Our only chance for economic survival is to always maintain a healthy atmosphere in which small business can come into being, operate, and survive.

The matter referred to follows:

The National Federation of Small Business has called on President Truman for a clear statement of the Government's intentions toward small independent enterprise during the current domestic and foreign crisis.

In its message, the federation inquired why the administration has not yet appointed small business representation on Government agencies, as called for in Senate Concurrent Resolution 14, adopted by Congress almost 5 months ago. Noting that long-range solutions to current domestic price difficulties lie ultimately in increased production and competition, the federation asked just what the administration plans in the way of vitalizing and protecting small, independent enterprise—the keystone of economic progress. In this regard, the federation asked just what the administration plans to suggest to the special session of Congress in the way of long-needed revision of taxes, in the way of assuring capital flow to presently existing and new small, independent enterprises, and what it will suggest in the way of a concrete antitrust program designed to unshackle small business. The federation asked, too, just what plans the administration has to integrate small, independent enterprise effort into foreign-aid programs, and what the administration will propose to safeguard the legitimate rights of small, independent business if legislative controls over business are adopted during the special session.

The federation noted that apparently reliable reports indicate that monopoly and international cartel groups are moving into position to use American foreign relief for their own ends; it asked just what safeguards the administration will propose to check such an eventuality. It asked if the administration is prepared to recommend that foreign relief plans contain definite provisions requiring positive maximum self-help on the part of the countries to be benefited before relief is given them. And it asked if the requirements of our national well-being are being given equal consideration in all plans to be presented by the administration.

The federation asserted that small, independent enterprise is desirous of doing its share in the current crisis. At the same time it declared that little encouragement has been given it by government. The federation asked President Truman to advise it definitely just what the administration will do to rectify this condition.

Text of the federation message to President Truman follows:

OCTOBER 25, 1947.

President TRUMAN,
White House, Washington, D. C.:

The National Federation of Small Business, Inc., views with great interest your decision to call on Congress for consideration of problems presented by prices at home and foreign relief need abroad.

This we say because over the Nation small, independent enterprise views with increasing alarm much of actual and projected governmental policy in both fields. First, small business cannot understand why the administration, fully 5 months after passage of Senate Concurrent Resolution 14, and in face of a grave national emergency the solution of which will require the united efforts of all segments of our national fabric, has not moved positively to insure small, independent business representation on all government agencies, particularly those of the policy-making variety, in which the interests of the American economy are affected.

Second, small, independent business keenly aware of the fact that production and competition alone present the long-range answers to current problems, would appreciate knowing definitely what steps the administration is prepared to recommend in the special session for the vitalizing and protection of present and new means of production and competition. Is it prepared to help insure continued unimpeded flow of capital to presently existing and new small business productive and competitive distributive facilities? Is it prepared to recommend tax adjustment along lines repeatedly suggested by members of the federation and recently suggested by the Commerce Department Small Business Advisory Committee? Is it prepared to recommend a strong, vigorous antitrust program as suggested to the congressional Joint Committee on the Economic Report by me on July 14, to free productive and competitive distributive small enterprise from monopoly restraints and unfair trade practices? Is it prepared to urge passage of pending antitrust law strengthening legislation, as supported by federation during the first session of the Eightieth Congress? Is it prepared to urge that small independent enterprise be integrated fairly into all foreign-relief planning? Is it prepared to urge provisions for protection of legitimate rights of small, independent enterprise in any and all legislative controls that may be developed for exercise over all business? Is it prepared to urge needed changes in national labor laws to grant equality of opportunity to small enterprise?

Third, small, independent enterprise views with increasing concern apparently reliable reports that monopoly groups and international cartels are readying themselves to slice great chunks out of all American relief expenditures. It wants to know if the administration is prepared to recommend specific controls to safeguard American aid which, in the final analysis, represents hard-earned tax dollars furnished by all American citizens against any such depredations.

Fourth, it wonders if the administration is prepared to recommend that foreign relief plans contain definite provisions requiring positive maximum self-help on the part of countries to be benefited before relief is given them.

Fifth, it wonders if the requirements of our own national well-being will be given equal consideration in all plans presented by the administration.

Mr. President, the small independent businessman wants to do his share to help in the current crisis, but so far he has been given very little encouragement in the way of actual deeds by Government. While he has received paternalistic pats on the head and has heard pious praises sung, he has been quietly frozen out of all activity. We would appreciate immediate advice from you as to just how small, independent business is to be integrated into the foreign-relief effort and what steps the administration is planning to recommend in the special session to preserve and protect small, independent enterprise from undue harm during the life of the current crisis. We will be happy to convey to our entire membership, the largest individual membership of any business organization in America, the reply you give to this request for information.

Small, independent businessmen federation members to a man contend the Nation will be ill served and the cause of free democratic government will be positively damaged if in the present emergency small, independent enterprise should be unduly harmed. Free competition and independent enterprise have vitalized our Nation to the point where it is the hope and envy of the world. We do not serve either ourselves or the world by tearing down the props of our success.

Small, independent enterprise awaits your reply and will follow with interest your recommendations to Congress.

C. W. HARDER,
President, National Federation of Small Business, Inc.

Letter of Hon. John P. Stewart, of Atlanta, Ga.

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. DAVIS of Georgia. Mr. Speaker, the people of the United States are becoming more concerned over the dangers we face as the facts unfold about

the world situation. Ex-soldiers, fathers and mothers, and taxpayers are wondering what lies ahead and whether we are meeting the issues squarely. They are not concerned with partisan politics, but rather with the vital issues of stopping communism, preserving peace, preventing waste of our natural resources, and preservation of our domestic economy, while we do our part in relieving the misery and destitution of the war devastated areas.

It is refreshing and most helpful to have the views of citizens who are thinking about these matters. I received recently a letter from Hon. John P. Stewart, of Atlanta, Ga., an outstanding lawyer in my congressional district, which I believe is worth the time of Members to read. Under leave previously granted, I insert his letter herewith:

ATLANTA, GA., *October 13, 1947.*

Hon. JAMES C. DAVIS,
United States Congressman,
Old Post Office Building,
Atlanta, Ga.

DEAR JUDGE: I don't often write my Congressman, although I have written DICK RUSSELL, who was a classmate at Georgia, a time or two on subjects our post was interested in. This letter is not official and I know my personal views are not important—but perhaps I can be a guinea pig and thus help you learn what fairly well informed people here are thinking on the big subject we are all concerned about—Russia and the Communists.

1. We are undertaking too much to try to feed and police most of the world. It's the same principle as when you lend a friend money or do someone a big favor. They usually end up by demanding that you do more and blaming you for all their troubles. We cannot give Europe all the food or money it needs, so because we have halfway promised it, they finally hate us and turn to Russia—at no expense to Russia.

This seems elemental, so why can't we avoid making such an obvious mistake?

We think we should give emergency food relief and all reconstruction aid that can possibly be put on a business basis. We should buy goods from them as much as possible, but not give them big gifts of anything.

2. Many of us feel that Truman is too "soft" to head our Government in these hard-fisted times, unless he is willing to take advice from such men as Marshall and Eisenhower and work through such agencies as OSS and give them plenty of authority and money. The current Reader's Digest has two articles which throw light on this—that about Wild Bill Donovan's OSS and the article about Albania. Also, the paper recently carried news of Albanian patriots being shot by the Communist government for being spies of the United States. In other words, Russia is giving us credit for doing what we should be doing—but the hell of it is, it isn't true. It would be most encouraging if we were openly fighting communism by giving full aid to the peoples' parties and anti-Communist organizations.

If timid souls say this would be an act of war, we can always point to the political murders and overthrow of peoples' governments which Russia has openly managed. Russia will find an excuse to fight the minute she thinks she can win.

Here's the way it looks to us ordinary citizens:

A. We are being too idealistic and altruistic and are not facing the raw facts.

We are shooting bird-shot (money and food) at the whole world and hitting nothing, and if we are helping anybody much, we are helping unfriendly governments and people and the Communists as much as we're helping our friends. This is foolish and stupid. It's said our millions of dollars of supplies to Albania were sold by the Communists to the storekeepers, then confiscated back, and the money and goods sent to Russia. We know what Tito did with our American aid. Why arm and strengthen our enemies?

B. Why not a practical policy? We could fight Russian methods effectively—which we're not now doing—and could make friends instead of enemies by helping only our friends; and could be strengthening the defense of our country (by upholding the democratic governments in western Europe) instead of pouring our wealth and supplies down rat holes that all lead to Moscow.

Here's how we think it can be done.

In the first place we must keep our armed forces and our Government finances strong.

Also, we've got to realize that if a nation like France wants to go communistic, we haven't enough food and money to spare to prevent it. We must fight some other way. Russia uses the natives by selling them bunk. We could use them by selling them the truth, and showing them that we help our friends, i. e., those citizens and organizations that actively fight communism.

We should by all means use an OSS at full strength to get and disseminate information and to organize patriotic underground movements in every Communist-controlled country to counteract the work of the Communist leaders.

Since the Communists put no value on human life and use false charges and mass murder as a matter of course, we are inclined to be too squeamish and think there's nothing we can do but send the Red Cross to "feed the people."

If 100 of the key Communist leaders were abducted from the trouble spots of Europe and put in a concentration camp for 5 years (since we are too humane to simply shoot them as the Communists would do) it would do as much good as a billion dollars' worth of food given indiscriminately to our friends and enemies alike—and as much good as landing a million men on the European continent.

Suppose the patriotic societies fostered by our OSS men in Albania knew that we would back them to the limit, with food, guns, planes, etc., they'd soon handle their own troubles. If the native traitors who lead the Communists who are trying to plunder the country are snatched from their beds and carried away in the night, as now happens to all who dare oppose the Communists—then they'll soon lose a lot of their bogus zeal for Moscow.

This was really the basis of the original Ku Klux Klan movement, and that was the only thing that really worked in the Reconstruction days in the South.

In the meantime, we can continue our debate with Russia in the United Nations for the purpose of educating our people, which I am afraid is the only useful purpose it will ever serve.

The third world war is well under way. In the past nobody on earth has been as stupid as our peacetime Army leaders. Can't we change that now?

Russia screams that we are war mongers. Why not fling the charge back in their teeth and tell them we will fight them with their own methods—since they're better than our present ones—and will be prepared to fight for our rights whenever they are invaded.

Then if we keep ourselves strong and make useful friends and allies—instead of false friends for whom we have done too much—we should not fear the outcome of the war when it comes.

We'd like for you to represent us along these lines and feel sure you will do so.

With kindest regards and best wishes, I am,

Very truly yours,

JOHN P. STEWART.

Boston Regional Veterans' Administration Understaffed

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. LANE. Mr. Speaker, under the GI bill of rights, we have solemnly undertaken to do everything reasonably within our power to help the veterans of World War II. In the Boston regional office of the Veterans' Administration, that is not being done, because there are not enough employees to handle the heavy case load. This unfortunate situation is responsible for much hardship and disillusionment among the veterans and places an unnecessary burden upon the personnel of this overworked Boston office.

This calls for a deficiency appropriation in order that we may give prompt and adequate service to our veterans.

Bear in mind that the Boston area is both an educational and industrial region, with a proportionately large number of claims. The recent cut in the number of employees has resulted in inefficiency and delay in handling claims for schooling, medical, and dental treatments, interviewing of veterans' claimants, assistance in filing claims, and adjudication of claims.

The Boston office was reduced 10 percent, putting it below the ceiling which was considered the minimum for carrying out its responsibilities. On the other hand, other regional offices throughout the country with a much smaller case load per employee, were cut only 1½ percent.

This has caused a traffic jam which threatens to paralyze the functions of the Veterans' Administration in this area.

There are 2,400 employees at the Boston regional office, with another reduction in force scheduled for next June. There is a case load of 215,000 veterans' claims. There are 80,000 running awards and 60,000 veterans in training.

The various veteran organizations are up in arms in protesting that this neglect be remedied through adequate appropriations to care for all deserving veterans.

Roland L. MacDonald, service officer, Department of Massachusetts, Marine Corps League, reports:

There are at present, approximately 15,000 applications for dental treatment. The average cost per case is $85, therefore, approximately $1,275,000 will be required to clear this back-log of $100,000 per month over and above the present monthly allotment for dental treatments. At the present time there are only three dentists on Dental Rating Board and it is obvious that dentists must be employed in the adjudication section to clear the back-log and to keep it current. There are thousands of veterans that are badly in need of dental care, whose physical condition would improve and infection eliminated * * * such as veterans suffering with arthritis, ulcers, and many other service-connected disabilities which are aggravated because of infection from neglected teeth.

The national service office of the Jewish War Veterans of the United States of America estimates that—

The following personnel are needed at once in the following departments:

Rehabilitation	40
Contact	30
Medical (clerks and typists)	25
Finance	85
Insurance	6
Manager's office	3
Administrative	36
Claims (filing clerks, etc.)	20
Dental (clerks and typists)	25

The cost of the above additional personnel for the various VA regional office departments is figured at about $700,000, plus the amount of $1,250,000 for the proper treatment and care to be given to the dental claims of the veterans.

Samuel I. Williston, department service officer for the Veterans of Foreign Wars, Department of Massachusetts, as a result of an investigation into conditions at the Boston regional office, makes the following recommendations, among others:

FINANCE

Immediate increase of personnel in this department and permanent help are necessary. For several years now it has been the policy of the Veterans' Administration to loan extra help to Finance from other departments several times a year. This causes a stoppage in the departments which must sacrifice this help, and this also gives to Finance inexperienced help to do their work. About the time the help is trained so that they are of value to Finance they are sent back to their own department.

If Finance is to get the checks out it must have permanent help and not borrowed personnel. There is also entirely too much secrecy and too many obstacles placed in the way of the veteran obtaining information as to why he did not receive his check. Delays in payment of awards are certainly without reason. If this department does not function properly the entire Administration is criticized.

REHABILITATION

This is a department that can stand much study and correction. Too many complaints are coming in from veterans of poor service. The training officers are overloaded and unable to be available to the veteran and to know his problems. The Veterans' Administration should maintain a close supervision over the veteran and his place of training. The training officer should be able and available to settle all the problems of the veteran. Veterans have to wait many months for checks and equipment and must constantly go to outside agencies to help in straightening out simple problems.

There are entirely too many veterans denied training due to nerve conditions who do not have a severe nerve condition. These veterans should be given a chance to rehabilitate themselves. These men want to help themselves. The answer is, "No, you are too nervous." Much improvement can be made in this department.

Joseph M. O'Connell, national service officer for the Disabled American Veterans, has this to report about the medical unit:

MEDICAL UNIT

A full day's work in this section consists of 200 examinations per day. I dare say that there are many days when there are not 200 examinations scheduled. Out-patient treatment cases in this office vary anywhere from 800 to 1,000 cases per day. To render service on this large scale the medical unit has a force of 380 people. This figure includes the personnel assigned to the Veterans' Administration offices in Springfield and Worcester. Of this total 380 people, there are only 69 professional persons, including doctors, nurses, and dentists. Clerical help in this section has been curtailed to the point that when a veteran is notified of his physical examination he is also sent the first page of his examination with the request that he fill out the first 26 questions. We have observed that this policy is very unsatisfactory because the majority of the veterans do not fill out the questions correctly and consequently the information submitted to the rating boards is neither correct nor complete. There have been occasions where the veteran has actually been reduced in compensation because the necessary information, such as his complaints and treatments, have not been fully described. It is assumed that the average veteran is intelligent enough to answer these questions fully and correctly on his own behalf, but as a result of our findings there have been cases (especially in neuropsychiatric cases) where the veteran doesn't understand the questions and because he gives incorrect information the case is not clearly understood by the rating boards. Sometimes the veteran's handwriting is so illegible as to make it difficult to determine just what treatment the veteran has had and how many times he has received treatment. We very definitely believe that when a veteran is called in for examination, as has been the case in the past, these questions should be asked by the Administration and the answer filled in by the medical unit instead of by the veteran. Oftentimes the veteran turns to the service organizations for assistance in completing the form, thereby placing a tremendous burden on the organization. Although all service organizations are ready and willing at all times to render service to veterans, we feel that this is an unnecessary burden and it is rightfully the responsibility of the Veterans' Administration.

On the question of out-patient treatment on a fee basis, this office feels that it is a very serious problem which must be met. The majority of veterans living outside the immediate area of Boston are attended by local physicians on a fee basis. We have been informed that the Medical Unit has had to reduce by half, in many cases, the number of treatments authorized per month. This office has had complaints from doctors as well as veterans on this score. One case which has come to our attention is that of a veteran who has been taking treatment on a fee basis from his own doctor for over a year at the rate of six treatments a month and he has now been reduced to only three per month. In cases of this type we definitely feel that harm will be done to the disabled veteran. The personnel of the Medical Unit are doing all in their power to help veterans in every possible way, but an estimate has been made that 25 more persons are needed immediately to take care of the drastic reduction in authorizations for out-patient treatment on a fee basis. There are veterans living in the immediate vicinity of the Boston regional office who are employed 8 hours a day, 5 days a week. They have no way of receiving out-patient treatment at the regional office without loss of worktime and they therefore have been authorized to receive out-patient treatment on a fee basis. Now that this procedure has been discontinued, the veteran has to make out on his own as far as treatments are concerned. If he takes a day off from work to obtain treatment at the regional office he loses a day's pay or approximately $8.

There is also the howling of the employer who does not want to put up with the absence of the veteran in order that he may obtain VA treatment. We feel that this situation should be taken care of immediately before more serious complications arise concerning the employing of disabled veterans, and the loss of pay to veterans who have been denied the right of obtaining out-patient treatment on a fee-basis.

Coleman Curran, department adjutant of the American Legion, and Eddie Reilly, service officer of the AMVETS, have expressed similar criticisms.

The veterans charge that penny-pinching economies effected by short-sighted groups in Congress are responsible for their present plight. Although they realize the necessity of providing funds for the reconstruction of Europe, they cannot help but ask: "Must it be at the expense of American veterans who became disabled in the fight to preserve our freedom?"

I am confident that the American people, once they know these facts, will support the demands of the veterans that sufficient appropriations be made to insure efficient service to those who sacrificed so much. In this connection, it is small wonder that the armed forces are behind in their enlistment quotas. The shabby treatment accorded the veterans of World War II is hardly the inspiring example that will induce younger men to volunteer for service to their country.

A deficiency appropriation will enable the Boston regional office to function properly. Beyond that, the, Committee on Appropriations should make a thorough study of this problem so that sufficient personnel will be provided to care for the case load. We cannot default on our obligations to the veterans.

Address Before Massachusetts Knights of Columbus

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

Addressing a State-wide gathering of the Knights of Columbus in Boston last night, Congressman PHILIP J. PHILBIN roundly denounced left-wing malefactors who are spreading religious, racial, and social hatreds in this country and called upon a union of patriotic Americans to combat the activities of communism and all its works.

"Free religious worship is one of the most sacred rights guaranteed by the Constitution," said PHILBIN, "and we cannot stand by silently and idly while Reds and fellow travelers here and abroad attack and seek to destroy it." Referring to left-wing efforts to generate social frictions between racial groups and classes of our body politic, PHILBIN declared that the first step in combating these tactics is to observe zealously the constitutional safeguards guaranteeing equality of treatment and opportunity for all persons without regard to their religion, race, station in life, or any other extraneous factors.

The Clinton Congressman lashed at Russian aggression and infiltration in Europe and Asia and emphasized that the most dangerous infiltration of all was occurring right in the United States. This movement is well organized and embraces practically every

segment of American life. There is hardly a social or economic activity that is free from the baneful influence of Communist and subversive propaganda, he stated.

"We cannot lend ourselves to warmongering, but we must at all costs protect our own Nation and its precious freedoms," PHILBIN declared.

"One would be blind indeed who could survey contemporary world and national conditions without appreciating the urgent need for this type of American organization. I have just returned from an extended tour of European nations, during which I visited many places, talked with many people, and studied the rapidly moving events of that harried and troubled section of the world. It is hardly possible for me to describe the privation and suffering, the political unrest, and Communist agitation that I found in many countries and which are symptomatic of world-wide conditions caused in large measure by left-wing conspiracies. Out of the widespread devastation, the shattered economies, the dire hardship and hunger which presently exist there, it is difficult to conceive the early restoration of stable, economic structures and orderly government. In fact, from day to day the situation seems to grow worse until countries of Europe seem to be seething cauldrons of desperate Communist activity aimed at the overthrow of all existing institutions. The Reds have scored many political victories by deceiving the people with flagrant propaganda or by engaging in actual fraudulent practices tantamount to stealing the elections. When these methods are not successful, as recent events prove, they have no hesitancy in starting armed revolts and insurrections, inciting violence, promoting great public disorders looking toward the capture of these countries and governments by force. All the while they sound pious words of devotion to democracy and hold themselves out as the defenders of representative government and as champions of the suffering and afflicted.

"In these ruthless campaigns to capture control of erstwhile peaceful democratic nations, the Reds have not been deterred by fear of international retaliation nor concern for the opinions of other nations. They have been ruthless, destructive, and bloodthirsty. Hitler at his worst could not exceed their outrages against human decency and their heartless, merciless treatment of individuals and groups who refuse to do their bidding.

"I need not tell this gathering that the very first technique of the Communists is to destroy all religion and all free worship. These left-wing malefactors are spreading religious, racial, and social hatreds not only in Europe but in this country, and one of the great and crying needs of the moment is a loyal union of patriotic Americans to check the activities of Communists and all its nefarious works.

"We well know that free religious worship and the right of the individual to order his own life free from regimentation by a radical superstate is one of the most sacred rights guaranteed by the Constitution. We cannot stand by silently and idly while Reds and fellow travelers attack and seek to destroy these precious human rights. Neither can we be unmindful of left-wing leaders who at this very time are working desperately to generate social frictions and hatreds between racial groups and other classes of our body politic.

"Although we have won the war, the freedoms we believed we had secured through very bitterest sacrifice are in grave peril. Communism is spreading steadily and speedily over many formerly free nations, threatening the liberties of these helpless people. Brazen attacks are made upon our own government officials and the policies of our own Government. If we are to continue as a free nation, indeed, if the ideal of human freedom is to continue to live in this world, America must meet every challenge to our own free institutions at home and abroad. We cannot permit any nation to ruin the peace which so many of our boys died for through aggression, infiltration, and Marxist conspiracy. We cannot permit any group in this country, however strongly entrenched, to strike at the heart of our governmental and business systems through subterfuge or preparation for rebellion.

"Now is the time to take a definite position toward organized communism at home and abroad, to put our own house in order and check the enemies of democracy within our gates. One of the very first steps in combatting this widespread radicalism is to observe zealously our own constitutional safeguards guaranteeing equality of treatment and opportunity for all persons without regard to religion, race, station in life or other extraneous factors.

"As we deplore and denounce Russian infiltration in Europe and Asia let us recognize that the most dangerous infiltration of all is occurring right here in the United States. Let us move to check it before it is too late and let us move to check the outrages against freedom and self-determination which are being perpetrated by Russian communism abroad. To be sure we must maintain our national defense and armed power at a high pitch of efficiency and effectiveness in order to protect our Nation and carry out our international commitments. We must not, however, lend ourselves to warmongering but, on the other hand, seek peace through collective action and, if necessary, revise the United Nations charter so as to outlaw the unconscionable use of the veto power which is making a laughing stock out of what we believed would be a great and effective agency for maintaining world peace. We can and should also use economic measures available to us, and by joining with other nations, as well as by our own action, shut out from world trade and intercourse any and all nations—be they principals or puppets—which refuse to be bound by rules of human decency, and which are carrying on aggression or ideological warfare against other nations and democratic ideals.

"Let us recognize that our primary responsibility is to our own country, that we must constantly strengthen and protect it, that we cannot weaken it in any way by misguided, unsound, or unwise policies, and that we must all determine to preserve our democracy, our economic system and our way of life against the attacks of left-wing malefactors. Let me repeat and reemphasize—unless we move promptly to safeguard our own institutions and the welfare of our own people, there is great likelihood that this Nation will find itself engulfed in the whirlwind of collectivism and hatred which has laid so much of western civilization in ruin and shambles, and which, indeed, now threatens all of us."

Relief Program in Italy

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. CHENOWETH. Mr. Speaker, I wish to call the attention of the House to an article that appeared in a recent issue of the Pueblo Chieftain, published at Pueblo, Colo., and which deals with our foreign-relief program. This article contains the observations of Mr. Vincent Massari on the failure of our relief program in Italy. Mr. Massari is one of our prominent citizens of Colorado and enjoys an excellent reputation. He has just returned from Italy, where he made a thorough investigation of the whole relief program. He certainly presents some startling facts in this report and confirms the suspicion that many of us have entertained that the food and supplies being sent to Europe are not reaching the destitute persons for whom they were intended.

Yesterday we heard the President request Congress to appropriate additional sums for relief in Italy and other European countries. In view of this report by Mr. Massari, not a single dollar should be appropriated until we are certain the conditions he describes have been corrected. I cannot support an appropriation like this when I know the money will be used to promote the interests of a political party in Italy instead of being used to relieve human suffering. I think the time is here for us to be honest with the American taxpayer who is furnishing this money with such a lavish hand. I submit Congress cannot continue to make these millions of dollars available for relief when we have the proof that they are being diverted to black markets and used for political purposes.

In view of the fact Congress will soon consider the request for additional funds for Italy, I hope every Member will read the accusations made by Mr. Massari. It is most distressing to learn that our efforts to assist the needy and deserving people of Italy have been so frustrated.

The article follows:

UNITED STATES AID SENT ITALY FUTILE IF BLACK MARKETS CONTINUE

Unless black marketing is stopped in Italy, relief supplies to that country will not help the starving people, Vincent Massari told Lions Club members at the Vail Hotel Thursday noon.

Massari, who recently returned from Italy from a special investigation mission for the Columbian Federation, declared he will prove that about 40 percent of what America sends to Italy is distributed with prejudice to foster the cause of political party and not of the Italian people.

The United States policy, he said, has not helped the real democratic elements in Italy, and the present administration of Premier De Gasperi is a continuation of Mussolini's Fascist rule.

ONLY ONE NEW LIBERTY NOW EXISTS IN ITALY

There is only one new liberty existing in Italy—"the liberty to infringe upon the old and new laws, the right to speculate on the misery of their fellowmen, and the right for fascism to actually reenter the Government with a Fascist sympathizer at its head. This man is none other than Alcide De Gasperi," Massari asserted.

"Several months ago members of the Cabinet, Vanoni and Campilli, were accused in Parliament of having accumulated millions. A committee was appointed among members of Parliament. The charges were proven, but Vanoni and Campilli are still members of the Cabinet, protected by Premier De Gasperi.

"Can you be surprised by these things when Fascists recently liberated by a general

amnesty are still holding responsible positions and resuming the old play?"

Massari, who is well known throughout this country and in Italy as well for his opposition to fascism and all its principles, went to Italy for the express purpose of investigating for the Columbian Federation, of which he is national president, just what is happening to relief supplies that are pouring into the country. The people are not informed as to where the little relief they do get is coming from.

ARREST OF OFFICIALS MAY BE NECESSARY

Any help that is sent in the future to Italy, Massari declared, should be conditioned on the removal of black-market operations, even if this means the arrest of a few Government officials and American black marketeers.

The recent visit of Lva Perón, of Argentina, to Italy is an indication that fascism still is not dead in Italy, Massari stated. It was followed by mass protests by the workers of Rome against the government and against the Fascists salute used by Mrs. Perón.

Massari charged that our governmental representatives and officers of the armed forces have not mingled with the common people in small communities; that they are approached by the society people and the Fascists of the old days; that they make their reports from what they are told and not from what they themselves see.

Massari explained why De Gasperi won a vote of confidence a short time ago. "I will tell you that the vote was taken right after Count Sforza announced that the United States had renounced her share of Italian ships given her under the peace treaty; that the majority on the Saragat motion was only 37 votes, while 63 members of the assembly did not vote at all; and finally because, between the two evils, the Italian people chose the lesser. They do not want communism and they've had more than enough of dictators. They add that the worst democracy is always better than the best dictatorship."

"The Italian press announced for our consumption that the Communist Party received a defeat in the municipal election of Rome. This is far from the truth. The Communists in this election have received 10 percent more votes than last year, and more than De Gasperi's party. It is true also that the De Gasperi party received a larger vote than last year, but this was accomplished at the expense of the Qualunquisti Party of Giannini, another name for Fascists."

Massari explained that many of those who have voted with the Communists are not Communists at all but wish to register a protest vote against the De Gasperi regime and who do not want their votes to be lost on a minority party. Leader of one of the minority parties, the Republicans, is Col. Randolfo Picciardi, leader of the Italian anti-Fascists who fought in Spain during the revolution and who was trying to form a legion of Italians from North and South America to fight against the Nazis in Italy before the landing of our troops on the shore of Italy. He was refused permission by the United States, who were more willing to deal with the House of Savoy.

Italians, said Massari, would like to see the United States take a middle-of-the-stream course, not a one-sided course as at the present, as long as Italy has a good Republican Party, and a good liberal party, and a good democratic party. They resent being told for whom to vote, or who to have for premier. They resent the fact that relief is distributed to help the party in power and not for the benefit of the people, most of whom never have seen a pound of flour, a pair of old shoes, or any of the old clothes from all that have been sent over to them from here.

Anniversary of the Blood-Drenched Battle of Gettysburg and Memorable Address November 19

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday November 18, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Bill Collins, Jr., which appeared in the Lawrence Sunday Sun on November 16, 1947, Lawrence, Mass.:

ANNIVERSARY OF THE BLOOD-DRENCHED BATTLE OF GETTYSEURG AND MEMORABLE ADDRESS NOVEMBER 19—50,000 SOLDIERS FELL IN HUGE STRUGGLE—IN OBSERVANCE OF ABRAHAM LINCOLN'S DEDICATION OF A PORTION OF GETTYSBURG BATTLEFIELD AS CEMETERY, SUN WRITER GIVES GRIPPING ACCOUNT OF WAR OF THE REBELLION'S MOST STUBBORN STRUGGLE, TURNING POINT OF WAR

(By Bill Collins, Jr.)

The tall man was tired.

It was strange that he should be tired at this time, if you consider fatigue as a result of physical and mental labors. The tall man with the weatherbeaten face of a farmer had worked hard all of his life. Since as far back as he could remember into the distant days of his childhood, he had worked and toiled to make his way. When he was eight, he was swinging an axe with the strong heft of a man. When he was 21 and his family moved to Decatur, Ill., from Indiana, he walked the entire distance—200 miles—driving a four ox team through mud and water, and upon arrival helped his father clear the land and build a home for the family. So many incidents in his lifetime had been strenuous and tiring—much more so than the business of making speeches. But on this November day, he walked slowly, with his head bowed a little, and with a heavy weight in his heart—and he was tired.

He was tired because his country was tired—because he and his people were weary of fighting and bloodshed, of battling with their brothers—tired of war communiqués, of remembering the slaughters of Bull Run and Fredericksburg, and Murfreesboro and Chancellorsville—tired of the chaotic confusion of killing.

It was November 19, 1863, and the place was Gettysburg, and the tall man was Abraham Lincoln—and he was tired.

The man standing at the fore of the platform shook his hand and introduced him proudly to the people gathered on the plain of Gettysburg. The people cheered and applauded. Some whistled. Others shouted, "Hooray for Honest Abe." And the tall man smiled. These were his people and he loved them.

The tall man with the sideburns, holding the work-weary hand of a woman wearing calico * * * the man with the short, squat frame who was standing on a barrel * * * the boy with the Union soldier cap and the bright wealth of wonderment in his eyes * * * the woman holding a baby in her arms, with no man to hold her hand since Chancellorsville * * * these people, these men and women, boys and girls, little children who gaped at him with open mouths and wide, watching eyes—these were his people.

Even as he was preparing to deliver his speech—a speech drafted roughly while he rode a bouncing, jouncing train to Gettysburg—he was thinking. He was thinking of the others there at Gettysburg, assembled on the plain—the dead. On this day he was to dedicate a portion of a battlefield as a cemetery—final resting place of men and boys who had fought to hold Lee and his Confederate Army back, to keep Lee from marching on to Harrisburg, capital of Pennsylvania. Perhaps it was fitting that they be buried where they fell—for this was their land; they fought for it and died for it. The tall man looked at the straggling strands of grass, the cool, lumpy, loamy earth—and he knew, as the soldiers knew, that it was more than earth * * * it was their land—their native land, their country.

Then he stood quietly, casting his gaze far out over the heads of the living as he began to speak—and it seemed he was addressing the others assembled there—the dead.

It was as though he were making a promise.

"Fourscore and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal. * * * Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. * * * We are met on a great battlefield of that war * * *"

Those who were watching and listening heard his strong, woodsman's voice roll out across the flat field, echoing on the soft, cool wind that ruffled gingham frock collars and tousled the tawny hair of farmers. Some, those who were watching the tall man's face more closely, saw his expression change just then. His face took on the look of a listener, and his voice softened just a trace.

The tall man, in his mind, was meeting with the dead. He felt as though he knew them well. He seemed to walk among them as they broke camp and moved about, talking rough soldier talk, wishing they were home.

Looking out across the sea of faces, upturned, rapt, he saw Lee's army moving onto Seminary Ridge, and the Union army, under General Meade, gathering on Cemetery Ridge, nearly opposite one another. He heard the shouted orders, the cacophony of muskets being loaded, or sabers being drawn. He heard a boy begin to rattle wooden sticks upon a drum—and a man with a stentorian voice singing about John Brown's soul.

"We have come to dedicate a portion of that field as a final resting place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this * * *."

Somewhere in the tall man's mind a bugle sounded. Men, moving like puppets guided by the strains of the bugle, leaped to their feet, crawled on their stomachs, and tried to kill one another. The sun moved higher in the heavens, to get a better view of this mortal jousting. The field became warmed and there was the stench of burnt powder and the whining sob of shells. Men fell on their faces, clutching their bodies, seeking to stop a bullet that had already past and penetrated flesh.

A man in blue, with half a face, began to cry for "Molly." A boy in gray sought the shelter of a tree, dragging a stump of leg along the brown, soft ground plowing a furrow in the earth—with drops of blood for seeds in planting. Then the twilight came, and the musket fire made little red holes in the dusk—and it was night, and quiet came, except for living, dying skirmishes beneath the blinking stars.

"But, in a larger sense, we cannot dedicate, we cannot consecrate, we cannot hallow this ground. The brave men, living and dead, who struggled here, have consecrated it far above our poor power to add or detract * * *."

It was the second day, and Lee's men made a wild rush to get Little Round Top, but

were beaten back with heavy loss. A Confederate soldier ran blindly up the hill, his eyesight bleared red by the blood that trickled into his eyes from a wound above his temple. He fell and then began to crawl—and then he lay quite still. There was a Union shell hole in a letter from his wife, a letter which held a lock of hair from the head of his first-born son—and a shell hole in his breast. A Union youth stood up in half-crazed excitement and aimed at General Lee. A cannonball knocked him down, his musket in his hand, unfired.

The tall man wandered amongst these men, impervious to the shot and shell, unmindful of the hell. He held a canteen of water to the lips of a man who was murmuring a woodsman's prayer. He pushed the hair from the eyes of a man who slumped behind a tree, a bullet wound in the flesh above his knee. He offered solicitude to a youth who lay with his face buried in the earth, screaming out in fear.

Later in the day, Lee's men got a foothold on Culps Hill, but were soon driven out. When they fled a boy with a sweetheart's bright, blue hair ribbon tied to his musket-piece tumbled headlong into the dirt. Others fleeing stepped upon him in their hasty retreat to safety. The boy began to crawl, then realized it was no use. He wrote a love letter in the sand with his bloodstained fingertip. The salutation was "Dear Mary."

"The world will little note, nor long remember, what we say here, but it can never forget what they did here * * *."

The drummer boy, scarcely old enough to tote a musket but wearing a soldier's cap, began to rattle on his drums—and the third day of death at Gettysburg began. A musket ball slammed through his drum and he fell with his sticks upraised. It was a welcome to the day. The third verse of a terrible, grotesque poem—the author's name was Death.

Lee sent General Pickett, with a force of 15,000 Confederates, to attack General Hancock on Cemetery Ridge. To reach the ridge, they had to cross a mile of open ground. Grimly, steadily, unmindful of the shrieks, the dying gurgles of their comrades, they advanced across the plain. The Union guns were ablaze with death-dealing musket fire. Men and boys, young and old, tall and short, good and bad—all exposed themselves to lead, and many fell to the grassy earth, kicking, screaming, praying, dying. Their ranks were ploughed through and through with shot and shell—Gettysburg was a man-made hell.

The Confederates charged up the slight slope of ground and broke part of the Union line. Men yelled curses at the wind, and men begged mercy from their God. Hancock's lines held. The Union rifles pumped shot after shot into the advancing army. Union soldiers lay flat on their stomachs and aimed carefully at the buttons on tunics, where hearts should be.

Pickett could go no further. With fragments of his division, for only fragments were left alive, able to retreat, he moved his men backward in defeat. The man singing about John Brown's soul was laughing as he sang. He aimed his musket methodically and fired at the man who held the Confederate flag. Another shot at Armistead, who was leading the Confederate advance. Then the singing stopped—with a musket shell and a rifle's roar echoing the chorus.

"It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us; that from these honored dead, we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain * * *."

It was the end of the most stubborn battle of the war. Almost 50,000 brave men fell in the contest. Lee had failed. At the end of the third verse of the blood-drenched poem of Gettysburg Lee retreated across the Potomac and never made another attempt to invade the North.

The plain of Gettysburg was littered with dead and dying, wounded men. A boy was calling for his mother. A man was swearing in a frenzied craze. A wife 500 miles away was rocking her youngest child to sleep with a song about its soldier father. A swallow dipped in flight as it flew across the field * * * and God covered the unsightly scene with the pitying curtain of night.

"* * * that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people, shall not perish from the earth."

The crowd paused then cheered and stomped and whistled, but Lincoln did not hear them—he was thinking of the others. It was as though he were making the dead a promise * * * and with his words, the tall, tired man had woven a thought * * * that shall not perish from the earth.

Cause of French Hunger: Failure of Farm Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the World Report of November 11, 1947:

CAUSE OF FRENCH HUNGER: FAILURE OF FARM POLICY

(Reported from Paris)

The French people are facing hunger this winter because of a Government farm policy that did not work.

Once almost self-sufficient in food, France finds itself begging for grain throughout the world. Bad weather is partly responsible, but it becomes increasingly evident that faulty planning has made the situation much worse than it might have been.

Largely as a result of Government miscalculation, there is less bread for the French now than when the Nazis occupied their country.

France has been transformed from a food-rich to a food-poor nation. The wheat crop, the country's mainstay, is the smallest since 1815, when there were many millions less mouths to feed. Frenchmen who puzzle over how it all happened are finding that this year's bad weather explains only part of the story.

Agricultural position of France in peacetime has always been strong. The country raised virtually all the wheat it needed. The crop averaged 8,050,000 tons a year between 1930 and 1939.

In sharp contrast is the 1947 wheat yield, now estimated at only 3,200,000 tons. This is considerably less than half the amount required to feed the nation.

Responsibility for the extent of this year's crop disaster rests jointly with the Government and wheat farmers. They set the stage.

The wheatlands had shown their ability to come back after the war. Crops rose from 4,247,000 tons in 1945 to 6,568,000 in 1946, when more than 80 percent of the prewar acreage was sown.

But for the current crop, farmers seeded almost a million fewer acres.

There was no margin against heavy losses. When bad weather struck, it was disastrous.

Government's part in bringing about the dangerous reduction in acreage is shown by Paris dispatches to be a product of conflicting policies.

Controlled prices forced the farmer to take the lowest return in years for his wheat. In terms of gold francs, he was getting less than at any time since 1895. Prices allowed for other crops were more attractive.

Inflation, meanwhile, was sending prices even higher on nonrationed goods that the farmer needed. This led the farmer to mistrust the currency the Government would give him for wheat.

Farmer's reaction was that it was not profitable to plant wheat when the price did not come up to what he thought it should.

Different crops, accordingly, were put in. Controlled prices on oats, barley, and corn promised a better return.

Diversion of wheat for livestock feed increased. Herds and flocks offered the farmer a hedge against inflation, enabling him to keep a part of his wealth in stock on the land. Moreover, poultry, eggs, and meat would bring more on the black market than the Government would pay for the grain that went to produce them.

New program that the Government is putting into effect is designed to remedy matters in time to get greatly increased production for 1948. According to Paris reports, it has these main features:

More acreage. Area sown in wheat must equal the 1937-39 average on each farm. Tax penalties will be imposed on farmers who sow less than the minimum.

Higher prices. Wheat growers are to get 91 percent more money for their crops than last year. Taxes on the farmer's profit from the crop have been cut.

Stricter control. Delivery regulations are tightened. Threshing contractors are responsible for an exact report on the amount of grain threshed for each farm.

Effectiveness of the program will depend on how well the French farmer responds. Given normal weather, a large wheat crop next year is possible. But the compulsory features of the plan do not sit well with the growers. Compulsory reports on threshing resemble the unpopular rules that were enforced during the German occupation. Forced deliveries also irritate the farmer, who has had long experience in outwitting the Nazis who demanded the same thing. The Government will have to find ways of overcoming these and other objections before it can rely on the wholehearted cooperation from the farmer necessary to restore France's farm production.

Address of Hon. Charles E. Broughton, of Sheboygan, Wis.

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. KEEFE. Mr. Speaker, the eighty-third annual convention of the Benevolent and Protective Order of Elks, was held this year in the city of Portland, Oreg. The convention was presided over by the grand exalted ruler, Hon. Charles E. Broughton, of Sheboygan, Wis. Mr.

Broughton is a distinguished American and a resident of one of the splendid cities in the congressional district I have the honor to represent. He has rendered outstanding service to the Nation as an editor in promoting and supporting civic betterment. His work in the Order of Elks is inspiring and under his leadership it is a great moving force in defense of America and our ideals of life. Because his annual address to this great convention is a masterpiece of good sound Americanism, I ask unanimous consent that it may be incorporated in the CONGRESSIONAL RECORD as a permanent contribution to the cause of liberty, freedom, and tolerance. It follows:

May I express to Brother Frank J. Lonergan, chairman, my sincere appreciation for a setting such as this, and to you, Mayor Earl Riley, and the citizens of Portland, the gratitude of the membership of the entire order. To Acting Gov. Marshal Cornett, your kindly words will be an inspiration while we remain in this State and retrace history and your progress during the intervening years between 1925 and 1947.

While I was in the Ohio Valley Hospital, at Wheeling, W. Va., recovering from injuries received in an automobile accident, I could not help but feel sorry for you, Mayor, when I read this Portland dispatch:

"PORTLAND, OREG., May 9.—City commissioners professed alarm when rumors flew through the city hall that Mayor Earl Riley had taken up knitting. The commissioners learned later that someone had confused a doctor's report. It said that his ribs—not his nibs—were beginning to knit."

This is our third visit as a grand lodge to the city of Portland. First in 1912, again in 1925, and now in 1947. Over the span of 35 years, Portland has grown tremendously. The whole State of Oregon, with its diversified industries, its timber resources, its fruit and beauty as an outdoor State, has an appeal and Portland in particular with its scenic beauty, is likely to draw us back this way again.

When we were here in 1925, we had the largest membership in our history up to that time.

In the years that followed we have had losses and gains, but tonight we are well over the 900,000 mark. This gain is not attributed to any one man, it belongs to all those of the grand lodge down through the years, who have kept the faith, and guided the endeavors of the subordinate lodges.

It is not for me to review the long history of our order, but to remind you that the Benevolent and Protective Order of Elks has ever had in mind, those finer things in life, which have made the United States of America the greatest nation on the face of the earth.

Our order is typically American. None but an American citizen can acquire membership. Upon our altar are the flag and the Bible, constant reminders of our duty to God and country. We are not concerned about a man's religion. That is a matter of his own choosing. Neither are we concerned with a man's political philosophy so long as he is an American. But we are concerned that the Government of ours shall not be hampered or hamstrung by individuals who have only hate in their hearts and would undo all of those things that are beneficial to mankind.

It is well for us to take note of the action of the A. F. of L. Upholsterers International Union in expelling from membership the business agent of the Minneapolis union for his Communist activities. In December last, at a social meeting the business agent and others were discussing the shooting down of American planes by planes of the Yugoslav Government. Testimony was offered by union members that the defendant said among other things, "They got what they deserved," and commented further that he would fight on the side of Russia in the event of war between Russia and the United States.

If we are going to meet the challenge as true American citizens, we must drive from our midst every enemy of this Government. Those who do not like our way of life have an invitation to pack up and leave, and the sooner this is brought about, the sooner we will be keeping faith with those who gave their all, that we might enjoy uninterrupted freedom. Communists detest law and order. We of the Benevolent and Protective Order of Elks and true American citizens believe in law and order and upholding and defending the Constitution of the United States. The call is here, the time is now.

I feel that this has been a year to pause and review our principles, just as it has been a timely year for this great country to pause and repeat the Bill of Rights of our United States of America. In my acceptance speech last July, when you conferred upon me the great honor of grand exalted ruler of this order I said:

"We are living in a world of increasing responsibilities. We of the Elks must assume our individual and collective obligations."

This new sense of responsibility for a wider and more consistent application of democratic processes in organization for work, play, worship, and education has concerned me this year of my stewardship. As I traveled through the country I have tried to emphasize the legacy we have inherited from Lincoln—tolerance—"without regard to race, creed, color, or national origin."

Our country represents freedom at its best. To preserve that freedom, we must fight. As your grand exalted ruler, I have fought every movement which would undermine or dethrone this our American Government.

You can't afford to gamble away the principles that have made the United States what it is, the best example of democracy on the face of the earth.

It has stood the test of time. It exemplifies the ideals of Washington, Jefferson, and Lincoln and the many others who have served this country and whose forceful leadership have taken us ever higher in our constant quest for the ultimate in democratic government. Ours is a way of life that requires constant alertness to retain the precious gift of freedom.

In more recent years we have had a lesson of hatred existing in our own midst. We have had an example of enemies at home and abroad endeavoring to change this Government. We have had religious prejudice marching under a banner based upon intolerance. During my year I can look back on our achievements with pride. In my own State the Ku Klux Klan has been outlawed; in Indiana an antihate law has been passed unanimously. Thus the seed of tolerance is reaping a well-deserved harvest.

The Benevolent and Protective Order of Elks was created by a small group of men who were lonesome and wanted companionship and an opportunity to do welfare work to aid the poor and crippled children of the city of New York. As the Benevolent and Protective Order of Elks grew, its scope of work widened. It founded a home for the aged at Bedford, Va., where we have facilities to house 450 brothers with comfort and convenience. Now and then an aged brother who has met with adversity comes to us asking our assistance and the grand lodge joins with subordinate lodges in giving him a home, and the major portion of expense falls upon the grand lodge.

It is a great source of pleasure to know that our meetings through the years have been given over to creating facilities like this and providing necessary funds through the Elks National Foundation, appropriations from the Elks magazine and from the individual lodges and members, so that we can care for the underprivileged, and help the afflicted. Early in the life of Elkdom social activities were made a part of our order, but we have never let the social side dominate. No one will ever know because we never tell of the many fine things that are done for little children, the happy moments that are created at Christmas time when we play Santa Claus. These are some of our achievements.

I am not going to dwell at length on the Elks National Foundation, one of the finest of our activities. This foundation was established in 1926 and has grown until today it represents more than $1,600,000. Over 90 percent of the lodges and the State Associations are giving generous financial support to the foundation. Individual members of the order are aiding and each year we find our foundation reaching greater heights and privileges to carry on crippled children's rehabilitation, education through the most valuable student award, and scholarships allocated to the States, giving the boys and girls, seeking higher education, an opportunity to reach their goal.

Time will not permit me to dwell on all our activities, but there is one that we cannot overlook. The Elks National Veterans Service Commission, which supplanted the Elks War Commission and which today is taking up where the war commission left off, has a program of sponsoring entertainment in 148 hospitals in 41 States. This is a work most commendable, and it will continue until the last injured veteran leaves these hospitals. In my travel over the country I have heard nothing but praise for this activity.

During our two wars, World War I and World War II, we spent millions of dollars in lending aid, building hospitals, and in the latter war creating fraternal centers and outposts where the young men leaving for the fighting zone could get a little taste of home for a brief breathing spell before they embarked.

This service was rendered under the Elks War Commission and at the last grand lodge session a new commission, we might say a peacetime commission, known as the Elks National Veterans Service Commission, was created. In peacetime we are faced with problems equally as great as were encountered during the war. We have many of the boys who were welcomed into our fraternal centers, now in hospitals for years to come.

I want to take this opportunity to thank Elks, their wives, daughters, and friends who worked day in and day out in these fraternal centers that the young men might enjoy recreational facilities and companionship. It will always be one of the bright spots in our order and it could not have been carried out except for our ladies.

I would like to tell you a little story of a young man who tried to get into the Air Corps immediately after Pearl Harbor. He was underweight, but was so insistent in his desire to fight for his country that the commanding officer told him to come back a year later and in the meantime build up his weight by prescribed exercise. He came back a year later and was accepted into the Air Corps and while fighting over Germany his plane was shot down and he was wounded. He was sent to Denver suffering with tuberculosis. Later he was transferred to Rest Haven in my own State. Early last fall the family was notified that he had but a short time to live. They wanted to make his last Christmas a happy one, and so they went out to Waukesha and inquired what he would like most for Christmas, as they all wanted to go together and get him something. They would have given him an automobile even though he couldn't run it. Anything to make that Christmas a memorable one in his life. His brother inquired for the family and Jay's reply was, "I will settle for a membership in the Elks. They are a fine bunch of Joes." Arrangements were made and he was initiated Christmas Eve. About a month ago I

received a letter from this young man, Brother Jay R. Schatz from which I quote:

"Your kindness and that of all the other Elks to me at that time indeed made my Christmas a perfect and memorable one. I hope that some day I may prove worthy of your kindness.

"I'm sure you'd be interested to know that the Elks show which is here once a month is the best entertainment we have. Speaking not only for myself but for all the veterans here, I know that it ranks as tops and is preferred to USO and all other shows. We all thank the Elks from the bottom of our hearts.

"Fraternally yours,

"JAY R. SCHATZ."

I like to tell this story because this boy did not become interested in the Elks because it was a fraternal order. He wanted to become a member of the Order of Elks because it had been so kind to him and the many thousands who were entertained in all of the metropolitan fraternal centers when they were going out to do our fighting.

Following World War I we erected a memorial building in Chicago in honor of those who fought and died for our freedoms. At the last grand lodge session arrangements were made for the rededication of this beautiful marble memorial in honor of the veterans of World War II, and on September 8, last, a vast assemblage of Elks and others made this a notable occasion. This memorial building is maintained out of the earnings of the Elks magazine that comes to you monthly and which is one of the finest publications of any fraternal order.

Our magazine chronicles the events of the year. It broadcasts to the members what we stand for. It reminds us of the rich heritage we as Americans enjoy. Our Creator had in mind a free people. You can only enjoy the fruits of a democracy when you are free.

The Constitution of the United States and the constitution of the Benevolent and Protective Order of Elks, operating side by side and hand in hand for 70 years as copartners, is a guaranty for the future. We must hold firm to this faith that the demands in time of peace are as great as in time of war.

The flower of this land gave of their full measure in two wars that the American Bill of Rights—our charter of freedom—would be preserved. They were not asked as to their religious or political faith when they enlisted. Why this questioning now?

We are not going to let a small group of enemies, a minority grow to a majority, such as occurred with Hitler, if I know the spirit of the American people. Nor if I know the spirit of Elkdom. We won both wars. We can win the peace of the world if we keep faith with those who sacrificed.

If we hold high the torch of liberty, and let tolerance without regard to race or creed be a legacy entwined with our flag, what a beautiful standard to follow.

Guard well that flag!
Your flag, my flag, the people's flag,
The flag that makes men free!

Armistice Day Address

EXTENSION OF REMARKS
OF

HON. ELLSWORTH B. FOOTE

OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following address delivered by me at the Armistice Day program of New Haven Post, No. 86, and the Sergeant Stanley Fishman Post, No. 319, Jewish War Veterans, on Sunday, November 9, 1947, at the B'nai Jacob Synagogue, 347 George Street, New Haven, Conn.:

Chairman Mann, members of New Haven Post, No. 86, and Sergeant Stanley Fishman Post, No. 319, Jewish War Veterans, and your auxiliaries and guests. You have conveyed a rare honor upon me this evening in allowing me to come into your house of worship and join with you on such a historic and solemn occasion. Since I took the oath as a Member of the Congress of the United States, I have not had such a sacred privilege. I really feel at home as I see so many friends before me.

We are met here tonight to pay tribute to the memory of those who died in two world wars, namely, to the 48 New Haven Jewish-American veterans of World War I and the 56 of World War II, who made the supreme sacrifice. Also remembering at this time the 3,500 of World War I and the 11,000 Jewish-Americans of World War II in this country who made the same sacrifice.

I should like to feel also, that this is a tribute to 800,000 Jewish-American men and women who fought in both of these horrible conflicts. I feel, too, that tonight we honor the memory of the 6,000,000 who died in the scourge that was called nazism, to the men and women who suffered at Belsen and Auschwitz and Dachau, who fell victims in hundreds of towns across the scarred face of Europe. The world cannot forget the beasts who slew the infant and the aged alike, who tried to drown an entire people in a blood bath of hate and inconceivable greed.

The history of our America is also the history of the Jewish people, who helped to make it what it is today. Two Jews, Luis de Santangel, Chancelor of the Royal Household, and Gabriel Sanchez, Chief Treasurer of Aragon, were the strongest backers of Christopher Columbus, and aboard the *Santa Maria* sailed Luis de Torres, the interpreter. When the Dutch came to New Amsterdam they allowed traders of your faith to ply the Hudson, and later one of them was Hayman Levy, who gave a young fellow his start in the fur business. That young gentleman was John Jacob Astor, who received a dollar a day for his labors. The history of the United States is filled with the names of Jewish men who helped to build this Nation in peace and in war. Isaac Touro, the Newport, R. I., rabbi; Jacob Rivera, who introduced the sperm-oil industry to America; Aaron Lopez, whose 30 merchant ships plowed the seas, and who founded Leicester Academy at Leicester, Mass.; Judah Monis, instructor at Harvard. After receiving his M. A. there in 1720, he published the first Hebrew grammar in North America. Jacob Lumbrozo, the physician, who landed in Maryland in 1656; Francis Salvador, of South Carolina, the first Jew to sit in a provincial assembly and who died in battle with the British. The Plymouth Colony Code of Laws in 1636, the Massachusetts Code of 1647, the Connecticut Code of 1650 were all based on the law of Moses, and in the New Haven Code, adopted in 1639, over half the statutes came from the Old Testament. Upon the example of the feast of Sukkoth, the Puritans established their feast of Thanksgiving, which we shall observe shortly. As early as 1765 a group of Philadelphia Jews, among them Barnard and Michael Gratz, banded together in public protest against the importation of British goods more than a decade before the Revolution. Mordecai Sheftall was Governor of Georgia in 1801. Aaron Levy gave his name to Aaronsburg, Pa. And, of course, we cannot forget Haym Salomon, whose financial genius and devotion to the patriot cause, was one of the principal mainstays of the forces led by Gen. George Washington. Haym Solomon was the first Polish Jew of record in the United States. It was Abraham Mordecai who built the first cotton gin in the State of Alabama. Adolphus Sterne served with the Texas Congress, fought against Mexico, and was one of the first representatives of the Lone Star State in Washington. Moses Albert Levy was surgeon general to Gen. Sam Houston, and the Surgeon General of the Confederacy was David Camden de Leon, also one of your own. Judah Touro gave $10,000, the first quarter of the cost of the Bunker Hill Monument, and he gave the old mill of the Norsemen at Newport to the people in the park which bears his name today. The name of Commodore Uriah Levy stands high in the annals of the United States Navy, for he abolished the practice of corporal punishment aboard our men-of-war and humanized the service on the sea. Judah P. Benjamin, a Yale man, served as United States Senator, as Secretary of three Departments of the Confederacy, and after the defeat of the South became a distinguished leader of the British bar. In the Civil War seven Jews were awarded the Congressional Medal of Honor. Fifteen Jewish sailors went down with the battleship *Maine*. The first man to fall in the Battle of Manila in the Spanish-American War was Sgt. Maurice Joost, a Jew. What reader of the history of the First World War does not thrill to the exploits of Sgt. Benjamin Kaufman, Sgt. Sydney Gumpertz, Corp. Barney Salner, Sgt. William Shemin, Corp. Hyman Silverman, and many others, not to forget the immortal Sam Dreben. It seems only yesterday that Irving Strobing sent the last message from heroic Corregidor; that we heard of Pvt. Harry Cohen in the advance on Oran; of Corp. Barney Ross, United States Marine Corps; of Pvt. Hyman Epstein on Sanananda; of Master Sgt. Meyer Levine, Lt. Norman Segal, Maj. Carl Lichter, Capt. George Laven, Jr., Lt. Comdr. Samuel Isquith, Lt. Comdr. Solomon Isquith, General Rose, and our own Sgt. Stanley Fishman.

There are many other names on the scroll of honor in the war just past, names that will live forever in the radiance of courage and honor and faith. Because of their gallantry, because of their sacrifices, this house of God is safe in an American city. Because of them we may gather without fear. In these harrowing times, when the world is torn by strife and distrust, we, the living, must bear the torch our heroes have lighted above the angry flood. We must bear it high, forever conscious of the responsibilities they have bequeathed to us. We must guard, first of all, the democratic doctrine in whose name they laid down their lives; we must never rest so long as a single man is in chains anywhere in the world; we must feed the hungry and clothe the naked, care for the widow and the orphan and he who has borne the battle; if we do not do these things we betray the trust these men had in a living nation. We do not seek war. We seek peace. The rolls of the dead, the ruined cities, the blasted lives, the crippled, the diseased, the agonies of civil war are enough to convince us of the futility of armed conflict. The price is too great. You cannot bargain with the gods of war. Today we are a free and a proud people. We must not be misled by demagogues or false prophets. We shall not mortgage the future and the future of our children. But we must be alert to the needs of the moment. We must realize that the United States, willingly or unwillingly, is the leader of the democratic world. We would not impose our philosophy of government on any man, but we cannot stand idly by when we see a foreign "ism" clamped about his neck without his just consent. From every corner of the world the friends of individual freedom are looking toward Washington for guidance and help. Can we turn a deaf ear to those pleas? Can we deny a helping hand to the little men and little women who kept, and who still keep, the

light of freedom burning in their hearts because of their faith in the power of the United States? Can we turn away from the nameless children who wander the face of the earth weeping for the parents they have never known? The boys who died in the far islands of the Pacific and at the very gates of the torture camps of Europe should give us that answer. That answer can be found in the graves of a hundred cemeteries marked with the Cross and the Star of David. That answer can be found in the hearts of those who suffered and were oppressed. That answer can be found in the soul of a living America. The weeping that assailed the silent sky above the burning ghettos shall be heard. The very stones of the temples and synagogues cry out for justice. The sacred parchments that were crushed beneath the boots of the SS will burn their eternal messages into the minds of all who know and who love the truth. The God of Moses led the Israelites through the wilderness because they believed in Him and obeyed His commands. The Commandments, which came down from Mount Sinai, are the laws of life for Christian and Jew alike for you and for me. If anyone today repeats the query of Cain, "Am I my brother's keeper?" he may find the answer in the American way of life, in the course that America shall take in the coming months. Our motives in peace as in war are challenged and misunderstood. Even our charity is twisted into an ugly thing. But if we go forward together, each respecting his brother, each praying in his own way, each one acting in justice and in mercy, we cannot fail, we must not fail, for we are the hope of those who have no hope, and in our triumph shall all mankind live and prosper in peace.

Address of Franklin D. Roosevelt, Jr.

EXTENSION OF REMARKS
OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. SMATHERS. Mr. Speaker, at the national convention of the Young Democrats in Cleveland last Thursday, I had the privilege and the honor of appearing on the same platform with several of my distinguished colleagues here in the House of Representatives and Franklin D. Roosevelt, Jr., of New York. Mr. Roosevelt was the keynote speaker of the convention. His message to the convention was realistic, affirmative, and bold. It was in keeping with the liberal traditions of the Democratic Party as had previously been so well enunciated by the speaker's father, the late and great Franklin Delano Roosevelt.

Under leave to extend my remarks, I include herewith a copy of the speech made by Franklin D. Roosevelt, Jr., to the national convention of Young Democratic Clubs:

I am happy to be here at this first postwar convention of the Young Democrats. You will forgive me if I dispense with the usual platitudes of convention oratory. The times are too critical for that. In 4 days Congress will be reassembling in emergency session at the call of our President. That special session of Congress may well determine whether democracy is to survive in western Europe and whether the present inflationary boom is to be followed by an inevitable collapse. Depression or prosperity, peace or war, those will be the real issues underlying the decisions Congress will be called upon to make.

I know that I echo your sentiments when I congratulate the President for casting aside political considerations and calling back Congress to deal with the grim realities confronting postwar America. It is our job as young Democrats to rally the young men and women of this country to support the bold, far-reaching measures that alone now can save the situation.

We Democrats say to the young men and women of our country: The rifle was the weapon with which you won the war; the ballot is the weapon with which you must win the peace. There is too much at stake for you to allow politics to be the monopoly of the politicians. Whether it is hot lunches for your children at school, or the price of your groceries, or whether that uniform is to be kept in moth balls—whether it is a house to live in, a decent job to work at, or security in the ownership of your farm—all of these issues are political issues. The failure to vote is in itself a form of voting: the failure to vote is actually a vote cast for the enemies of the people.

We say to the young voters of the country: register; study the issues; scrutinize the candidates. We are confident that if you do these things when you cast your vote it will be a Democratic vote.

I urge the young men and women of America to come into the Democratic Party. Join one of our political clubs. Participate in the activities of those clubs. It is in the political clubs that these nominations are made. It is in the political clubs that issues are crystallized. The citizen who limits his electoral activities to voting on election day is in the position of voting for a candidate other men have chosen and making a decision about issues that have been framed by other people.

Great challenges confront our country—challenges such as the harnessing of our mighty powers of production to the use and higher standard of living of all the people, not just increasing the most fabulous corporate profits in history, which are even embarrassing to the economic overlords of Wall Street; constructive utilization of atomic energy, the implementation of the President's civil rights program, the enactment into legislation of the economic bill of rights, the building of one world. These issues will be shaped and fought out in the political arena. What nobler or more satisfying vocation can there be than to help resolve these challenges in a way that advances all mankind further along the road of liberty, equality and economic security and peace.

The Democratic Party is the party of youth. The great social advances of the last 15 years were initiated by the Democratic Party and enacted into legislation only over the bitter resistance of the Republicans. We take pride that the CCC and the NYA were Democratic achievements. The Democratic youth programs restored to millions of our young people a sense of self-respect. They provided them with technical skills. They built up and strengthened their health. None of these measures was instituted as a preparation for war and yet they had a good deal to do with the superb army, navy, and air force our country put into the field when war came. It was Democratic leadership that provided for the veteran GI bill of rights, job training, education, veterans' housing, such as it is.

In a world in which no nation is disarming, America has to remain strong militarily and I, for one, want to go on record here and now in favor of universal military training. But we must always remember that military might is insufficient by itself. That is why universal training must embrace more than the manual of arms; it must be a school of citizenship, advancing men on the road to maturity and democratic responsibility, full employment, the opportunity for education, freedom from discrimination because of race, creed, and color—all of these things and many others are embraced in the unity which constitutes the Nation's strength and vitality.

To the youth of this country the Democratic Party offers a philosophy—a philosophy which fundamentally is based on a belief in the dignity and rightness of free men and on the conviction that human rights come before property rights. Because of this convicton, the Democratc Party believes that economic policy should be concerned primarily with the millions of workers, farmers, and small businessmen at the base of the economic pyramid, who when they are well off and prosperous the country as a whole is well off and prosperous. The political corollary of this philosophy is that in the long run the majority of the people can be relied upon to make the right decisions, to make the decisions that work out best for the common good. It is a faith in the majority as distinguished from the conservatives' belief that a small aristocracy of either education, wealth, or birth alone has the wisdom and judgment to exercise political and economic control. It is a faith in the average man and represents the tradition of Jefferson, Jackson, Wilson, and Roosevelt.

When the Republican congressional leadership cooperated with the NAM and big business to end price controls in June 1946, they were expressing the opposite philosophy—that what is good for big business is good for the Nation. There can be no doubt that the ending of controls has given big business the biggest profits in history. But for most Americans it has meant a reduction in their standard of living, and for the country as a whole it has meant inflation.

When Senator BRICKER at a Republican conference on rent control declared that if the landlords were not taken care of through the relaxation of rent controls "it would not be the kind of Republican Party I am used to," he was again reflecting the Bourbon philosophy of the Republican Party. The Eightieth Congress, the first under Republican leadership since 1932, demonstrated that the Republican Party still remains the party of special interests, of the big-business plutocracy.

What a Roman holiday took place last winter when the special interests came back into Washington in the brief cases of the Republican majority: The trade-unions were the first to be thrown to the lions. Then they went after the farmers and attacked the soil-conservation program. Then they turned on the school-lunch program. Then they organized a little lynching party for rent control. Nothing was spared—public power and reclamation, the housing agencies, cooperatives—it was a sickening carnival of the greedy. Perhaps it is just as well, for it gave the people a preview of what might happen if the Republicans were to gain full control of our Government.

I want now to deal with the central question of our times—peace. The creation of a unified world that is free from tyranny and the threat of aggression is the greatest challenge that confronts our generation. The millions of Americans who served in the armed forces come home from the war wanting peace and wanting to get along with the peoples of all nations. Instead of one world, however, the postwar years have witnessed an ominous ending of wartime unity. Sometimes the air is so filled with international character assassination, in the Vishinsky manner, that we all get an uncomfortable feeling that we are only on a furlough.

We are a peace-loving generation. Our desire for peace, however, should not be con-

fused abroad with a lack of attachment to the traditions and institutions of our country. I do not know whether my words can get to my Soviet comrades-in-arms with whom we so recently fought shoulder to shoulder, but I think it is appropriate for me to say today on this platform before a convention of young people of the political party which for the last 15 years has been identified with a policy of cooperation with the Soviet Union, that cooperation is a two-way street, that we are as strongly attached to our form of government as the Soviet young people are to theirs; that we resent foreign slurs on our leaders as much as they do on theirs, and that we don't like to be pushed around.

Americans know that we cannot have one world exclusively in the image of capitalist America. But neither can it be exclusively in the image of Communist Russia. We favor a policy that will allow the peoples of all nations to determine for themselves their form of government and economic system free from the domination and intervention of strong neighbors. The big problem in international relations today is that of finding a basis by which different economic and political systems can get along together. Is the Soviet Union prepared sincerely to accept such a cooperative concept as a starting point? I say to the leader of Russia this is the key:

1. Good faith of your given word.
2. Sincerity of your objectives.
3. Honesty of the conscience of your government.

I do not wish to be misunderstood. The supreme object of American statesmanship—and may I here pause to pay tribute to the great leadership of Secretary Marshall—I repeat, the supreme object of American statesmanship must continue to be the building of peace and not preparation for war. But until the Soviet Government is convinced of the folly of its present two-world policy, America must remain itself militarily strong; it must strengthen its sister democracies; it must give full support to the United Nations.

In a few days Congress, on the call of President Truman, will be back in Washington to deal with the interlocking problems of inflation and foreign aid. It is important that this representative gathering here assure the President of our support for generous, unstinting, and rapid aid to Europe.

The economy-minded Republicans may try to pervert the Marshall plan into a global dole. But we cannot haggle over the price of peace. Aid to Europe should not only be for the purpose of relieving hunger and misery, its object must be to restore and rehabilitate the European economy as a whole. It must be a cure and not merely a palliative. It must provide capital, equipment, know-how, technicians. We must give Europe the tools by which they can begin to produce themselves. We must give aid without strings attached to such aid. Our aim is the restoration of free, independent nations. We cannot and must not dictate to peoples their forms of government.

The survival of democracy and the peace of the world are now dependent on the scope and speed of our aid. I reject the argument that large-scale help to Europe will stimulate shortages at home and inflation. During the war we equipped and supplied vast armies in the field and at the same time, raised the standard of living at home. We can accomplish the same thing now without reverting to the over-all system of controls enforced during the war. A limited allocation and control program will curb the inflationary boom and, at the same time, enable us to meet our international obligations.

One thing is clear: the American people will not allow this special session to bog down in politics as usual. It is regrettable that Senator TAFT saw fit to turn down Senator MCGRATH'S offer of a political truce during the special session of Congress. I want to remind Mr. TAFT that time and again, before and during the war, when the Republicans subordinated the defense and foreign policy of this country to political considerations their leadership was overwhelmingly rejected by the voters. The crisis today is as great as it was in the days before Pearl Harbor. There are Republican leaders who placing country before party have ably and generously cooperated in hewing out a bipartisan postwar foreign policy behind which our country has been united. We hope that their mature judgment will prevail over a Republican congressional leadership that still dallies with the remnants of isolationism in the form of a TAFT dribble.

My father, in a speech to the young Democrats of America, said that the age of geographical pioneering has finished, but that the period of social pioneering has just begun. He enlisted the country, and particularly the youth of our country, in a great crusade against social injustice. That crusade goes on. With the New Deal, Nation-wide thinking was brought to bear on the great social and economic problems of our time and the principle was firmly established and approved time and again by the voters, at the polls that in the campaign against social and economic inequality the full powers of Government should be used, but used in a way that would not impair civil and political liberties. The New Deal provided no final answers to many of the problems it dealt with They are the problems to which we must address ourselves. They are the challenge to our generation. I know that you will join with me in saying, "We accept the challenge."

Letter of Charles W. Layne, M. D., of Newburgh, N. Y.

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday November 18, 1947

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following letter which I received from Charles W. Layne, M. D., 246 Grand Street, Newburgh, N. Y., on the legislative problems before the Congress:

NEWBURGH, N. Y., *November 14, 1947.*
MRS. KATHARINE B. ST. GEORGE,
United States House of Representatives, Washington, D. C.

DEAR MRS. ST. GEORGE: You are about to convene an extraordinary session of Congress for two purposes, (1) to combat inflation, and (2) to do something about the Marshall plan. These two objectives are completely antithetical; it is absolutely impossible to do both. If you foster the Marshall plan you are going to increase inflation; if you do something to impede inflation you must discard the Marshall plan.

To my mind, we need some legislators who will repeal and repeal and repeal and undo many of the things which have been done since 1933, thereby allowing the American people to get back to some sane economy. Our purpose should be to make ourselves strong instead of trying to have more and more regulations and give away more and more money.

Sincerely yours,

C. W. LAYNE.

Sermon Delivered During Dedicatory Exercises of Merrimack College, Andover, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following excellent sermon which was delivered by Rev. Cornelius T. H. Sherlock, diocesan superintendent of schools, Boston, Mass., during the dedicatory exercises of Merrimack College, Andover, Mass., on Monday, September 22, 1947:

Your Excellency, Most Reverend Archbishop, Right Reverend and Very Reverend Monsignors, Very Reverend and Reverend Fathers, Fsteemed Brothers, Reverend Sisters, honored guests, students of Merrimack College, friends, this is an historic occasion. We are gathered here this morning in the Church of St. Augustine to assist at the beginning of a most important institution. The ceremony in which we are taking part shows forth generations of Christian leaders in a world in need, a succession of Catholic trained men and women whose power in a world in crisis may well be immeasurable. To be present at this beginning of Merrimack College is a matter for self-congratulation but it is, as well, an occasion for serious prayer.

I should be most remiss in my duty toward the truth were I to fail to pay tribute to those who inspired and made possible this momentous undertaking.

From a host of good works that have characterized these first 3 years of the administration of Archbishop Cushing there emerges an unmistakable pattern of predominant concern, his consuming interest in the problems of youth. This interest has been recognized at higher levels of education and administration and it was but natural that the bishops should choose him as the one most fitted to be the bishop-leader of youth work in the Nation. To his more than substantial encouragement of the Catholic schools of the archdiocese I am, by my position, the most happy witness. His encouragement to those in educational work is their anchor in difficulty and their power in progress. It was His Excellency's fatherly love for boys and girls and his strong consciousness of the need for articulate Catholic leaders in all walks of life that made him the enthusiastic sponsor of this newest college in the archdiocese of Boston. The clergy and the faithful of this area are most grateful for the gift of a supremely generous and inspiring patron of Catholic education.

This adventure in the field of college training is in peculiarly capable hands. The Order of St. Augustine is one of the oldest religious institutions in the church. It traces its origin back to the great St. Augustine himself and finds its foundations already laid down at the beginning of the fourth century. Its development into a more coherent institute was a matter of a relatively short time. Its survival as a pulsating and vibrant influence in the world of today indicates a vitality and flexibility at once sound in a great religious tradition, and realistic and adaptable in a world of many changes. Time and again its members have suffered at the hands of their enemies and at certain times have been apparently overwhelmed by the vicissitudes of national and world history,

but when the storms subsided they reappeared with a power and energy that was amazing.

The fathers of St. Augustine took an important and honorable part in the exploration and Christianizing of this country. Over 400 years ago we find their names among the heroic Christian teachers of early America. Their story here has been one of continued godly educational work and the ceremony of this morning simply marks the latest episode of their long and glorious history.

It is the function of education to provide for the student all that is necessary to make his life a success. If education does not provide the equipment necessary for successful living then it has failed. But education for successful living assumes that there are certain objectives to be reached. What are these purposes of education?

The philosophers of learning have grouped educational objectives into several classes. It is an obvious purpose of education to develop the student, to train and encourage the realization of himself so that the qualities of soul and body, the powers and skills that are within him, may grow and develop to the limits of his capacity. Certainly self-realization is a valid objective of education. The student will be living in a world of human beings with rights and obligations like his own. His education must help him to live socially among his neighbors. He must, as the saying is, adjust well to an exacting and varying society. He must attain the reasonable objectives of human relationships. He lives in a land where democratic ways are encouraged and civic duties are numerous. That education would be much at fault were it not to train him for his civic responsibilities. He must live in a competitive environment and he must earn his living by his own abilities. Inadequate, indeed, would be the education that would fail to help him to economic competency.

But in the face of these briefly suggested aims of education it is only too true that a man may succeed as a doctor, or a merchant, a lawyer or a politician and yet fail as a man. A woman may be renowned as an artist or executive and, in reality, be still a failure. The objectives set had been realized in a successful career but the successful career is not an end in itself. These so-called objectives are but means to an end. The true and ultimate end of man is the realization of a supernatural destiny.

When God made boys and girls he gave them no transitory goal. He made them for Himself and the lisping child learned at his mother's knee that to gain the whole world and to suffer the loss of his soul was failure. The scholarly St. Basil, many centuries ago, in his address to young men on the right use of Greek literature, stressed the point in these words: "We Christians, young men, hold that this life is not a supremely precious thing. * * * Neither pride of ancestry, nor bodily strength, nor beauty, nor greatness, nor the esteem of all men, nor kingly authority, nor indeed whatever of human affairs may be called great, do we consider worthy of desire, or the possessors of them objects of envy; but we place our hopes upon the things that are beyond, and in preparation for the life eternal do we all things that we do." The great saint would have his students study all things, prepare for all the demands of successful living, but he set a scale of values that gave all things their just measurement, their exact position in the hierarchy of good, places beneath the ultimate objective of man's creation, the fulfillment of God's will and his own eternal happiness. Yes, indeed, even here on earth, as we realize the temporal objectives of education, "in preparation for the life eternal do we all things that we do."

This, in reality, is the admired integration of Catholic education where all subjects are studies and all successes are attained only in the light of a supernatural destiny.

A few educators and many noneducators feel that religious subjects, introduced into a teaching curriculum, which is otherwise secular, can supply the acknowledged need for religious education. This the Catholic college must deny. It is necessary that every subject, nay, every learning situation should be permeated by Catholic thinking and Christian attitudes. To use the words of the Holy Father, Pope Pius XI, "* * * It is necessary that all the teaching and the whole organization of the school, and its teachers, syllabus, and textbooks in every branch, be regulated by the Christian spirit, and under the direction and maternal supervision of the church; so that religion may be in very truth the foundation and the crown of the youth's entire training, and this in every grade of school, not only in the elementary but in the intermediate and higher institutions as well."

And so it is in the Catholic college that every subject, whether it be history or literature, biology or mathematics, is approached from a Catholic viewpoint, and taught in an atmosphere pervaded by Christlike attitudes and Christian thought. It is this we have primarily in mind when we describe Catholic college education. This is an education that is right, and a right education cannot fail. An individual student may now and then fail to profit by this education, but the failure must be attributed to some other cause than the system in which he failed. A right education cannot fail.

This is the education that trains for true success in life. It prepares men and women to succeed in temporal things only that they may devote themselves more freely to the art of living, the art of living fully now and richly for all eternity.

The school, even at the college level, is acting as the agent of the parent. By the nature of things the family is the natural learning situation for the youth. But the demands of a complex society make imperative the engaging of competent aids in the adequate instruction of students. American Catholic parents long ago committed themselves to an expensive and exacting program of Catholic schools and colleges on the general assumption that they wanted their children trained in schools whose scope of program was broad, and whose aims were long in range. It appeared to these Catholic parents that schools that left God out of their curriculum or who, at best, placed God and things religious in a subordinate place, gave children and youth a distorted view of the truth. Such programs indicated too clearly to the student that spiritual values and eternal verities were of slight importance in the world of the educated man or woman. Such distortion in learning by the child meant only one thing to the Catholic parent and that one thing was failure of the child in the art of successful living.

Catholic parents would not brook failure in the lives of their children, so they presented the only answer they knew—a vast system of Catholic schools and Catholic colleges and universities. Thus they supplied an education at once broad and far reaching, while at the same time it was beautifully unified and integrated by an all-pervading spirit of religion. In their own tongue they repeated the well-known thought of the patron saint of this college, "Let every good and true Christian know that wherever he may find the truth, it belongs to the Lord."

We live in a world of devices and techniques. They have their importance and we should be lost without them. But they will not save education in a distraught world. For many years now education has been buffetted about in a tempest of relativity, a storm of shifting winds, or arbitrary and constantly changing values. Certain values, transcendent and unchanging must again be secured, permanent and inviolate.

St. Augustine, in his turbulent youth, had loosed his hold on God's eternal truths. He lived in his life a philosophy of convenience and of pleasure. Through the windly insights of the benign Ambrose he found his way back again to the secure and permanent values of God. And turning his back on the shifting glitter of the city of man, he wrote his great work the City of God. There is an analogy in this figure applicable to our situation here today. These students must prepare themselves to live in the cities of men. The distracting glitter and the unstable values of synthetic cities can be both dangerous and pitiful. However, because of the education they will have received here at Merrimack College, they will be prepared for successful living. They will not close their eyes to the realities of the world, but they will face these realities through the lasting vision of the city of God.

This type of education is a tremendous gift. These students, during the next 4 years, will receive much from Merrimack College, more than ordinary mortals may rationally hope to receive. They will be the selected beneficiaries of an education established at the cost of great effort and serious sacrifice. Such munificence, such generosity on the part of those who made this education possible, imposes obligations on the students who enjoy these collegiate benefits.

The world can reasonably expect that they will be leaders in their own communities and in their own spheres of activity. But the leadership they will exercise, like the education they shall have received, must transcend the present. It must lead others not only to temporal happiness but to the supernatural happiness of everlasting life. Of them it must be said that they profited much from what was offered here and that the world was better because of the influence they exerted as a result of their Catholic education at Merrimack College.

Constitutional Rights Denied to Voteless District of Columbia

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. AUCHINCLOSS. Mr. Speaker, in accordance with my unanimous-consent request, which was granted, I am very pleased to insert in the CONGRESSIONAL RECORD a copy of a speech about the present government of the District of Columbia, made by Mr. Philip L. Graham, publisher of the Washington Post, on the occasion of the New York Herald Tribune forum.

Mr. Graham paints an eloquent picture of the present chaotic condition in the District government and makes a very strong argument for reform and the establishment of home rule. His address follows:

The Constitution of the United States declares that "All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States." And it goes on to proclaim that "no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States."

Well, in the District of Columbia—the seat of the Federal Government—there are some 870,000 citizens whose privileges of citizenship have been very markedly abridged, not by any State but by the Federal Government itself.

They are denied the right of representation in the Legislature which frames their laws—a right defined by our founders in their Declaration of Independence as "inestimable to them and formidable to tyrants only."

They are even denied any semblance of local self-rule. Their municipal government, such as it is, consists of appointed proconsuls neither responsible nor responsive to their will.

Their dependency exceeds by far that of the people of Guam, Puerto Rico, or Samoa. Not even the forms of self-government allowed to the conquered Germans and Japanese are granted to the residents of Washington.

This situation has both practical and moral consequences for the people of the United States, as well as for the people of the District of Columbia.

Let us look first at its cost to the Nation. The La Follette-Monroney committee on the reorganization of Congress put it this way: "The Nation cannot afford the luxury of having its national legislative body * * * perform the duties of a city council for the District of Columbia."

Now, nominally, the government of the District consists of a Board of Commissioners of three members. But they are possessed of little real authority.

Actually the greatest control of Washington is held by the District Committees of the House and Senate, although they share substantial power with the District Appropriations Subcommittees of the two Houses. In addition, almost every other Federal official in town has something to say about District government. The President appoints various local officials. The Budget Bureau must approve local bills being submitted to the Congress. The Secretary of the Interior runs the park system and one of our five separate police forces. The Secretary of the Army runs half the city's water system while the District Commissioners run the other half. The Civil Service Commission, the Bureau of Standards, and some sixty-odd other boards and commissions all make contributions. About the only agencies that leave us alone are the International Pacific Salmon Fisheries Commission and the Alaska Rural Rehabilitation Corporation.

Let me offer an illustration of how the machinery of government operates in Washington. Let me show you how your Senators and Congressmen are forced to use their time because Washington has no local government. Some time ago the National Capital Park and Planning Commission, a Federal body, recommended the removal of two stone gate posts which constituted a traffic hazard in the side street running between the White House and the State Department. The District Commissioners were ready enough to accept the recommendation. But with them, to think is not promptly to act.

First it was necessary to secure the approval of the Federal Bureau of the Budget. Next a bill was introduced in the House and referred to the District Committee which, in the fullness of time, reported favorably. Then the full House pondered and finally passed the proposal.

The Senate, however, was still to be reckoned with. The Senate's District Committee first had to approve the measure. And finally came the day when the greatest deliberative body on earth set aside its consideration of universal military training, of peace treaties, and of other trivial undertakings to determine that the two stone gate posts should, indeed, be removed.

All that remained now was to speed the bill to the White House. At last the bulldozers could be put to work.

There is nothing singular about this rigamarole. The whole involved procedure must be gone through whenever the District needs a simple ordinance. The Seventy-eighth Congress, a wartime Congress, devoted time and attention to 57 separate District bills dealing with such matters as the sale of shad and herring, the disposal of dead human bodies, and the provision of butter for patients at St. Elizabeths Hospital.

You people of the 48 States send your Representative to Congress to deal with problems of significance. From your point of view, this absurd condition is frustrating your will by demoting your Senators and Congressmen to the level of city councilmen.

From the point of view of the people of the District of Columbia, the condition is altogether tragic.

It results inevitably in bad government. The crime statistics of Washington are truly shocking. During the first 6 months of this year, the Nation's Capital moved to the top of the list among cities of its population grouping in the number of cases of aggravated assault, burglary, and petty theft. Yet, there is very little that the citizens of the community can do about it. The Washington Post showed that not only was the crime rate appalling but that it was being concealed by false statistics and inadequate official reporting. But the Superintendent of Police is appointed by the Commissioners, who are themselves appointed by the President, and, therefore, have no fear of retribution at the polls. When a resolution was offered in the closing days of the last congressional session for an investigation of the Police Department, a single senatorial friend of the Police Superintendent succeeded in blocking it.

And that situation is typical. The people of the District have no control over local officials, none over the allocation of funds for operating local government, and none over the local taxes imposed upon them.

Congress has persistently refused to extend the District income tax to those thousands of Government employees who live in Washington, enjoy the facilities of the community, but claim permanent domicile elsewhere. Why? Because the people who claim permanent domicile elsewhere are supposed to be voters and constituents of Congressmen. The District is nobody's constituency.

The moral consequences are still more serious. The people of the District are not incapable of self-government. In point of fact, they comprise a higher percentage of college graduates and high-school graduates than any community in the country. And Government is their principal occupation. But the sorry truth is that there has descended upon them to some extent that apathy which is characteristic of dependent peoples everywhere. They tend to submit to absentee rule which is maintained by force majeure and to accept conditions which they seem unable to change.

Almost a year ago an unofficial plebiscite on self-government was held in Washington. The results showed to some degree a disappointing lack of enthusiasm for home rule. Although prior to the plebiscite all Washington newspapers put on a drive to get out the vote, the turnout was smaller than it should have been. And a considerable opposition to home rule was indicated. Although 84 percent of the voters recorded themselves in favor of representation in the Congress, only 70 percent voted for local self-government. Now, while this result shows a tendency to apathy about self-rule, 70 percent is after all an unambiguous majority. And before one gets too smug about Washington, remember that no other city has had so to test community support of self-government.

It must be admitted that there are shabbier reasons than mere apathy behind some of the opposition to home rule for Washington. It would be dishonest to avoid mention of them. In its culture, Washington is essentially a southern city. In the Capital City of the world's greatest democracy, formal racial segregation is extensively practiced. Undemocratic racial ideas work with multiplied force in the undemocratic atmosphere of a community deprived of the right of self-government. They work in a vicious circle. The lack of local government keeps the citizens from gaining any practical experience in working out racial adjustments on a local level. This begets a climate of ignorance and blind fear which in turn has led many white citizens to be willing to give up the franchise themselves rather than permit the Negro to vote.

After last year's plebiscite a study of the attitude of a cross-section of voters showed that only 1 percent of Negro voters opposed home rule, whereas over 40 percent of white voters opposed it. The fear of Negro domination of the government was the reason most frequently given for opposition to home rule. Yet further examination showed that this fear resulted largely from basic ignorance about the number of Negroes in the community. The 1940 census had found that 28 percent of Washington's population was Negro and subsequent studies of the population show that the percentage is still about the same. But one out of every three white residents wildly exaggerated the proportion of Negroes, and it is among those misinformed, fearing a Negro majority that does not exist, that the opposition to local suffrage is highest.

There is a saying in Washington that home rule is like the weather. There are signs, however, that this is now changing, that someone at last is going to do something about it. This summer a subcommittee of the House District Committee under a chairmanship of Congressman AUCHINCLOSS, of New Jersey, conducted extensive hearings on home rule and reorganization of District government. The subcommittee's report is now being prepared and we hope that it will recommend legislation establishing home rule.

A prompt end of the present situation must concern not only us in Washington but all of you who have a responsibility for its continuance. It concerns you for two reasons. First, in these times of important decisions, you cannot want your Senators and Congressmen to fritter away their energies passing local ordinances for Washington. And, finally, you cannot desire continuance of the mockery of our principles involved in holding the Capital City of this democracy in voteless bondage.

Markets—Managed or Free?

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. ROBERTSON. Mr. Speaker, on every side today we hear some reference to the competitive system, and it has long been an accepted principle of the United States Government to at least attempt the enforcement of laws against business enterprises of the trust character operating in restraint of trade.

Hon. Robert E. Freer, Commissioner of the Federal Trade Commission, recently delivered an address to the Purchasing Agents' Association of Denver, Colo., dealing with many phases of their work, including this particular phase.

His address follows:

It has been suggested that your organization would be interested in a discussion of recent Federal Trade Commission activities affecting pricing methods, particularly as these activities might relate to the economy of the intermountain territory.

At the outset it should be emphasized that the Federal Trade Commission is not seeking to enforce arbitrary methods of pricing, and is suggesting no formulae to replace any of the pricing practices, the legality of which has been questioned. Thus statements that the Commission seeks to enforce universal f. o. b. mill pricing or to set up local monopolies are simply without foundation.

The Commission has questioned the legality of a number of pricing systems in recent years—not on any new or strange legal theories, but because either they were the result of a combination to fix and maintain prices or were discriminatory under the Clayton Act, and its Robinson-Patman amendments.

The law is well settled that any combination or conspiracy to fix or maintain prices is illegal This is no new or strange theory. Under the ancient common law free markets in which the buyers participated in the price-making process were set up and obstructions to freedom of the market were prohibited. Whether physical or monopolistic in nature, such obstructions were forbidden.

Thus it was a public offense to forestall the market by purchasing commodities before they reached the market in order to resell them at higher prices in the free, open, and legitimate market.

It may interest you to know that, reflecting this traditional view, public markets at which produce is sold by farmers directly to consumers, frequently bear signs prohibiting price-fixing and stating that violations will be punished by fines as high as $50.

It was a public offense also to engross, or in modern parlance to "corner," a commodity in the market because this was regarded as an attempt to enhance prices and as a denial of equality between buyers and sellers. For similar reasons it was regarded as a public offense for a middleman to regrate or pyramid the cost between producer and consumer, the modern counterpart of which we have in our present so-called gray markets.

The rule was also developed at common law that a seller who entered business to serve the public generally must serve all comers at a reasonable price and without discrimination. The Clayton Antidiscrimination Act is a Federal recognition and restoration of that ancient common law rule modified somewhat to meet modern conditions. Our other antitrust statutes[1] are also designed to reach practices which have been recognized for centuries as inimical to the integrity of a free competitive market.

I wish to point out to you some of the cases of interest which the Commission has acted on in recent years. An order was entered against a group of manufacturers of crepe paper requiring them to cease and desist from employing by agreement a method of pricing which involved dividing the country into three large zones, within each of which customers of the same class paid the same delivered price, irrespective of the differing freight costs to customers. The Circuit Court of Appeals sustained the Commission's order, saying:

"One glance at the three-zone map for bulk crepe will show the artificiality of the zone structure and intention to obviate any natural advantage of location from price determination.

* * * * *

"We think the artificiality and arbitrariness of the zone structure is so apparent it cannot withstand the inference of agreement. The Commission evidently could not believe that Wisconsin companies would deprive themselves of the natural benefit of location in the Midwest and proximity to the West, over eastern competitors, were it not agreed that they would have equal chance for the eastern business, where most of the crepe paper manufacturers were located."[2]

Note particularly that the order of the Commission and the decision of the court were based squarely upon an agreement to employ the zone system of selling, and further that the court was impressed by the regional discrimination against the West inherent in the scheme.

In another recent case, the Commission entered an order requiring the manufacturers of milk and ice-cream cans to cease and desist from an agreement to employ what has been characterized as a freight-equalization system of pricing. By this method, each producer quoted an f. o. b. price at his factory and calculated delivered prices by adding the rail freight to destination. Where use of his own f. o. b. price, plus freight, amounted to more than the f. o. b. price of a competitor, plus freight to customer from the competitor's plant, the latter formula was used in quoting. In sustaining the Commission's order against collusive use of this practice, Judge Major of the seventh circuit court of appeals said:

"It is argued, perhaps correctly, that such a freight system had long been employed by industry so that members thereof might deliver their product at the same price. * * * Such being the case, the fact still remains that it was employed by petitioners for the purpose of fixing the delivered price of their product, and by such use price competition was eliminated, or at any rate seriously impaired. On the face of the situation, it taxes our credulity to believe, as argued, that petitioners employed this system without any agreement or plan among themselves."[3]

Still another similar proceeding involved what is known as the single basing-point method of pricing, whereby everyone in the industry quoted a price at a single point, and added freight to the customer's location. The Commission entered an order requiring the producers of malt to cease and desist from continuing this method by agreement, and, with Judge Major again writing the opinion, the circuit court sustained the Commission's order, saying:

"We are of the view that the Commission's findings that a price-fixing agreement existed must be accepted. Any other conclusion would do violence to common sense and the realities of the situation. The fact that petitioners utilized a system which enabled them to deliver malt at every point of destination at exactly the same price is a persuasive circumstance in itself."[4]

All of the above cases have been plain, old-fashioned price-fixing cases. In another series of cases the Commission and the courts have considered the legality of the so-called single-basing point system under the Clayton Act and without reference to conspiracy or agreement.

The producers of corn syrup employed a method of pricing known as Chicago plus, whereby a producer in Kansas City, for instance, sold to his customers in Kansas City by adding to the prevailing Chicago price the rail freight rate from Chicago to Kansas City. Thus, all bulk corn sirup was priced on the fiction that it was produced in and shipped from Chicago. The Supreme Court of the United States upheld the Commission's orders in these cases,[5] saying in the Staley case:

"In none of the markets in which respondents had a freight advantage over their Chicago competitors did respondents reduce their prices below those of their competitors. Instead, they met and followed their competitors' prices by prices rendered artificially high, by the inclusion of unearned freight proportioned to the amount by which their competitors' delivered costs exceeded their own.

"We cannot say that a seller acts in good faith when it chooses to adopt such a clearly discriminatory pricing system, at least where it has never attempted to set up a nondiscriminatory system, giving to purchasers, who have the natural advantage of proximity to its plant, the price advantages which they are entitled to expect over purchasers at a distance."[6]

To the extent that these orders may result in the elimination of "phantom freight" and reflection of territorial advantages to buyers located near factories remote from the old Chicago base, important savings to large geographical areas may be expected.

It is common knowledge that certain areas in the west and south have suffered from discriminations of the type I have mentioned, due to pricing of goods on the fiction that they have been produced and shipped from some eastern industrial center. It is not in my province to discuss the details of such matters which have not been investigated and considered by the Commission, so I cannot elaborate on this situation as it may affect Denver and the inter-mountain territory. But to illustrate the manner in which such artificial and discriminatory pricing methods may adversely affect the industrial development of a community, I would like to recall a situation which was developed in our investigations in the corn syrup industry. The largest producer in the industry had a plant at Chicago and another in Kansas City. Prices in Kansas City, even though they involved no actual freight charges, were calculated on the Chicago price, plus freight to Kansas City. A number of manufacturers of candy were located in and around Kansas City, and corn syrup constituted one of their principal raw materials. As far as price was concerned it made no difference whether they purchased from the plant in Kansas City, a plant in St. Louis, a plant in Chicago or a plant in Iowa. In any case, the price was Chicago plus freight. As was stated by the Supreme Court in affirming the Commission's order, the "phantom freight" differential in favor of the Chicago candy manufacturers placed them in a more favorable position, and several of the Kansas City manufacturers moved their factories to Chicago.

As a matter of interest to you, it was found in the corn products industry that shipments from Kansas City to Denver or Salt Lake involved 10 cents per hundred pounds of unearned or "phantom freight," this being the difference by which the actual shipping charge from Kansas City was lower than the freight rate from Chicago used in computing the Denver price.

To recapitulate: These proceedings which have involved the legality of methods of pricing have been squarely based on price-fixing conspiracy or upon price discriminations which injure competition and which cannot be justified by legitimate differences in the cost of manufacturing, selling, or shipping. No new or strange theories of law or economics have determined or affected these proceedings. The Commission is not seeking to confine industry to local territories or to prevent national distribution by any concern which can achieve such distribution without either entering an agreement on prices with its competitors or resorting to unjustifiable discrimination.

On this subject, I have recently read several speeches by a colleague of mine which constitute ringing defenses of what he calls administered prices, and in which he decries proceedings of the Antitrust Division of the Department of Justice and the Commission

as part of a game of "cops and robbers." He has proposed as a substitute for present methods of enforcement of the antitrust laws new legislation which in effect would grant immunity from action under the antitrust laws to industries which would get together and draw up a set of trade practice rules under the auspices of the Federal Trade Commission. There has been some favorable comment in the trade journals on this legislative proposal.

I appreciate that businessmen generally are the stanchest defenders of the system of freedom of economic enterprise under which this country has reached its present high standards. Yet for some reason they frequently fall for a proposal to "manage" that system, or the part of it in which they are most immediately concerned, through group action. Thus a group of wholesalers may become intensely irritated by what they feel to be the unfair practice on the part of manufacturers in selling direct to certain retailers, bypassing the wholesaler. The natural urge is to do something about it.

The Commission has had numerous cases of this sort in the past, where such groups have gotten together to pool their strength to do something about it by way of organized pressure on manufacturers to cease selling direct to retailers. I have no doubt that the men involved in these matters have been firm advocates of free competition and that it would have been impossible for most of them to have built up their businesses without resort to real competition. They would be the first to resent any organized group which tried to enforce rules of conduct upon them, yet apparently feel no inconsistency in maintaining a blacklist of manufacturers with whom they will not deal as the result of some real or fancied wrong.

The competition of the free market is in many respects a ruthless thing. A man may build a costly plant near his raw materials but distant from his markets. Discovery of raw materials nearer the market may ruin him unless the discoverer can be persuaded to price his product so that his advantageous location is equalized. This same thing may occur where any of the other factors, including new machinery or processes, research, or just plain American ingenuity throw an industry out of balance for a time, and give some producer advantages not enjoyed by others. From the standpoint of the businessman, the easiest thing to do is reach some understanding whereby the status quo is preserved and the man with the advantage forbears from translating it into lowered prices.

The temptation to soften the effects of competition is ever present in business—it is perfectly understandable that a man might resort to agreement with competitors to avoid failure. Perhaps you gentlemen are familiar with individual instances of such coerced or desperation agreements which you consider to be justified morally, ethically, and legally. However, can you visualize the remarkable industrial growth of this country under any system of private or governmental controls which would have removed the harsh realities of free and vigorous competition? Can you visualize the growth and development of our present automobile industry if it had been organized and run to keep in business the badly located, badly run or uneconomic producers whose bones lie along the trail?

What are the alternatives to free and fair competition? Only two present themselves to my mind. One is a system of industrial controls by business itself. The other is a similar system in which the responsibility is shared both by business and the Government. Now, to be realistic for a moment, do you gentlemen who are in industries in which for example, lumber, brick, cement, steel, or copper is a basic raw material really feel that you could substitute the absolute decision and judgment of a group of producers of such basic material for the forces of a free competitive market? Do you feel, at heart, that any group in such an industry is wise enough and unselfish enough to run the industry in the public interest so that it could be removed from the operations of the antitrust laws, or other control? Without meaning to cast any reflection upon the ability or the integrity of the basic material producers, I doubt seriously that you feel that they could be entrusted with such a responsibility, and, probably, you believe that in any case the end result of such assignment of responsibility must be to place some sort of check upon their actions, so that when their primary interest in the welfare of their stockholders might conflict with the larger public interest, the public will not suffer. The only check which can be used for this purpose is the Government itself, so that such a course must lead to divided responsibility for management of industry between industry and the Government, much as has been developed in the field of public-utility regulation.

When I spoke of the two alternatives above I was referring to the short-range prospects. It does not require any great stretch of the imagination to foresee, in the long run, that managed markets, either by businessmen themselves or by businessmen under Government supervision, must lead ultimately to a disappearance of any lines of demarcation between business and government and the development of the super state which will tell us all the whats, whens, whys, and hows of everything we do. It may seem strange to you that I should oppose a proposal which no doubt would convert the Commission from an agency with less than 600 employees to one of many thousands of high-powered accountants, economists, lawyers, investigators, consultants, and Lord only knows what else.

We had some experience with substitution for competition of Government-regulated industry controls during the NRA period. Entry into certain fields was restricted, as were additions to plant facilities. Production controls were formulated. Nearly every conceivable control to alleviate the distress of competition was tinkered with in one or the other of the codes. Pants pressers, filling-station operators, and even manufacturers who refused to conform to the rules laid down were hauled before the courts. A seller who deviated from the prices, terms, or conditions of sale filed with the code authority in order to secure a choice piece of business was a chiseler. What had in other times been normal individual rights and legitimate business practices suddenly became illegal.

I refuse to believe that American businessmen want to return to such a system of management and controls as a permanent, peacetime proposition, in spite of their grumbling at the imperfections of the free market in operation.

The sponsors of legislation to substitute a "rule of law" in industry and to supplant the present antitrust policy by one of self-imposed rules of conduct, deny that they propose a return to anything like the NRA codes. They urge that the proposals would not interfere with the Sherman Act and the Federal Trade Commission and Clayton Acts, and would instead serve as a cooperative means of enforcing the law without the necessity of prosecutions and orders to cease and desist. If this is really true, why then is it stated to be necessary to suspend the antitrust laws for those industries which meet and formulate rules? Present procedures of the Federal Trade Commission encourage any industry group to come in and draw a set of trade practice rules to eliminate unfair or deceptive practices which may be present, and to promote ethical and moral standards of conduct above and beyond the minimum standards necessary to "get by." The Commission has always avoided approving any rule which would promote conduct in violation of the antitrust laws, and the trade practice rules as now drawn do not give anyone immunity from the antitrust laws. Even the NRA codes purported to give lip service to the Sherman Act and exemptions from its operations were specific and narrow in scope under NRA.

I presume that under any such program as is proposed, trade practice rules would be concerned with the intimate details of industry operation. Anything less would defeat its own purpose. I question whether proponents of such a plan have thought the matter through to its logical end product which can only be complete and thorough government regulation. I am a Government official and I would be the first one to tell you that there is no single man or group of men in the Government service, or likely to be in the Government service within the next several hundred years, sufficiently wise and dispassionate to substitute his or their judgment for the "natural" regulation of a free market.

Furthermore, is it possible for us to maintain political freedom of action where our economic affairs are managed inside or outside the Government? In many countries in Europe economic freedom has been practically eliminated. A man may not open a grocery store where he pleases, or operating a grocery store, may not sell what he pleases. A baker must not make and sell a cookie containing more than a fixed percentage of sugar—a regulation no doubt inspired by the "righteous" ire of confectioners over inroads of bakers into their field. A host of similar controls could be cited. I doubt that a people subject to such minute regulation of their economic life can ever be said to be politically free. Our success in developing this Nation to its present pinnacle of living standards and personal and intellectual freedom can be attributed to our liberal capitalist system and to our insistence, through the courts and the forum of public opinion, upon the principles of the free market and the right of every man, subject to the basic rules of fair play, to risk his money or his time and effort in making a living.

The sum of the efforts of all of us is the free market, and it can never be controlled or managed successfully by any small group of men for more than an instant. Its rewards for success are munificent and its penalties for failure are harsh, but it is truly representative of all of us. The retail druggist in Kalamazoo, the wholesale grocer in Keokuk, the steel fabricator in Toledo—all of them make up the market, and it is by the collective judgment and experience of all of them that business moves up and down and ebbs and flows. Ten, a hundred, a thousand businessmen may be wrong about a decision at any one time, and many may fail as a result, but the cumulative effect on the market may be very slight. On the other hand, consider the effect of such an error by a Government official or a group of businessmen with the power of management of the market.

I would like to leave you with this one thought in parting: When you are urged to join in a movement to repeal the antitrust laws, to support a program of self-regulation for industry, or to foster managed markets, stop and ask yourself whether the immediate advantages urged upon you outweigh the prospective paternalism of a controlled economy wherein Government officials may have the responsibility for every important economic decision. Never forget that the American economic machine is the most unbelievably complicated organization that the world has ever seen—that its continued functioning depends upon the automatically interrelated operation of hundreds of thousands of working parts, any of which can affect its efficiency. Even the relatively simple proposition of setting ceiling prices during the wartime emergency required an organization of thousands upon thousands of employees

which could function very imperfectly since every action in setting a price at one point necessarily raised a host of other problems and complications at other points. During the NRA and during the war we had some experience with cooperative controls of the markets. We also have been able to observe the results of such controls in other countries. While some measures of control are doubtless necessary in periods of emergency, there is nothing in our experience with them which would make them attractive or recommend them to us as a steady diet.

The difficulty with controls is that no one has yet devised a system whereby the other fellow can be controlled to act 100 percent of the time in our benefit and where we ourselves can retain freedom of action.

Do not let the irritations, the discomforts, and the imperfections which are so obvious in the free competitive enterprise system blind you to the fact that it is the foundation stone upon which is built our American way of life.

Above and beyond passively resisting attempts to enlist him in movements to vitiate the antitrust laws, every citizen should work actively to preserve the American way of life and the free competitive system upon which it rests. You who are engaged directly and actively in business have even more of a direct stake than that of your citizenship, since the companies that you represent are the direct beneficiaries of the freedom of that system. Neither the Federal Trade Commission nor the Department of Justice would be able to enforce the antitrust laws against the active resistance of an unwilling and unsympathetic populace. In the last analysis, the effectiveness of the enforcement of the antitrust laws, or that of any other set of laws in our democracy, must depend upon your willingness to accept them as guiding principles in your daily actions, and to give them your active support in your daily business affairs.

Resolutions of Poweshiek County (Iowa) Farm Bureau

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. LECOMPTE. Mr. Speaker, the Poweshiek County (Iowa) Farm Bureau, at its annual meeting on November 8, 1947, adopted resolutions which are both timely and farsighted. In order that other Members of Congress may have the benefit of the views expressed, I include the following resolutions of the farm bureau organization:

1. We reaffirm our allegiance to the United States, the Department of Agriculture, the Extension Service, and the Iowa and American Farm Bureau Federations. We will cooperate with them to the fullest extent.

2. We pledge our whole-hearted support to the churches, schools, and all other organizations in the county working for community betterment.

3. We favor the support and full participation of the United States in the United Nations organization and the constructive programs of the Monetary Bank and the Food and Agriculture Organization.

4. We feel that a revision should be made of the present parity formula to include the cost of farm labor and modernizing it to become more equitable to the producers of all farm products.

5. We believe that under present conditions the control of production of our agricultural commodities is necessary so that the supply will be in line with the demand. We recommend that this program be continued and administered by locally elected farmer committeemen up to and including the state levels. We further recommend the continuance of Federal Commodity Loans and purchases, when necessary to maintain the prices of farm products.

6. We favor the 100-percent collection of the State income tax rather than higher property taxes.

7. We recommend that all income-producing property held by nonprofit organizations be taxed as other property.

8. We recommend that a more intensive State and Federal road improvement program be developed for the construction of all-weather secondary roads and demand that our State and Federal money be allocated on a need basis. We urge that county road building funds be more efficiently used and an extensive use of the district plan be made.

9. We favor top priority for available State aid to be given to the Agriculture Land Tax Credit Fund to make effective the 15-mill ceiling on property taxes for school purposes levied against farm land.

10. Since a number of the counties of the State now receive $5,000 county appropriation annually for extension work, while others like Poweshiek County receive only $3,000 annually, we recommend that legislation be enacted so that all counties will receive $5,000 annually.

11. We recommend the employment of a fulltime county nurse.

12. We recognize the valuable assistance rendered to agriculture by the Agricultural Extension Service, the Experiment Station, Iowa State College, and the United States Department of Agriculture.

13. The need of more soil conservation practices in Poweshiek County is becoming more evident each day. We recognize the value of the soil-conservation work as carried on by the Poweshiek County Soil Conservation District.

14. We endorse the Women's Family Living Program which emphasizes the home as a most important unit in developing cultural and economic education in our communities, which now are a vital part of world affairs.

15. We recognize the valuable training being given our rural youth through 4-H club work and vocational agriculture and homemaking schools. We feel that every rural boy and girl should have an opportunity for the training afforded by these programs.

16. We commend the Farm Service officers and manager and the general and special insurance agents for their work and the efficient operation of their groups.

17. The various cooperative associations in the county have made a successful and valuable contribution to agriculture. We pledge continued support and assistance to these organizations.

18. We recognize the value of the publicity and support which the papers of the county have given during the past year and express our appreciation to them for their fine cooperation.

Morrison Outlines Platform

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. MORRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from one of my constituents and my platform:

NOVEMBER 15, 1947.

Congressman JAMES H. MORRISON,
Washington, D. C.

DEAR JIMMY: I suppose you are going to be very busy in Washington with the special session. The campaign is coming along fine and you are a cinch to win.

The solid supporters of Huey Long are not going to vote for Earl Long because Earl Long doublecrossed Huey and tried to send Huey to the penitentiary. Then too, Earl couldn't win the last two times when he had the Old Regular support. Now he hasn't got the Old Regulars nor nearly as much support as the last time so he can't run any better than a poor third.

Looks like you are way out in front over Sam Jones. You may win in the first primary, but I feel sure you will defeat Sam badly if there is a second primary.

I want you to put your platform in the CONGRESSIONAL RECORD. You have done a wonderful job as a Congressman and I feel sure that you will make a good Governor. Your work in behalf of the farmers, particularly the rice, sugarcane, cotton, strawberry and sweetpotato farmers will bring you thousands of votes.

Being a veteran myself, I know of your work for thousands of veterans and they are really whooping it up for you.

Here's wishing you the best of luck and success.

Yours truly,

LOUIS OURSO.

To the People of the State of Louisiana:

The following is my platform: I firmly resolve to restore the government of the great State of Louisiana to the people, where it rightfully belongs. This means as Governor of Louisiana I will eliminate the control of the Jones-dictated incompetents and profiteers who for 8 years past have taken so much money from the people and given so little in return. There will be no compromise with the usurpers of the people's rights. I pledge myself to eliminate them from position and influence in our State government.

The following is the Jimmy Morrison ticket, composed of four present officeholders running for reelection, two veterans, and other outstanding individuals: James H. Morrison, for Governor; J. Y. Fontenot, for Lieutenant Governor; Lucille Mae Grace, for registrar of State land office; K. K. Kennedy, for attorney general; A. P. Tugwell, for State treasurer; John R. Jeter, for secretary of State; L. B. Baynard, for State auditor; John E. Coxe, for superintendent of public education; D. M. Riddle, for commissioner of agriculture.

LOCAL SELF-GOVERNMENT

I stand unequivocally for local self-government. This means that as Governor of Louisiana I will recognize the elected officials, whether they be municipal, parish, or State officers, and their duly constituted authority as given to them by their respective electorates. Let there be no misunderstanding on this point, to wit: JIMMY MORRISON is for local self-government.

ECONOMY IN STATE GOVERNMENT

I will recommend to the legislature an orderly and well-conceived plan for the economical operation of our State government and all its agencies, boards, and other instruments of government which exist in any manner by virtue of State support. This means I will guarantee a stop to the squandering of the tax money paid by the citizens of this State—and it also means that the people of this State will get a dollar's worth of service or material production for every tax dollar paid to the State. Attention is directed to the following indisputable fact that, since Sam Jones became Governor in

May 1940, the total revenues collected by the State have reached the staggering sum of $829,021,004.32, as of June 30, 1947. This means that the past two administrations have collected almost $10,000,000 per month from the taxpayers of this State. This is almost $300,000 a day that the past two administrations have collected and given the people absolutely nothing in return—the people want to know where has the money gone. No words need be added to these figures. They tell the appalling story of mismanagement, squandering, and financial abuse that has been forced upon the people of Louisiana. Over and above all indictments that the record plainly makes is the fact that for the past 8 years Louisiana has not enjoyed one single, solitary piece of advancement or achievement, except in the field of public education. No new institutions, no new roads, no new bridges, no new buildings—nothing of a permanent nature has been accomplished; yet, the burden of the taxpayer is greater than ever before. Revenue collections are beyond the dreams of the most optimistic, and all the money has been spent. Indeed it is in order to ask the administrators of this State for the past 8 years: What did you do with the millions upon millions you collected from the people for the past 8 years?

HIGHWAYS

I will build paved, concrete highways and other hard-surfaced roads. Louisiana, the once proud possessor of one of the finest systems of paved highways in the Southern States, now, after the past 8 years, lags far behind her sister States. The magnificent highways built prior to 8 years ago have been permitted to decay and fall into ruin without any surplus of dollars being set aside for the time when roads could be repaired. Highway planning has practically remained in the talk-stage with little, if any, results being evident for the past 8 years. I will propose to the legislature a program that eventually will provide hard-surfaced roads for the whole State and eliminate the dusty, expensive-to-maintain, and dangerous gravel, shell, and poorly-constructed roads that plague this State and destroy so much equipment and take so many lives. The latest Government statistics show that Louisiana stands third in the Nation in bonded indebtedness, surpassed only by California and New York, and stands second in the Nation in per capita debt, next to Arkansas. This is four times the average of all the other States and three times greater than that of Mississippi. There are few States in the Union, if any, that collect and bond and rebond and allot and reallot so much money for roads and get so little. Notwithstanding the huge sum of $199,419,772.60 that has been received by the Department of Highways during the last 7 years, no roads to speak of have been built or maintained. Those in the war-camp areas were reconstructed with a grant of $9,500,000 from the Federal Government.

I pledge the farmers and rural folks immediate action to give them roads and take them out of the muck and mire into which the last two administrations have forced them. At every session of the legislature farmers and rural folks have begged in vain for roads that have been promised them but never built, notwithstanding the all-time record collections of the taxpayers' dollars. I will appoint to the highway department men who know the State, men who desire to give Louisiana a fine network of roads, men who will be ever loyal to their trust, men who will give full value in return for every dollar spent. This policy will be a significant contrast to that pursued by the politicians who have operated the highway department during the past 8 years with such wanton disregard and open disrespect for the people of Louisiana.

I pledge the people of this State that I will provide for the construction of four-lane highways in and out of every major city in Louisiana. This all-important traffic artery has been promised and repromised and even provided for but never built. I also pledge our administration to widen every main highway in the State and to introduce safety controls on all our principal arteries of traffic. I promise to use the full power of the office of Governor of Louisiana to complete the long-talked-about and never completely accomplished New Orleans-Lakeshore Highway. I will do this when I am your governor, whereas all you have had has been promises, loss of life, destruction of property, inexcusable inconvenience, and no real construction worthy of mention. The completion of the great Lake Ponchartrain seawall from the Industrial Canal to the south shore has for 8 years been ignored. This is a vital and badly needed project. These improvements would place New Orleans on a comparable basis with Miami, Chicago, and New York. Wonderful recreational facilities would be provided our people during the long summer months, to say nothing of the protection in lives and property the seawall would provide. One of the main objectives of my administration will be the completion of this seawall. I further promise that I will construct substantial bridges over all rivers and streams throughout the State and to replace those that are inadequate and made practically useless by lack of care and attention.

EDUCATION

The great educational system of this State will be advanced and expanded to the fullest extent under my administration. The universities and colleges, the trade schools, the public-school system, the adult vocational activities, and every form of youth and adult education will have my deep and sincere interest. This means I will labor for constitutional dedication of sufficient revenues to guarantee that the present amount of State financial support will be maintained as a minimum in order that a long-time program may be undertaken without fear of curtailed revenues. It also means that I will increase the State public-school fund to meet the expanding educational needs of this State. I will provide better salaries for teachers. This State should and must guarantee a minimum salary of $2,000 for beginning qualified teachers, with annual increases for experience up to a minimum of $3,600. I will provide increased salaries for bus operators, janitors, maintenance and lunchroom workers, and other school employees, in order to insure a livable wage for these worthy people.

I will continue the development of a strong, diversified, and well-balanced program of vocational education to meet the needs of every community. This program will further the expansion of trade-school education and other adult vocational activities, including community canning and service centers. Standards for living for many of our people must be lifted and economic independence encouraged for all. I will foster and expand our veterans' training program so as to vocationally equip our former service men and women through the best possible farm training and training on the job in trades and industries. I will provide adequate college housing facilities for all veterans desiring a higher education. I will uphold and strengthen the teacher-benefit laws providing for retirement, tenure, sick, and sabbatical leave.

I will assure every child a free school lunch and means of transportation to and from schools, and I will guarantee a substantial lunch that will be good, wholesome, and nutritious. Not only my knowledge of State affairs but also my activities as a United States Congressman in helping to secure additional funds for the lunch program give me a clear insight into the needs of our school-lunch program. I hold a deep and abiding interest in our youth and pledge to them and their parents the full power of my administration in their advancement. It is no longer enough to be able to read and write; it is our responsibility to give every child of our State a high-school education.

I favor the establishment of a veterinary school at Louisiana State University.

VETERANS

There are over 300,000 veterans in this State, and I pledge to these great and honored men and women the support and recognition to which they are so justly entitled. This means that I will, to the extent of the power of the office of Governor of this great State, give preference to veterans in employment and aid their cause whenever possible. I propose to reorganize the department of veterans' affairs. This department will be completely nonpolitical, and only competent personnel will be employed. In selecting the head of this branch of our State government, I will accept nominations from various veterans' organizations. I propose to appropriate from the general revenue of the State a veterans' aid fund of $2,500,000 to be used for relief purposes. The amount of $500,000 will be dedicated to the immediate relief, during my term of office, of indigent and helpless veterans. The remaining $2,000,000 will be securely invested and held in trust, the revenue from which will create a lifetime fund to carry on the relief work of this department. All veterans of the State of Louisiana will be eligible to obtain assistance from this department. Those requiring food, clothing, medical aid, funeral expenses for dependents, or any other immediate relief may apply through the department's nearest local service officer. Widows of veterans and dependent children under 18 will be eligible. The veterans applying for relief through this department will be first checked to determine whether other forms of relief, such as Federal, State, parish, or local are due applicant. If these are unavailable or inadequate for the emergency, this department will grant the claim at once. If the emergency should exist for more than 3 months, permanent methods of rehabilitation will be provided. Supervision will be provided to insure that the allowance will be spent for actual necessities. The cash amount to be given to any veteran will be determined by the circumstances involved in each individual case. The service officers of the various veterans' organizations will be called on to investigate and prepare claims, thus permitting a needy veteran to deal wtih a fellow serviceman familiar with his circumstances, who knows local conditions and can fairly estimate the amount required to meet the emergency. I also propose to furnish rent-free quarters for veterans and their families living in Federal veteran-housing projects located on the grounds of State institutions and attending school.

State soldiers' bonus

I favor a State soldiers' bonus for World War I and World War II veterans.

CIVIL SERVICE AND RETIREMENT

I favor the merit system in the operation of our State government. It will be my position that the civil service of this State shall be fairly and objectively operated so as to give security to those who need protection. Favoritism, such as has been evidenced in the operation of this program thus far, will not be permitted to creep into the just administration of the civil service when I am Governor. Under my administration, I pledge that no employee of the State government shall be subject to political domination and pressure, such as now exists. The people of this State do not want civil service to be used as a club in behalf of any political faction.

I further pledge my support of the State retirement plan for State employees. I shall view favorably the extension of the retirement plan to include city and parish employees.

OLD AGE AND SICK BENEFITS

I will remove from the old-age pension program all its presently humiliating requirements. I pledge myself never to traffic in politics with the old-age pension plan. To do this is, to my mind, the lowest form of political chicanery conceivable. No person qualified for a pension ever will have to subject himself, or herself, to indignities and humiliations in order to receive that which the Federal and State governments have provided. My knowledge of this all-important subject, gained as a United States Congressman, gives me a comprehensive insight into this essential social problem. I will bring the old-age pensions back to what they were before the advent of our present "class" government. I will do my utmost to raise the level of pay to $50 per month for those who are 60 or over. We have an obligation to those who have served honorably in life when they reach 60 years of age. And, too, we must and shall protect and provide for those who are struck down by mental or physical disabilities. I will provide proper benefits for all who become disabled, regardless of age. This covers complete State assistance to those of our citizens who are indigent, blind, or otherwise incapacitated. I will forever advocate help to the aged and sick in a worthwhile way.

Fifty dollars per month pension

I favor a $50 per month old age pension for every citizen of Louisiana over the age of 60.

HOSPITAL AND HEALTH SERVICES

I promise to develop a measure of financial security for the continued operation of those hospitals throughout the State that are operated with public funds. I firmly resolve that as Governor of Louisiana there shall never occur, as has happened during the past 8 years, any suspension of the fundamental functions of our public hospitals. I propose, upon taking office, to have a complete and exhaustive survey of the entire State program of hospitalization made and to recommend to the legislature that sufficient funds be provided for the full 12-month, 24-hour-a-day operation of the State-owned hospitals. This means, in short, that the needy and unfortunate who are ill shall never suffer for lack of adequate hospital facilities as long as JIMMY MORRISON is Governor of Louisiana. I also propose that, where no public hospitals are available, the State will construct receiving stations for the temporary alleviation of human suffering until the patients can be transported to the hospitals. I will provide, particularly for the rural areas, free ambulance service to the hospitals. I will also provide mobile dental clinics to serve those of our citizens in the rural sections of Louisiana. The health standards of our people must be raised. It is folly, indeed, to construct and equip massive hospitals and then, through mismanagement and misdirection, allow these institutions to fail in their service to the public.

The utter lack of concern by the past two administrations for the unfortunate sufferers of tuberculosis is a blot upon the State of Louisiana. The State should promptly proceed to construct, in a desirable location, a hospital of sufficient size for the treatment of these cases. To this end I will advocate that the legislature promptly provide the means for the establishment of such a hospital for sufferers from tuberculosis. Adequate funds will also be provided for all State-operated hospitals to enable them to diagnose and treat all persons afflicted with cancer.

PROGRAMS FOR OUR INSTITUTIONS

The treatment of the mentally afflicted in our State institutions stands as an everlasting indictment against all who hold the power to correct this terrible situation. I guarantee to provide complete care, in keeping with the best medical standards, for the mentally ill people of this State. We should hang our heads in shame at the treatment that has been afforded these unfortunates. I propose to furnish clean and comfortable quarters to these people and to provide an adequate medical staff, properly trained, for the difficult task of treating psychopathic patients. The prime objective of this service will be to return patients to normal life. Those who are incurable will be made as comfortable and happy as possible.

PENAL INSTITUTIONS

The institutions of punishment of the State have too long been political footballs. I shall have all penal institutions studied and shall inaugurate a practical, humane, and orderly policy for their operation. I shall have the most modern and advanced methods applied to all places where offenders are housed. Too little thought is given to rebuilding and restoring these people to society. I shall do my utmost to have the most competent people available accept the responsibility of operation of our penal institutions and I shall demand of them a supreme effort for the betterment and rehabilitation of the inmates.

Our reform schools, as they have operated in the past, have fallen far short of their opportunity. These schools at present are making practically no contribution to the reformation of the unfortunate girls and boys assigned to them for rehabilitation. In many instances they have had bad habits and wrong ideals fastened upon them instead of having their mental and moral attitudes improved. The approach to this important social problem has been misdirected in that the program has been handled as one of criminal punishment rather than educational rehabilitation. The State department of institutions is not the proper guardian for these children who have been denied the benefits of proper home training. What these children need is the guiding hand of well-trained and sympathetic men and women teachers. The State supervision of this work should be removed from the State department of institutions and placed under the State department of education, where it will be administered in a professional and sympathetic manner. When I am Governor, I pledge myself to work in behalf of this improvement in the training of our juvenile delinquents.

PROTECTION AGAINST STORMS, FLOODS, ETC.

I will sponsor legislation that will provide safeguards against the heavy toll in lives and property which has been taken all too often by nature in the form of storms, floods, etc. Pitiful, indeed, is it that our fellow citizens and their loved ones should be wiped out, as has occurred so recently in south Louisiana, particularly in Jefferson Parish. I shall not merely indulge in lip service. To the contrary, I firmly promise the people in areas exposed to these hazards that the great State of Louisiana will carry out its obligations to provide for their safety, their lives, and their property. The forces of nature can defeat the resistance of man, but, when man through his power of government fails to construct ordinary safeguards, then it can truly be said that the Government, because of poor leadership, has failed to do its duty. I will ask the legislature to grant such powers as will enable me to send immediate assistance to the sufferers in such grave emergencies.

YOUTH PROGRAM AND STATE PARKS

This State has a great obligation to its youth. The proper safeguards must be thrown around our young people. I intend to inaugurate a youth program on a large scale. I shall entrust this task to trained men and women and do my utmost to make Louisiana the shining light in the Nation on youth advancement. Parks, playgrounds, contests, social affairs, and the many and varied offerings that interest young girls and boys will be made accessible to our youth. Juvenile delinquency must and will be mastered; a better State and a better Nation result from a healthy and happy younger generation. I will have an immediate survey made of all our great State parks, whose development has been sadly hampered by lack of sufficient funds, and bring them to a point of expansion and prominence worthy of their possibilities.

NATURAL RESOURCES

The great natural resources of this State have been loosely handled and poorly directed. Hodgepodge methods of a changing variety have been the order of the day for 8 years past. I will invoke a sane and workable policy, denying to none their just rights and demanding proper return for the State on a fair and equitable basis. The people's right to demand the benefits from the gifts which nature has bestowed upon them must be recognized as paramount. And, too, industry, landowners, producers, and all other parties directly at interest must have the rights and protection that a state and nation of free enterprise afford. I will place in effect a sound and fair program covering our natural resources that will not be subject to the whims or the selfish interests of any clique or individual. Any landowner who is blessed with having natural gas under his land will have the right to sell, in order to receive his royalty, that gas at the highest possible price, with the understanding that a reasonable conservation policy to protect the State's interest be maintained. A just treatment of this question will be my objective and will result in bringing order out of the chaotic conditions that have existed all too many years.

TIDELAND SUIT

The feudal atmosphere that encompasses the struggle between State government and the Federal Government in the tideland suit must be removed. Louisiana is a coastal State and, as such, believes that its land underlying the tides and navigable waters is the property of the State. This contention has been overruled by the Supreme Court, with the resultant effect that title to producing areas under water has been denied the States. I have had experience with this subject in the Congress of the United States and voted with the majority, in the Congress, to protect States' rights. Jurisprudence has been established which inflicts great injury upon our State as well as all others. I will do all within my power to recover this tremendous loss and join with the governors of the other 47 States to preserve not alone our holdings but also sovereign rights. I shall at the meeting of the Democratic Party do all in my power to have inserted in our party platform a plank demanding the return to the States of that which has belonged to them since we have been a nation.

RECLAMATION PROJECTS

The unused expanses of this State should and will, under my administration, provide greater use and insure higher health standards through a practical and feasible program of drainage. Low, watered, and other desirable areas that can be converted into fertile soil for planting or grazing or even construction make for greater opportunity for the people of this State. This is a vital reclamation project, worthy of time, attention, and money, but it has had only lip service for the past 8 years. I will not merely talk about a State drainage program. I will recommend one to the legislature and put it into effect.

AGRICULTURE

Agriculture is the foundation of life. The greater part of my life has been lived in a farming area. I have privately and publicly represented farmers practically all of my life. I am proud to lay claim to the fact that I consider myself part and parcel of that great and noble array of Louisianians who are known to the world as farmers. I will recommend to the legislature the most far-

reaching and comprehensive farming program that the best minds of the State and Nation can suggest. I will collaborate with the Federal agencies and expand State services to farmers to an extent that Louisiana shall rank with the foremost agricultural States in the Union. Research, assistance, institutions, demonstrations, and actual productivity on a greater and finer quality basis for every product from the tilled soil, including farm products and livestock, will be one of my greatest objectives. My efforts will not only be directed toward raising larger and better crops and finer and more profitable livestock, but also toward helping every farmer dispose of his products at the best price, in the quickest manner possible. No stone will be left unturned to help the farmer in every way.

FISHING, TRAPPING, HUNTING, AND WATER HYACINTHS

The trapping and fishing industries are of great importance to our people. These occupations provide work for many thousands of our people. The time spent on developing these great outdoor industries has been too little. I will propose to the legislature a program to enlarge and expand these industries by insuring greater production and a finer quality of the catch. The State has this obligation. I will see that the State assumes it. I will put a stop to all of the ridiculous and unjustified red tape that has done nothing but confuse and befuddle trappers and fishermen for the past 8 years. I will endeavor to eradicate the water lilies, hyacinths, alligator grass, and other impediments, within the ability of the State's power to make accessible many streams, inlets, and other bodies of water that are gradually being choked and ruined by these useless and toll-taking growths. I will abolish all fishing license fees for all Louisiana fishermen. I will also abolish all license charges on all boats used for fishing and trapping. I will likewise advocate the repeal by the legislature of the State gasoline tax on all gasoline that is used in boats. I propose to inaugurate a program through the department of wildlife and fisheries to restock the streams and forests of this State with the all too rapidly disappearing natural life of the State. Louisiana is a hunter's and fisherman's paradise. I assure the sportsmen of the entire State, north, south, east, and west, that I will have a special division within the department of wildlife and fisheries proceed immediately to restock our streams and lakes with fish, and forests with wildlife, including quail and other forms of wild game.

REFORESTATION

A State program of reforestation worthy of the great State of Louisiana will be started when I become governor. Louisiana must and will expand its reforestation program. The first step to this end will be the development of an adequate fire-protection service. Too much emphasis cannot be placed on reforestation, which means so much to our State and its people.

PROPERTY TAXPAYER RELIEF

I am convinced this State can and should do more toward encouraging home ownership. I will immediately upon taking office as Governor bring about a new and a broader program for the relief of property taxpayers. Further homestead exemptions are possible, and an intelligent study of this subject will prove that this is so. The property tax relief fund will be analyzed with the view of giving greater assistance to the home owners through the medium of greater homestead-tax exemption.

COMMERCE AND INDUSTRY

The natural advantage and resources of Louisiana make it the most promising region in America in attracting new industries and business. I pledge that, as Governor, I will cooperate with all business and industry, both large and small, and do everything within my power to attract new business and industries to our great State. I further pledge that I will cooperate with business and industry to the end that no harmful, unnecessary taxes or regulatory laws shall be imposed by the legislature with my permission or sponsorship that would in anywise retard the growth and development of Louisiana.

The encouragement of foreign commerce at our great port cities must be one of the major objectives of this State. The port of New Orleans must truly regain its position in importance as the gateway to Central and South America.

It is my firm belief that with a careful, businesslike administration, with competent personnel handling its affairs, no increase in taxes will be necessary.

FISCAL AFFAIRS

The fiscal affairs of this State have drifted to a complex and involved condition. There are too many useless agencies, boards, and delegations or partial delegations of authority that tend to create disunity, greater expense, and less efficiency in the operation of the State government. Inexperience and utter lack of understanding of fiscal affairs in the past 8 years have brought about this condition. It must be corrected, and regimentation must be curbed. So-called expert plans by imported efficiency experts have been costly to the State and harmful to a proper conduct of the State's fiscal affairs. I propose to get down to good old "horse sense" business methods and to eliminate all useless agencies, boards, and individuals, thereby insuring a saving to the people in time and money. Departments that mean nothing but confusion and unnecessary expense will be eliminated.

CHIEF-EXECUTIVE APPOINTMENTS

Every department in this State within the purview of the chief executive will be manned by competent persons of recognized honesty and ability. Every department will be carefully analyzed, and wherever necessary improvements will be made to render better service to the taxpayers of Louisiana. None within the power of my appointment as Governor shall serve the people unless he or she is trustworthy and competent. Those who will be part of my administration shall carry out the will of the people, and not dictate or try to dictate to the citizens of this great State. I will endeavor to secure Louisianians for all important administrative positions.

This platform will be enlarged upon as the campaign progresses. All phases of State government naturally cannot be touched upon in this short document; however, in campaign speeches the members of the JIMMY MORRISON ticket will go into greater detail with a full submission of figures and facts to support each and every position taken in this platform. The pledges which I make, with God's help, the cooperation of my official family, and the support of the people of Louisiana, I intend to carry out.

Sincerely,

JAMES H. MORRISON.

The President's Program

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of November 18, 1947:

THE PRESIDENT'S PROGRAM

The President's address at the opening of the emergency session of Congress was by almost any test a genuinely commendable effort, reflecting both in its form and substance the application of much time and painstaking thought. It commended itself particularly, it seems to us, in four respects.

In the first place, although Mr. Truman touched on the issue of long term aid to Europe, he wisely put off detailed discussion of that problem for a later date, concentrating on stop-gap relief and the closely related subject of domestic inflation. In the second place, he made it clear that he regarded the inflation problem as one on which action was already long over-due and on which Congress would have to legislate regardless of what course it elected to pursue in Europe. As he said, "we can no longer treat inflation as some vague condition we may encounter in the future. We already have an alarming degree of inflation * * * and it is getting worse." The reason the foreign-aid program ties in so closely with domestic inflation—as Mr. Truman rightly discerns—is that to embark upon such a program at a time when inflationary forces are already at work in the United States would be to accentuate the already rapid rise of the price spiral, an outcome which might conceivably not only defeat the foreign-aid program, but even bring a smash-up of our own national economy, now functioning at its highest rate in history.

The third point which commended itself in the President's address was the concreteness of its recommendations. Others in the administration, far less politically vulnerable than the President, including his Council of Economic Advisers, while they have urged that anti-inflation action be taken, have shied away from making any but the most general proposals. If there had been any advance qualms among those who shared his general views on this subject it was not that he would propose the wrong things but that he would have no specific program to offer. Any misgivings on that score have now been dissipated. One may or may not agree with all of the 10 anti-inflation steps that the President calls for, but no one can say that they are ambiguous or difficult to understand.

Finally, aside from his forthrightness in this respect, the President, we feel, is entitled to a special word of commendation for recognizing, as he did, the interdependence of wages and prices. In his tenth, and final point, he urged that Congress authorize the placing of price ceilings on products in short supply which basically affect the cost of living or industrial production. To which he added, "and to authorize such wage ceilings as are essential to maintain the necessary price ceilings." This was the basic policy adopted, of course, in the months immediately following VJ-day. The principle was subsequently modified and finally abandoned altogether, to the great detriment of the Nation's price structure. The President believes that there will probably be few occasions for using this authority, but, as in the case of several of his other suggestions, he thinks it should be granted if only to keep as a shotgun behind the door.

If the future may be judged from the past, a number of the controls which Mr. Truman seeks authority to impose, or reimpose, are almost certain to become the subjects of lively controversy. No one can seriously quarrel with that. But it is to be hoped we will be spared the anguished cries of those who raise the spectre of totalitarianism whenever a government attempts to combat an emergency with emergency measures. It is probably no exaggeration to say that the private enterprise system has less to fear from hostile foreign propaganda than it has from those who are either unable or unwilling to grasp

the fact that if that system is to endure and thrive in normal times then it must be saved from the unnatural strains and stresses of war and other national emergencies, as well as from its own excesses, which have a way of manifesting themselves on such occasions.

The President and the Crisis

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of today:

THE PRESIDENT AND THE CRISIS

The President meets head-on the dilemma which is presented to this country by the double-barrelled need of sustaining free institutions abroad and halting our own "alarming" inflation. Without a doubt our inflation is due in part to our shipments to the necessitous nations. No government can enter the markets for the purchase of a third of our wheat for export without putting up the price. But to stop our consignments would be to indulge in a squint-eyed policy. If the nations are not helped they may not survive as independent countries. As Mr. Truman puts it, "Human misery and chaos lead to strife and conquest. Hunger and poverty tempt the strong to prey upon the weak."

Mr. Truman's meaning is as plain as daylight. He has, as we all must have, the Soviet Union in mind. If these nations were to be submerged in a Russian world we should have to face a startling readjustment of our domestic life, a readjustment in the direction of a bristling armed camp, ready for military action. Knowledge of the impact of such a contingency has been envisaged by all American statesmen since Jefferson. Jefferson said that the one thing this country can never tolerate is a Europe under the tyrant's heel. If the statement were valid in days dependent for communication on the sailing ship, its validity springs to the eyes now that space has been conquered. There is thus no choice. We must introduce safeguards at home while continuing to help Europe tide over its food and fuel crisis till action has been taken on the Marshall Plan for applying a cure in place of a palliative.

Mr. Truman's message is worded in a style befitting the critical occasion which brought the Congress in session. His phrases are as eloquent and as persuasive as any we recall in a Presidential message. Rightly he keys his request to the "great responsibility that goes with great power." He speaks humbly of our possession of both these attributes. It is, as he says, "an awe-inspiring truth that the manner in which we exert our strength now, and in the future, will have a decisive effect on the course of civilization."

Our inflation is in part responsible for the slow progress of European reconstruction. Only from the Western Hemisphere, free as it is from devastation, come the goods needed for repair and sustenance while repair is in progress. But the rising prices of these goods already have absorbed Europe's dollar resources and its American credits. The same experience will attend the Marshall plan unless the American inflation is arrested. When the Paris report on the Marshall plan was drafted, certain assumptions on American prices were made which, in the light of events in the last few months, now seem unsound. A sound price structure in America, in short, is basic to world reconstruction.

But the inflation has to be stopped in the interests of every American. The existing pinch is evident in every home below the top brackets. President Truman puts it in figures. The housewife who goes to buy food today must spend $10 to buy what $7 bought a year and a half ago, and the cost of living is still climbing, at a present pace of 16 percent a year. If this price inflation threatens our entire program of foreign aid, how much more immediate and personal is the impact upon our own people?

In the circumstances the President's prescription is as bold as the crisis demands. Inflation is a phenomenon of too much money competing with too few goods. President Truman would reduce the money pressure by curbing the excessive use of credit by business and consumer alike. On the goods front he asks for authorization of allocation powers where these are no longer available and for the continuance and strengthening of export controls. These powers are an essential instrument in the war on waste that we must now declare. The third category of measures will be the most contentious. Mr. Truman asks for the renewal of selective, not over-all, price controls "on vital commodities in short supply that basically affect the cost of living," coupled with the necessary wage controls lest wage increases render impossible the task of maintaining these price ceilings. The President approaches this request with evident reluctance, saying he is aware that he is proposing drastic remedies, but the signs of "runaway" inflation give him no option. It is what William James would call a "forced option." It should surely be apparent that Mr. Truman, who a short while ago was talking of these powers as the prerogative of a police state, would be the last man to use them if they were not needed.

In this as in other items in his program the President has displayed the wisdom that comes from attention to the stark realities disclosed in his momentous message. The inflation they are intended to arrest would inevitably lead to the depression on which the Soviet is reckoning for an unimpeded path to conquest.

Congress and Aid to Europe

EXTENSION OF REMARKS
OF
HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial by William R. Mathews appearing in the Arizona Daily Star entitled "Congress and Aid to Europe" and analyzing the most important issue now facing this session:

CONGRESS AND AID TO EUROPE

The special session of Congress that President Truman has called for November 17 will place before our country those two closely related subjects—aid to Europe and high prices. Because the excessive demand from Europe for food and other supplies is one major cause of high prices in America, this joint consideration by Congress is certain, although aid to Europe will get the spotlight.

That the American people will approve of aid to meet starvation is almost certain. They have that much heart. On the other hand that they will approve of the appropriation of several billions a year for some years to come for a general program of European reconstruction, is open to serious doubt. That doubt is based upon a deep-seated lack of faith generated by a continuous and humiliating record of defeats in the field of foreign affairs. Only if conditions to guide the use of that aid are written out in detail in any proposed legislation by Congress, will the program pass.

In such circumstances, if the plan of the President and General Marshall is to receive sympathetic consideration, it must revive the faith of the American people by following some basic principles, such as the following:

(A) The European countries must show a record of self-help individually and cooperatively among themselves.

(B) American aid to be contingent upon such a record of continuous self-help and to be suspended to any one or more countries that fail to live up to such conditions. Aid to be administered by an all-American agency and not by any international one.

(C) Instead of opening up credits which could be used to promote the flight of capital from Europe, goods only should be sent.

(D) Recognition and agreement by participating powers that Germany is the key to European recovery and is to be made self-supporting, with due precautions against rearmament.

(E) Recognition that loans or gifts by the American Government can be continued for only a few years, even if the program is successful. Consequently, if European countries expect such a movement of capital continued, they must so organize and conduct themselves as to attract private capital.

(F) Recognition by the American people that their own tariffs must be lowered to encourage increased imports as the only true means of allowing Europeans to become self-supporting by paying for what we send them.

(G) Recognition by the American people that they must use their political power promptly, honorably, and firmly, to meet any threat to the peace of those nations that are friendly to us and participate in the plan.

(H) Application of these same principles to any legislation affecting the Orient where Japan must be made self-supporting without rearmament.

Briefly stated, this means European self-help as much as it does American help; and, as a corollary, it can be said Europe will not be stimulated into helping herself unless America compels it as a price of American aid.

An impartial observer can see that Europe is capable of helping herself to a far greater extent than she has done. She can make more extensive use of the unemployed labor in Italy to make up for labor shortages in Britain, France, and other countries. She can, as her productivity increases, trade finished goods for what will be during the coming years the surplus food of the Danube Basin. That the Soviet Union, in response to French inquiry, said it had wheat for sale provided France could give something in return, indicates how, despite the Soviet Union's denunciation of the plan, it can participate in the indirect benefits of European recovery.

Such self-help will reduce the demand for American food. That will cause American prices to fall. Thus is the recovery of Europe directly related to high prices in America.

Increased productivity in Europe also requires maintenance of law and order. For us to give aid to countries where the governments lack the will or the competence to keep open the channels of trade would be like pouring water down a rathole. For us to assume that economic aid can be substituted for competence to govern, will lead to painful disillusionment. For us to subsidize continued strikes, 5-day weeks, and the blighting of initiative will be much like

giving an opiate the effect of which will be temporary.

We cannot tell other countries what kinds of governments they must have, but we can rightly insist that the governments we aid live up to certain basic conditions. If the British people want a socialist government, that is their business, provided we are not called upon to pay for its incompetence. Any help to Britain should be made contingent on a steady increase in Britain's coal production.

The same principle applies to France. When people have coal under their feet and won't dig enough of it to keep themselves warm, and their industries humming, they are not helping themselves. Indeed, they are asking Americans to do things they don't want to do.

We have a right and a duty to question the advisability of using American funds to maintain various overvalued European currencies at obviously false levels. The net effect of those artificially maintained values is to slow down trade, create infinitely more paper work, and postpone a settlement that must ultimately be made before there can be a sustained recovery in Europe.

The key to increased productivity in Europe, however, is Germany. The concentration of 70,000,000 highly skilled, hard-working people who have grown up around the coal resources and the steel making of the Ruhr makes it so. Nearly 48,000,000 of those people are now under Anglo-French-American jurisdiction. They are capable of making an enormous increase in the wealth production of Europe, if we allow them.

If, instead of attempting to exact vengeance that has been costly for us as well as for the Germans, we had allowed them to go back to work, the European recovery would be greatly advanced by today. The Germans could now be trading finished goods for at least a part of the food supply from the Danube Basin. We would not be shipping our steel to Germany to meet fabrication emergencies there. We would not be sending 300,000 tons of American food each month to keep the Germans from starving.

Because Germany is the key to recovery in Europe, our future policy there becomes one of the most vital subjects Congress must consider. If Britain and France, or Britain, France, and the Soviet Union, under one political pretext or another, are going to block, hamper, or restrict German recovery, we might as well call the turn now, and deny all aid to them. Otherwise, we would have a permanent job supporting 48,000,000 Germans in the Anglo-French-American zone on a dole paid for by American taxpayers. If the people of France, Britain, and the other countries cannot see that they need the wealth that Germany can create, they should not ask for nor get American aid. If they can shift to us the consequences of their costly political mistakes, they can never be expected to alter such blighting policies.

But Congress should also understand that American policy has been, and still is, partially to blame for conditions in Germany. There is no use crying over the costly spilt milk of the vengeance of the past, but this policy, even in a mild form, should be brought to an end. Two more years of futile de-Nazification and Nuremberg and Dachau trials will, by depriving Germany of hundreds of thousands of its ablest leaders and best brains, hamper German recovery, weaken our own prestige among the German people, and cost American taxpayers still more money. American food and resources will continue to be drained to maintain Germany on a dole, when she could be self-supporting.

Congress should take note that there seems to be an almost deliberate American attempt to force a Socialist society on Germany. Why is this policy allowed to continue? Why are German industrialists, coal mine owners, and others, prevented from taking charge of their businesses? Are we going to sponsor German enterprise under private ownership by which German productivity could be restored, or are we going to force government-directed enterprise, with its blighting bureaucracy on German industrial life?

Answers to these questions will have direct bearing upon congressional appropriations. Free enterprise will arouse and stimulate those creative abilities for which the Germans are noted. The results will benefit all of Europe, and America as well. To turn German industry over to a German government would concentrate its productivity and control under one political head. That would be more dangerous than encouraging diversification of ownership and allowing such ownership to function for some years to come under an Allied inspection authority.

In any event, the paramount objective of restoring German productivity is the recovery of Europe, not so much because it will help the Germans, but because it will help all of Europe and reduce America's burden. This can be done without rearming Germany industrially. For any program of European aid to be used as a disguise for maintaining Germany on an American dole, would be a fraud on the American people.

In the face of this general situation, Congress must set down minimum requirements to govern the use of appropriations it will be asked to make. It must delegate its power within definite limits to a competent and independent agency. That agency must be duty-bound to carry out the instructions of Congress.

To expect such a policy to be popular with Europe would be to expect the impossible. On the other hand, Members of Congress in touch with the American people know that the time is over when American people can be hoodwinked and bamboozled by sugar-coated but specious pleas for help.

If this program, with its conditions, is to be carried out, a separate independent agency, called the American Reconstruction Corporation, could probably do the job better than the Department of State or Department of Defense. Such a corporation, responsible directly to the President and to Congress, would not meet with the diplomatic opposition that the Department of State, for instance, would be compelled to recognize. This new agency must be able to talk turkey to foreign governments, and assume the responsibility for getting the job done as well as accepting any blame or glory. It would also attract more capable men, men who would become discouraged by the protocol and the red tape of the Army or the State department.

These conditions obviously amount to the use of our political power as well as our economic strength. We must not be afraid to face trouble squarely, and insist upon our way when we are paying the cost. We must act instantly to meet any threat to the peace with force if necessary.

Certainly we shall be criticized by Communists throughout the world and the Soviet Union itself for exacting such conditions. We must expect that. We are strong enough and disinterested enough, our consciences are clean enough, to allow such criticism to run off our backs like water from a duck.

Such a program, with its use of $6,000,000 to $8,000,000 over a period of 2 years, is a thoroughly practical one politically. Where mere mention of $19,000,000,000 or $22,000,000,000, spread over 4 years, frightens Members of Congress as well as the American people, a 2-year proposal is a speculation which the people can probably be persuaded to make.

If this initial problem brings results, as it can if it is administered wisely, and the European countries cooperate, the American people 2 years hence would be more inclined to make further advances. They will support successful ventures, but they will turn thumbs down on a boondoggling project.

This program will put Europe under the incentive to make good by being fully cooperative. The chances are that by getting European recovery started, private capital may begin to assume a good portion of the future burden. The International Bank for Reconstruction and Development could begin to sell more of its bonds to the general public and thus provide funds. The Government could be relieved of this financial and administrative burden. The increased productivity of the world would give the only honest and truthful answer to the problem of high prices.

As a program, it will not commit our Nation to the uncontrolled help of lend-lease and the unlimited objectives of an ideological war. We should carry it out not with the idea of stopping communism, but with the idea of giving to Europe something better than communism. We can do it solely as a matter of good business speculation, from which we can withdraw, if it should go sour.

It is a positive answer to any Communist threat to western Europe. It will stimulate European self-confidence. It can give the Soviet Union and its satellites a demonstration that our intentions are peaceful, and that our methods are productive and beneficial to them and to the direct recipients. It will not arouse Europe's hopes unduly; it will not bamboozle our own people.

We should not say that this money is borrowed. It should be treated as a gift. Our people should be told that the great good America will reap from it is the benefit that comes with an increased production of wealth in a peaceful world. That is the only real cure for high prices.

Morrison Answers Overton

EXTENSION OF REMARKS
OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, November 17, 1947

Mr. MORRISON. Mr. Speaker, under ordinary circumstances, I do not stop to answer wild and false statements uttered or circulated by the agents of my opponents, but when a Member of the United States Senate from this State stoops to become the guttersnipe purveyor of falsehoods in behalf of a defeated candidate, it is time to denounce these falsehoods. This campaign has been characterized by rumor peddling. It has been the one weapon of the Long-Jones boards of strategy, but history demonstrates that all falsehoods fall of their own weight.

JOHN H. OVERTON, a senile and doddering old man, who has on several occasions vented his spleen on me because I have dared to help people of this State who live in his district, and who appealed to him first for help and got nothing, dragged his senatorial toga in the slime of falsehood on Monday night. He did this in the interest of a candidate, Sam Jones, who said that he, OVERTON, was unfit to sit in the United States Senate, and that he had been elected by fraud and ballot-box stuffing. I sometimes wonder how low a man can sink when we are presented with a spectacle of this old man wallowing in the mud of falsehood in order to bolster the declining

cause of a man who publicly referred to him as a political crook.

Everything in life that JOHN OVERTON has got he got from the Old Regulars of New Orleans. What a shame that this back-stabber has no more decency than to appear in public against them.

JOHN OVERTON says that my campaign for the governorship is being financed by New York gamblers and racketeers. This is just a plain, low-down, common lie, and OVERTON could have found out the truth had he desired.

JIMMY MORRISON had no more to do with New York gamblers coming into this State than the man in the moon. JOHN OVERTON knows that this is true. JIMMY MORRISON had no more to do with them coming back into this State after they were closed up in 1940 than MacCaulay's traveler from New Zealand. JOHN OVERTON knows this is true likewise.

If memory serves me right, these New York gamblers returned in 1942. Is OVERTON too senile to remember that a man called Sam Jones was Governor for 2 years after this? Does not OVERTON know that a simple word from Sam Jones as Governor would have stopped every gambling device in this city and State? Or tell us, John, was Sam in on the deal?

It may be true, as this doddering old man says, that these people are financing some candidate's campaign. But they have given not one red cent to JIMMY MORRISON.

To the people of Louisiana, I say look around you. For the past 8 years JIMMY MORRISON has had nothing to do with the State government and Sam Jones has had all to do with it. Is not that the answer?

With reference to OVERTON'S other mouthings, they are as false and as phony as he is. In the two campaigns that have gone before this, JIMMY MORRISON has supported the men he thought best fitted for the office. I make no apologies for this. If, in exchange for this support, these candidates offered to pay some of his campaign debts, that was but to be humanly expected. I am a poor man and I have twice run for the governorship without funds or organization, impoverishing my friends, and plunging myself into debt that I am still paying. I could easily have feathered my nest had I believed the Sam Jones type of government was a good thing for Louisiana. I did not and do not now.

Not all the OVERTONS on earth will ever elect Sam Jones Governor of this State. Not all the lies or foul slander will obscure his record. The voters are too well informed.

Veterans' Bonus

EXTENSION OF REMARKS
OF
HON. DAVID M. POTTS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, November 17, 1947

Mr. POTTS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Radio Station WHN, New York, Friday, November 7, 1947, on behalf of the American Legion, Bronx County, on the veterans' bonus:

Two Sundays ago in the gray mist of early morning the *Joseph V. Connolly* sailed up the Lower Bay into New York Harbor. It was carrying out a sad mission, and as if it knew and felt that sorrow, as did the silent thousands of Americans waiting with sad hearts, and was weighted down by it, that good and sturdy ship lay low in the water. It was returning to loved ones in mute form its heavy cargo of once virulent and strong and mighty, young Americans—Americans who but a few short years ago interrupted their education, stopped their varied labors and left these same shores determined to preserve for you and me and themselves, should they be fortunate enough to survive the awful carnage which was to be their lot, that precious heritage of life, liberty, and the right to happiness which despotic nations abroad were then threatening to extinguish. They and their comrades-in-arms have preserved those blessings for us who remain here on earth.

I participated with about 150,000 others in the awesome memorial services in Sheep Meadow of Central Park to the first of our soldier dead of World War II to be returned to these shores. Selected to represent the dead of that war was a soldier to whom had been awarded posthumously the Medal of Honor for gallantry and heroism in action, above and beyond the call of duty. Noble words are those. We thrill to them. Typical are they of the goal which our American soldiers generally set for themselves whenever the opportunity should present itself.

Many thousands of tearful mothers, fathers, sisters, brothers, wives, and sweethearts of soldiers, sailors, and marines never to return in living form were present to pay their respects to their loved ones on this occasion. Perhaps it was their son or husband or brother who had been so chosen. His name was withheld because he represented all. Perhaps he was there in their presence. They could not know. One thing they were certain of, though, he was there in spirit.

For the fallen heroes the problem of life on earth have been settled for all times. They rest in peace. They need no longer concern themselves with worldly affairs; with working out a livelihood; of gaining an education; of rearing a family; of being respected citizens.

For them the duties of being fond parents or devoted sons or husbands are ended; of seeing that Junior or Sister have their sore fingers cleaned and bandaged; that their colds and other illnesses are attended to; that they get to school and are wholesomely fed, clothed, and their little bodies kept warm.

Others will have to perform those duties now. Perhaps it will be mother, out of the Government insurance, or others in her place if she, too, has gone on, or, finally, society in the keeping of its obligation to the veteran.

But for the buddies who came back to their families, the problems are not ended. They are there—real, and must be met.

At this point. I want to give full praise to the great efforts of the American Legion, Bronx County, and of its bonus committee, headed by its energetic and resourceful chairman, Milton Seligman, for taking up the cudgels for the veteran in connection with the New York State bonus overwhelmingly accepted by the people of this State last Tuesday. I have seen numerous instances, in some of which I have had the privilege of helping, where the American Legion has gone all out to see that the veteran, whether a Legion man or not, got all the law said he was entitled to.

I want also to thank and to congratulate the people of New York State for realizing their obligation to the returned veterans and to the families of our departed veterans and for voting to discharge that indebtedness in part last Tuesday. All major parties joined to bring the bonus to fruition. Their efforts were nonpartisan. They joined hands to this end when the New York State Legislature first enacted favorably upon it in 1946 and again in early 1947 in conformity with the requirements of the State constitution that it be acted upon favorably at two successive sessions of the State legislature. And now the people to whom it had to be referred for final decision have ratified that action by a tremendous vote.

As a matter of fact, the problems of the returned ex-GI are larger to him because of the years spent in service which otherwise would have been gainfully and productively employed in equipping him for later life—perhaps at school in furtherance of his education, perhaps at the workbench in gaining years of greater experience at his job to stand him in good stead at promotion time. But, in any event, fruitful years so far as his economy is concerned rather than wasted years.

We owe it to the veteran to make up to him as much as we can of that which he has lost as an individual in society's behalf; to help him meet his temporal obligations and needs; to give him a lift—a helping hand.

For the returned veteran there may be a number of war-created problems which he must resolve. Problems which, in the normal course of peacetime years denied him, he could have taken in stride and discharged with ease.

Perhaps they are the financial problems which accompany marriage. That is, of purchasing furniture, of paying the doctor and hospital when baby arrives, or of having Junior's tonsils removed.

Perhaps they are employment problems, of getting started in a business or occupation at a beginner's wage which, except for his years in the armed service, he would have overcome by now. The New York State bonus will help ease the veteran's reconversion to civilian status.

The bonus is not charity; it is not a dole. The veteran has purchased it with his sacrifices and valor expended over many terrible years. The money which he used was his blood and that of his buddies spilt for us on alien fields that we might be saved the awful carnage here. The price he paid was a costly one. We could not deny him that which he bought. The bonus is tangible evidence of our thankfulness that he has done so much for us. It constitutes our sharing with him the things which he saved for us.

New York State has led the way. It is a good beginning. I say "beginning," because in a larger sense we can never completely make good to the veteran that which he has lost. Presumably bonus legislation will one day be considered in Congress. Any such legislation which has merit, I shall support.

One Hundredth Anniversary of Discovery of Gold in California

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. BRADLEY. Mr. Speaker, in 1948 the State of California will commemorate the one hundredth anniversary of the discovery of gold in California. I present herewith a resolution of the Board of Supervisors of the County of

Los Angeles requesting that a commemorative stamp be issued on that occasion:

IN RE CENTENNIAL OF DISCOVERY OF GOLD IN CALIFORNIA—RESOLUTION URGING POSTMASTER GENERAL TO ISSUE COMMEMORATIVE POSTAGE STAMP

On motion of Supervisor Jessup, unanimously carried, it is ordered that the following resolution be, and the same is hereby, adopted:

"Whereas the people of the State of California will be commemorating the one hundredth anniversary of the discovery of gold in 1848, the gold rush in 1849, and statehood in 1950 during the next 3 years; and

"Whereas these events started a long chain of spectacular developments in our civilization, culminating in the emergence of California as the great giant of the western slope of North and South America; and

"Whereas the first in this series of events, which was to turn California into a golden land of unlimited opportunity, was the discovery of gold on January 24, 1848, in Coloma, El Dorado County; and

"Whereas the centennial of this event next January 24 will signal the official start of all centennial observances in the State: Now, therefore, be it

"Resolved, That the board of supervisors urge the Postmaster General of the United States to issue a commemorative postage stamp honoring that significant event, and that it be used to spread the glories of this great State to the far ends of the world; and be it further

"Resolved, That the first two stamps of this commemorative issue be given to the President of the United States and to the Governor of the State of California for the purpose of exchanging mutual pleasantries on this occasion; and be it further

"Resolved, That copies of this resolution be dispatched forthwith to the Postmaster General so that he may initiate the machinery necessary for issuing the stamp, and to each California Congressman and Senator so that they might lend the weight of their official positions to the suggestion outlined herein."

I hereby certify that the foregoing is a full, true, and correct copy of a resolution which was adopted by the Board of Supervisors of the County of Los Angeles, State of California, on November 12, 1947.

[SEAL] EARL LIPPOLD,
County Clerk of the County of Los Angeles, State of California, and ex officio Clerk of the Board of Supervisors of Said County.
By RAY E. LEE,
Deputy Clerk.

Problems Facing the Special Session of Congress

EXTENSION OF REMARKS
OF

HON. DAVID M. POTTS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. POTTS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio talk delivered by me over Station WBNX on Friday, November 14, 1947, on problems facing the special session of Congress:

Next Monday your Congress will be confronted in special session with problems that may shape the destiny of this country and the world for years to come.

I doubt that any other Congress in our short history has been compelled by world events to meet and attempt to solve such vast and grave economic issues. That is why I would like to have you consider with me some of the factors that have brought this special session into being. Speaking as a Republican Member of the House of Representatives, I feel very deeply the responsibility that falls upon each of us as we sit down in Washington in legislative session next Monday, the 17th. We can assume that the eyes and ears of the entire world will be watching and listening to our every action. In our own country the average citizen, worried and harassed by the black cloud of inflation, will follow anxiously each day's debate and deliberation.

For a moment I would like to discuss some of the causes of our present confusing dilemma.

Everyone has a right to ask, 1, How did we get into this sorry mess, and 2, How are we going to get out of the swirling currents without permanent damage to our national economy and well-being?

The high cost of living in America is more than a political issue. History has shown that free governments frequently come to disaster on the rocks of dictatorship and totalitarianism because of unsound financial practice.

A bankrupt government is usually a weak and bewildered government and one of the certain symptoms of bankruptcy and confusion is uncontrolled inflation.

The brutal fact is that we not only have at this very moment a serious degree of inflation but uncontrolled inflation itself. What really frightens most of the people is that they are threatened with more and more inflation because inflation, like power, feeds on itself.

You may rightly ask, How did it all begin? Some administrators have argued that the termination of price control is the chief cause of high prices. That is like saying that a weak dike is the cause of a disastrous flood. That does not make sense. People living in the lowlands know all too well when the floodwaters sweep over their homes and destroy their crops and the lives of their neighbors, that the trouble began back in the hills where the spring freshets race down the gullies and sweep in growing torrents to form the black floodwaters of destruction.

Inflation occurs when the supply of money is greater than the supply of goods and services. Stated in another way, the total price of things on the market is usually the total amount of money that the people are willing to spend. This occurs whether or not the Government tries to control prices because as we learned by bitter experience recently, when price control prevents free exchange, the goods go underground and free transactions take place in the so-called black market.

Thus price control affects only the manufacturer or the merchant or the consumer who is unwilling or unable to break the law. Inflation was begun when the huge amounts of money added to the total money supply gathered such momentum that it could not be dammed up behind a strong, protecting wall.

In other words, we are simply paying today for unsound free spending and deficit financing practices.

You have only to recall that the volume of money in circulation increased from $5,500,000,000 in 1933 to more than $28,000,000,000 today—an increase of over 400 percent in money in circulation.

It should be borne in mind that during these same periods bank deposits and currency outside banks increased from $42,500,000,000 in 1933 to $100,000,000,000 during recent months.

This tremendous increase in purchasing power is not the cause of inflation—it is inflation. We should go a step further and recall that there was no corresponding increase in production.

This radical inflationary policy was followed from 1933 right through 1941—before we became involved in war and were compelled to borrow hundreds of billions of dollars more in order to finance our military operations all over the world. With the expenditures actually necessary to finance our military efforts, no one has any quarrel. But there is considerable evidence to indicate that many of our wartime expenditures were extravagant and just plain foolish.

As a direct result of he policies followed for a decade and a half, policies which were aggravated but not created by the war, we now have a dangerous degree of inflation.

This was accomplished through taxes designed to discourage industry from expanding its enormous production facilities and by many other devices. It was claimed that the cost of living just had to come up. So a philosophy of economy of scarcity was adopted. Few of you have forgotten that it was decided to remedy the low cost of living by ordering the killing of pigs and the plowing under of cotton and sharply restricting corn and wheat acreage. Remember the Government payments not to grow potatoes.

Meanwhile more and more dollars were pumped into circulation. More money was spent than was raised in taxes, and you know how heavy taxation has been.

Excessive amounts of money were obtained by printing bonds by the bale, placing them in banks, or selling them to individuals in order to receive dollar credits in exchange.

No one could stop this avalanche, even when some of our most astute economists foresaw the peril and sounded the disaster warnings. The voices of the minority were drowned out by the rumble of the mimeograph machines in the Washington bureaus.

Today the dike has been breached, and the inhabitants of our once happy valley have been caught in the raging torrent of inflation.

Is it any wonder that the present administration is confronted with a staggering and confusing dilemma and the President has now asked the Congress to cooperate with him in rescuing the country from threatening disaster?

Is it any wonder, my friends, that the Congress should now remind Mr. Truman that cooperation is a two-way street?

In effect, in calling this special session of Congress, the President, on one hand, is seeking to have us repair the nearly fatal damage to our economy by the heedless spend and spend, tax and tax philosophy, and at the same time is imploring us to implement the State Department's feverish first-aid program for the suffering nations of the world.

It should not be forgotten that more than 2 years ago the administration was confronted with the problem of removing wartime controls, with the knowledge that unless this was done in a sane and orderly fashion great damage might be done to our economic structure.

At first, faced with the certainty that the transition from a war to a peacetime economy would drastically reveal to the people the full consequences of unsound policies, an ineffective effort was made to perpetuate controls.

When Congress enacted a bill this year to provide for a reasonable extension of controls and their orderly and gradual termination, the bill was vetoed and the Nation was suddenly thrown into a period of uncontrolled prices at a time when it was bound to work the greatest damage.

Is it any wonder that the housewife in the lower income brackets may not yet fully realize how much of the Nation's total tax

bill she and her family are paying. And remember that this tax burden is not limited to the amount withheld from the pay envelope in direct taxes.

Let me put it this way: Every time the home maker buys a loaf of bread she pays a share of the taxes of the farmer, of the taxes of the miller who ground the flour, of the taxes of the baker who bakes the bread, and of the taxes of the grocer who sold the loaf.

In this way the individual American is paying more and more for the excessive high cost of Government.

Let's examine the question of your skyrocketing grocery bill.

When we remember that the total food bill of the Nation for 1946 has been estimated by an agency of the Government itself at approximately $39,000,000,000, the cost of Government, which is included in the form of taxes paid all the way down from the farmer to the purchaser, becomes thoroughly appalling. As a matter of fact, between one-quarter and one-third of the total national income is being diverted into the dead-end street of taxation. Thus, you have less and less to spend for food and the necessities of everyday living.

In the first session of the Eightieth Congress, which concluded in July of this year, the Congress undertook to do something toward reducing the excessive costs of your Government. In fact, the Congress sought to take drastic and sound action in reducing the excessive cost of Government by twice passing an income-tax reduction bill which would have reduced our Federal tax burden by about $4,000,000,000.

It should not be overlooked that a tax reduction of $4,000,000,000 would have amounted to an increase in the take-home pay of millions of taxpayers, and this would not have been inflationary because it would not have increased the cost of production.

There are undoubtedly many of my listeners who send food packages to relatives residing across the sea. That is charity. It is the milk of human kindness. Those of you who do so are to be congratulated for your kindness and generosity. To do so, you must, of course, expend some of your own money to make the purchase. By doing so you make your own economic position less secure. Every five or ten or more dollars you expend for that purpose means you have that much less for yourself and your own family.

So it is with the Nation. And just as there is a limit to how much an individual can spend to send food abroad to his relatives, so there is with the Nation. Consequently, we must decide what is the limit of our ability to continue to so provide for humanity abroad.

A very dear friend of mine of international reputation recently epitomized what he considered our approach should be. He said: "The only way to help an able-bodied man, is to help him to help himself." I think that thought applies to nations as well.

Is it any wonder therefore that we should remind the President and his advisors that the people have a right to know how much they will have to spend now for relief abroad.

It is not ony a question of what we should spend for relief but how much we can afford to spend in American dollars and what will be the drain not only upon our pocketbooks but upon our not inexhaustible supply of resources.

We can only reach the conclusion that we must do our best at this very late hour to reestablish out of threatened domestic chaos a semblance of order through restoration of the principles of sound financing.

Of course we must meet the challenge but we cannot afford to jeopardize our own economy by submitting to continued cries of crises. During the war we met all our obligations and there is no reason why we cannot do it in peacetime.

The President has appealed to your congressional leaders for cooperation. But it must be conceded that Congress holds the purse strings despite the fact that our efforts were thwarted by veto after veto in the first session of the Congress.

The administrators should realize by now that the people have the right to know all the facts in full detail as they may develop from day to day. And the people must be allowed to decide for themselves through their representatives what direction our Government must travel to reach our destination of lasting peace and prosperity in safety.

The people want to know what we have already spent abroad—and what we shall be asked to pay now and later for these adventures in world-wide relief—and that includes what has already been handed over to other countries and what we have been committed to ship in wheat, coal, and other precious commodities overseas, while Americans try to understand the tactics of forcing us to eat less and less at home. The American people have amply demonstrated their generous impulses in feeding the starving and clothing the naked of the world. And they are entitled to know all the needs in plain English—without bureaucratic cover-up and double talk.

Armistice Day Address of Judge J. F. T. O'Connor

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Judge J. F. T. O'Connor, the Breakfast Club, Los Angeles, November 5, 1947, Armistice program, over KFWB, Warner Bros. Pacific coast hook-up:

Twenty-nine years ago along the snow-covered muddy trenches the command rang out, "Cease firing." Church bells tolled, whistles shrieked, bands played, crowds filled the streets of every city and town all in celebration of the war's end. There were 8,538,315 soldiers on both sides: the Allies and Central Powers—who did not hear the cheers. They made the supreme sacrifice. One hundred and twenty-six thousand were Americans. In World War I 4,355,000 were mobilized.

Armistice Day is a solemn occasion, not a celebration. The winter snows, the summer rains, have these many years fallen on the graves of our heroic dead—it was a war to end wars—this hope and high purpose found its defeat in the crazed mind of a dictator.

Armistice Day is dedicated to the memory of those who fell in battle and to honor those who carry through life the scars of the conflict. This day a grateful nation recalls their sacrifices and, in a small way, pays its humble tribute.

This day has a second purpose. It is to analyze the problems of the day, and to suggest a solution. This is our obligation to the soldiers living and dead who preserved our liberties. Peace to all men—how can that be accomplished? Soon another winter will bring terror to the starving people of Europe; little children too cold to sleep and nearly too hungry to eat—we must not let them die—they are not to blame for the lack of vision or the treachery of the world leaders. Down through the ages has come the command: "Suffer little children to come unto me." Shall we heed the command or shall they perish?

America has opened its great heart. A train leaving our fair city with several carloads of food will gather more food as it speeds on its way to the Atlantic coast, and then across the ocean to relieve the famished people of a war-torn world. This, the idea of one man, Drew Pearson. Let another train follow with warm clothes, shoes, and blankets—to help a shivering people through the cold winter—there is enough discarded clothing in American homes to keep Europe warm.

When the war factories were no longer needed to supply our armed forces and those of our gallant allies, would it not have been a constructive plan to utilize them for the manufacture of farm machinery such as plows, drags, seeders, binders, mowers, threshing machines, garden tools, hoes, rakes, and send these to Europe together with seed of every kind, and, in addition, send foundation stock: cattle and horses and barnyard fowl. Our Agricultural Department could send men experienced in successful farming to teach modern methods to our friends across the sea. They would become self-supporting which should be the aim of every self-respecting man and woman. Our best contribution should be implements of peace rather than engines of war. It is not too late; it would supplement the Marshall plan by raising food abroad instead of here; the transportation problem would be solved; there would be less drain on our economy resulting in more food for our own people at less cost; and fewer dollars would be required for the needs of Europe, which would, in turn, reduce our tax burden.

This is not a dream. I can see the fields green with growing wheat, oats, rye, and barley. I can see the cattle grazing in the tall grass, the alfalfa, and clover. I can see the gardens with corn, potatoes, and every kind of vegetable. Those of us who have lived and worked on a farm know the miracle of nature; mother earth responds to the touch of the energetic hand. This would be democracy in action. This would keep faith with the soldier dead and the soldier living. It would be a fitting dedication of Armistice Day.

Address of Fleet Adm. William F. Halsey

EXTENSION OF REMARKS

OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered by Fleet Adm. William F. Halsey, Jr., retired, which he delivered on the occasion of the Armistice Day luncheon sponsored by the American Legion of Memphis, Tenn. It was truly a powerful speech. He fairly captivated the citizens of the mid-South through his personal appearances and through his several addresses carried by radio.

Memphis has become very much interested in the operations of the Navy because of three very large establishments located in the city during the war, and which have been continued. Rear Adm. Felix Stump has endeared himself to the entire Southland. He is an able naval

officer and not only inspires the troops under his training program but receives the wholehearted support of all of his civilian neighbors.

Admiral Halsey's address follows:

I am honored to join with you in observing Armistice Day. It is fitting that we should now honor two generations of Americans who gave their lives for their country in two world wars.

I see many veterans of each of these wars here this afternoon. Those of you who served in both wars will agree that there are several points of similarity between the two.

Despite the advances modern civilization has made in the science of destruction, wars can never be made humanitarian affairs. War will always mean death and destruction, whether by arrow and "Greek fire," or by rocket and atom bomb. The results are always death and misery, both of which the world can well do without.

Memphis has known the horror of war in the loss of her soldier and sailor sons who made man's greatest sacrifice for their Nation, on fields and seas far from home. We can never replace that loss. But the means of preventing a recurrence in future years lies within our grasp. We must not let ourselves become butter-fingered.

This is more easily said than done. We are used to our democratic way of life, and we like it. If we didn't, we would use the liberties it guarantees to change to some other way of life. Recently we have been showered with evidence that a small minority in our midst is trying to change our form of government. This they might do in two ways. First, persuade us to change it ourselves, and, second, change it for us.

We can recognize the tactics, for they are much the same as those used by the Nazis during the war, when they unsuccessfully tried to divide the Allies by instilling doubt, jealousy, and distrust among our leaders and our peoples.

Living Nazis and Fascists, smarting from the pain and shame of total defeat, must gain great satisfaction from watching the disintegration of the winning allied team by the same means with which they themselves tried to accomplish it. It would be truly ironic if they should see their wartime aim realized during the postwar era.

Our diplomats have an extremely difficult and delicate job. Theirs is a very straight and narrow path to lasting peace and cooperation between nations. The obstacles they encounter, and the difficulties that beset them are too numerous and varied to recount.

At times their negotiations are so delicate that a single outspoken newspaper editorial or radio comment may undo months of painstaking effort on their part. If they take sides on a controversial issue, they may be accused either of warmongering or fellow-traveling, depending on which side they take.

In any case, they may be accused of imperialistic motives by radical elements at home or abroad.

Personally, I think our statesmen are doing a magnificent job, despite all obstacles. But it is a job we cannot expect them to do alone. They must have our full support rather than our criticism.

They may make mistakes; no one is infallible. Yet we must remember that they know far more about their jobs than we do; that they possess information that is, for security and other reasons, not accessible to us; and that they are making difficult decisions in behalf of the majority, and not for isolated groups of individuals.

The present world situation demands a firm and clear-cut foreign policy on the part of the United States. The first requirement for such a policy is the wholehearted support of the American people. The second is the confidence of the people in their chosen diplomats.

Any show of disunity, indecision, and disagreement regarding our foreign policy merely serves to weaken our position in the eyes of the world.

This reminds me of the story of a famous admiral. While a young lieutenant, he was officer of the deck when his ship was navigating a very tricky channel. The civilian pilot told the helmsman to steer to starboard. At the same time the captain ordered him to steer to port. To avoid an accident by the confused helmsman, the young lieutenant calmly said, "Steady as you go." The helmsman obeyed the compromise order and an accident was avoided.

We must remember that a helmsman's job is at best difficult. It becomes dangerous if both passengers and crew shout conflicting orders from every side. Instead of loud criticism and conflicting advice, our helmsmen need the same cooperation that any commander expects from those on board in order to run his ship in the best possible manner.

In the Third Fleet, our ships had to be efficient. Their crews had to be prepared to carry out the orders and implement the decisions of the captain and his seniors. Every man on every ship had an important part to play, whether he was a cook, radioman, storekeeper, or gunner's mate. The same is true in the peacetime Navy, and the same is true in our country as a whole.

When an apparently small item, such as giving up meat on Tuesdays and poultry on Thursdays, can have a decided effect on our foreign policy, then it becomes obvious that every American must take an active interest in his Government's relations with the rest of the world and give his representatives the support their responsibilities demand.

National military and naval strength is a tangible form of our support. If we wish a permanent peace, not only for ourselves, but for the entire world as well, either the United States or the United Nations must have the capacity to repel aggressive states.

I hope the United Nations will work, but it will take some time to organize and equip a world police force of a size and strength adequate to prevent aggression and maintain peace. Until that time we should let no nation or group of potential aggressors outclass us in military might.

By remaining strong on land, at sea, and in the air, we discourage aggression and promote world peace—we lend force and meaning to the words of our diplomats—and we guarantee that our way of life will not be changed by any force more sinister than our own free will.

That's what I mean by supporting our Government, its leaders, and its representatives. It is not war talk, for if we are strong, there can be no fear or war. I do not advocate censorship in any way, shape, or form, but I do advocate clear thinking before we echo the alarming fears and accusations of a minority who set themselves up as experts.

We must make it plain to our Government and to every nation that we will back it to the limit. Only in the knowledge of our power and unity can our representatives exercise the full might of their convictions.

In the years following the first Armistice Day, the democracies made a mistake and the effects of it were all but disastrous. History can repeat itself, but it need not if we face realities with clear vision, and not through rose-colored glasses.

The finest memorial to our gallant dead of two world wars would be a guaranty that there will never be need to celebrate the end of a third. The boys who didn't come back deserve something more lasting and beneficial than monuments of stone and bronze. They died for peace that we might live in peace. We must not let them down; we will not let them down if America remains united.

March of Freedom

EXTENSION OF REMARKS

OF

HON. RICHARD F. HARLESS

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. HARLESS of Arizona. Mr. Speaker, pursuant to unanimous consent granted by the House, I am inserting in the CONGRESSIONAL RECORD an article from the November 6, 1947, issue of the Arizona Daily Sun of Flagstaff, Ariz., which includes a poem, entitled "March of Freedom," written in 1945 by James Patrick McGovern, special Washington correspondent of that newspaper, and dedicated by him to national welfare, with the thought that it "may be found expressive of the American ideals our country has fought for in the past, is fighting for in the present, and is destined to fight for in the future":

SUN MAN'S VERSE TO BE INSCRIBED IN LEGION HOME

The following poem, entitled "March of Freedom," written in January 1945 for the American Legion, by James Patrick McGovern, special Washington correspondent for the Arizona Daily Sun, is to be inscribed on a wall panel in the new home of the Bethesda-Chevy Chase Post, No. 105, at Bethesda, Md., of which Captain McGovern is a member:

"MARCH OF FREEDOM

"Our valor now makes live each yesterday
Of bitter struggle wreathed with heroes' deeds,
Since first our fathers blazed their dauntless way
Through virgin tracts and sowed their hearths' new seeds.
Our homes then grew in beauty, love, and peace
Within the fortress of our fruitful land,
Which promised that our State would never cease
As long as justice ruled the heart and hand.
But freedom is an ever-restless sea;
It must be always wooed and won again.
To change is life, to strive is destiny;
The rust was never deep for sword and pen.
Our future thus must give our past its due
Of victory again, of peace more true."

—*James Patrick McGovern.*

Relations With Russia

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, November 20, 1947

Mr. BARKLEY. Mr. President, I ask unanimous consent that an address dealing with our relations with Russia, delivered by the Secretary of State in Chicago, November 18, which has been referred to this morning by the junior Senator from New Jersey [Mr. SMITH], be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE GEORGE C. MARSHALL, SECRETARY OF STATE, AT A DINNER SPONSORED JOINTLY BY THE CHICAGO COUNCIL ON FOREIGN RELATIONS AND THE CHICAGO CHAMBER OF COMMERCE, PALMER HOUSE, CHICAGO, ILL., TUESDAY, NOVEMBER 18, 1947

The American people, I believe, have a sound understanding of the basic principles and objectives of our foreign policy. These have been expressed on many occasions by responsible officials of this Government beginning with the President. They are understandable, I believe, to you all because they have their origin in the American conscience and in the deeply rooted traditions of our people. No American, I am sure, questions the desirability of this country promoting wherever it can the right of people to govern themselves and the rule of impartial law as against the exercise of arbitrary power. These principles require no elaboration. But, true as they are, such generalities do not always serve to clarify for our people the current problems with which we are now faced. They do not in themselves answer the question, "What is it all about?" They do not in themselves provide an answer as to why at almost every turn we find ourselves in disagreement with another power with whom we were so recently allied in the common cause. I shall tonight confine myself to the problems relating to one area of the world which at the moment are occupying the attention of the administration and the Congress and with which in another aspect I will be dealing at the meeting of the Council of Foreign Ministers which opens in London, November 25. That is the related problem of the revival of the European community and the peace settlements with Germany and Austria. I shall try to avoid oversimplification on the one hand and bewildering detail on the other.

In my statement before the committees of Congress on November 10, I laid great stress on the entity known as Europe and its importance to the world and to the United States in particular. So important to the understanding of our present problem is the meaning of the European community that at the expense of repetition I will restate it. Europe, or what through centuries has been known as Europe, is a community of nations which despite racial and religious differences, commercial rivalries, and sporadic internecine wars has developed governmental procedures and an advanced civilization. We are a part of that civilization. Our national traditions—the foundation on which our entire civilization rests—find their counterpart, if not their origin, in some part of this European community.

Europe is a natural grouping of states designed by geography and history to function as a community if it is to function well. Because of the character of its people, the nations comprising the European community function harmoniously and effectively only if they are permitted to operate of their own free will. The logic of history would appear to dictate the necessity of this community drawing closer together not only for its own survival, but for the stability, prosperity, and peace of the entire world.

Due to the Nazi attempt to subjugate the entire European community, Europe was plunged into a great war. The central question that arose at the end of this war was in effect what was to be the future of this European community. Was it to be restored to a position of stability so it could work out its own problem, or was it to be kept in a state of permanent dependency and eventual absorption into a system alien to its traditions and civilization?

It is generally recognized that the major responsibility for finally crushing naziism devolved upon three powers, none of which can be strictly classed as a continental European state. The efforts of two of these powers have been consistently directed since the military victory toward the restoration of the European community to its former status. They have been so directed partly out of compassion but primarily, I think, because they recognized the historical fact that a revived, revitalized Europe is necessary to a peaceful and prosperous world order.

For centuries Europe occupied a preeminent position and exercised a dominant influence in international affairs. Before the recent war it was one of the two highly industrialized areas on earth and enjoyed a correspondingly high standard of living. Today Europe is devastated and dispirited, but once it regains strength and confidence it will draw on its store of resources, energies, skills, and spiritual qualities and again make major contributions to world progress. This is the goal of those who are genuinely devoted to the cause of European recovery.

Unfortunately, it has become apparent that the third great power which contributed so much to the common victory evidently does not share that purpose. For reasons that are still obscure, it is endeavoring apparently to prolong the present unsatisfactory state of affairs indefinitely. If this purpose prevails, obviously the prosperous European community we knew before the war cannot be reestablished within the foreseeable future.

This brings me to an important conclusion. It is this divergence of purpose concerning the future of Europe which is the cause of many of the present differences between the United States and Soviet Russia. The divergence is not due to any direct clash between the national interests of these powers.

It is my belief that if Europe is restored as a solvent and vigorous community, this issue will have been decided and the disturbing conflict between ourselves and the Soviets, insofar as Europe is concerned, will lessen.

It seems evident that as regards European recovery, the enlightened self-interest of the United States coincides with the best interest of Europe itself and of all those who desire to see conflicts of whatever nature resolved, so that the world can devote its full attention and energy to the progressive improvement of the well-being of mankind. The place to begin that process is Europe.

I have referred to the fact that Europe formerly stood as a strong, and constructive element of the world's economy and political order. Its trade, both among the European countries themselves and with other regions, was a major factor in the international exchange of commodities and services and was a direct stimulus to productivity throughout the world. The stabilizing influence which Europe as a concert of independent nations exercised on the remainder of the world was a basic factor in assuring the security of our own nations—a fact which we acknowledged by twice committing our total resources to the preservation of the integrity of the continental community, free of single-power domination.

The near collapse of Europe has left weakness where once there was strength, and has created in effect a political and economic vacuum. It is certainly not our purpose to exploit the situation by filling the vacuum with American power. The map of Europe today bears witness to our true intentions. West of the line where the Allied armies met, nations in their own way are grappling with their postwar problems, each in accordance with its distinctive institutions and traditions, free of external pressure. The proposal of the United States to assist in the recovery of the nations that responded to the suggestion of June 5 has no purpose other than to restore Europe as a self-supporting community of states and to terminate as speedily as possible dependence upon us for aid. It is unfortunate that only 16 European states felt free to participate in the Paris Conference on Economic Cooperation. This Government is willing to cooperate with every nation that pledges a generous effort to the common cause of European recovery.

We are now intimately working to this end with governments of varied political complexions—some constitutional monarchies and some republics both with Socialist ministers, some controlled by conservative elements, and some constituted on coalitions. This is a fact that everyone can see, and it should dispel completely the propagandistic assertions that we seek to impose the American pattern on others.

Much has been said about the various freedoms, about democracy, about the right of people and of nations to determine for themselves without restraint the forms of government they desire. Much has also been said regarding the desire of the United States Government to influence other nations to follow what we believe we follow with constantly increasing success—that is a philosophy of government dedicated to the freedom and welfare of the individual. That is our earnest desire. It is certainly not imperialistic and it does not indicate a passion for war.

We realize that we cannot expect the same conceptions to be held by all countries. Different races, different traditions, different histories and rates of development lead to different results, but on fundamentals I think we find a general agreement among peoples the world around.

If the United States entertained any idea of extending American influence or domination over Europe, our policy would not be directed toward ending European dependency upon this country, but toward perpetuating that relationship. The clarity of the record and of our intentions, however, has not prevented Soviet officials and Communist groups elsewhere from waging with increasing venom a calculated campaign of vilification and distortion of American motives in foreign affairs. These opponents of recovery charge the United States with imperialist design, aggressive purposes, and finally with a desire to provoke a third world war.

I wish to state emphatically that there is no truth whatsoever in these charges, and I add that those who make them are fully aware of this fact.

What is the record? We have annexed no territory. We have not used the greatest military power and military resources ever assembled to acquire for the United States a special-privileged position, either political or economic. Furthermore, since the close of hostilities the United States and Great Britain have voluntarily reduced the area of their sovereignty in the world. Colonial areas and dependent people have been assisted to achieve full independence. New countries have emerged from under the United States and British flags to take their place as members of the United Nations.

While the western democracies have been reducing the area of their sovereignty, one country has taken the opposite road. The Soviet Union has in effect considerably expanded her frontiers. Since 1939 she has de facto annexed territory comprising an area of more than 280,000 square miles, with a population of some 22,000,000 people.

The American proposal for assistance to Europe is directed toward production, construction, and recovery. It is a genuinely cooperative undertaking, which is being worked out in an atmosphere of mutual trust and with careful regard for the sovereignty of nations. Indeed, this joint endeavor by the United States and 16 European states is a clear and convincing demonstration of cooperation freely given, to achieve the common good. As such, it perfectly reflects one of the basic precepts of democracy.

This Government recognizes that elements of uncertainty are involved in so vast and complex an undertaking. But we believe that the promise of success more than justifies the risks. We are completely convinced that the risks of not attempting to restore Europe are far greater than those involved in taking positive action as now proposed. We recognize that our people will be called upon to share their goods still in short supply and will have to forego filling a portion of their own requirements until the greater needs of Europe have been met. This is a direct contradiction of the allegation that we are seeking to dump surplus goods in Europe in order to avoid the depressing effects of oversupply. This particular charge of dumping must have a strange sound to those Europeans now desperately seeking the very essentials of life. And it must sound equally odd to Americans who are standing with money in hand impatient to buy goods which we are sending to Europe to meet a more urgent need. But such is the breath of propaganda.

I should like in this connection to make a few comments regarding propaganda in general and particularly with regard to the debates and procedure of the United Nations Assembly. It seems desirable to analyze the situation somewhat and clear up some of the issues prior to the meeting of the Foreign Ministers in London.

During the meeting of the United Nations Assembly there was a great deal said, with considerable vituperation, regarding the attitude of the Government and people of the United States toward the Soviet Union, along with the direct accusation that a war spirit was being fomented by our press and by distinguished citizens who were named. A portion of this, the major portion I assume, was intended for pure propaganda purposes. But I also assume that there may have been some genuine feeling that the purposes of this Government and the attitude of most of the American press were definitely hostile to the Soviet Union. As a responsible official of the United States Government I would like to see more restraint than is sometimes exhibited in discussions of international issues.

But as regards the critical attitude recently manifested in this country toward the Soviet Union, I should like to distinguish between this effect and its cause. To determine that cause it is necessary to go back at least as far as the summer of 1945, immediately following the German surrender. At that time I think it was a fact that the people of the United States had as high a regard, or I might better put it, appreciation, for the Soviet people and their sacrifices, and for the Soviet Army and its leaders, as they held for any other people in the world. But today, only 2 years later, we are charged with a definite hostility toward the Soviet Union and its people, which constitutes a complete change in our attitude since the summer of 1945.

I recognize this effect. I would not characterize it as hostile. But the important question is, what produced this tremendous change in our national feeling and attitude? The truth as I see it is that from the termination of hostilities down to the present time the Soviet Government has consistently followed a course which was bound to arouse resentment of our people.

Just what the purpose of this remarkable procedure has been, particularly during 1946, I have been at a loss to determine. So many of the actions of that government were provocative without any other evident purpose. I have endeavored to find at least a partial explanation in the historical characteristics of the Russian Government and its officials through a long period of years and not solely related to the present regime. While some light can thus be cast on the problem it does not, even in a small way, explain why a government should proceed with apparent deliberation to destroy the invaluable asset of high regard and good will which it possessed in the attitude of the American people and why it should deliberately provoke such animosities as are evident at this time.

The people of this country are God-fearing people. They have been very patient in their attitude toward misrepresentation of their actions and motives when their only purpose has been to help the other fellow. Today our people have been virtually driven into a state of active resentment and, having been goaded to this point, they are accused of having lighted and stoked this great fire of public resentment. This last is propaganda, yes, of the most brazen and contemptuous character. But since it affects the very stability of the world, it is time to call a halt to such inflammatory practices.

I am not pessimistic regarding the progress made by the United Nations during the recent Assembly meeting. The fact that the world has a forum for free debate is in itself a hopeful portent for the future. The fact that debates have sometimes included more of vituperation or diatribe than of logic or adherence to the facts was unfortunate, but in the long run, I think, merely incidental, and an always present possibility in any democratic debate. The Organization did pass through a serious struggle, but I think it emerged without loss of potential strength. The question now is, Where do we go from here? Which leads me to the coming Conference of Foreign Ministers in London.

The problem of restoring the European community inevitably raises in acute form the problem of Germany. The restoration of Europe involves the restoration of Germany. Without a revival of German production there can be no revival of Europe's economy. But we must be very careful to see that a revived Germany could not again threaten the European community.

I am not speaking of the revival of Germany in a military sense. There can be no question of the absolute necessity of keeping Germany disarmed and demilitarized. Today, Germany is completely disarmed. Measures have been proposed by the United States and supported by the United Kingdom and France to insure the continued demilitarization of Germany for 40 years. Thus far the Soviet Union has, in effect, rejected that proposal, by wholesale amendments of its purpose; but the offer still stands.

The revival of German militarism, however, is not the only important factor involved in the relationship of Germany to a restored Europe. There is an imperative necessity for safeguards to insure that the economic power of Germany shall not be used by a future German Government as a weapon for the furtherance of exclusively German policies. This poses admittedly a complicated and difficult problem. An attempt artificially to limit German peacetime economy could easily prevent the essential revival of German production to an extent that would render impossible the economic revival of Europe.

The answer to the problem would appear to relate primarily to the future role and functioning of the great industrial complex in the Ruhr. The United States believes that safeguards must be set up to insure that the resources and industrial potential of the Ruhr, particularly in respect of coal and steel, should not be left under the exclusive control of any future German Government, but should be used for the benefit of the European community as a whole.

The charge has frequently been made that the United States in its policy has sought to give priority or intends to give priority to restoration of Germany ahead of those of the other countries of Europe. The truth is that far from having been accorded a preference over any Allied country, German recovery has lagged so far behind that of the other countries of Europe as to retard the whole effort for European recovery. At the present time industrial production in western Germany is less than one-half that of prewar. The food supplies are seriously below the minimum requirement for health and efficiency and German foreign trade is only a small fraction of its former dimension. In fairness to the American taxpayer who has been contributing hundreds of millions of dollars annually to support the people in the American zone, Germany must be made self-supporting as quickly as possible. With safeguards against any revival of German militarism and with measures to assure the utilization of the basic products of the Ruhr for the good of the European community as a whole, I believe that Europe and the world will be adequately protected against the danger of future German domination. In these circumstances it should be possible to proceed to the establishment of a provisional central authority in a federated German state, and to the final framing of a peace settlement. We shall earnestly endeavor at the Conference in London to make progress along these lines.

Now I have tried to give you a picture of certain of our major international problems. These are not the only problems with which we are dealing. There are other areas of the world in which we face situations of immense complexity and gravity. But what I have told you this evening may give you a better idea of the character of our international problems as a whole and of our approach to them.

We are aware of the seriousness and extent of the campaign which is being directed against us as one of the bulwarks of western civilization. We are not blind to any of the forms which this attack assumes. And we do not propose to stand by and watch the disintegration of the international community to which we belong.

But at the same time we are aware of our strength, and of the fact that there is great need in many countries for our help and our friendship. We can afford to discount the alarms and excursions intended to distract us, and to proceed with calm determination along the path which our traditions have defined.

I will approach this conference in London with an open mind and will seek only for a sound basis for agreement. I will seek to avoid statements for mere popular or propaganda effect, no matter what the provocation. It is my purpose to concentrate solely on finding an acceptable basis of agreement to terminate the present tragic stalemate and to speed the advent of a new era of peace and hope for Europe and the world.

The Voice of America in Europe

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, November 20, 1947

Mr. SMITH. Mr. President, Secretary Marshall in his Chicago speech on Tuesday last put bold emphasis on the propaganda which the Soviet-Russian Government is conducting against the United States. That he chose to do this on the eve of his departure for the Foreign Ministers Conference in London has given his remarks extraordinary importance. The effect of his speech has been to emphasize even further the importance of establishing an adequate information program that will enable the United States to tell the truth to the hundreds of millions of people throughout the world who are exposed daily to the stream of vitrolic anti-United States

propaganda coming out of Moscow and from Russia's satellite communistic dominated countries.

During this last summer the joint Senate and House group, authorized by the Congress, visited the capitals of Europe to study our over-all information program. As cochairman of this committee I made a radio broadcast last week over the Columbia Broadcasting System giving a general summary of our observations. The full report of the committee is now being prepared and will be reported to the Congress in the near future.

I ask unanimous consent to have my radio address, entitled "The Voice of America in Europe," printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As chairman of the Senate group of the Smith-Mundt congressional committee investigating our Voice of America program abroad, I have just returned to the United States from a 2-months' study of the new war that's going on in Europe. It is a war of words, directed against the United States by Russia and her satellite countries operating from behind the iron curtain. The invective that has been turned loose against us by these countries in their effort to force communism on Western Europe is so vicious as to be almost unbelievable to anyone who hasn't actually heard it. We are accused of virtually every political and moral crime under the sun. Our democracy is decried as an instrument to enslave our people. The radio is the chief weapon by which this war of words is being blasted at us, but it is not the only weapon. It is being carried on by paid rumor-mongers, and in the Communist-controlled press of the countries which wish to be friendly with us. It is being carried on in dozens of other ways more subtle perhaps, but none the less effective.

My experiences and my observations on this investigating trip impel me to use every means at my disposal to try to let the American people know what is happening to us in Europe. They also impel me to do everything within my power to convince the Congress of the necessity for strengthening the Voice of America as one of the key steps in overcoming the effects of the propaganda that is being used against us.

First, let me outline to you what I mean by the Voice of America. The Voice of America is the international information program now being conducted on a limited scale by our State Department. It takes in our international short-wave radio programs directed to the countries of the world in some 24 languages. It includes some 59 American libraries operated in half a hundred foreign countries. It encompasses our exchange of persons program with other countries under which American teachers and specialists in the sciences and arts go to these countries at their invitation to assist them, and under which we encourage students, teachers, and others to come to the United States to study, and give us the benefit of their own cultures. It includes also the daily informational news services to our embassies throughout the world to keep them informed of the news from America and to enable them to pass it on to any persons in foreign countries who wish to publish it or otherwise disseminate it.

In short, the Voice of America is our own instrument for projecting a full and fair picture of the United States to the other nations of the world.

This effort to tell the truth about the United States has taken on vastly increased importance as a result of this new war of words that has been directed against us in Europe. Its importance is further enhanced in the light of the efforts we have been making to relieve hunger in the war-ridden countries of Europe and the Far East. And it becomes of transcendent impotrance now that we are at the point of providing additional billions through the Marshall plan in aid to these countries in our efforts to forestall chaos and prevent starvation abroad.

It has been our sincere hope that Russia, and all the satellite countries would participate in this humanitarian effort. Russia not only has refused to do so, but Moscow has applied pressures on the satellite countries to prevent their participation. Russia has not only declined to join in this effort, but she has organized a consolidated Communist propaganda service, with headquarters in Belgrade in a concerted move to destroy our European recovery program. This is all part of her plan to impose communism on Europe for Russia well knows that communism can thrive only on chaos and human misery; that a happy, well-fed population does not turn to her type of dictatorship. The Moscow plan is to divide, and then absorb.

Our present Voice of America, in the light of these new needs is wholly inadequate to meet the needs of our country. It must be strengthened far beyond our previous conceptions of its size and scope.

Congress has become aware of the need for this expansion, and at the last session directed the investigation by the committee of which I am co-chairman. The legislation needed for the expansion of our international information service is even now before Congress, in the form of the Mundt bill, giving congressional authorization for these activities, which hitherto has been lacking. The Mundt bill was passed by the House of Representatives by a substantial bipartisan majority last June. It has been carefully considered by the Senate Foreign Relations Committee and has been reported out to the Senate, where it is now on the calendar for action by that body. I hope for early Senate approval of this bill with some strengthening amendments which now seem to be desirable.

In order to assess the value of our Voice of America as it is now conducted, as well as to determine the need for the expanded program, our committee this summer spent 2 months in an exhaustive investigation of the subject. Its members visited all the countries of Europe except Russia, Yugoslavia, Albania, and Ireland.

We found in every country we visited that we are losing this war of words. Our own Voice of America is pitifully weak compared not only with the efforts of Russia and her Communist satellites, but compared also with the efforts in the same field that are being made by friendly countries such as Great Britain and France.

Russia has turned loose against us a propaganda machine of incalculable size and effectiveness. No one can even estimate the resources that are being poured into it. It employs every kind of device of mass communication to din into the ears of the populations of every country of the world, the lies and distortions by which she hopes to keep the world in chaos and ultimately to control it. The grist for this gigantic propaganda machine comes direct from Moscow with almost every act of her government, and every speech by her representatives at the United Nations designed for propaganda value in the war of ideologies.

Among the nations that are friendly to us the importance of adequate international information programs has long been recognized. Even today Britain, under an austerity program which has reduced her governmental expenditures to the barest minimums, spends some $40,000,000 a year on these activities as compared with the meager $12,000,000 appropriated for our Voice of America for the current fiscal year.

Everywhere we went in Europe we were asked, "Why doesn't the United States, with its commanding position in world affairs and its vast international responsibilities, make a greater effort to assure that its story is told abroad, and that the facts about its policies and purposes are made known to other peoples?" The answer to that question, of course, is that we as a Nation have not yet recognized the importance, as a factor in world peace, of having other countries understand our policies and purposes.

On all sides we saw evidences of the extent to which misrepresentations of the United States and its policies are prevalent. We were asked in many places whether, for example, there was any truth to the Russian charges that we were seeking imperialistic control over Greece, Turkey, and of all the countries we are trying to aid. There was all too little knowledge of the aid plan as it was enunciated originally by Secretary Marshall in his Harvard speech last June in which he clearly stated our motives. The Paris Conference of 16 nations to survey the needs of Europe was pictured as a device of the United States to clamp selfish controls on these countries, instead of as the device of free countries to work out by themselves the basis on which aid could be made effective for their peoples. We were accused by our detractors of controlling this conference despite the fact that we were not even represented there, but the people of Europe—at least vast numbers of them, never heard the truth.

I believe so implicitly in the necessity for telling the truth to these people, and in the urgency of so doing, that I have today requested Secretary Marshall to prepare, for our use in Congress, a plan for expanding our Voice of America operations throughout the world to a scale which he deems adequate to meet the new demands created by Russia's organization of the Comintern and by the Marshall plan itself.

I have suggested to him that we start from scratch in our new consideration of our information service in the light of the changed conditions; that this new plan be engineered to meet the realities of the European situation as we have found it; and that the plan be provided as speedily as possible so that the Congress may give it the earliest possible attention.

In closing, I want to emphasize that it is not my desire, nor the desire of any responsible American with whom I have talked about this problem, to have our country engage in the kind of propaganda war that is being carried on against us. Every effort in our own international information program should be directed toward telling the simple truth about the United States to the other peoples of the world. We should be factually accurate; so scrupulously accurate that no one can successfully challenge us. And we should speak over such commanding facilities that our voice can be heard wherever there are people who want to hear us.

The United States, despite the attacks being made on us by communism, has a vast reservoir of good will everywhere in the world. We must, for the sake of our friends in these countries, as well as for our own sake, let them know the truth about our own democracy, and about our hopes and aspirations for world peace.

The Value of Humor

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, November 20, 1947

Mr. COOPER. Mr. President, I ask unanimous consent to have reprinted in the Appendix of the RECORD the text of an address delivered in Beloit, Wis., by

our colleague the senior Senator from Wisconsin [Mr. WILEY].

The address was on the subject of the value of humor. It was delivered at a dinner of the Rock County Wisconsin Republican organization and it marked the appearance on October 13 of Senator WILEY's book Laughing With Congress. It is my understanding that many of the Members of Congress are mentioned in the book, and I therefore think this address is of particular interest.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HUMOR'S VALUE FOR A BETTER AMERICA

(Address by the Honorable ALEXANDER WILEY, United States Senator from Wisconsin, at the Rock County Republican dinner in Beloit, Wis., October 7, 1947. Dinner marked publication on October 13, 1947, of Senator WILEY's book Laughing With Congress, by Crown Publishers, New York)

I am grateful for this opportunity to appear before this fine group in the good city of Beloit. I want you to know how much I appreciate your courtesy and your kind reception to my book.

I will keep my remarks very brief. As was once said about a speech: "The longer the spoke the more the tire." Or, as another fellow put it: "Be bright, be brief, be gone," or, "If you can't strike oil in 20 minutes, stop boring."

VISITS TO BELOIT

As you so well know, the Congress has been in almost continuous session for so long that I have been unable to get back to Beloit as often as I would like. Even now, as you know, I am preparing to leave again for Washington to be on hand early in November for the sessions of the Foreign Relations Committee, which will consider the European-aid program. So, it may be some time before I get back to see you kind folks again. Nevertheless, you can be sure that the memory of these very pleasant hours together will long be a source of deep gratification to me. Moreover, I will take back with me your frank reactions and suggestions on Wisconsin and national affairs.

SUBJECT OF LAUGHING WITH CONGRESS

I would just like to say to you a few words about the book to which you have so kindly referred. As I state in my introduction to the book, my primary reason for its preparation is to help spread a bit of good cheer on what is often a sadly misunderstood subject—the United States Congress—to show the human side of the Congress. All of us, as I mention in the book, need a sense of humor in these trying times.

The Book of Books, as you know, is crowded with instructions to man to "rejoice always," to manifest good cheer rather than gloom. "The joyfulness of a man prolongeth his days," we read.

LINCOLN'S HUMOR AND OTHER RELEASES

Some of you may recall that I have often referred to humor as one of the three great safety valves or releases which characterized one of our greatest Presidents and certainly by far our greatest Republican, Abraham Lincoln. Yes; humor was one of his "safety valves" in hours of crisis, and the other two were a great and abiding love of the Republic and Lincoln's ability to commune with his Maker. Perhaps if I get the opportunity and spare time I may be able to do some further writing on the other two vital elements in Lincoln's trio—a book on love of country and another on prayer or communion with God on high. I am sure you'll agree that every American could indeed profit from Lincoln's example.

As a matter of fact, even President Truman said a few days ago that a President of the United States would be in a "heck of a fix" if he didn't have a sense of humor.

WHY A SENATOR WRITES A BOOK

Now, on this matter of writing, please don't misunderstand me. I lay no claims to having great writing ability. Writing is not my business, nor do I believe that it should be the business of any Senator or Representative of the United States primarily. We have an obligation to the people to get our legislative job done. I work 80 hours a week, and I'm proud to do so for our people. To cite an example of that work in the last session of the Congress, I reported a total of 206 Judiciary Committee bills. And that's just one aspect of our tasks.

Nevertheless, as I see it, and as you undoubtedly do, it is up to each American legislator to help inform the American public, to help bring light to it. That is the only reason why any writing is justified by a Congressman or Senator. Through the medium of this book—which was written in odd snatches, mostly late in the evening—I hope to get across certain ideas, to demonstrate, for example, that Congressmen are human beings and are big enough to like humor even if it is at their own expense; to demonstrate that the Congress has always been a victim of bouquets and brickbats, mostly brickbats, and most of which are unjustified. As one newspaper crack put it:

"If God had made Congress,
He would not boast of it."

Well, I believe on the contrary that we may indeed be proud of our Congress, although we recognize some of its shortcomings.

REPUBLICAN GAGS

One of the particular parts of the book that I very much enjoyed doing was that entitled "The Gag Party Between Political Parties." Perhaps you will recall the so-called joke in it, for example, to the effect that no Democrats carry life insurance because no one can make out their policy. Or Speaker Tom Reed's description of the Democratic Party. He said: "It was like a man riding backwards in a railroad car. He never sees anything until he gets past it." Then there is the one about the farmer who responded to a question about local politics from a visitor. The farmer said: "Well, my neighbor over in the next place is a bit 'teched' and he is a Democrat. My wife and I are Republicans. Our baby is a Wet, and our cow is a Dry."

Perhaps, too, you recall the one about the time Speaker Reed was heckled during a campaign speech. At last the heckler got up and said to Reed: "Aw, go to—let us call it—Hades!" To that Reed replied: "I have traveled in many parts of the State and have spoken at many meetings, but this is the first time I have received an invitation to the Democratic headquarters."

SERIOUSNESS OF CONGRESS

Those, then, are some of the samples of the humor of Congress. It is not the humor of professional comedians, because our job is the most serious job in the world. And on this matter, I would like to clear up what may be some further misinterpretations regarding my conception of Congress. As I relate in the book, there may be some few folks who erroneously think that I regard the Congress lightly, or, for that matter, who think that I regard the issues of the day as jokes. Such an interpretation is, of course, absurd and I am sure that if there are any such people who make it, they are very few indeed.

A United States Senator's job is no joke. I regard the high office which the people of Wisconsin have twice tendered me—a son of immigrants—as my life work—as my mission for constructive work. I am grateful to Wisconsin with depth of feeling that I can never adequately convey. I have accordingly dedicated the book "to the happiness of the people of Wisconsin, and of all America, and of their children and their children's children."

No, gentlemen, I do not regard my job or any Congressman's job as a joke. I want to do an even better job for you in Washington. I am your servant—that is why Wisconsin has sent me to our Capital—to serve State and Nation.

The Congress of the United States is the most important and most serious legislative body in the world today. On it, the fate of our Nation rests, and, indeed, perhaps the fate of the civilized world. Let no man snidely ridicule the Congress, let no man viciously belittle it, lest he serve to sabotage "the one last hope of the world" in this era of dictatorship.

Wholesome humor about the few foibles of the Congress is one thing; malicious, hateful, sneering, subversive jests about the Congress or about the sincerity of its Members are another thing. The American people have enough judgment to separate each type of humor.

GRIMNESS OF ISSUES

No; there is very little humorous about the issues Congress faces. As you know, I have just returned from a brief trip with Mrs. Wiley in war-ravaged Europe. We know from first-hand observation that there is very little, if anything, humorous about Europe's woe. There is very little humorous about our own American problems—about high prices, for instance, about the need for all-out production; there is very little humorous about the housing shortage or about Government controls; there is very little humorous about the tremendous bureaucracy which is weighing on the shoulders of the American public; there is very little humorous about high taxes, or about the menace of communism, and so on down the line.

But there are some comical aspects of these grim issues, and I have tried to relate some of these aspects so that by "recharging our batteries"—by letting off a little bit of steam—we can better handle these difficult problems.

You remember this fact, no doubt: Abraham Lincoln, when he came to some of his most difficult Cabinet sessions and saw his Cabinet members tense, their muscles tied into knots and features grim, when he saw this before him, he would not enter immediately into a discussion with his Cabinet members on the important issues they faced. On the contrary, he would tell them a joke or two. He would get them to unbend, to loosen those taut muscles, and so by using the safety valve of humor he would enable them to be adequate to their problems.

CRITICISM OF LINCOLN'S HUMOR

Lincoln, you will recall, was criticized for his humor. Some newspapers and others tried to taunt him as a clown, a buffoon, a country bumpkin. But the American people—the common folks "whom God loved so much that he made so many"—they understood Abe; they laughed with him. So, too, they can laugh with Congress.

OUR NEED FOR HUMOR

So you see, what I hope to do in some small part through the medium of this book is to add a bit of humor to our lives so that we can better meet our responsibilities. It has been my privilege and pleasure to send with my compliments copies of the book to a number of places where I know that a bit of humor is particularly needed, to some of our veterans' hospitals, for example, where the heroes of our First and Second World Wars still lie in their beds, wracked and broken by war in everything but spirit. I have sent more copies of the book to libraries and to other folks and institutions who I think can stand a bit of good cheer to make the clouds roll away.

All of us need humor, and, as you gentlemen have so well demonstrated today, you appreciate that great fact.

CONCLUSION

As fellow Republicans, I know that you are going to be adequate to your responsibilities next year, that we are going to work together as a team here and throughout the country, to elect a Republican national administration and a Republican Congress, in order to assure better direction of the ship of state. And that is no joke either.

Thanks again for your courtesy, and I hope to see you all again very soon.

Statehood for Hawaii

EXTENSION OF REMARKS
OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, November 20, 1947

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable JOSEPH R. FARRINGTON, Delegate from Hawaii, in the opening program of the New York Herald Tribune forum in New York City on the night of October 20, 1947, regarding the bill which passed the House on June 30, 1947, granting statehood to Hawaii, which bill is now pending before the Public Lands Committee of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The time has come to admit Hawaii to the Union as the forty-ninth State.

The people of this Territory have demonstrated that they are fully capable of self-government, and they believe that they have been promised it. They are entitled to their rights as American citizens. These rights can only be realized completely and irrevocably as citizens of a sovereign State.

Granting statehood to Hawaii at this time would greatly enhance the influence of the United States in the Pacific and among all dependent peoples. It would demonstrate our belief in the principles of democracy and self-determination. The House of Representatives recognized the soundness of this policy by adopting on June 30 of this year H. R. 49, the bill providing statehood for Hawaii, and sent it to the Senate, where it is now pending.

To compel the people of this Territory to continue in their present status would be not only the violation of a promise but contrary to the wish of the people themselves, who voted, by a majority of more than 2 to 1, for statehood in a plebiscite in 1940. It would also be positively harmful.

It would weaken the tradition of self-reliance that has marked the development of Hawaii as one of the most progressive and prosperous communities under the American flag. It would invite the enactment of retrogressive measures that would severely injure one of the greatest experiments in democracy ever launched by this country.

To anyone who challenges this statement, let me point out that in opposing statehood for Hawaii in a recent article, Dr. Nicholas Murray Butler, president emeritus of Columbia University, proposed that the people of Hawaii be given a semi-independent status. He would turn back the clock to a form of European colonialism so completely discredited that the people of the Pacific want none of it today. His proposal is positively insulting to a people who are proud, most of all, of their American citizenship. Not a single one of them has even entertained the thought of a government other than one which would identify them, in every respect, as completely American.

Dr. Butler objects, moreover, to Hawaii becoming a State because it is noncontiguous territory. This question was settled in 1900, when Hawaii was incorporated in the Union as a territory and made an integral part thereof by the organic act of 1900. Objections because of distance have long since been eliminated by the development of modern methods of transportation and communication. Hawaii today is closer to Washington than Boston was to Philadelphia at the time of the Continental Congress.

The dangers and uncertainties of the territorial form of government are evident in the serious discrimination suffered by the basic industry of Hawaii. Sugar produced in Hawaii constitutes almost 25 percent of all the sugar produced under the American flag. But Hawaii is compelled to ship it to the States in its raw form, excepting only a small portion that is consumed locally. This is required under a law that has been on the statute books of our country since 1937, despite vigorous protests from Hawaii's people. It constitutes a restriction on our trade and commerce that is not only un-American but whose implications hold serious threats to Hawaii's future development.

Under present conditions, a simple act of Congress is all that is needed to reduce Hawaii's people to a status of complete dependency and political slavery. Through a period of more than 10 years, the people of this American Territory have been threatened successively with government by the Army, Navy, or both; complete disenfranchisement with government by a commission appointed in Washington, and elimination of the residential requirements covering the appointment of our principal executive and judicial officials, which would give Hawaii government by carpet baggers.

During the war, the Army set up a military government under martial law in Hawaii that was without precedent in this country. It was a government patterned after that used in occupied countries. Its abuse of power and violation of fundamental American rights was a scandal. This government was eliminated only after a bitter fight by the civil agencies of the Federal Government, and has since been roundly repudiated by the Supreme Court of the United States.

The people of Hawaii believe they are entitled to better treatment than this, and to the security in their rights as American citizens that can come only with State government.

To deny Hawaii's people statehood because of their racial origin would be the most tragic error of all. It would not only retard the political development of this territory, but seriously bring into question the sincerity of the United States in its professions of democracy. It would weaken the postion of the United States at a time when democracy must become dynamic to meet the challenge of Russian communism.

For close to a century now, Hawaii has been the great meeting ground of Pacific people. There they have found, in the tradition of the native Hawaiian people, a measure of friendship, tolerance, and fair play unparalleled in the world today. These people have come to Hawaii through a period of well over a century, from every one of the 48 States, from China, from many countries of Europe, from Japan, and from the Philippines. Each has made an important contribution to the development of these islands. In the American system of free public-school education, economic opportunity, and political equality, they have found a sound basis for living in happiness and harmony, despite their unusually diverse racial origin.

Today all but a small portion of Hawaii's people are American citizens. The war proved their loyalty beyond the shadow of a doubt. They love this country. The record of the FBI and the Army and Navy Intelligence Services shows that there was no sabotage and no subversive activities among Hawaii's people. The Americans of Japanese ancestry who composed the One hundredth Infantry were all from Hawaii. They became the most highly decorated unit in the American Army and were also the spearhead of units formed subsequently of Americans and Japanese ancestry from all parts of the country. They were the product of Hawaii's system of education, economic opportunity, and political equality. They proved, if anything ever proved, that loyalty to this country is not a question of race but of the heart and of the mind.

Hawaii, for half a century, has been a lighthouse of democracy in the Pacific. The leaders of free government in the Far East have always found in Hawaii protection and inspiration in their efforts to achieve liberty in their native countries.

In the light of this record, in the light of our declarations in behalf of democracy and self-determination, in the light of our responsibilities for the government of the Pacific islands, in the light of our hopes for the Philippines and our objectives in China, and more particularly Korea and Japan—we of the United States cannot afford now to deny to our own people in Hawaii the privileges and responsibilities of democracy that can only be achieved by State government.

Since becoming a part of this country by voluntary annexation in 1898, Hawaii has consistently paid into the Federal Treasury each year more than at least 14 individual States. The total contribution is far in excess of the money spent by the Federal Government in Hawaii, except, of course, the funds spent on national defense.

Government in the Territory has been maintained at a high standard throughout this period. Although privileged to do so, Congress has never found it necessary to exercise its right to veto a law passed by the legislature of the Territory. Illiteracy is virtually unknown in Hawaii. A large portion of the funds paid in taxes to the government of the Territory is used to maintain a system of free public-school education which extends even into the most remote rural areas and is far above the standard of many States.

The same high standard prevails in the fields of public health, public works, laws for the protection of labor, law enforcement, and last—but by no means least—finance. Neither the Territorial government nor any of its subdivisions has ever defaulted on a bond issue. Their financial rating has always been of the highest.

Hawaii has virtually no absentee landlordism. Its sugar and pineapple industries, monuments to the American system of free enterprise, are owned and controlled by the people of Hawaii. It has many other enterprises and sources of independent business that see in these islands, strategically situated at the gateway to the Pacific, great promise for the future.

As far back as 1900 Congress found Hawaii's development so much in the American tradition that it decided to make the islands a territory of the United States and give the citizens of the Republic of Hawaii citizenship in the United States. In a succession of congressional investigations into the question of statehood for Hawaii, beginning in 1935, evidence has shown beyond dispute that Hawaii has met all the requirements for statehood asked from other territories upon entering the Union.

The last of these investigations was conducted early this year by the House Committee on Public Lands. The committee decided by unanimous vote to recommend to the House the adoption of legislation ena-

bling Hawaii to become a State. The action of the House in voting approval of this legislation followed on June 30 of this year, and the bill was sent to the Senate, where it is now pending before the Committee on Public Lands.

We of Hawaii have always believed we would be given statehood upon meeting the same requirements that governed the admission to the Union of 29 territories. In the debate on the organic act amendments were offered providing that adoption of this legislation should not be construed as promising statehood to Hawaii at any time in the future. These amendments were rejected in both the Senate and the House. This action is but one of many that have led Hawaii's people to believe they would become a State. This belief has been further fortified by planks in platforms of both major political parties, the utterances of many public officials, and the results of investigations carried on by Congress over a long period of years.

President Truman has already recommended statehood for Hawaii. His Secretary of the Interior, Julius A. Krug, who has been very aggressive in supporting legislation for this purpose, has announced that the President would sign the bill passed by the House if it also passes the Senate.

The people of the country are in favor of statehood for Hawaii. A Gallup poll showed this last spring. The enthusiastic response to the favorable action of the House leaves no doubt about it.

Now it remains for the United States Senate to act. The hour of great decision is here.

Hawaii was ceded to the United States by the people of those islands of their own free will. With faith in the future and confidence in the integrity of this country, they placed themselves, their islands, and their destiny in the hands of the American people.

Today, after almost 50 years of tutelage, they are prepared for the responsibilities of statehood. They believe this is their right and their destiny. They believe that as citizens of a State they will have a vitally important contribution to make to the future of this country. To admit Hawaii to the Union now is in the national interest. It will enhance the position of our country in the Pacific and among liberty-loving people everywhere.

As American citizens, we ask finally to be admitted to the Union as a matter of simple justice and fair play.

Foreign Aid

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, November 20, 1947

Mr. THOMAS of Oklahoma. Mr. President, I am in receipt of a statement in the nature of suggestions and recommendations with respect to what our Government should do in affording aid to the unfortunate people of the devastated areas of Europe. Because of the nature of the statement, I ask permission that it be printed in the RECORD. The statement is from Mr. Robert M. Harris, a former citizen of the State of Oklahoma.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Relief and loans to foreign countries to be considered by Congress in special session is of such paramount importance that I make the following suggestions for your consideration:

RELIEF

It is vital that relief go direct to the people involved and not become entangled with foreign governments and the intricacies of their politics. There is a distinct danger that unless relief is handled properly it may find its way into communistic or anti-American hands. This has happened in recent months and years.

To that end it seems imperative that all relief should be handled under definite American control and supervision, perhaps through the American Red Cross or a similar Government agency, which proved so successful and helpful after the last war in this field.

FOREIGN LOANS AND CREDITS

The objective of all foreign loans or credits should be to help distressed nations abroad to help themselves. Of necessity, such loans or credits should be on a long term and revolving basis. They will have to be guaranteed by the foreign buyer, his bank and his government, and by our Government. A Government Credit Insurance Agency charging reasonable premiums for a guaranty, similar to the Government war risk insurance which proved so successful in the last two wars, would minimize the burden of the United States Government guaranty and the premiums paid would probably cover any or all losses involved.

These foreign loans or credits should be made on a business basis and only with friendly and noncommunistic nations. The purchases made from these funds should be limited to American commodities, machinery, and goods, whenever it is in the interest of our economy. The American seller to assume at least the risk of his profits. By handling foreign loans in this way it will have this direct benefit:

1. The loans will in no way help communistic or governments not friendly to the United States.

2. The loans will be kept free of politics both here and abroad and will likely, therefore, be repaid, which seldom happens when governments make loans to governments.

3. By keeping the loans in business channels, the loans will not only likely be repaid but they will be most helpful in reviving industry and reconstruction in Europe along commercial, practical, and American lines.

I have discussed the foregoing with outstanding bankers, economists, and practical businessmen. They commend it. The experience of my firm in doing business with most of the nations of the world during the past 40 years convinces me that this program, properly carried out, will do much to help these foreign countries to save themselves and redound to the benefit of our country.

Reclamation—Insurance for Our Food Supply

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, November 20, 1947

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on reclamation which I delivered in Phoenix, Ariz., October 30, 1947, at the sixteenth annual convention of the National Reclamation Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies, and gentlemen, it is always a source of satisfaction to get together with a group of people who are so interested in extending irrigation and bringing additional land into greater production. The National Reclamation Association is an organization devoted to increasing the productive wealth of this country. In that respect it offers a sharp contrast to many other well-known organizations, which I will not name, which appear to be much more interested in dividing up the wealth or in taking away the wealth of others. It is a contrast of which you should be proud. This country was built by men who were primarily interested in creating new sources of wealth—and they did an amazing job in a very short time. By following in their footsteps you are carrying on the tradition that has made America great. We shall never have a stronger and more prosperous America, with higher living standards for all, unless we seize every opportunity for the development of still greater production of everything that human beings need and use—and that is what you are doing. I congratulate the National Reclamation Association on the constructive position it has taken on the various questions relating to the development of our national resources, and on its long history of successful achievements in that regard.

Last January I was honored by being named chairman of the Senate Committee on Public Lands. This newly enlarged Senate committee has jurisdiction over legislation dealing with the development of our land resources, including irrigation. In other words, it absorbed the duties of five old committees, including Irrigation and Reclamation. As soon as I was selected for this post, I resolved to do my utmost to deserve the honor—by informing myself as fully as possible on every aspect and every phase of our irrigation development, and the problems connected therewith.

Since the end of the session last summer, I have devoted my entire time to making good on that decision. Aside from a short trip to Alaska, I have spent practically all of the last few months in visiting and touring around the western States. I have taken every opportunity to look over the reclamation projects that are in operation, as well as those that are under construction and those that are still in the planning stage.

I was already fairly well acquainted with our own development in Nebraska. However, I had not had an opportunity to see the progress all over the western half of the Nation. Let me assure you, the results already achieved are awe-inspiring. The thousands of prosperous and productive farms that have been irrigated under private and Federal irrigation plans are the best possible proof of the soundness of the entire reclamation program. They are doing their full share toward meeting our national need for food and other agricultural products.

The progress already made is clear proof of the change that has come over our methods of thinking about and dealing with our water resources. For too many years we considered only our surplus water problems—a danger to be guarded against. We built higher and higher dams and levees to keep excessive water flows from injuring us. But now I believe the whole country has come to realize that water is much more an asset than a menace. Upstream engineering to catch the waters where they rise and divert them to useful purposes has come to be recognized as the real solution to our water problems.

Too much water is still a serious problem in certain areas. I have a rather close personal knowledge of that fact from the disastrous floods we have had in the Republican River Valley in southern Nebraska.

The most urgent problem before the Nation is our food supply. The proposals to continue shipping abroad gigantic quantities of grain will obviously put a severe strain on our available supplies, and the floods and drought we have experienced in many parts of the country have cut production sharply. The President, and other high administration officials, and Members of Congress, have all been deeply concerned as to means of maintaining an adequate food supply. A wide variety of suggestions have been made for dealing with this situation. Conservation measures of various sorts are being tried out on both a national and a local level. The problem of our food supply has never been more in the public eye.

Here is exactly where reclamation comes into the picture. If there is one thing that reclamation means, it means more food. I mentioned the great impression made on me by the various irrigation projects in operation. Over 20,000,000 acres of our country are under irrigation at the present time, about one-fourth under Federal projects and three-fourths under privately constructed and operated projects. Millions of tons of food and forage are being produced annually. The Bureau of Reclamation hopes to bring under irrigation another 400,000 acres of land by next year.

Yet the strongest impression I received from my tour was not the achievements to date but rather, I was struck by how much remains to be done. Our geologists tell us that there is enough water, now unused, to irrigate another 20,000,000 acres in the 17 reclamation States. This water, if put to use, would give us about 200,000 additional farms, and each one of those farms would soon become a miniature factory, supplying the Nation with increasing quantities of food.

Think of the production that those millions of additional irrigated acres could supply us, if they were already in use. Last year, according to the Bureau of Reclamation estimates, between eleven and twelve million tons of food and forage crops were produced on Federal reclamation projects. Shortly before I left Washington, I secured figures on production of various crops on just the 2,500,000 acres which receive all of their water from Bureau projects. On these 2,500,000 acres, our farmers produced last year 2,359,000 tons of alfalfa and other forage crops; about a million tons of sugar beets; 22,000,000 bushels of grains; over a billion pounds of fruit; 66,000,000 bushels of vegetables; and smaller quantities of other crops. That was the production on less than 2,500,000 irrigated acres for which we have detailed, accurate reports.

From these figures you can see the production possibilities of an additional 10 or 20 million irrigated acres. Use of all our water in the West would permit us to multiply those production figures by 10. It would give us 20 million tons of alfalfa and other forage crops, almost 200 million bushels of cereals, etc., right down the line. Altogether, an additional 20 million irrigated acres would supply us each year with between 50 and 100 million additional tons of food and forage crops. This acreage, properly distributed among the crops that we need most, would more than make up for the food shortages from which we are suffering this year. If we had that production right now, no one would be worrying about our national food supply.

There is one other angle to this question that I should mention. Irrigation offers a sharp contrast to the picture of floods and droughts and other hazards which have cut down crop yields in other parts of the country this year. With an assured supply of water, the irrigated areas produce year after year large quantities of high-quality foodstuffs. Irrigation is in itself a form of crop insurance.

Some of my statements may seem sort of distant in the future, yet a substantial part of this picture is already coming true. The construction program of the present fiscal year, based on the appropriations made by the session of Congress just ended, will be, I believe, the largest in the history of American reclamation. A figure of about $200,000,000 in construction work has been set as the goal for the Bureau of Reclamation for this fiscal year.

This construction will be the first big installment on a short-term program aimed at investing another $1,500,000,000 in projects already authorized by Congress. These projects already authorized contemplate the irrigation of 4,000,000 additional acres of land, together with the other benefits associated with irrigation, such as power and recreational development, flood control, etc. By the Bureau's present schedule, it is hoped to complete these authorized projects within 6 years.

I might mention that this schedule may require a supplemental appropriation by Congress to provide additional funds for the current year. During the course of my travels this summer, I visited several places where the construction work had slowed down or was about to be closed down, apparently for lack of sufficient appropriations. I know that when the appropriations were voted by Congress last summer, a sincere attempt was made to arrive at figures which would take care of the actual construction needs of all the projects. There was a general feeling that construction would be delayed because of the difficulty in securing construction materials, labor, and so forth, and that the Congress was anxious to avoid voting larger sums of money than could be spent efficiently. It is rather difficult to compute accurately 12 to 18 months in advance exactly how much money will be required on a given construction job.

It now appears that in the case of some projects, funds are not sufficient to carry the construction work through the entire fiscal year, and these projects, including Davis Dam on your own Arizona-Nevada border, might have to close down if additional appropriations are not provided. If that is the case, I feel sure that Congress will be willing to reexamine the need for funds on the various projects. I feel confident that necessary funds will be provided.

Speaking for myself, I do not like the present stop and go method of financing reclamation projects. It is not good business. When once we have decided to construct a project, we should make funds available as rapidly as they can be wisely expended. The people in charge of the program and construction should be in a position to plan the work as a continuous, smooth-running operation. It is poor business to stint on the funds for a project under construction that will start paying dividends when completed. Delaying work on a project on which construction has been started is not economy; it is simply waste.

Completion of the authorized projects I have mentioned, bringing water to 4,000,000 additional acres, would go a long way toward making up the food deficit that I have been talking about. If I keep returning to this question of our national food supply, it is because that is one phase of the question in which the whole Nation is interested. It is also our chief reason for expecting the support of the rest of the Nation for our program. Reclamation might, in fact, be called our national food insurance. We have found this year how badly we need that insurance. Perhaps that experience will make it a little easier in future years to secure the support of the East, the Middle West, and the South for our program.

In this brief address I have chosen to spend most of my time on only one phase of the subject of reclamation—its relationship to our food supply. There are other sides of the program in which you are interested.

Two particularly important and highly controversial questions would each require more detailed treatment than I have time to give them, and I imagine they are being covered elsewhere in your program. I refer to the issue of so-called valley authorities, and to the question clarifying the intent of the Reclamation Act of 1939 and eliminating the confusion created by the solicitor's opinion of 1944. I do not intend to spend much time on these two questions at present, but I do have one comment to offer. In my opinion, both of these controversies were created, to some extent, by the failure of Congress to draft sufficiently precise and definite legislation as a guide to the administrative agencies executing the programs.

In the case of the controversy regarding the meaning of the Reclamation Act of 1939, it is absurd that laws should be written in such a way that different people could come to exactly opposite conclusions regarding the intent of Congress in passing those laws. Congress should have expressed its intent in such a way that no one could mistake its meaning. If that had been done originally, no basis for controversy would have existed. We would not have to do the job all over again, trying to explain exactly what we meant to say in the Reclamation Act of 1939.

In the same way, I believe that much of the demand for valley authorities has been created by the overlapping jurisdiction assumed by different agencies of the Federal Government operating on vague mandates of authority from the Congress. If we do not tell the Corps of Engineers, the Bureau of Reclamation, the Agriculture Department, and other agencies exactly where their powers begin and where they end, we should not be surprised when each agency is tempted to encroach a little on the jurisdiction of the other agency. That has happened in some cases, and the resulting confusion, I believe, has played a large part in lending plausibility to the idea of valley authorities.

In other words, I believe that Congress must bear part of the blame for some of the unfortunate confusion that has been created, and I want to admit that fact frankly. In recent years I think we are doing a little better job. For example, in the Missouri River Basin we took the bull by the horns and adopted a clear-cut program by enacting the Pick-Sloan plan for the Missouri. In authorizing that plan we laid out clearly the job to be done and we defined very definitely which part of that job was to be done by the Corps of Engineers and which part was to be performed by the Bureau of Reclamation. Since 1944 we have had very little trouble with jurisdictional disputes between those two agencies in the Missouri Valley, and we have also experienced a perceptible lessening of enthusiasm for the authority idea. The principal argument in favor of an MVA has evaporated, now that we have a coordinated plan.

If we could write all our reclamation legislation in as clear and concise a manner as we did in drafting the Flood Control Act of 1944, I believe there would be far less controversy and confusion, and we could go ahead faster with the main job of bringing more water to more land. The primary responsibility for that job rests with Congress. But in doing that job we in Congress must rely heavily on the National Reclamation Association. Your organization has the technical knowledge and the contact with actual operating conditions that is absolutely necessary for the preparation of sound legislation. We need and appreciate your help very, very much.

One other job which requires our constant attention is to keep recrganizing the administrative machinery to fit our changing needs. As an example, I have in mind the situation

that exists in respect to irrigation projects on the Indian reservations.

There are two organizations within the Department of the Interior having charge of irrigation and reclamation projects. One is the Bureau of Reclamation and the other is the Office of Indian Affairs. There is apparently no need for this duplication of functions, and last session, Senators ROBERTSON, of Wyoming, ECTON, of Montana, MALONE, of Nevada, LANGER, of North Dakota, and I joined in the introduction of a bill (S. J. Res. 82) providing for the transfer of the irrigation projects on Indian reservations to the Bureau of Reclamation.

The history of Federal reclamation on Indian reservations dates back to 1867, when an appropriation was made to build an irrigation system on the Colorado River Indian Reservation here in Arizona. Irrigation in this region goes back to prehistoric times, in rude form and with a primitive method of agriculture. Appropriations for varying amounts have been made over the years since 1867 to provide irrigation systems on Indian lands. Several projects, in fact all the larger and more prosperous of the Indian irrigation projects are not really Indian, but are largely settled and cultivated by white people. On such projects as the Yakima, Flathead, Crow, Wind River, Uintah, and Fort Hall, most of the farming is done by the white people. There is really no good reason that I can see why such projects should be under the management of the Office of Indian Affairs. Our proposed legislation would transfer all records, property, and personnel to the Bureau of Reclamation, along with the transfer of the functions, powers, and duties of administering these projects. This is only one sample of Bureau simplification, which I feel should be inaugurated.

In conclusion, I want to return to my title subject by reminding you that our national need for food is not a passing crisis or a temporary thing. We are still increasing in population—over 1 percent per year. In fact, this last year it was 1½ percent. We are not bringing under cultivation an additional 1 percent of acreage every year. We can't; the good land of the east and central parts of the country is already in use. Iowa is 98 percent tilled. Nor are we improving agricultural productive efficiency very fast. Highly productive, irrigated agriculture is the only answer, and I predict that we shall see the need for it more and more clearly during the coming years.

According to a recent news report, our administration has plans for the expenditure of millions of dollars for the irrigation of some 800,000 acres in Greece. This program in that far-away country is to be under the supervision of an irrigation adviser from our own Reclamation Bureau. This news is evidence of the interest that other countries have in the development of their own agricultural resources. I mention it only to point the moral of my own theme. If we can afford to spend our money and use our men to develop the irrigation possibilities of other countries, it would seem to be elementary wisdom to proceed as rapidly as possible to the full exploitation of our own resources.

Several years ago I told the reclamation people of my State that irrigating an additional million acres of Nebraska land would mean more to the State than the discovery of oil. I believe that is true, and I believe it is true all over the West. If we can continue with the sound progressive development of our water resources along the lines charted by your organization, we will be adding permanent wealth and permanent resources for the production of the world's greatest need—food.

Do Higher Wages Account for High Prices?

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, November 20, 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Do Higher Wages Account for High Prices?" by Hon. Lewis B. Schwellenbach, the Secretary of Labor. The article appeared in the New York Times magazine on November 16, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DO HIGHER WAGES ACCOUNT FOR HIGH PRICES?

(By Lewis B. Schwellenbach)

During October wage negotiations were conducted between the owners of dairies serving the New York metropolitan area and their employees. These resulted in the granting to the employees of an increase of $8.50 per week. This amounted to a weighted average cost increase per quart of milk of six-tenths of a cent.

In that area splitting of the price increase or decrease into proportions less than one-half cent is not permitted. These employers were confronted with the proposition of either increasing the price one-half cent and absorbing the one-tenth of a cent cost increase or charging 1 cent increase, out of which they would profit to the extent of four-tenths of a cent over and above the cost of the wage increase. They decided upon the latter course and attempted to secure delivery to the purchasers of five and one-half million quarts of milk consumed in the metropolitan area of an announcement of an increase of 1 cent per quart.

That notice, dated October 27, 1947, started with the following language: "Substantial increases in the cost of operations due to the new higher wage rates of employees, made effective as a result of negotiations just concluded, compel us to advance home delivery prices or store delivery prices, etc., effective October 27, 1947."

I have no information concerning the wage increase other than the fact that it was negotiated. I do not know on what margins these dairies operate so as to be able to state concerning their ability to absorb the one-tenth of a cent if they had increased the price only one-half cent per quart. I do know that the statement made, which I have just quoted, is very similar to statements made whenever prices are raised after wage increases are granted. Almost invariably the seller attempts to place the entire blame upon the wage increase, and by inference the public tends to blame labor unions exclusively for their price increase. I think this announcement should have said that of this new 1-cent increase, six-tenths of a cent was going to labor and four-tenths to the dairies in which these laborers work.

The conclusion I am trying to draw is a very narrow and limited one. It is simply that wage increases are not the exclusive cause of price increases. If that conclusion is accepted it would follow that price increases are not exclusively due to the efforts of organized labor.

I think that constant repetition of statements similar to that put out by the milk industry has caused the American people to accept a fallacy well recognized by students of logic. Its technical name is post hoc ergo propter hoc, which means, literally, "After this, therefore the result of this." As they have read of wage increases and then heard announcements of price increases in which the statement is made that these were due exclusively to wage increases, most people in America have thought that that was true. Actually it isn't true.

During the period since VJ-day consumers' prices on all items have increased from 130 to 165, while the prices of food have gone up from a little above 140 to 205. Both of these increases use the average between the years 1935 and 1939 as the base of 100. Measured on the same base, up to the end of the second quarter of 1947 the prices of food products increased 72 percent over the 1939 level and the prices of manufactured products 48 percent.

Very largely the people who grew and processed the food products are not organized into unions. Almost universally the people who produced manufactured products were organized into unions. The farmers themselves did not fix these prices. They were fixed by the operations of the commodity exchanges in various parts of the country. The increase in consumers' prices came almost entirely after June, 1946, when for all effective purposes price controls were abolished by the Congress.

During the war both prices and wages were controlled. There were no increases in either which could frighten anyone who might fear an inflationary threat. Therefore I think that the important figures are those which involve the postwar period. During this time we have heard and read the argument that postwar price increases have been caused by postwar wage increases. The facts are that between VJ-day and August, 1947, wages of factory workers have increased 21 percent, while prices have increased 24 percent. Of that 24 percent, 20 percent occurred after the lapse of OPA in June, 1946, and 15 percent of the 21 percent increases in wages came after that date. These facts prove my point that wage increases did not exclusively cause price increases.

But that is not the complete answer to our question. The fact that since VJ-day wages have lagged behind prices by 3 percent is not sufficient to satisfy the American people. There are other factors which enter our increased price structure. Clearly everyone has a responsibility to attempt to protect our economic structure against inflation.

One factor which has undoubtedly reflected itself in our price structure is corporate profits.

I do not approach the question of corporate profits with any scalpel in my hand to try to disembowel either the corporations, their officers, or stockholders. Our economic system is based upon profits. Without them it could not function. On the other hand, I do not think there is anything so sacred about them that, when anyone in Government mentions profits, businessmen should want to go underground with whatever they have and become frightened about what they call their risk capital.

The plain fact is that corporation profits have risen tremendously in the last 2 years. During the third quarter of 1945 (when VJ-day occurred) corporate profits were low. I do not think it would be fair to use that figure because of contract cancellations by the Government. It seems to me fairer to those who oppose my contention to take the full year of 1945. During the first half the profits were higher, and during the last half they were lower.

This shows profits after taxes of $8,900,000,000. These increased $12,500,000,000 for 1946. During the first half of 1947 the "annual reported profits of all corporations" totaled $17,000,000,000 after taxes. I do not

know, and nobody knows, how much each corporation or each industry shared in these profits. Such figures are not available to anyone. However, it seems to me that no fair-minded person could help concluding that a reasonable part of those profits could have been used to keep prices down during this period when the inflation threat hangs over our head.

The chief argument used by those who ask us to close our eyes to these profits concerns inventories. It is asserted, and I assume it to be true, that included in this 1947 profit figure is an inventory which cost $4,100,000,000. It is contended that, because the future value of the inventory is uncertain, the whole amount of it should be disregarded. Everyone knows that it is unreasonable to ask the consumer to disregard this entire item. While the whole $4,100,000,000 may not be received for it, a substantial part of it will.

The other argument used to support the position that no part of this profit can be used to protect our price structure is that the corporations must set up reserves. Of course, they must do so. Good business requires it. But at the same time the workers of the country need a nest egg to protect their futures. According to the Federal Reserve Board, more than two-fifths of our families decreased their savings in 1946. The Board estimates that 40 percent of the money represented by the decrease was spent for essential living expenses, 20 percent for durable goods, 20 percent for rent, and 20 percent for transfer to other investments. In other words, 80 percent was for necessities.

I do not pretend to know just how much of these profits could and should have been used to protect the consumers against excessive price increases, or how much represented necessary reserves. Anyone who attempts to say that is either divinely endowed or should be in an institution. But I do know that a part of it could or should be used in an effort to keep prices down. I also know that those who rested on their oars, satisfied that they could pin the entire blame on labor unions, were doing a distinct disservice to the companies they ran and to the American public which wants to keep our free-enterprise system and the democracy under which we live.

There are other factors in this problem of price increases. One of the favorites for discussion right now is our foreign-aid program. Undoubtedly this factor cannot be disregarded. But as was pointed out by the Council of Economic Advisers on November 1, this is largely psychological because actually our exportable surplus is larger than the amount so exported. Using the language of the Council, "the effect of the foreign-aid program upon the domestic economy to date has been substantially less than that of the total export surplus."

Another argument made by at least one prominent citizen is that the failure of the two tax bills this year to obtain Presidential approval is to blame. This is on the theory that if people had more money to spend they would not complain about high prices. When one considers that for the great mass of the people the tax savings would not exceed $30 per year this argument needs no further pursuit.

Another factor was pointed out in the Council's report. That is the increase in domestic consumption. For example, it points out that the per capita consumption of meat has increased from a prewar level of 125 pounds per year to an estimated 155 pounds a year in 1947. Compared with the total the increase is not important enough to account for the marked rise in prices.

It has been contended that I had no right to use the figures from VJ-day or from June 1946 as starting points in reaching my conclusion.

This is certainly a reasonable argument worthy of consideration. I call attention to the fact that I have not abandoned the 1939 base. I have simply made use of that part of the statistics so based which I think pertinent to the discussion. I would call attention to the fact that the Council of Economic Advisers which consists of three of the Nation's outstanding economists and statisticians, used the same periods in the last two reports.

The issue in which we are interested is prices. They have risen abruptly since VJ-day and since June 1946. Our question is the extent to which the rises were caused by wage increases and other material factors. I believe I have proved that wage increases are not the exclusive cause of higher prices.

Foreign Aid and Domestic Economy

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, November 20, 1947

Mr. WHERRY. Mr. President, the able senior Senator from Ohio [Mr. TAFT] made an excellent address on November 17, 1947, which was broadcast over the NBC network. I ask unanimous consent that it be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today, the President of the United States demanded that Congress and the people turn the clock backward. He advocates a return to the days of war, of the OPA, the War Labor Board, and the War Production Board. He demands power in his individual discretion to fix prices or not fix prices, to fix wages or not fix wages, to prevent purchases by the housewife unless she gets ration stamps from some new Federal board, to dictate to every farmer where he shall sell the products of his farm and at what prices and to regulate the details of every business, control its inventories, regulate its acquisition of raw materials and direct the disposition of its finished products.

He wants price control against the producer, wage control against the workingman, rationing against the housewife and the restaurant, every kind of control over the businessman. It means the setting up of a Federal bureau with literally hundreds of thousands of employees, and agents prying into the daily lives of millions of people. We know this is what it would mean because we saw it happen here. Such a proposal is not progress, nor is it liberalism. It is reaction and a step toward a completely totalitarian nation.

Evidently under this administration we can never return to a state of peace. We still have war taxes. We have a war budget. Now we are to have war controls. Most of our Presidents have regarded war and its incidents as the worst calamity a people could suffer, except a loss of its liberty. But the present administration is so eager to retain the incidents of war that one can only doubt whether there is a real will to peace.

The President represents that these powers will be sparingly used only with relation to vital commodities in short supply which basically affect the cost of living, or basically affect industrial production. Everything, he says, is to be done on a highly selective basis. If there is one thing which the OPA certainly learned, it is that you can't do price control partially. The President ended controls himself partially on the ground that you could not control some prices unless you controlled all. All important commodities are interrelated. If you ration and fix the price of meat, everybody rushes out to buy chickens and eggs. Controls immediately must be established over them. Who is to determine what are vital commodities and whether they affect the cost of living? The definition itself is so broad that it includes 90 percent of all commodities. No; the President is only trying to sugar coat the pill. This is the OPA. This is the police-state condemned by the President himself only a month ago. This is the end of economic freedom.

Certainly prices are too high. Certainly unreasonable increases in wages may be requested. Certainly more food is being consumed in this country than necessary. But if we can't meet problems of this kind within our system of free competition and incentive, then we must regiment prices, wages, and rationing forever.

Apart from theory, there are three practical objections to adopting a police state. First, it chokes production instead of increasing it, and what we want is more production to give people what they need at reasonable prices. We saw under the OPA controls how many important products disappeared from the market. The housewife couldn't buy any butter, any meat, any soap, or canned goods. No man could find a white shirt or a new suit. There was no leather because of the black market, slaughtering of beef, and no shoes. There wasn't any lumber or building materials. And none of them came back until we got rid of OPA. The English have complete price control and rationing, and they haven't got enough to live on. They have no incentive to get production. Men don't work longer hours because there isn't anything to buy with the money they could earn. Surely with that example before us we don't want to socialize and regiment America.

In the second place, nobody knows enough to do the job of control as well as it is done by natural economic law. There are probably a billion transactions a day in this country, and no one knows how to fix the prices and conditions to govern those sales. I saw the little men who struggled with the problem in the OPA bureaus. They created books and books of regulations, and had to amend them daily. If their rules fitted the East, they didn't fit the West or the South. And there was no relief from bungling and injustice.

Certainly this administration has shown no evidence of ability to do the job. Look at the mess made of the voluntary food-saving program to carry out a highly desirable purpose. Meatless Tuesdays and chickenless and eggless Thursdays never did make any sense, because everyone ate chickens and eggs on Tuesdays and meat on Thursdays, leaving them just where they were. Last Thursday morning on the dining car the steward told us that while he could not serve eggs, he would substitute wheat cakes on every order. So to save wheat for Europe the travelers ate wheat cakes in America. What difference would it have made if the Government had had legal power to enforce its decree? The compulsory plan would have been the same fool plan, and just as ineffective.

Third, price controls won't work in peacetime as I shall develop later.

The reason this country has a surplus of food to ship in such tremendous amount is that we have pursued a system based on liberty. If we go back to Government restrictions, there won't be any surplus to ship abroad, and we will be subject to the same paralysis of initiative which exists in Europe and England today.

Bad as the price situation is, this is no emergency like war. According to the President's own statement, the average income of individuals after taxes has risen 30 per-

cent since 1929 in terms of actual purchasing power. The average man is therefore 30 percent better off than he was at the high point of prosperity 18 years ago.

The average workman is better off today than he was in 1939 just before the war in spite of the high prices, because his wages have gone up 110 percent while the cost of living has only gone up about 65 percent. Nearly half the families in the country have two workers in the family, and those families are better off than they were before the war. Unfortunately, there are still a large number of families whose wages or fixed income has lagged behind the increase in prices. We have to do everything we can to get prices down or increase their income, but we don't need to surrender liberty to meet every economic problem. What emergency except a political emergency justifies making the President an economic dictator with power to run the lives of each businessman, farmer, workingman, and housewife?

This high price condition is no accident. It has obviously resulted from the policies of the administration which has controlled this Government for the last 15 years and throughout the war. Prices are high because demand is greater than the supply. Although the supply is tremendously increased over prewar, the money available for spending has increased still more. The war was financed on inflation with a deficit of $50,000,000,000 a year for 3 or 4 years. The money created then and saved by the people is coming into the market to buy goods. Under lend-lease we distributed dollars around the world, and now those dollars are coming back from South America and elsewhere to buy goods that are insufficient for our own needs. Through the Bretton Woods fund and bank and the British loan we have distributed more dollars to be spent here. At the same time we have kept Government expenses and taxes many times higher than they were before the war. The administration has resisted any attempt to cut expenses, or cut taxes. Every cent the Government spends puts more money into the buyer's side of the market.

The huge tax burden from this expense amounting to about $40,000,000,000 a year—plus twelve billion of State and local taxes—30 percent of the national income—is a burden on millions of taxpayers. A lot of the taxes, however, are passed on into the cost of manufactured products. When you buy a pair of shoes you help pay the taxes of the farmer who raises the cattle, the livestock dealer, the packer, the leather processor, the shoe manufacturer, and the retailer. Probably 25 percent of what you pay on most articles is made up of taxes.

Probably the most important cause of high prices is the tremendous volume of export buying. True, we have an exceptional income here at home in the United States but the income of our people is practically balanced by our production. When we impose on top of this balance $20,000,000,000 of foreign purchases, we can hardly be surprised that a great increase in demand outruns our supply and forces prices up. This year we are exporting at the rate of twenty billion, and importing at the rate of nine billion. That means that $11,000,000,000 of market demand are coming from abroad with no goods to balance them. About half of it is balanced by taxes, but the other half is pure inflation.

The President recommends that we extend and strengthen export controls. Why, he has had power to control exports right along, only he hasn't exercised it in any effective way. He has permitted the world to come in with the dollars we gave them, and bid up the price of our goods.

Of course we have to export to Europe to prevent starvation and chaos. Everybody agrees on that. There isn't any substantial difference about the necessity of doing something at once to carry Italy and France through the winter, through a short range emergency program. From the point of view of checking communism, this program is essential. But it is more or less useless unless we change our policy in Germany and our policy in China. Secretary Marshall is apparently uninterested in saving China from the Communists at a very reasonable cost, while advocating billions for western Europe.

It is most unfortunate that there is not a word of encouragement in this message for those fighting against communism in China without ammunition and with their backs to the wall. His effort to reestablish the economy of western Europe with American dollars is completely hopeless as long as he continues in Germany to destroy the industrial plants which alone can make Germany self-supporting.

People seem to feel that we cannot check exports without causing hardship and starvation, but as a matter of fact of some $20,000,000,000 of exports in 1947, only about 40 percent go to Europe—12 billion go to every other section of the world, North America, South America, Asia, and Africa. Surely we should ration the rest of the world on steel, grain, and oil before we even consider rationing our own people. Today the Russian Government has an active commission here buying American goods and paying gold for them which is better than credit, but just as inflationary. Much of what Russia is buying is heavy machinery, good for the manufacture of munitions. Why does the President grant export licenses for goods of this kind when steel and various types of machinery are insufficient for our own needs?

I have pointed out that the tremendous exports are one of the main causes of high prices here today. They can be cut down. In fact, if they continue at the present volume they present a threat to the whole economy, because they cannot possibly be maintained indefinitely when the world returns to normal. In 1929 we built up a false export trade based on private credit. When it became apparent that the loans were not to be repaid, all lending stopped, and the sudden unemployment which resulted here contributed heavily to the depression of 1932. Now we are repeating the experiment with government funds instead of private funds.

We have been aiding Europe at the rate of about $5,000,000,000 a year of Government grants, loans, and other aid. I think we can maintain that rate without further serious effect on prices, if we cut down on other exports and other Government expense, certainly without any need for setting up police state controls. But I cannot see any reason for increasing the rate of the very generous contributions we have been making. No nation has ever been so generous or made such tremendous effort to export as we have during the past 2 years. We cannot endanger our whole economy and our whole liberty by trying to increase that $5,000,000,000 rate to the $8,000,000,000 a year requested by the foreign nations at Paris.

The European Socialists do not seem to realize that if we are to continue our $5,000,000,000 program for any length of time, it must be based on a continuation of that liberty; that while temporarily we might increase our output by Government restrictions, in the end we would soon be subject to the same paralysis of initiative which exists in England and Europe today. In other words, Europe has to take the limitations which are inherent in a free system if they want the benefits produced by it.

We have shipped more food and other assistance out of this country than any other nation has ever before accomplished for the world. We cannot stretch that liberality too far or there will be nothing to ship. We cannot ship so much that under a free system it will lead to a period of "boom and bust."

In short, the way to hold prices down is for the Government to spend less money and reduce taxes, to limit exports and to hold the Marshall plan within a reasonable figure, and to control the growth of private credit. The Marshall plan is not primarily to relieve hardship and starvation. Our whole contribution for food, fuel, and fertilizer under this plan will probably not be more than $2,500,000,000. The rest of the assistance requested is desirable, but much of it is not essential, certainly not worth another OPA in this country. Apparently the President thinks that we cannot adopt his version of the Marshall plan without police state controls and another OPA. I said last week in New York that the President was asking for two completely inconsistent policies at the same time. I said that if he wanted the $8,000,000,000 European form of the Marshall plan we cannot have lower prices, if we want lower prices, we have to give up that Marshall plan. If the Marshall plan is essential for the preservation of Europe and the world, then we can better stand higher prices than we can stand a complete relapse to a Fascist regimentation of every individual in the United States. But I believe very strongly that we can adopt a modified Marshall plan probably with more benefit to the countries concerned than if we are too lavish, and I believe that we can hold prices at reasonable amounts with such a modified plan, if we cut other expenses and taxes, control credit, and limit exports.

Surely, the American people do not desire a return to the days of OPA. They know that the controls won't work. They remember the shortages and the black markets. In time of war a morale develops which makes it possible to maintain some control, but in time of peace those controls are certain to fail. They will not hold real prices down, if we permit other conditions to go on forcing prices up. The American people don't like to be regimented, and they don't like to be ordered around by Federal officials. Our experience with prohibition and with OPA both prove that vast black-market operations develop which the Federal Government itself is unable to control. Morals are broken down because it pays to be a criminal.

Surely, the President's memory must be short. It was the President's own Decontrol Board which took off the controls on dairy products and grains in 1946. It was the President himself who took off controls on meat just before the 1946 election. It was the President himself who took off almost all other controls in December 1946 before the first Republican Congress in 14 years even convened. Can he sincerely believe that the Government could now enforce the controls he is asking for without a vast army of enforcement agents? Or even with such an army?

The President's adoption of this police-state program represents the final surrender to the left wing. The President himself indicated clearly within a month his disapproval of price control. What has happened since? The growing importance of the Marshall plan? But three committees of eminent men examined the plan and found that we could safely undertake it, or the essential part of it, without serious danger to this country. While some mild forms of allocations were suggested none of the committees thought a complete price control, wage control, rationing system was necessary. Only Leon Henderson and his crowd, and the Political Action Committee of the CIO advocated this program. There has been no change in conditions except the conditions of political strategy.

From a Republican political standpoint it might be better for the Congress to give the President the power which he demands. It could only result in failure and a revolt of public opinion against any man who is trying to enforce the law. I have had Republicans say to me that we should swallow our prejudices and pass these measures for political advantage, so that chaos and confusion

will rebound to our advantage in November 1948. But it seems to me that the issue is far deeper than any political issue. We stand at the cross-roads today between a free America and a planned economy. This is the last stand of the planners who think they know how to run the people's affairs better than the people can know themselves. If this effort succeeds in time of peace, there will never be a time when an emergency cannot be summoned up to justify the continuation of these powers. It was only a month ago that the President himself said that consumer rationing and price controls were police-state methods. That is the issue today, not only in America, but throughout the world. This country is the great bulwark of a free life, and from that freedom has developed the greatest and most productive country in the world and the country where the people are better off than any other country in the world. Shall we abandon that philosophy for the police-state methods which have brought the rest of the world as seekers for charity at our door?

Address of Hon. John L. McClellan, of Arkansas, Before the Arkansas Wood Products Association

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, November 20, 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address delivered by me on the 28th of October, before the second annual convention of the Arkansas Wood Products Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, members of the Arkansas Wood Products Association, and friends, one of the principal benefits of a recess period of Congress is that it affords to Members the opportunity of conferring with their constituency and the citizenship of the Nation which they represent. The importance of such contact and consultation between Members of Congress and the individuals, groups, and different organizations can hardly be overemphasized. From such associations, there is developed a closer relationship between the people and their lawmakers, and this results in a better understanding of all common problems—local, national, and international in scope—that are directly related to Government and the affairs of state.

These considerations, along with others, and the genuine pleasure of greeting and having this delightful association with you, have motivated my presence here today.

I congratulate your officers and entire membership for having developed and perfected this splendid organization. Because of the great importance of the timber and wood works industry to our national economy and welfare, the establishment and services in this State of an association like yours have long been needed, and it is a source of personal gratification to me that it is now in existence and functioning. I have no hesitancy whatsoever in predicting its future growth in power and useful service to the industry and to our State and to the Nation.

Your association gives to us who are representing you in the National Congress a source to which we can turn for accurate information, and for counsel and advice on issues vitally affecting the industry itself and, in many instances, on problems of general concern. Your officers in the past have freely exercised the privilege of making suggestions and submitting to me the recommendations of your group. These have been welcome and helpful to me in the discharge of my official duties. I believe almost without exception, after due deliberation, my opinion has generally coincided with those entertained and expressed by you. I hope, and I am sure, this cooperation and pleasant relationship will be continued in the future in the spirit and for the purpose of mutual helpfulness.

It would be highly presumptuous for me to attempt a thorough discussion of any subject peculiarly related to the industry that you represent. Your knowledge and experience in this field of enterprise surpass, I am sure, any information of which I am possessed. But as a member of our national lawmaking body, I must be and am concerned about the welfare of all our principal industries and about the usage made of all our great natural resources.

The four major natural resources of our State and Nation are the soil, the timber, the minerals, and our waters—our lakes and streams. These natural resources provide the physical sustenance of human existence and are basic factors in the health, strength, economy, and prosperity of our community and national life. Three of these—our soil, our timber, and our minerals—are by their very nature exhaustible. Two of these—our soil and timber—by proper use and management can be conserved and the depletion from use and consumption thereof can be in many instances substantially restored. The third—our minerals—man cannot restore. Therefore, our only means of prolonging their availability is by conservation in their use. The fourth great resource—water—is generally not depletible but is rather inexhaustible. With it, we only have to develop its potentialities in order to make it serve our industrial and human needs.

Although we are fortunately blessed with a system of government that embraces the free-enterprise system where human rights, including property rights, are exalted and respected, it is recognized and accepted that for the promotion and protection of the State and national interest, the Federal and State Governments have a large responsibility with respect to these basic natural resources to the end that they may be preserved and made to serve the common good.

While you are primarily and occupationally interested in and identified with one of these—timber—you are also of necessity vitally interested in all of the others.

Because of the Government's responsibility for the protection, preservation, and conservation of these indispensables, it has been my opportunity and privilege as a Member of the National Congress to help enact laws and make appropriations of public funds for the authorization and carrying out of programs designed and intended to promote the preservation, conservation, and proper utilization of all four of these major, basic resources. These programs in part provide for soil conservation, forestry reserves and preservation, depletion allowances for certain minerals, and for irrigation, navigation, reclamation, flood control, and the development of hydroelectric power.

I make no attempt at comparison of the importance of these various Federal programs. They are all worth while, they are all valuable, and all contribute in a large measure to the welfare and future prosperity and strength of our Nation and to the high standard of living of our people. I have taken a special interest in all these programs because without exception every one of them is important to the economy of our State.

Time, of course, will not permit me to discuss the value and all the benefits we derive from each of these programs, but I do wish to dwell in some measure upon that great resource of timber, the industry with which each of you is identified.

The geographic area which the State of Arkansas embraces was abundantly and richly endowed by providence with the great variety and high quality of timber resources. When the white man first visited this area, it was covered with some 32,000,000 acres of excellent forests. In fact, trees covered the entire area of the State except that occupied by our waters and a few hundred thousand acres of land in the Grand Prairie section. In the natural course of progress and the increase in population, more than one-third of our original forest lands has been converted into farms and into industrial and other uses, so that now we have left only 20,000,000 acres of forest lands that are available for the future growth of timber.

Our virgin supply has largely been consumed, and although it has been estimated that we have at present the equivalent of between forty and fifty billion board-feet of growing stock, 1 year's national supply, we know that in our highly developed economy such reserves unless maintained and increased will not be adequate for all our needs of tomorrow. If we are to be wise as a state, as a nation, and as a people we must use the necessary means and employ practices of usage that will conserve and maintain this large reserve and substantially increase it by cultivation, growth, and restoration.

We of this generation have no moral right to denude the forest areas of our land and dissipate this great natural resource to the extent of leaving an impaired heritage to future posterity. To do so would impoverish the Nation. We of the present generation are in reality trustees, the keepers, of these natural endowments and have the continuing responsibility, where it is possible to do so, to leave adequate reserves for the comfort, happiness, and prosperity of the people who will inhabit this great Nation in the generations and centuries to come. It is thus incumbent upon us to practice good husbandry, to take and use without waste only that part that is essential to our own well-being, and to promote the growth and restoration of this resource to the extent that it is possible to do so.

In this age of global wars, and when the peoples of the earth are beset with grave and perplexing problems that endanger national existence and civilization, and with the clashing of two divergent and diametrically opposed forms of government and ways of life, in which ultimately one may survive and the other perish, it is imperative to our freedom and to our existence that we as a nation remain strong. In more than one instance where we once had an abundance of vital and strategic resources, we know now that these resources are not unlimited for all time and that shortages or lack of adequate reserves have already begun to appear. This need never be true of our forests for either our domestic or peacetime needs, nor for purposes of war, in that eventuality, if we use the intelligence, the wisdom, and ingenuity of which we are possessed. A lack of timber reserves in a great and prolonged military struggle could seriously weaken our striking power and our defensive resistance. This, of course, applies with equal force to the depletion of our soil and minerals.

Therefore, if America at the time of some crisis in the future is to have that strength in natural physical resources to enable her to have adequate military defenses and the

striking power to repel any aggressive foe, it is essential that the necessary reserves be developed and at all times maintained.

The danger of a future war to which I refer is neither mythical nor is it fantastic. It has happened before, it could happen again; it is a dreaded and unthinkable possibility. But, until a permanent peace has been won, not to recognize that war is a possibility would be the height of national stupidity, and not to be prepared as best as we can would be inexcusable and possibly fatal folly.

We must trust, we must pray, and labor every day in the vineyard of peace in the hope that it will ultimately dwell upon earth and that there will be good will among men. But until a genuine peace has been attained, America, remembering the past, must not be indifferent and slothful at the present nor unconcerned and neglectful of its future.

Dismissing, however, any contemplation or prospect of future wars and the need for military strength and assuming that peace will henceforth reign supreme, there still remains full need for the conservation of our forests and the proper utilization of our wood and timber resources. If we are to enjoy a continually increasing happiness, prosperity, and higher standard of living. These considerations and objectives are within themselves sufficient to warrant and require that you and I as citizens, that all of our people, and State and Federal Government, promote long-range programs and employ practices in forest husbandry and in our wood and timber processing and usages. It is a source of extreme gratification to me that a major part of the industry, and those of you who are identified with it in Arkansas, are fully cognizant of these necessities and that you have inaugurated fruitful programs and practices that are making a valuable contribution not only to the conservation of this great vital resource but that in the processing of wood products, you are finding ways and means of eliminating tremendous waste that has occurred in the past and are ever exploring and finding new uses, new services, that wood products can be put to for the enjoyment and convenience of our people and for the enrichment of our Nation.

I was particularly pleased when our last State legislature, under the leadership of our present Chief Executive, had the vision, the wisdom, and the statesmanship to greatly increase State appropriations for the forestry program. The $450,000 appropriated by our State legislature, when matched by Federal funds that are available, makes possible the expansion of the program to include millions of acres of forests that have not heretofore been within reach of the limited programs of the past.

The appropriations of the Federal Government for all phases of forestry programs were $70,000,000 for this fiscal year. Although I recognize the pressing necessity for economy in government, I hope that I can, and that our people can and will, always distinguish between true and false economy. To save a dime and lose a dollar can never be a sound fiscal policy. The saving of a dollar of public funds while suffering the loss of far greater values in any of our national resources is false economy under any accounting system or appraisal of true values.

So long as I have the honor of serving you in the Senate, as these issues and measures come before me, it shall be my purpose to study their merit and measure their worth in terms of tomorrow as well as in terms of today; and with my present understanding and judgment I shall continue to support and vote for adequate appropriations essential to the preservation and development of our natural resources and the enhancement of our national wealth.

Yes, let's keep America strong—militarily, resourcefully, and economically. Only in that way can we make sure of our future. I have an abiding faith that you, individually and as a group of citizens of Arkansas, identified with one of the largest industries in the Nation, will keep faith and remain steadfast in this high purpose and patriotic duty. I trust that your Federal Government and the Congress, and that I as one of its Members, will wholly meet our responsibilities to you, to the Nation, and to future generations.

We Are Losing the War of Words in Europe

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. MUNDT. Mr. Speaker, under leave granted me by the House I am placing in the RECORD at this point an article on European conditions which I wrote at the request of the editor of the Sunday New York Times and which appeared in the November 9 issue of the New York Times Magazine.

The purpose of this article is to present as best I can, on the basis of my observations and studies in 22 European countries, the necessity of developing and maintaining an effective and adequate American information program overseas.

I am convinced that we will be engaging in a futile and ineffective program indeed if America limits its efforts to feeding the stomachs of Europe while the Communists concentrate on feeding the minds of Europe. Europe is today as hungry for American facts as it is for American food.

If we are really going to strengthen the forces of freedom abroad I am certain we must supplement any program of economic aid with an effective program of education and information in Europe which will not only dispell the illusions created by Soviet propaganda but which will also develop a clear understanding and appreciation abroad of American policies, American concepts, and American plans for the preservation of peace and the restoration of prosperity.

WE ARE LOSING THE WAR OF WORDS IN EUROPE

A CONGRESSMAN WANTS TO STRENGTHEN AMERICA'S VOICE AND OUTLINES A PLAN TO MAKE IT MORE EFFECTIVE

(By KARL E. MUNDT)

(KARL E. MUNDT, Representative from South Dakota, has just returned from leading a joint Senate-House committee through 24 European countries, where its members studied political conditions and the operation of the State Department's international information program.)

Europe today has become a vast battlefield in which adjectives have replaced armaments as the active elements of attack and defense. So clearly are the lines being drawn, however, in this battle of words and ideologies that shooting may once again supplant the shouting unless positive American leadership is promptly and prudently exerted to help restore good sense and sound government in Europe.

Moscow and its controlled Communist parties in every European capital have taken the initiative in this word war. They have devised and are directing a campaign of vilification and misrepresentation which throughout Europe has the United States and the United Kingdom as its primary targets. As the larger and the stronger of the two countries dedicated to democratic freedoms and non-Communist devices, the United States is being pummeled by propaganda over the air waves, in the press, and by all the other methods known to the arch propagandists of communism, to the point where we must either answer the challenges and criticisms being hurled at us or reconcile ourselves to the fact that our silence in Europe is certain to harvest for us a crop of ill will and resentment entirely unjustified by our policies abroad.

How should American leadership be employed to put oil upon the troubled political and economic waters now boiling so violently in all but a few European countries? Is it a job we can afford to undertake? Are we equipped to do it? Is it one giving reasonable promise of success? Is it a challenge which we dare ignore?

Having just returned from a 6 weeks' congressional study trip in Europe on which I served as cochairman of a joint Senate-House committee studying economic and political conditions in 22 European countries, I am convinced that early and intelligent action on the part of America can go far toward rescuing Europe from both chaos and communism.

Our committee devoted much of its attention overseas to the propaganda and information programs not only of our own country but of England, of France, and of Russia. In no country did we find our American effort in the field of public relations abroad as extensive or as well staffed as that of England and Russia; in some countries we are actually trailing the French as well in the use of information services in the all-important task of making and holding friends in Europe.

Fortunately for us all, it is only the Russians and their Communist satellites these days who are directing their propaganda barbs against us; the net effect of the English and French efforts, in fact, is to help offset the allegations of our attackers, but in the final analysis only Americans, with American facts and American skills, can convince the people of Europe that American policies and projects are devoid of the sinister motives attributed to them by the Russian propagandists whose goal it is to make them fail.

Czechoslovakia provides a good illustration of what we observed in country after country in Europe, although in Poland and in the Balkan countries the men of Moscow have made even greater progress with their program of abuse and misrepresentation. In Prague we have an able and alert young American, Frank J. Lewand, in charge of our American information activities. He has one American assistant and three helpers recruited from Czechoslovakia. This pitifully inadequate information team is supposed to keep the people of Czechoslovakia advised about the true intent and purposes of American policies.

They are expected to maintain and staff our information library in Prague (we have no information outposts or personnel in any other city of the country); they are supposed to provide background interpretative material and translations for speakers and editorial writers; to book showings for our documentary films and provide projectionists; to circulate translations of the American daily wireless news and information bulletins to the Czechs most active in public opinion molding fields; to aid in arranging exchanges of students, teachers, cultural leaders, and the like between Czechoslovakia and the United States; to translate the contents of the Prague newspapers and relay them to our State Department so Washington can be conversant with what is being said about us abroad.

All these tasks and many more comprise the day's assignment for these American information officials who, if each of them were triplets, could not begin to provide the services essential in telling the American story in Czechoslovakia.

What is the result? Slowly but surely we are losing the struggle to win favor in the public opinion of that country. Against our few minutes of radio time beamed by short wave to Czechoslovakia, the Russians direct several hours of programs each day to the people of this tiny country. In contrast with our Tom Thumb team of information officials, the Russians maintain information centers all over the country abundantly staffed with well-trained workers. Throughout Europe it is everywhere the same. In this cold war of words and ideologies, the Russians are using big artillery and rockets while we rely on popguns and pistols.

Whether behind the iron curtain or in western Europe we found the pattern of the Red propaganda to be the same. The United States is portrayed as the dollar diplomat, the sinister imperialist, offering food and fuel and monetary aid to Europe for purely selfish purposes. We Americans are pictured as trying to buy the soul of prostrate Europe for a poor mess of porridge. Andrei Vishinsky's violent outpourings at sessions of the United Nations are love sonnets compared with the vicious falsehoods the Reds circulate about us in Europe.

The Marshall plan and other proposals for American aid to countries outside of Germany are pictured as (1) a frantic effort to avoid an inevitable American depression by foisting off on Europe unneeded supplies inadequate for Europe's needs; (2) an unconscionable attempt to give priority to the German aggressors over the countries victimized by the Nazis in the restoration of war-torn Europe; (3) a brazen plot to restore the military might of Germany after which we shall withdraw our occupation forces and leave Europe once again to fall victim to German armies.

Up to now, we Americans have largely contented ourselves with efforts toward feeding the stomachs of Europe while the Russians have concentrated on feeding its minds. If this formula is continued, it is easy to envisage the result at the end of the trail. We may help avert starvation in Europe and aid in producing a generation of healthy, physically fit individuals whose bodies are strong but whose minds are poisoned against America and whose loyalties are attached to the red star of Russia. If we permit this to eventuate it will be clear that the generosity of America is excelled only by our own stupidity.

Compared to the cost of supplying the physical needs of Europe, the expense of providing facts for its minds is but trifling. Less than 1 percent of our total aid to Europe would be required to set up and maintain a United States information program abroad adequately staffed and well equipped to carry the story of American concepts, purposes, and policies to the people of Europe, whose hunger for these facts actually exceeds in its intensity and scope their hunger for American food.

The task of telling the American story in Europe is far less prodigious than might be supposed. In the first place, on both sides of the "curtain," the little people of Europe are yearning for information about, and inspiration from, America. They look to us as their last mundane ray of hope. They attach credibility to what we say and print. They devour American books and magazines. They crowd into our information libraries to read our daily newspapers even though the papers reach them 2 months old. They stand in line to see our motion pictures, whether documentary or commercial films. They covet the opportunity to study or visit in America.

In the second place, we now have the nucleus of an information service around which we can build effectively in Europe. Regardless of what some critics have said about William Benton, recently resigned Assistant Secretary of State in charge of our information and cultural activities, this country owes Mr. Benton a deep debt of gratitude for his persistent battle to keep alive and at work at least a tiny remnant of the information service our military authorities felt it essential to maintain in order to win a shooting war.

Certainly, it is now clear we cannot complete our victory and win this war of words without a greatly augmented and expanded information service. It is also clear that only by winning this word war can we avert a shooting one in Europe. Our committee visited 23 American information outposts in 22 countries (in Turkey there are information offices in both Istanbul and Ankara) and we agreed that if it were in our power we would not remove from office or replace a single man or woman now representing America in this program overseas. Mr. Benton's office recruited or retained men or women in the field information offices of Europe of whom Americans may well be proud.

Here is what the situation in Europe would seem to require if the Voice of America is to be heard and understood by people long since grown tired of hearing only the wolf call of the Communists:

1. The establishment by substantive law of a permanent Office of Information and Educational Exchange within the State Department of the United States. My bill, H. R. 3342, passed by the House last July, and now on the Senate calendar for action, would accomplish this result. Once enacted into law, this office should be administered by an Assistant Secretary of State with perhaps two divisional chiefs, one to head up the information activities (radio, press, exhibits, films, libraries, et cetera) and the other to direct the cultural phases of the program (U. S. relations with UNESCO, student exchanges, lecturers abroad, musical and dramatic renditions, English language and other classes abroad, etc.).

2. The field force in each country should be expanded to include at least an administrative information officer, a librarian, a press attaché, and perhaps a cultural officer in addition to local assistants.

3. Background stories on American life and motives, interpretative articles, and current news items where commercial wire services do not supply them, should be supplied (translated into the languages of the countries receiving them) to the newspapers, the radio people, and the leaders in the public opinion of every country.

4. Competent speakers and constructive films should be made available to foreign countries seeking them as means of acquainting Europeans with the American picture and the American program. All countries this side of the iron curtain have English-speaking clubs or associations of Friends of America which are actually pleading for services of this type.

5. Exchanges of students and scholars, professors, lecturers, newspaper people, leaders in all fields of endeavor, should be encouraged and facilitated between the United States and every country willing to cooperate on a reciprocal formula. We found American-educated men and women holding government positions in many foreign capitals—invariably they were great bastions of friendship for the American program.

6. American counselors and advisers should be made available to governments requesting them to aid with their complicated and confusing problems of finance, taxation, census taking, weather forecasting, agricultural methods and what not.

7. As a quid pro quo for further American aid in Europe, free radio time should be provided to Americans for the broadcasting on standard wave lengths, from local radio stations in the languages of the recipient countries, information programs about the scope and purposes of American aid and about American policies generally as they pertain to Europe. Since virtually all European radio stations are owned by the state, this is a return consideration easily provided if we are prepared to utilize the opportunity. Short-wave broadcasting from America, relayed by BBC in London or over American-owned stations in Germany or Algiers, should be beamed to the "curtain countries" and to Russia, where otherwise nothing but falsehoods about America are ever heard.

8. As a strictly reciprocal concession for the literature foreign embassies and agencies circulate in America about their countries and their governments, America should insist on the right—and utilize the opportunities—to circulate in other countries magazines, periodicals, or bulletins setting forth the facts about ourselves.

9. Information libraries, display rooms featuring exhibits and photographs about America, should be established and maintained in the major cities of Europe, with mobilized units occasionally touring the provinces so that people could have available to them the truth about America by reading it in the magazines, books, and papers which are published for Americans. To some extent, translations should be made available in European languages.

10. Congress should appropriate without delay sufficient funds to make the foregoing minimum program a working reality while the decision against communism in Europe can still be won without a shooting war.

What would it cost? I recommend an annual appropriation for this purpose of $50,000,000. Perhaps it could be done for less, but it seems foolhardy to skimp on a program so essential to the peace and prosperity which we all desire so greatly. After all, $50,000,000 is just about one-third the cost of constructing a modern battleship under prevailing building rates.

By the expenditure of just two battleships spread across the next half dozen years in Europe this $300,000,000 spent as insurance to make our economic aid program an effective instrument for peace may well make it unnecessary ever again to engage another American fleet in battle action. It should be worth the trial.

If we try and fail, we have spent very little in the effort, but if we fail to try we may have squandered all we have elsewhere spent in vain. Let the Voice of America ring out in Europe as the voice of truth and the bugle call of hope. Against it the false calls of communism can win few converts, and when aggressive communism ceases to gain ground it will start receding very rapidly. The Communist regime is what I describe as a "bicycle government"— to be effective it must keep moving forward rapidly; it loses efficiency as it decreases its momentum; when it slows down it wobbles; when it stops it falls. And like a man on a bicycle, it cannot back up either gracefully or safely. Positive American action in Europe now along the lines described can, in my opinion, stop communism's advances.

All that we require is the courage and the imagination, now, to establish and implement a program of sound information abroad which will be comparable in time of peace with the unprecedented initiative we Americans are always able to display in time of war. America should no longer neglect this great opportunity awaiting it in Europe to finish World War II in such a way that world war III will never come to cloud our history books.

Report on Grass Roots Tour of My District

EXTENSION OF REMARKS
OF
HON. HERBERT A. MEYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following report of a recently completed grass roots tour which took me to every one of the 105 towns in my district where there is a post office.

Are people interested in problems facing our Government? Would anyone show up at the post offices when I came there to give me their views? If they did, would they talk freely about their views on national problems, or would they be apathetic about the whole thing?

Those questions were all answered in a most heartening manner. Told in advance that this was not a political or speech-making tour, that I wanted to meet the people of the district personally, Republicans and Democrats alike, to learn at first hand their problems and get a true cross section of their thinking on matters of national import, the people of the Third District came out to meet me and demonstrated that this area in the heart of America is truly sound to the core.

People are thinking about the mess the world is in and the decisive part America must play in cleaning up the rubble left by two world wars. They are alive to the responsibility of the people in a free Republic, where the Government is the servant of the people, to guide that Government in its course.

As might be expected in view of the headline role held by foreign affairs right now, that was the subject on which the most people expressed opinions. Many shades of opinion were voiced, but generally speaking the feeling was that we should do what is necessary, with due regard to our own economy, to feed the hungry and clothe the naked, but we should have something pretty definite as to the actual needs and some accurate information on just how much they are doing to help themselves.

"When bigger and better sacks are made, Uncle Sam will be holding them," said one lady half humorously, half seriously, deprecating the manner in which UNRRA and other relief furnished by the United States had been handled, without proper credit to the givers and without careful distribution where needed. They do not want that to happen again. And they want concrete evidence that those we help are doing something to help themselves. It does not make sense, they say, for hungry people to be striking and refusing to produce. They feel, too, that Uncle Sam should not alone assume the burden of feeding the world and they ask why other countries, such as Canada and Argentina, with surpluses should not contribute to this relief. "I'm against building up a global WPA and it looks like that is what some of our planners are doing," many said. This protest was invariably followed by the comment that thousands of our own needy people in this country are entitled to some semblance of a decent living. "We are all for helping the hungry folks abroad, but what about our hungry folks right here at home," they asked.

There were many expressions about the danger of getting down to the bottom of our own barrel of resources. "Suppose we have a wheat crop failure next year, and we are due for that, then what? Maybe these international planners have an answer for that," said one dirt farmer, "but it doesn't make sense to me."

In brief, they want no more of the blank-check era. They are insisting that on any further appropriations for relief there must be strings attached whereby we are assured that the relief actually goes to those in need and not into black markets and those who receive this relief must definitely know that it comes from us.

The food-saving campaign also was talked about a great deal. Speaking of one meatless day a week, one man said, "I wish someone would guarantee me 1 day a week that I could have meat." The eggless day got no more approval. Just plain saving of food in general, reducing the amount that goes into garbage cans is what the majority favor. In smaller localities, they pointed out that they already are very saving, but feel that in larger places, especially among apartment dwellers, there is room for savings.

The attitude of Russia in the United Nations and the infiltration of Communists into many phases of American life were of much concern to the good people of the Third District, whose loyalty to representative government is an outstanding characteristic.

"Russia is like a boy playing corner-lot baseball who gets mad if he can't do all the pitching," said one man whose memory went back to the days of playing what youngsters used to call work-up, push-around, or similar names.

Many other matters were brought up. Among them were bureaucracy and the high cost of government, prohibition, branch banking, large land holdings, World War II bonus payments, national old-age pensions and World War I pensions, minimum-wage law, socialized medicine, Taft-Hartley bill, exporting of automobiles and farm machinery, community-property tax, opposition to the return of OPA and rationing, rent control, REA activities, Federal aid to schools, taxation, the freedom with which Russians can move about our country while the Soviet forbids a Senate committee to inspect our own Embassy in Moscow, Brazil's break with Russia, portal-to-portal pay, universal military training, and so forth.

A high light of the tour was the appearance at some of the points of high-school civil government classes, with their teachers, who came to ask questions about details of the working of Congress not covered in their textbooks. These young people, I am sure, were representative of similar classes in other schools in the district, and it was stimulating to look into their eager young faces and sense their interest in the procedure of government.

As a newspaper publisher it has long been noted that when some writers despaired of the younger generation, people working closely with youth such as schoolmen, Boy and Girl Scout leaders, and the like, took an opposite view. These young people convinced me that they are going to hold firm to Americanism when they take their places among the voters who rule our Government.

I am grateful to all who took the trouble to meet me on this tour and give me the benefit of their counsel. They gave me just exactly what I was after. That was a cross section of public opinion which would enable me to better represent the people of the Third District when I go back to Washington to be their voice in the free assembly of the sovereign people.

Leadership in Asia Under a New Japan

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, November 20, 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address which I delivered at the University of Michigan, Ann Arbor, Mich., on August 5, 1947. This address closed a series of lectures given under the general subject, The United States in World Affairs. My theme was Leadership in Asia Under a New Japan. Unless our representatives err and unless they are guided by old hates and biased objectives America is now offered her greatest opportunity in constructively building a part of the new world as we dreamed during the fighting days of the war when we assumed that we knew the objectives we were fighting for. We can neglect this opportunity and we probably shall. That we shall not is the hope I have expressed in this address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

World conditions and the relationships between nations make it impossible, much as I should like it, to spend all our time this evening on Japan. Japanese-American relations must fit into American world policy. Therefore it is necessary to point out by way of premise one or two facts that must be kept constantly in mind throughout my discussion.

First of all, few have noticed that the Truman Doctrine and the Marshall Plan, in reality, have their origin in what we have done in the Far East. China was told to put her own house in order before she could depend upon future aid, and Japan is now looked upon as the very center of American activity and policy of that phase of the Truman Doctrine which stands for the support of peoples attempting to remain free of economic controls and political dominations.

With Congress having before it resolutions which call for the admission of Hawaii and

Alaska as States, Japan becomes more of a neighbor than ever. Our administration, as trustee of the former Japanese Islands of the Pacific makes us an actual administrator of territory which was formerly controlled by Japan and a close neighbor to nations and peoples, who, until the imediate present, have been considered far off.

Our first treaty with Korea, which was completely forgotten when the Japanese annexed that land, seems now, as far as our responsibility there is concerned, to have again come to life and Korea looms large, and we stand today, as we always have, in theory, for the independence and territorial integrity of China.

Our tasks are not going to be easy. They are going to be many times harder than they have ever been unless we properly orient ourselves to the basic values of our various friendships and responsibilities in Asia, and, without prejudice and without hate, evaluate honestly who are and who must be our friends if even a semblance of peace is maintained in the Eastern Hemisphere.

In our new relations with the Philippines, the recasting of controls in Indonesia, in Indochina and Siam—in the continued development in their individual national responsibility—the commonwealth states in the Pacific all contribute factors to our policy and to our plans. In a way, Australia and New Zealand are now as close to us as Canada.

The new India, whether united or divided into parts, has given us an entirely new relationship—one which will test the ability of our diplomatists to evaluate new conditions and work in accordance with them, and a test of executive understanding and leadership in carrying on our new responsibilities in that part of the world. To the thoughtless, they seem to be few, but to those who know the strivings of the people of all Asia to the challenge given them by a mere reading of the political concepts of the West and the free intercourse with our missionaries, they are many. A reminder of a single event will make my point. When William J. Bryan was in India, he left this thought, and it never died: No matter, he said, in effect, how much you may dislike Britain, never forget that you should be forever grateful to her, for she gave you the English language, in which the concepts of liberty have been expressed.

Great as these factors are though, the responsibility for seventy-odd million Japanese, functioning under a new constitution sponsored by us, and, when the time for peace actually comes, introduced to the world as an American-directed product, our biggest and greatest task is, of course, Japan herself.

Almost a century has passed since Commodore Matthew Perry anchored his tiny squadron of small vessels in Tokyo Bay. Faced with this impressive display of power, the Japanese were forced to accept their first modern treaty. This treaty served to open Japan to the West and exposed her to western idealism, western realism, European and American ways. In almost a decade from the time of the first treaty students from Japan had arrived in America and the teacher-student relationship was begun. In the late summer of 1945, again an American, this time a soldier, led the spearhead of the greatest concentration of armed strength the world has ever known into Tokyo Bay. From a turret of the flagship *Missouri* flew an American flag of 31 stars—Commodore Perry's flag of an earlier day. On the deck below, Gen. Douglas MacArthur received the imperial surrender. Japan had been opened for a second time and exposed again to western idealism, realism, and practices. It is hoped that this second opening will renew an even firmer student-teacher relationship.

We know now only too well what dire consequences sprang from the earlier contact between our country and Japan. Japan followed with zeal all she thought represented best the strength of the West, our military and naval habits. Two or three centuries of Shogonate, military single-willism, plus the fact that her constitution was set up by a revolutionary government, proved to be factors so strong that even the new constitution and the new leadership could not overcome the habits and the thought of the past. Perry's visit was conceived in a mixture of American self-interest and American good will, but it was the first link in a chain of events that led to the acme of the world's use of force to combat force at Hiroshima and Nagasaki.

Having emerged from the long slumber of centuries of hermit-like seclusion, the Japanese grasped eagerly at the new material techniques of the West. It is inevitable that the learner should attempt to imitate his teacher and, like so many students, the imitation was accepted and indulged in without, of course, attempting to interpret completely that which was imitated. The Japanese learned the West's techniques, learned them well, and applied them ruthlessly, testing their new-found strength in a series of wars spaced almost regularly at 10-year intervals. The Chinese-Japanese War of 1895; the Russian-Japanese War of 1905; the World War of 1915; the Manchurian Incident of 1931; and finally in 1941 the Second World War. The peoples of the West followed this strange spectacle of growing power in the Orient, first with amusement, then with surprise, then awe, and finally, after the rape of Nanking, with either indignation or terror and horror. It was a hideously fascinating spectacle. From an island base rich in natural beauty but wretchedly poor in the substance of power and scarcely larger than New Mexico, the Japanese reddened the map of Asia in ever-widening arcs until at the pinnacle of their military success their empire encompassed an area equal to that of continental United States.

This, then, was the end result of a seemingly insignificant naval visit more than 90 years ago. What can we expect from the "second" opening of Japan, carried out under such strikingly different circumstances? As you know, it required almost 4 years of devastating war, appalling sacrifices of American lives, and an immense united effort to pry loose the Japanese from their conquests and to force them once again back into the confines of their homeland. But now the arrogant alien boot no longer echoes in war-torn China. The Japanese Fleet is at the bottom of the sea. Flattened beyond recognition are many of the great cities of Japan, where the abundance of Asia and what she could secure from the West had been fashioned into deadly instruments of aggression.

We have won at tremendous cost this second opportunity to "open" Japan. We had to pool our courage, our skill, our intelligence, and our imagination in a common undertaking of unbelievable magnitude. Our responsibility is not merely to make the victory that finally came a vindication of our technology, but even more a triumph of a way of life based upon decent ideals, a fulfillment of American democracy and its dream of human freedom.

But are we equal to this new task? Can we meet the challenge of the second opening of Japan, and in a larger sense the challenge of the peace, with a trust in the strength of the atomic bomb. No; we need something more. Will we retain the war-forged spiritual unity and the determined will to achieve, now that the objective is to construct rather than to destroy? Can we supply the needed leadership to the world when the basic requirement is no longer guns but mechanisms of peace and ideals? Our capacities to wage the war were admittedly unsurpassed. Our capacities to lead the peace are presently undergoing careful scrutiny in many parts of the world. Japan must have no cause for losing faith in her teacher.

Although we share the control of Japan with our allies, the circumstances of the war have projected America into a position of primary responsibility. Our task bids fair to challenge all of our capabilities which can only become successful on a cooperative basis, and cooperation never succeeds unless there is a fusion of common ideals and common characteristics. Have I thereby set the stage for an impossible contingency? Is there anything in the way of ideals common between us and our former enemy? If our answer is to be generated by hate, it will be definitely "no." If, though, through a study of history and what has actually taken place, without our being against Japan just because we are for some other country, we can discover many common ideals and aspirations. If it had not been for these common ideals and aspirations, the peace, as it did come in Japan, would never have occurred. The atomic bomb, despite the Emperior's reference to it, and again admitting that it was a contributing factor, was not the basic factor which brought about the surrender and with it the complete trust on the part of our former enemy that America would honor every promise she made. How was it brought about that a country and a people, who have been credited with being individually and collectively self-sacrificing and still having an army of 4,000,000 men trained and equipped who had never shot a bullet at an enemy, surrendered unconditionally and still realized that that which they were doing could be done with honor. It could not have been from a fear of a call for more sacrifice. It must have been from trust. And how was it, despite the fact that many leaders of our Government justified the use of the bomb on the score of military necessity and knew little about what had gone on since the very days of Pearl Harbor in attempting to bring about a complete surrender where guerrilla warfare could be avoided, that armies scattered over almost half a globe could be returned without piecemeal fighting and disorder. Something must have been going on because a people of over 70,000,000 could not be converted overnight by the destruction of a comparatively small city after larger cities had been destroyed without affecting their spirit.

It is because I believe that a future successful building of Japan depends upon an appreciation of the ideals which will go into that building that I am going to attempt to point out that which can be accomplished by reference to that which has already been accomplished. And if the same spirit can control the future as it got control of the hearts and minds of the Japanese people in the past, we can build hopefully; and, under our tutelage, Japan can become a leader of Asia in developing national solidarities and peaceful international activities to such an extent that the rebirth of new Japan will affect the lives of the millions and millions of other peoples in Asia.

When I say that, I do not in any sense condone one single act which the Japanese Government did in bringing about war with America. I have, time and time again in talking to the Japanese, repeated one theme, and that was that the government led by Matsuoka and Tojo had actually become apostate, that these leaders turned their backs upon the fundamentals of their greatest leaders, and that the acceptance of their theories would lead to Japan's utter destruction.

You will remember that after Pearl Harbor the Japanese Government instituted a monthly celebration in honor of the Pearl Harbor victory. The idea of apostate leadership struck me so forcibly that I wrote one or two magazine articles and developed the first of what became my messages to the Japanese people. I pointed out in December 1941 that never in the world's history had a nation of 70,000,000 people deliberately moved to its own destruction to the extent that I

called it national suicide. I was, of course, an American and Pearl Harbor outraged me even, I think, more than anyone else because it seemed proof positive that wicked forces in Japan had completely gotten control of the finer thinking of the great men I used to know. I was so convinced that the destruction of Japan was certain that I started my appeals directly to the Japanese people. The OWI institutionalized me and my messages were sent regularly up until January 1, 1946. All the time I stressed one theme, an appeal to the Japanese people to overthrow their false leaders and to return to the teachings of Meiji Tenno and his associates.

As time moved on we were thus in a strong position of being able to explain what was meant by unconditional surrender and ultimately were able to unite the Japanese people in the thought that it was not necessarily the aim of America to destroy their basic institutions. We repeated that surrender with honor was attainable if it were lived up to in honor, and thus came the unheard of surrender and almost universal respect for what the Emperor had done.

The convincing of our own people of the necessity of avoiding anarchy in Japan was not an easy task. I call to mind now one radio program I was on in which the great man with whom I carried on the discussion maintained that anarchy in Japan would be welcomed. Calculate if you can the loss of life to our boys and the millions more of destruction that we would have had to have fought through if we had not gotten the type of surrender we did. Now my point is that that surrender had to be organized and was not an implusive thing resulting from the destruction of Hiroshima and part of Nagasaki. If the Japanese leaders had succeeded in convincing their people that Japan should fight as the last machine gunner fought at Iwo Jima or Okinawa to utter destruction, who can figure how long it would have taken our soldier boys to have burned and blasted out of China and other places of Asia all of the Japanese who were there.

All during the war, both in our own country and in Japan, not much was publicly said and not much was quoted that went out in our psychological warfare. But if what was said had not been very effective, why was so much attention paid in replying? If the Japanese people did not hear what the OWI sent out under the name of Senator THOMAS, why did the Japanese radio go to the trouble to try to belittle and abuse all that Senator THOMAS stood for? At any rate, the results did come out as I maintained from the very beginning were possible. My and the OWI's 5-years' work may be completely marked off as having been useless, but the results remain. I have stressed this point because I believe that the future success of American and Japanese cooperation in bringing stability to Asia depends entirely upon our being able to appreciate common viewpoints from which we can operate and through which there will be joint agreement. The surrender is proof that it can be done.

In the messages to Japan, I took the stand that modern Japan was at her very best in thought and in action during the days of the Meiji era when such men as Admiral Togo and General Nogi were the instructors of the present Emperor. I knew both Togo and Nogi. I knew their lives and I knew their ideals, and I knew what the present Emperor had been taught as a boy. I knew also Admiral Nomora. He, too, had become an instructor of the princes in the peers school. I knew his philosophy about the world and what the result would be if Japan and America should fight. I knew that the present Emperor and his little brother, Prince Chichibu, had both been taught that friendship with America was of prime importance for the success of Japan and that if Japan went to war it would end with the destruction of the Japanese prestige in the world. It was because of this knowledge that I had such faith in the effectiveness of the two messages which some of us urged President Roosevelt to send directly to the Emperor before Pearl Harbor. I knew these boys could never forget these teachings. To an extent, therefore, I knew that my appeal to the Japanese people would also bear fruit if any of my words got to the Emperor. I know now that they did. Have we not in the basic teachings of the necessity of friendship with America, which was drilled into the mind of the present Emperor as a child, a key to the position of the future Japan in the world? Is there throughout all of Asia another nation with the educational system which, when properly cleansed of propaganda, can unite a people as Japan was united for evil? Can this not be turned to good purposes with lasting effect if the good purposes are based upon truth?

That Japan can achieve national solidarity we all know and admit. That she has been a good and constructive member of the community of nations in the past we also know. To anyone who wishes to understand the schemes of national planning which Russia, Germany, and Italy later followed, he should study the antecedents of those schemes tried in the development of Japanese nationalism from 1868 down to 1900. Thus we have a people who have been schooled and who can be united to deal with; a people, too, who have been united at times for good quite as much as they have been for ill. When one realizes the whole history of the development of nationalism all over the world, one is not surprised that a people such as the Japanese, who consciously were imitating others, did at times take more seriously the written word and what was being done in the world than a people who were not conscious of imitating. Give the Japanese people and Japanese nationalism an honest psychoanalysis and that which has occurred in their land can be explained on the basis of what had occurred in other lands. Japan's acceptance of the Axis theory of Mussolini and Hitler makes the strutting of Matsuoka today seem the comic opera stuff it was. But Japan's leaders, like Matsuoka, were not the only people in the world, although they acted the part more ridiculously, who fell for the strutting.

Look at the Japanese soldiers' record in the Boxer War. Note the respect which Nogi and Togo both had for noncombatants in the Russian-Japanese War, where General Nogi, during the battle of Port Arthur, sacrificed brigade after brigade rather than let his fire reach defenseless persons, women and children and noncombatants. Then read an Italian writer's thesis written after the First World War in defense of horrible warfare and translate that into Japanese and have it accepted literally by a people who were admittedly following, what we know today, were false leaders and you have an explanation of the Japanese change of character and what took place at Nanking and other atrocity centers. The philosophy of warfare took a terrific change after the last war. Writers began putting forth the ideas of horrible warfare, and the more horrible the more quickly it was to be over. The sad part about that attitude is that when people get an idea from someone else and not from their own experience and translate that idea into their own language and into their own way of behaving, horrible warfare becomes beastly warfare, and there is much of the last war that has to be characterized as low-down, beastly warfare. Thus we see that the seeds which matured in the destruction of Pearl Harbor had their beginnings in the Western Hemisphere.

Japan is a nation that definitely wants to be led in world affairs. She needs the association of an honest mind and teacher. The Japanese people have never once lost the student attitude. I do not mean by that that the nation and culture of Japan is devoid of much that is their own, because they are not. But I do want to leave with you the thought that every act of Japan since the arrival of Admiral Perry and the decision of the Japanese leaders to take upon themselves Western ways has been an act of following and not of leadership. As long as Japan had the leadership of Great Britain under the Anglo-Japanese alliance she had a constructive leadership. I am not advocating an American-Japanese alliance, but the war has put us in a position of either being good neighbors, of assuming the teacher-student attitude, or of completely withdrawing and allowing friendships to be sought in less helpful centers, as they were when Japan looked to Italy and Germany as friends and broke with their former allies, the British, and her association with us.

Now, if there is to be the student-teacher position plus good neighborliness, because the good-neighbor policy must work east and west as well as north and south, we have an obligation to perform. If we will do our part there is no doubt in my mind but that Japan will do hers.

It is important that we have clearly in mind what it is that the United States proposes to accomplish in Japan. Our objectives are not secret. They have been stated clearly and firmly many times. They are objectives that are entirely in harmony with the purposes of the United Nations. They were endorsed by all the major Allies at Potsdam. What we desire is the full demilitarization of Japan and the removal of obstacles which thwart democratic activities in Japanese society. At the same time we will allow the Japanese people every opportunity to resume a peaceful and respectable place in the world.

I said before that the primary responsibility for the success or failure of the Allied objectives rested with the United States—that the future of Japan would be determined largely by our actions. There is, however, also a clear limitation on our responsibility. We cannot create democracy in Japan, for democracy, as General MacArthur has said and we all know, "is a thing largely of the spirit." General Marshall, echoing the ideals of Lee, which he undoubtedly planted in his heart as a youth at the Virginia Military Institute, has defined it in a way that Jefferson would applaud and at the same time realize that his teachings were as much a part of American leadership today as he hoped they would be when he wrote that he and Adams would yet look down from heaven with joy at the fulfillment of this great dream. Marshall's words should be taught to every school boy and girl in America, should be translated and made part of the education of each youth in Japan. These are his words:

"I realize that the word 'democracy' is given many interpretations. To the American Government and citizens it has a basic meaning. We believe that human beings have certain inalienable rights—that is, rights which may not be given or taken away.

"They include the right of every individual to develop his mind and his soul in the ways of his own choice, free of fear and coercion—provided only that he does not interfere with the rights of others. To us a society is not democratic if men who respect the rights of their fellowmen are not free to express their own beliefs and convictions without fear that they may be snatched away from their home and family. To us a society is not free if law-abiding citizens live in fear of being denied the right to work or deprived of life, liberty, and the pursuit of happiness."

Surely I will be excused for a moment's diversion to say what I have said so many times that the outstanding characteristic in our world leadership in the World War is that our great generals and admirals are statesmen first and military geniuses second. If this is not a complete proof of the American

ideal of citizen soldiery, I do not know what else it may be. An almost day-to-day association with our Secretaries of War and the Navy during the war period gave me a renewed appreciation of the basic idealism which underlay their acts.

Democracy is a way of life a long time in the building. Our legitimate objective and the most we can hope to accomplish is to establish and permit to grow in Japan those conditions under which democracy can flourish. At the same time, we must remain on guard against a revival of forces which, just a short time ago, were calling for a "hundred years war" against us and crashing planes in mad suicidal dives on our naval vessels. Let us make no mistake; militarism in Japan is not a mere surface phenomenon involving a few generals and admirals. It is more a manifestation of imitation of evils found in the West and the tragedy which befalls a people who cast off decent ideals to follow apostate leadership.

The work of the occupation has fallen into three main categories: Demilitarization, political and social reorientation, and economic reconstruction. In considering each of these it is important to remember that the actual task of administering the policies has rested largely with the Japanese Government, operating under the authority and supervision of the supreme commander for the allied powers.

The most tangible result is seen in the demobilization of Japanese military power. Within a very short time after the surrender, forces in the homeland were completely disbanded and armaments production was brought to a halt. When the Japanese had completed these assignments, they were ordered to dissolve their war and naval ministries. Then came the return of the pioneers of Japanese expansion—the 6,000,000 civilians and soldiers scattered in outposts throughout the Pacific and in Asia. This tremendous job of repatriation was completed by the end of 1946 except for large numbers of Japanese prisoners still held by the Russians. Still another phase of demilitarization has been the war crimes trials. These have been conducted with justice. In addition to the major criminals still undergoing trial in Tokyo, scores of other Japanese have been made to answer for the flagrant atrocities they committed against the helpless during the war. These trials receive full publicity in Japan so that the ordinary people may know to what depths of wickedness their military descended.

Of course, the complete destruction of Japan's current ability to wage war is not in itself perpetual insurance against a revival of military power. In the long run the prevention of militarism must depend upon the further growth of the democratic idea among the Japanese people. It is at this point in allied policy that the problem of demilitarization merges with the larger questions of political and social reorientation and economic reconstruction.

What we should attempt in these fields is the establishment of an environment in Japan which will predispose the people of that country to a peaceful revolution of tremendous consequence. We should introduce in a few years the nonmaterial aspects of hundreds of years of western culture—the fruits of the Renaissance, political liberalism, Christian humanism—in short, all those ideals and spiritual values which have tempered the material advance of the west. But, in addition to that, the oldest of all Chinese learned culture, based as it was upon a deep and appreciative study of the Chinese classics, should be revitalized and brought to life under the auspices of teachers who have accepted the theory of the dignity of the individual and the notion of the processes of government which spring from an acceptance of the principle of inherent right in the individual and above all the great principle that governments are instituted not for their own perpetuation nor their own good, but for the people they represent.

To bring about the desired reorientation of Japanese society, every phase of Japanese life must be affected. The initial targets already aimed at are the feudal components of the social structure and elements in public life which had championed totalitarianism. These impediments to freedom had to be uprooted and swept into obscurity before any constructive measures could be undertaken. Therefore, thousands of persons in government, business, education, and public information were screened. Scores of Japanese with militaristic leaning have already been excluded from public life. Furthermore, the thought-control police—the dreaded Kempei-tai—have been abolished, and the fanatic patriotic societies, such as the Black Dragon, have been dissolved.

State Shintoism, chief perpetrator of the imperial divinity concept, has been abolished. This is not the great revolution which many writers have stressed. The Shinto religion, even in my day, was a religion without a theology, without a hierarchy, and even without a system of morals, excepting for the influence which those priests who did read and who understood the Chinese classics might have accepted. Ancestor worship alone had little state significance until it was pointed out to the Japanese by westerners that it was not necessary for the whole nation to become Christian, as was the plan, in order that nationalism might properly be accepted, since, thoughtlessly, it had been pointed out that nationalism, as a state ideal, had developed only in Christian countries. The scheme was for the Crown Prince to become a Christian and that when he succeeded to the emperorship the transition would be easy.

At this time it was pointed out that, if Shinto were made to stand for the concept of the divine right of kings, as evolved in the West, Shintoism could become a state religion and made into a political concept to develop the theory of national patriotism. The Mikado cult has ceased to operate in the realm of mysticism. The Emperor, Hirohito, has been humanized and placed both constitutionally and in practice on a level comparable with that of King George of England. In my day the Mikado cult, as a political necessity, had not become so universally accepted that those few teachers, who talked about the development of the Japanese Constitution and compared the Emperor's political position to that of the King of England, were interfered with. I remember one debate in Parliament where this was openly one and, while the member of Parliament was chided because he was reminded of the fact that the constitution carried the provision of the inviolability of the Emperor, it did not seem then archtreason to discuss the point.

While the effect of these preliminaries were spreading through Japan, the Japanese Government was pushed into a series of actions designed to establish a basis for genuine democracy. Restrictions on political, civil, and religious liberty came to an end and thousands of political prisoners—potential leaders of a new Japan—were released. The notoriously brutal Japanese police received a reschooling in practices of common decency and courtesy. New textbooks in geography, history, and morals cast Japan in an entirely different light for the pupils of the elementary and secondary schools.

The press, the radio, and the screen all experienced a new freedom. They ceased to be the mouthpiece of officialdom and their liberty was limited only for the interest of Allied objectives.

One of the most far-reaching changes concerned the women of Japan whose position in society had long been backward. They were granted legal equality. This change cannot be marked off as a purely theoretical one as some critics have sought to do. That the women will exercise their new rights is indicated by the first election after the establishment of the occupation. They constituted 67 percent of all voters. They elected 38 of their sex to the house of representatives. One of my own students, who wrote his masters' thesis in the middle twenties on the subject the Introduction of Women's Suffrage in Japan, became one of the leaders in this movement.

My point in mentioning this is to show that there are thousands in great movements in Japan who are prepared to assume leadership in many fields in bringing about Japan's great social and political changes. The University of Michigan is well represented in these fields.

The trends toward political, economic, and social democracy set in motion by General MacArthur's directives culminated in the new constitution promulgated on November 3, 1946. Much ill-informed criticism has been directed at this constitution. There are those who say that the document is alien to the Japanese character, that in allowing it to be promulgated General MacArthur has provided the shell of democracy without the substance. The fact remains, however, that the document is one of the most democratic fundamental laws ever devised. It conforms in every respect to the most advance concepts of the political, economic, and social responsibilities of government. That it is un-Japanese does not destroy its basic purpose. Almost everything that we attempt in Japan at this time might be labeled un-Japanese since we are attempting to reform and redirect Japanism, not to preserve it intact. MacArthur, himself, has clearly stated that the constitution, however liberal, does not of itself create democracy. However, what it does do, is to provide the legal structure within which democracy can develop. That is all that any constitution could do. That is all that we intend to do. The process of giving substance to a fundamental social concept is something which can be undertaken only by the people who live under it. The task is a timeless one and we shall not know soon with what degree of success the Japanese will discharge it. Knowing the Japanese and knowing that the seeds of democratic thought are already there, I am convinced that democracy has taken genuine root in Japan and that it will endure. All are impressed by the recent Japanese elections. A preponderance of moderate candidates was elected, and the national government is now headed by a Socialist, who is a Christian, Tetsu Katayama, whose views follow those of the British labor party. His cabinet is of a coalition type and it contains a considerable conservative element.

The political and social progress of Japan during the 2 years of the occupation has been very impressive. In the long run, however, it is likely that the final test of our policies will take place in the economic field. If we fail there, democracy will not stand in Japan. Let us not forget that the advance of totalitarianism in Europe was built largely on the promise to end the economic chaos into which the various nations had fallen.

The great family trusts—the so-called Zaibatsu—have been dissolved and large landholdings have been divided. Responsible trade unions have been encouraged. The motive behind these measures is to break up excessive concentration of wealth in impoverished Japan and to diversify economic power and responsibility.

There are some problems of the Japanese economy that are beyond the control of the Japanese themselves. Consider for a moment that the arable land in Japan now available to feed a population of between seventy and eighty million people is equal to slightly more than one-half the farm acreage of the State of Illinois. We have got to face the fact that Japan does not and cannot produce sufficient food. The prospects for any significant increase in agricultural production in the foreseeable future are exceedingly remote. As a matter of fact, in

the absence of large imports of fertilizers there is more likely to be a drop in output. Then remember that Japan's major cities were destroyed. Familiar as the Japanese are to overnight destruction, such as the Tokyo earthquake and fire of '23, the Osaka and Aomori fires, and the volcanic eruptions, yet the destruction of her cities on a scale greater and more extensive than the destruction in any country in Europe makes it too much for us to expect them not to have greater economic consequences.

It is clear that Japan's sole hope of maintaining even a tolerable standard of living depends upon the redevelopment of peaceful foreign trade. Until this can be done, the United States must advance essential food supplies. It is hardly necessary to stress that if widespread starvation takes place in Japan, not only would our democratic objectives be defeated, but the security of the occupation itself would be placed in costly jeopardy. The Japanese authorities have been prodded into developing the most equitable distribution of food supplies. Beyond this the responsibility rests with the people of the United States and with their Congress to make available basic assistance until economic recovery reaches the point where Japan is once again self-sustaining.

At present three factors hamper Japan's recovery: The economic break-down and exhaustion within Japan; the failure of the Allies to settle finally the reparations problem; and the barriers to free Japanese trade in the world markets. In each of these instances, only initial corrective measures have been taken.

Regardless of what the Japanese themselves do, however, we must recognize that ultimately the tempo of Japanese recovery is intricately related to Allied policy on the question of reparations and foreign trade. The principle of compensating the victims of Japanese aggression with a part of Japan's productive capacity is recognized by all the Allied powers. But it is imperative that the Japanese be advised as quickly as possible on the precise terms of the reparations settlement. Until this is done they cannot go forward with their recovery plans. In the case of foreign trade, the Japanese will be permitted some private trading after August 15. But this is only a partial solution. Japan must be able to purchase essential nonstrategic raw materials freely abroad, and to sell finished products in the world markets. This may run counter to the views of some selfish interest in the Allied nations, but the alternatives are a continuous drain upon the taxpayers of the United States or mass starvation in Japan. These are the inescapable realities of the situation.

But regardless of the distress caused by bad economic conditions, Japan must be guided from that most fatal of all premises—that to feed the people must come first, social and political reforms after. That is the fallacy to which Italy has sunk with such fatal results to the good, well-being of that great people. My plea is that political, social, and economic upbuilding go hand in hand, for they are related.

The destruction of Japan was so complete, her defeat so colossal, and her governmental changes so revolutionary that there is no other way out for Japan, excepting to attempt to be a good student and a good neighbor. Common sense, therefore, is the only guide which Japan need follow. But pure common sense will not see us through in our end of what must be a bargain. We have got to appreciate our student. No teacher is successful if he has no sympathy for, appreciation and comprehension of his student. To know Japan, therefore, to understand her basic ideals, to appreciate both the good and the bad of her characteristics becomes our prime essential. We must cease to be satisfied with following a policy of rather ill-trained unsympathetic experts.

Economically Japan has always been dependent upon our trade; more than ever that will be the case. The invention of nylon and its universal acceptance by the ladies of the world may bring an economic repercussion upon the Japanese silk industry from which it cannot recover. Nylon and war have both got to be overcome. But Japan's success economically is more certain than it has ever been if she can remain free from the destructive burdens of a terrible taxation which was necessary to maintain her unnatural armaments. Thus Japan economically faces the new world with skill, abundance of labor, organizational ability, a knowledge of knowing how to work together, and a craftsmanship unexcelled. Given these factors plus a halfway decent market she will succeed. That she will have that market depends upon us. We will have to do some adjusting there. Japan's skill in meeting the demands of consumers in almost any line was, you remember, so much a factor before the war that those who judged war entirely on the basis of economic competition felt that she and her selling abilities must be destroyed. Thus if we become her sponsor and her economic ally in raising her own standard of living and help her to get her goods into the markets of the world she will become a profitable ally, not only to us but to the whole world.

Socially Japan must of necessity work for the raising of standards in the rest of Asia or she, like ourselves, will be overcome by lower standards, if the thesis that poverty anywhere affects the living standards everywhere is true. If we have learned so well that war anywhere is the concern of all everywhere, then Japan can join enthusiastically with us in attempting to arrange her economy so that her standards may contribute to the betterment of the standards throughout the world.

The Japanese money system is, of course, completely destroyed. But we have there a people who have been used to a stable currency and that can be assured them again by association with us. Her yen should be pinned to our dollar.

Politically we need not fear a return to any philosophy at all which is distasteful to our American democratic ideals if we will but give the Japanese people a chance again to read and study about Washington and Lincoln and such other American leaders as every Japanese schoolboy studied during the development of the Japanese school system. The war was carried on by leaders who were as false to the Japanese traditions as they were accepted by the majority of the Japanese people a generation and a half ago, as they were false to world thought. Japan can again be brought into the sisterhood of nations with the Rising Sun as a token of a restoration of an old aspiring, an old striving, crushed by the rise in the world of a false doctrine of the notion of a single will in a state under the leadership of dishonest, ill-trained, overambitious Hitlers, Mussolinis, Matsuokas, and Tojos.

Under the old theory, the Emperor owned all of the land and all of the people and was father of all. These concepts are taken from the theories put into the Chinese characters. The people in a paternal sense were never forgotten. They had no rights, but they needed no rights because the Emperor was all benevolent. That was theory. We have today in Japan a constitution based upon our own American notion that governments exist for the benefit of the people, that governments themselves have no rights but that the rights belong to the people, that the property is the property of the people and the governments only use the property for the people's benefit and for public use. The Emperor in this picture is a guardian, therefore, of the people's property and the people's well-being. That, too, is theory. It is the key to American-Japanese cooperation. Leadership in Japan, no doubt, will come from the people inspired by these ideals and the Emperor will be an interpreter of the people's aspirations. Think that through as you consider the whole of Asia and see if it is an exaggeration to say that the making of new Asia will undoubtedly come under Japanese leadership. The culmination of the American revolution is not yet complete, but it is surely on the way.

This is what I said in 1943: "The after-war world will be a world with the center of interest shifted away from the Western Hemisphere to the east. Asia, like Europe, is allied with distant powers and divided within. Yet, the preponderance of Asiatic populations will throw the center of gravity to the Eastern Hemisphere. Since the beginning of time, Asia has been a world problem. Now it is the world problem. The conflicts in which the four major Allies—Russia, China, the United States, and Great Britain—are fighting are Asiatic conflicts. But long after Asia will have ceased to be a theater of military operations it will be predominant; for the three greatest social, political, and economic revolutions—the Chinese, the Indian, and the Russian—are essentially Asiatic.

"Our fundamental concepts of democracy and our religious and political recognition of the dignity of the individual and his inherent rights are necessary to the solving not only of Europe's problems but also of Asia's. Our belief in the rights of revolution gives us confidence in the face of change. With faith, then, in our idealism, the world will go forward as it follows American leadership."

If my prediction is true, the place for Japan in the fulfillment of the prophecy is plainly seen when we catch the spirit of her new constitution. Our whole success depends upon our being able to keep the thought of the leadership in Japan in harmony with what we said in our psychological warfare and to build the future Japan upon what we told the Japanese was their own ideals as taught them during the best part of the Meiji era.

Racial Relationships

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, November 20, 1947

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD an editorial entitled "Remedy Worse Than Disease," which appeared in the Raleigh News and Observer under date of November 2, 1947. This editorial was written by Hon. Josephus Daniels, who was Secretary of the Navy for 8 years during President Woodrow Wilson's administration, and who completed 8 years of service as Ambassador to Mexico in 1941.

Mr. Daniels has been active in promoting good race relationship throughout his long and eventful public career, and in this editorial he discusses calmly and dispassionately the report of the Civil Rights Committee.

I also ask unanimous consent that another editorial, entitled "Aycock Chartered the Way," from the same newspaper, be inserted immediately following the first editorial.

Gov. Charles B. Aycock led the educational movement in North Carolina

in the beginning of this century, and it has resulted in providing a splendid system of public schools in our State, in which the white and Negro teachers receive the same compensation when holding the same certificates and having the same number of years' experience. The viewpoint expressed in this address by Governor Aycock in 1901, while he was Governor of the State, is the basis upon which our State has proceeded, and is the only basis upon which peaceful and harmonious relationship can be maintained throughout the South and the Nation.

The report of the Civil Rights Committee betrays a woeful lack of understanding of the real conditions which exist in this country. Some of its recommendations are good, but others fail utterly in offering any solution of the race problem. To adopt the views of this committee throughout would result in chaos, rather than in orderly and peaceful conditions, and would hinder the great progress which is now being made in a fair and just determination of the race problem to the good of all concerned.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Raleigh (N. C.) News and Observer of November 2, 1947]

REMEDY WORSE THAN DISEASE

In November, 1946, President Truman appointed a committee, with Charles E. Wilson as chairman, known as the President's Committee on Civil Rights. The service expected of this committee was thus stated in the official statement from the White House:

"The committee is authorized on behalf of the President to inquire into and to determine whether and in what respect current law-enforcement measures and the authority and means possessed by Federal, State, and local governments may be strengthened and improved to safeguard the civil rights of the people."

Last week the committee made public its report in a 178 page pamphlet. A digest of this report appeared in Thursday's News and Observer and other papers. A careful reading of the exhaustive report, accompanied by charts, discloses that substantially the recommendations of the committee may be summed up in these 14 points:

1. That the 48 sovereign States should be abolished or reduced to the status of the type of provinces, most civil rights questions to be administered by Federal appointive boards with powers equal to those of the State or the judiciary.

2. That no individual or firm be permitted to give employment to any person unless approved by a board with the power to kill or make alive under a so-called Fair Employment Practices Act.

3. That majorities have no rights equal to those of minorities.

4. That whereas in State enforcement of law as to civil rights there are so many miscarriages of justice that this function of government as to minorities be transferred to Washington.

5. That there shall be no segregation in schools, colleges, churches or elsewhere.

6. That suffrage and election laws be exclusively enacted and enforced by the Federal Government unless the States agree to be the puppets of legislation giving sovereign power to boards or commissions appointed by the Federal Government.

7. That no funds from the Federal Treasury, collected from all the States, can be employed for education, health, or the public welfare in any State where segregation is practiced in schools or hospitals and aid to the poor or in transportation.

8. That a Federal board shall enforce compliance with the policies of nondiscrimination and a permanent commission to insure civil rights and make the FBI a sort of gestapo.

9. That Federal control of housing and renting be adopted.

10. That in the armed forces all races shall bivouac together and end all segregation.

11. That the requirements for voting be prescribed by the Federal Government beginning with a congressional act to forbid poll-tax payment as a voting prerequisite.

12. That Congress enact an antilynch law.

13. That steps be taken to have a rehearing and change of the decisions of the Supreme Court on civil rights cases in 1883 and the substitution of the dissenting opinion of Justice Harlan.

14. That the decisions of the Supreme Court, beginning with its decision in *Plessy v. Ferguson*, in 1896, which held that segregation was not discriminatory be overturned.

In long and elaborate arguments and citation of history, the committee seeks to justify these 14 radical steps that would make of the Federal Government the sort of government that Alexander Hamilton desired, minus the king he preferred, to the sort of government Washington, Jefferson, and Madison set up—one that has been an indissoluble Federal Government with fixed and limited power, with sovereign indestructible States functioning in all fields not assigned to the central government.

The committee has gone far afield from the instructions given by President Truman in creating the committee, and discussed what should be done with reference to communism and other issues that are not directly related to civil rights.

The long report contains little or no reference to the duties imposed on the State or local governments or the many conspicuous actions of officials in the Southern States to uphold all the laws and secure the civil and other rights of Negroes in the South. But there runs like a thread through the entire voluminous report an emphasis and denunciation of the cases where the States have failed in their duties. Stress is laid on failures in certain Southern States to punish men guilty of lynchings. The report of condemnation of these failures is not more severe than were contained in the press and by officials in those States stained by the failure to convict lynchers. While magnifying and denouncing—and properly—lynching there is no word of condemnation of those guilty of the rapes for which the crime has most frequently been resorted to, or the indignation felt by most southern people who are portrayed as guilty of prejudice against the Negro. A Russian reading the horrible recital of lynchings—and condemnation cannot be too severe—would feel justified in the slanderous statements some of their spokesmen have broadcast about American wrongs to minority groups. The report does not indicate that this most heinous crime that shamed the States where they occurred have greatly decreased and that public opinion in the South is as strong in condemnation of lynching as the members of this committee. They write as if the crime would cease instanter if the Federal Government had sole authority.

The authors of this report seem to be obsessed by the need of turning over the protection of civil rights to Federal boards and commissions and other officials. The history of the enforcement of laws by the Federal authorities does not justify the belief that they are sacrosanct and there would be no miscarriages of justice by turning over all prosecution to Federal officials. They are human and their record of convicting violators of the law does not justify such supreme faith that all would be well if they were given the exclusive power proposed by the report. To be sure, it is nowhere said in words that States are to be relegated to the scrap heap and the Federal officials given exclusive power, but there is no escape from that conclusion after reading the various indictments and recommendations.

The worst lawbreakers in America today are the magnates who head the trusts which violate the antitrust law. It is the duty of the Federal Government to protect the despoiled people by enforcing that law. They have plenty of lawyers and plenty of money, but what is the record of conviction and punishment? Not only have violators of the law not been jailed but there have been few convictions and in these cases the penalties have been little more than a slap on the wrist. With that record, and the failure to convict the profiteers who robbed Uncle Sam in war contracts, who can believe that all would be well by turning over the civil rights prosecution to the Federal authorities—particularly since the commitee recommends permanent boards—"all boards," said Woodrow Wilson, "are long, wooden, and narrow."

There is much in the report of injustices that should be righted. Injustice to any man—particularly the weak—is a disgrace and stigma on our country. Denial of the right to vote for nonpayment of poll tax is indefensible, but that has been ended in most States and is on the way out. Lack of equal educational facilities is indefensible, even though in the South any lack is being remedied. The authors recognize the situation in the South with a larger number of children than in other parts of the country and they state that Mississippi spends 3.41 percent of its income for education while New York only spends 2.61 percent. Even so, "this means $400 per classroom unit in Mississippi and $4,100 in New York. Negro and white school children, both suffer because of the South's basic inability to match the level of educational opportunity provided in other sections of the Nation."

After that fair statement, what does the committee suggest? A majority advocate denying any Federal aid sorely needed in the South unless the Southern States are compelled to send white and Negro children to the same school—a proposal which the members know is equivalent to a denial of needed assistance for the children of both races. The report states that all the members did not concur in advocating the Big Stick of saying to the South: "End segregation or we will urge starving your schools." No man who understands the situation, and would have better schools for both races, would advocate the policy recommended by a majority of the committee. The report should have printed the names of the members who did not favor giving aid to schools in States whose constitutions compel separate schools for the races.

The proposal to deny Federal funds for education if there is segregation in the schools is equivalent to making an offer with one hand and denying it with the other. If in the Southern States, where there is a large Negro population, the tender of Federal aid for schools is accompanied by a demand for mixed schools, every man who knows southern sentiment knows the tender of the money thus conditioned would not be accepted. The proposal is a "promise to the ear" to be "broken to the hope."

The people of the South are aware of their shortcomings. They have not always done as well by the Negro as they should, but that is not sectional. There has been no worse race riot in the country than in Detroit, but, though southern failures and wrongs are paramounted there is no allusion to such scenes as occurred in Detroit or to the segre-

gation of the Negro in Harlem and lack of welcoming him above the Potomac.

There is no reason to doubt the good intentions of the members of the committee, but portions of the report breathe ignorance of and prejudice against the South. It is alleged that the South has race prejudices and that its segregation laws are proof of prejudice. The South is no more free from it—maybe not so much so—as the people in New York who segregate the Negroes in Harlem and wouldn't let a Negro family live on Fifth Avenue or enter Groton or its other like schools. Prejudice, injustice, lack of consideration for the Negroes who have come far from slavery is indefensible. They should be treated with justice, paid well for good work, afforded educational advantages, given fair trials in courts, guaranteed the right to vote when they possess the required qualifications, and given friendship and help. Most folks in the South give these things more and more. The Negroes in the South are advancing, owning more homes and getting better wages as they are in other parts of the country. These better conditions, with good will and friendship, should grow and be reciprocal. They cannot be advanced by such exaggerated and prejudiced statements as abound in this report or by turning over all protection of rights to a Federal bureaucracy.

With no doubt of the good intentions of the members of the committee and approval of the good portions and the information the report contains, the carrying out of the recommendations would not abate any of the situations which the members wish to act upon. It might aggravate them.

The remedy proposed would prove worse than the disease, a disease that needs healing rather than the proposed surgeon's knife. It is not certain that a well-meaning committee has not dug up more snakes than can be killed.

[From the Raleigh (N. C.) News and Observer of November 4, 1947]

AYCOCK CHARTED THE WAY

In declining to agree with the report of President Truman's Committee on Civil Rights as to the end of segregation as practiced in the South, the people of this and other Southern States are actuated by no feeling that militates against opening doors to education and advancement of the Negro than those misguided friends who, while segregating him in the North, demand that the South shall depart from separate schools and separate churches and separation in public assemblies.

The South today is guided by the wise counsel of Gov. Charles B. Aycock as set forth in 1901 in an address to the Negroes of North Carolina at the Negro State Fair in Raleigh. Governor Aycock said:

"What you wish, what you need, more than recognition by the President or other people in authority, is the establishment among yourselves of a society founded upon culture, intelligence, and virtue, and in no wise dependent upon those of a different race. * * *

No thoughtful, conservative, and upright southerner has for your race aught but the kindest feelings, and we are all willing and anxious to see you grow into the highest citizenship of which you are capable, and we are willing to give our energies and best thought to aid you in the great work necessary to make you what you are capable of, and to assist you in that elevation of character and of virtue which tends to the strengthening of the State. But to do this it is absolutely necessary that each race should remain distinct, and have a society of its own. Inside of your own race you can grow as large and broad and high as God permits, with the aid, sympathy, and the encouragement of your white neighbors. If you can equal the white race in achievement, in scholarship, in literature, in art, in industry, in commerce, you will find no generous-minded white man who will stand in your way; but all of them in the South will insist that you shall accomplish this high end without social intermingling. And this is well for you; it is well for us; it is necessary for the peace of our section; it is essential to the education of your children that you shall accomplish this high end upon this point."

Nobody has compressed so much wisdom into a statement that should govern the course of members of both races as is found in the address of Governor Aycock to the Negroes of this State. It is to be regretted that the members of the President's Civil Rights Committee did not have access to this address so they could have incorporated it with approval in their report.

The Impact of the Marshall Plan

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Thursday, November 20, 1947

Mr. O'MAHONEY. Mr. President, the Cosmos Club of Washington, D. C., an organization of distinguished scientific and professional men, celebrated its sixty-ninth birthday anniversary on the evening of November 17, when it was my privilege to have the opportunity of speaking on the impact of the Marshall plan. I ask unanimous consent that the text of my remarks may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE IMPACT OF THE MARSHALL PLAN

Once again the people of the United States must come to grips with destiny, while peace and progress under freedom hang in the balance. Until the First World War was fought, our decisions directly affected only those who lived within the borders of our own country. Now our decisions affect not only ourselves, but the people of the whole world.

We cannot separate ourselves in this hour of decision from the rest of mankind. It must be understood why this is so before any intelligent judgment can be reached upon either the necessity or the impact of the Marshall plan.

SCIENCE HAS DESTROYED ISOLATION

Let me begin, therefore, by asserting that we ourselves by our own achievements have destroyed the isolation which once was the protection of the United States from the errors and tyrannies of other lands. By the use which we have made of our own freedom, by the manner in which we have released the individual energies of the millions who make up our population, we here in the United States have wrought most of the scientific advances which have almost abolished time and distance and which have made the world so small that no part of it is separated by more than a few hours from any other part.

Modern means of communication and transportation are essentially the achievements of the free people of the United States. In a very real sense we have made the world what it is today, and we cannot act as though the tremendous scientific and technological progress of the last 50 years is nonexistent.

UNPARALLELED DEVASTATION

This, however, is not the only sense in which we ourselves have been the authors of the problem we must solve. It is too easy to forget the contribution that we made to the world devastation that must now be repaired if freedom is to be preserved. Hitler prostituted science and technology to achieve a total war. To his side he drew other totalitarian powers who carried on the war with the deliberate purpose of destroying everything in their path so that subjugated peoples would become economically as well as politically dependent on the new arbitrary rulers of the world. When we were drawn into the war we finished the job of physical destruction. We laid low not only the productive facilities of the enemy nations, but the productive facilities likewise of those areas of friendly nations which were occupied by the enemy. By our military power we destroyed the physical capacity of the people of the devastated areas to support themselves.

More than that, we destroyed organized government, by which alone people can maintain order and create the conditions under which they may support themselves. Upon the conquered peoples we have imposed what is to them an alien military government. We knew from all the written history of man that government by force cannot successfully be imposed upon any people. Men were endowed with freedom by their Creator. No earthly power can take that freedom away. It is our task now to reverse the program of Hitler. We must repair the devastation of war in order that people everywhere may have liberty and may be dependent upon themselves both economically and politically.

The military victory which cost us the lives of 300,000 young men, and the broken bodies of hundreds of thousands of others who will never be restored to health, resulted in destruction such as was never before wrought on this earth. The science and technology which we, like our enemies, also used made World War II the most appalling conflict from which mankind ever suffered. The issue before us now is whether we can walk away from that destruction with any hope of realizing the objectives for which the war was fought—the objectives of human progress for which this Nation was founded.

RESTORE EUROPEAN CAPACITY OF SELF-SUPPORT

The Marshall plan is a proposal to help the people of Europe to restore the devastation of war and thereby make themselves once again self-supporting. The problem has three general aspects which cannot be separated one from another. It has a humanitarian aspect which appeals to Americans almost without exception. It also has an economic aspect and a political aspect, both of which are intimately related to the scientific and technological achievements which we utilized so successfully in fighting the war, and both of which are also intimately related to the ideals of human freedom, to attain which we waged the war.

If our contributions should be confined to the relief of human suffering, if we should neglect the obligation to help to reconstruct a world in which both the economic system and the political system shall be free, then our humanitarian doles will be wasted, and all the sacrifices of blood and treasure made during the fighting will have been fruitless.

There are those who have cynically referred to the Marshall plan as "operation rathole." I undertake to say that if those cynics should have their way, the crass term they have invented would have to be applied to the entire American effort in the fighting war, because nothing would then be saved from the ruin.

The task before us is no easy one. It involves great risks—risks of inflation and risks of great drafts upon the commodities essential to our own future. The alternative is so dreadful that we must assume the risk if we have any determination to perpetuate the American ideals of living which have been cherished on this continent from the beginning. Our choice now lies between going

backward toward weakness with the cynics who do not understand that America has become the greatest nation in the world with consequent opportunities and obligations, or going forward under the courageous leadership of those who still carry in their souls the vision of the future which illumined and inspired the leaders who founded and preserved this Government.

INACTION MEANS DESTRUCTION OF FREEDOM

Failure to reestablish a sound economy in the world by which people can be self-supporting means the destruction of these principles of free government to which this Nation has been always dedicated. The people of this country cannot hope to live in prosperous security in a world where the people of every other nation are living in misery or serfdom. History teaches us that dictatorships arise out of calamity. When men are incapable of supporting themselves, and when they are incapable of obtaining the instruments of self-defense by which to overcome the physical instruments which arbitrary power can use to suppress freedom, then they surrender the right to govern themselves, and totalitarianism ensues. If we allow totalitarianism to spread over the rest of the world for lack of intelligent and devoted loyalty to our own ideals of human freedom, we shall only be inviting attack.

It is, therefore, the part of wisdom for us courageously to adopt a policy of securing freedom for other peoples, not by resort to force but by contributing from our own resources to reestablish peaceful living in the devastated areas of the world. That is my interpretation of the purpose of the Marshall plan.

WHY GOVERNMENT MUST ACT

What then about its effect upon us? If it be asked why this Government should invest public funds in the reconstruction of Europe, or why the task should not be left to the people of Europe themselves, the answer once again is found in the scientific and technological nature of the modern world in which we live. The construction of the industrial plant by which we produced the supplies to fight the war was made possible only by public funds. Private capital did not and would not take the risk. Fully 80 percent of the entire cost of the facilities which were constructed here to produce the war supplies necessary for the conflict was contributed out of the National Treasury. What we sometimes fail to realize is that the instrumentalities and devices which are necessary in the modern world are of such magnitude and require such tremendous expenditure of capital that private risk capital is difficult if not impossible to obtain, and public funds must be utilized. Reconstruction of the areas and the production facilities destroyed in total war is likewise a task for Government rather than for private enterprise. So the restoration of a sound economy in Europe, requiring as it does investment of huge sums for which there is no private source, must necessarily be a Government activity. The preservation of a free economy requires that while recognizing this fact we recognize also the necessity of keeping always in mind the desirability of so organizing the program as to preserve individual economic opportunity.

MARSHALL PLAN INVOLVES COMMODITIES, NOT DOLLARS

And what about our capacity to make the Marshall plan effective?

First, let me say that we are not dealing so much in dollars as we are in commodities. We talk of dollars, and the 16 European governments which assembled in Paris talked of dollars, only because the dollar is the one currency of the world that has a value recognized everywhere. It has that value because we alone of all the nations which participated in the war have come through the conflict with our productive capacity unimpaired. Indeed, it has been expanded.

Let us consider food, the first essential of the Marshall plan, whether we look at it from its humanitarian, economic, or political point of view. The people of the United States were not badly off with respect to the consumption of food in the 5 years, 1935–39. Indeed, we were better off than most of the other people of the world. We were eating 125 pounds of meat per capita, more than 37 pounds of eggs, 340 pounds of milk, 235 pounds of fresh vegetables. With respect to all major food commodities, these prewar records have been exceeded in 1946 and 1947. This year we are consuming 123 percent of the meat we consumed in 1935–39, 127 percent of the eggs, 132 percent of the chickens, 119 percent of milk, 111 percent of fresh vegetables, 140 percent of corn products, and 153 percent of breakfast cereals. True, in 1947 the per capita civilian consumption of flour was 98 percent of the average for 1935–39, but the fact is clear that food consumption in the United States this year is running approximately 25 percent ahead of prewar food consumption, and we have been producing that food here at home from the largest acreage ever planted. Less than 10 percent of our food production last year was exported, and even that percentage was reached only because of the heavy exportations of wheat, which happens to be capable of the most efficient handling because it not only has a high caloric value, but is easy to ship.

RELIEF ALONE NOT SUFFICIENT

If now we should send food abroad only for humanitarian purposes, it is obvious that we would then be treating the symptoms and not the disease, with no prospect that the demand for food doles would come to an early end. The strain upon our own resources can be most effectively and speedily brought to an end by helping the Europeans to restore food production there. Obviously we shall be lessening the demand upon our own supplies of food if by our investment we enable the Europeans to obtain the tractors, the other farm machinery, and the fertilizer that will enable them to produce again their own supplies.

Although the United States has been and is now an importer of nitrogen fertilizer, and although our consumption is increasing, there is good reason to believe that we can expand our domestic production. Certainly we are well supplied with phosphate rock, and though we have been importing potash, our production and other estimated reserves are such as to make it certain that the Marshall plan offers no threat to our future on this score, particularly if we adopt a domestic policy designed to eliminate all possibility of private restrictive practices on the domestic production of fertilizer.

What is true of food is likewise true of other commodities that are in short supply. The domestic demand here at home for steel exceeds all previous experience, because we have had full employment since shortly after the termination of the war. And demand for all products has consequently increased, so that even though production has been expanded in most lines we have a relative shortage that operates to increase prices. In order to build a pipe line for oil from the lush fields of the Middle East to the shores of the Mediterranean, we have authorized the export of a large quantity of steel, which could be very well used here at home. That steel will contribute to increasing the European supply of petroleum, another shortage commodity in Europe. Surely it is clear that the restoration of steel production in Europe will operate to increase our own supply by the degree to which it cuts down the demand upon our exports.

PRODUCTION IN EUROPE ESSENTIAL

In the days before the war, Italy imported almost 60 percent of its coal supply from Germany, and American coal is being exported at the expense of the people of the United States to supply this Italian deficiency. How can we better cut down our expenditures for American coal shipped abroad than by restoring coal production in Germany and in England. France has not been self-sufficient so far as coal is concerned, and since fuel is the basis of all industry, anything that we can do now by realistic expenditures over and above the merely humanitarian level will operate to increase European supply, and, therefore, world supply of the commodities upon which economic restoration depends. To those who pretend to think that the people of Europe do not care to work, I should point out here that in France before the dollar crisis arose coal production was running at a rate of 115 percent of the production of 1938. Unfortunately, however, France before the war was not producing enough to supply its own needs. I might also add the observation of one of our most distinguished and able financiers and economists, Mr. Eugene Meyer, chairman of the board of the Washington Post, who, speaking to the District of Columbia Bankers' Association on October 20, last, on his conclusions reached during a recent visit to Europe, said:

"The crop failure also has a great deal to do with industrial production in France and elsewhere in Europe. You hear the widespread comment here that the Europeans are not working as hard as they should, nor producing up to their proper capacities. But I am convinced that had they had a good crop their industrial output would have been much higher. They could have spent some of their dollars that went toward buying food on essential raw materials for their factories, and they could have had more of the physical stamina that is necessary for high industrial production."

This is not the forum in which to present a detailed analysis of all of the commodities which will be required to effectuate the Marshall plan. That has been well done in the Harriman, the Nourse, and the Krug reports on the executive side, in the report of the Herter committee on the legislative side, and in the report of the Committee on European Economic Cooperation prepared by the Paris conference. All of these reports are extremely encouraging in the broad and intelligent manner in which they have been prepared. I think no one can read the report of the Paris Conference without feeling that the European governments democratically organized in western Europe desire only to be enabled to reestablish an economy in which their people can be self-supporting. One result of the war has been that intra-European trade has been destroyed, so that the capacity of one European country to contribute to the restoration of another has been seriously impaired, and while there has been a substantial degree of recovery through media created after the conclusion of hostilities, the interchange of products has not been restored in such a manner as to enable the people of these nations to purchase with their exports the imports which are needed to restore and stabilize their economies.

SOVIET GOVERNMENT IMPEDES PROGRAM

The situation is complicated by the fact that the Soviet Government unquestionably believes that the capitalistic system cannot save itself. And so it has to date preferred to impede recovery in western Europe rather than to contribute toward it. The sad truth is that Moscow, in pursuit of power over the entire Eurasian Continent, has actually laid seige to western Europe, denying it food supplies from the eastern zones and promoting disorder within the boundaries of the democratic nations. This raises clearly the political objective of the Marshall plan, namely, to halt the spread of totalitarian philosophy not by the resort to force but by the resort to moral and religious principles of constructive cooperation among the peoples of the

world. The long road to permanent world peace can be shortened if we accept the responsibility of leadership in a program of reconstruction, just as in the war we accepted leadership in the military program.

THE AMERICAN CAPACITY TO PERFORM

Some there are who shudder at the estimated cost of the rehabilitation program as recited in the Paris report, the Harriman report, and the report of the Herter committee. The fear has been expressed that this is an expenditure beyond that which the people of the United States should be called upon to make. It has even been suggested that it is a burden beyond our capacity to bear. This opinion, I think, can be held only by those who do not comprehend the economic and the scientific strength of the people of the United States, who do not comprehend the fact that our greatest resource is the individual abilities of our people, a resourcefulness which has flourished in the soil of freedom.

Too little attention has been given to the fact that the Seventy-ninth Congress, in 1946, after the fighting had stopped, rescinded appropriations and canceled contract authorizations amounting to more than $70,000,000,000, appropriations and authorizations that had been made during the war without a single dissenting vote. We were unanimously ready to expend for purposes of destruction more than $70,000,000,000 in excess of the sums we did expend. That, I repeat, was for the purpose of destruction. It was a sum greater by $22,000,000,000 than the entire national debt of June 30, 1940. It was a sum three times as great as the maximum estimate of the Paris Conference of the cost of the 8-year program for rehabilitation.

If we were willing to make this additional expenditure to carry on the work of destruction, how can we fear now to invest a fraction of that sum in the effort to build a sound economy and to preserve real democratic governments that recognize the dignity of the individual man?

Surely it is clear that the alternative will not save us any expenditure. If we abandon the attempt to lay the economic basis for permanent peace, the alternative is continuing expenditure for military purposes with the danger that we shall drift into the ultimate disaster of a third world war which can end only in the destruction of our own economy and in the destruction of all of those ideals of human freedom and progress which have been the cherished objective of Americans from the beginning.

Expenditures for military purposes never end. They grow from year to year. And the burden of these expenditures will never be lifted from the backs of our people until we win world peace. The cost of the Marshall plan upon the other hand will be a diminishing burden because year by year as the productive capacity of Europe is restored, the drain upon our resources will be lessened.

Within a year after the Marshall plan has been adopted we shall be able to judge its effectiveness and to determine whether or not it is in fact the road to peace. Indeed, the current events in Europe seem to indicate that the Soviet regime is convinced that the Marshall plan is the instrument by which a democratic economy and democratic government may be restored in Europe. The current riots which have been precipitated in Italy and France are not the riots of the people. They are the riots which are inspired by the leaders of the ideology which wants to see the Marshall plan fail.

AMERICAN GENIUS CAN PRODUCE

This program of European reconstruction is not only in harmony with our traditional ideals and within our financial capacity, but, I think, also—and this statement is particularly appropriate for this group—it is well within the genius and the skills of the American people. When it is undertaken, it should, in my opinion, be accompanied by another program designed to develop and expand the utilization and conservation of all our natural resources. For an infinitesimal fraction of the sums we are prepared annually to spend upon the maintenance of military preparedness, we could broaden our educational facilities, conserve our water supplies, increase our agricultural output, expand our production of electric energy, stimulate the development of new sources of mineral supply, and experiment in the discovery of substitutes for those few commodities of which we are in short supply.

The wonders which have been accomplished with startling rapidity by the American engineer, the American inventor and the American scientist, have outrun our capacity to understand that this generation is living in an age of plenty. The international rivalries, jealousies, and wars of the past, have usually been the result of efforts to gain control of commodities which were in short supply. Justinian went to war with Persia because the Persian king was sitting astride the silk road from China. The robber barons made their indelible mark upon European history because they, too, were motivated by controlling the distribution of commodities of which the people did not have enough.

Now, however, if we look back upon the scientific developments of two world wars, we know that the dependence of mankind upon traditional sources of supply has been diminished to a remarkable degree. Now that we have jet propulsion, which gives promise of reducing our dependence on high octane gasoline for the operation of high-speed airplanes, and now that we know how to make synthetic liquid fuel from oil shale and from coal, it is certainly no longer essential for us to think in terms of traditional international relations in order to gain control of deposits of natural petroleum in other parts of the world.

SCIENCE AND RELIGION BRING A NEW ERA OF PROGRESS

The electronic tube is invisibly opening the doors to a new era in which new plastic materials can be more rapidly manufactured than ever before, and penicillin can be developed with vastly greater speed and greater volume to fight disease. Synthetic fabrics are making available new garments for glamorous dress. New methods of making alumina from alumina clays is relieving the aluminum industry from its dependence upon bauxite, and the whole field of light metals offers opportunity for development heretofore undreamed of.

New occupations are being created. New purchasing power is being brought into existence. New markets are being developed because we have full employment. We have entered the age of plenty. No longer is it necessary for us to follow the monopolist in the economic field or the totalitarian in the political field, both of whom have been activated by the belief that there is not enough to go around. There is enough. Science has made it so.

If we look into the future with the scientist and the philosopher instead of backward into the dark past with the exploiter of human needs, if we listen to the lessons of science and religion, we may hope with confidence that an intelligent and a courageous effort to raise the standard of living for people everywhere will at length enable us to lead the world to peace.

No iron curtain can conceal from the peoples of the world the human progress that can be won by a nation which harbors real faith in freedom and has the courage to act upon it.

Medical Care and National Health

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, November 20, 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered last night at the Biltmore Hotel, New York City, by Bernard M. Baruch at a dinner sponsored by the Medical Society of the State of New York, the Coordinating Council of the Five County Medical Societies of Greater New York, and the Greater New York Hospital Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You do me honor to ask me to talk to you about health. I almost became a doctor myself.

When I was a boy, my mother took me to a phrenologist. His office was across the street from where Wanamakers now is. He felt the bumps on my head and asked my mother what she expected to do with me.

She replied, "I am thinking of making him a doctor."

"He will be a good doctor," said the phrenologist, "but my advice to you is to take him where they are doing things in finance and politics—he might even make good there, too."

It has been a long detour for the prodigal. He has returned.

In many ways I am sorry I did not become a member of this noblest of professions. For I believe we approach a great adventure in health. That is our goal. I think it obtainable. It would be gratifying to take a more active part in it.

All my thoughts on medicine are colored by memories of my father, Dr. Simon Baruch. He was the wisest man I ever knew. He pioneered in surgery, physical medicine, and "incurable diseases." Often, I heard him tell prospective medical students:

"Do not enter the medical profession to make money. Study medicine only with the idea that your greatest compensation will be knowing that you help your fellowman. Do not expect gratitude and you will never be disappointed."

As Chairman of the War Industries Board in the First World War, I realized how important to defense was the health of our citizens. That awareness was reinforced many fold during this past war.

In preparing a report for the late President Roosevelt on manpower, I was shocked to learn at least 4,000,000 men had been rejected as IV-F's—unfit to defend their country. Some, not all, of these defects were preventable.

How much more shocking would have been the record, if everyone had received the same examination?

Since then, I have given the problems of medical care much thought. It deeply concerned me that we not fail the returning veteran, so I studied their medical needs. From that, it was only a step to related problems of general medical care for all.

Soon I was up to my neck in reports, statistics, speeches, congressional hearings. I conferred with many persons, doctors, and nondoctors, experts, and amateurs.

May I tell you some of my conclusions. They may not be particularly new to you, pioneering this field. They may be helpful, coming from a nonprofessional mind.

But before I list them, I would like to point out that the medical science and art have conferred a new and great benefit upon society in the last generation. The years of our lives have been heavily increased. This helps not merely the individual, who wants to go on living—and living in dignity and self-respect—but all the people to live more comfortably and freer from fear.

And now to go on with my exposition:

There is no question—the need for more medical care exists.

Also, there is no question this need will have to be met.

The problem is how?

All over the world, the masses are stirring for higher living standards. Improved medical care is a foundation of that better standard. Without good health, of what advantage are higher wages or shorter work hours, better education or greater leisure?

The families whose earnings disappear with serious illness—the many who suffer disease which your skillful diagnosis and treatment could have prevented or halted—or whose limited means bar them from the medical attention available to you and me—these people will not remain content.

This striving of the masses for better living is felt everywhere. In health, your profession must steer that surging tide into channels of improvement. Then, the surge does not overspill into the revolutionary flood, which washes away more than it brings.

One of the last things Woodrow Wilson wrote—called "The Road Away From Revolution"—was this:

"In these doubtful and anxious days when * * * the road ahead seems darkened by shadows which portend dangers of many kinds, it is only common prudence that we should look about us and attempt to assess the causes of distress and the most likely means of removing them."

That was Wilson's method—to assess portending dangers, and anticipate them by timely action. So he proposed the realistic League of Nations, which men rejected as a dream—and got a nightmare. Wilson knew social change was inevitable. He worked to steer that change into orderly channels.

You should take that as your guiding star.

Society usually divides into three broad groups.

At one end—the left end—are those who burn with a passion to change everything as quickly as they can—if not quicker.

At the other—right end—are those who want things just as they are.

In the middle are people, like Woodrow Wilson, to whose school I belong, who believe in intelligent progress and seek to guide it.

What differentiates these three groups is their attitude toward that vital element of life—time.

The left-enders feel time panting hot on their necks.

The right-enders use time to fight rear-guard actions, all the way.

The middlers—sometimes both left and right call us muddlers—seek to come to terms with time, preserving the best of the past, discarding the outworn, and moving on to a better future.

In the matter of adequate medical care, too many doctors have been fighting a rear-guard action for too long. I feel I must warn those doctors—time is running against them. The medical profession has justly earned great influence in the community. It can keep that hold only as it moves forward. It will lose that hold if it has nothing but objections to offer, if it has eyes only for what not to do.

We must look for what can be done—and do it.

The great question is how? I do not want to seem to say I know the answers. We do know the public is demanding better and more medical service through some action, political or otherwise.

What is this adventure in health I see dawning, and toward which you all have been keeping the doctor's vigil through the night? This adventure, which you will have to lead—or it will fail—has many elements:

1. More and better doctors in more places.
2. An immediate, complete survey to modernize medical education, with greater emphasis on chronic and degenerative diseases, mental hygiene, and preventive medicine.
3. More hospitals more evenly spread through the country.
4. Less specialists; more general practitioners.
5. Reorganize medical practice, stressing group medicine where needed and voluntary health insurance.
6. For those who cannot afford voluntary insurance, some form of insurance, partly financed by the Government, covering people in by law. I would call this "compulsory health insurance," if that term's proper meaning had not been lost.
7. Increased medical research.
8. Greatly expanded physical and mental rehabilitation.
9. Education to make health a national habit.
10. A vigorous, preventive medical program, reaching everyone—children above all.
11. A new Cabinet post for health, education, social security.
12. Creation of a nonpolitical watchdog committee to safeguard progress in medical care for veterans.
13. Increased numbers of well-trained nurses and technicians.
14. Adequate dental care.
15. A stabilizing economy—inflation will make worthless any health program or anything else.

Each of these would take a speech by itself. I can but sketch some of them.

Even the least ambitious schemes for improving the Nation's health require more doctors, all competently trained. Why aren't more doctors being educated? In studying that question, I was struck by how expensive training a doctor has become—in dollars and in time. In its fine report on "Medicine in the Changing Order," the New York Academy of Medicine states:

"There seems no alternative other than Government aid if educational standards are to be raised or even maintained. * * * If medical schools are to continue as centers of research * * * here also Government aid may be necessary."

If science and medicine ask the Government for aid—which even the conservative deems necessary—they must expect he who pays the fiddler will call the tune. This means the Government will rightly insist upon no discrimination in medical care because of race, color, or creed. It will rightly insist upon opportunity for all to enter the profession and advance on the sole basis of ability and character—without restrictions of race, color, creed—or sex. And, I hope, without fear of, or favor from, the State.

Minimum standards should be set for institutions getting financial aid.

How much more the Government is likely to insist upon will depend upon the more progressive leaders in your profession.

According to the academy's report—I quote: "There has been no fundamental reorganization of American medical education since about 1910." That finding certainly calls for your profession undertaking—now—a most thorough, down-to-earth survey to modernize medical education, making recommendations so boldly inspiring the people will gratefully back them. No one can draw up a better program than doctors.

Chronic illness and preventive medicine deserve greater attention. In all fields—I hope in war as well—there is a new accent on prevention. From answering fire alarms, our thinking is progressing to fireproofing.

Preventive medical care should commence as close to the beginning as society can reach. I favor a major, sickness-prevention drive at the public school level. This should include compulsory examination of all children at regular intervals. Means should be made available for correcting defects disclosed.

How wonderful, if children were taught how to properly eat, sleep, sit, stand, play and take care of themselves, developing both the knack for getting along together, and self-discipline—physical and mental.

Even when medical care is available, many adults neglect or refuse to use it—often because of social taboos, as in venereal diseases, or psychological dreads, as in cancer and tuberculosis. These attitudes reflect our not having outgrown the awkward age in thinking about disease and health. We do not really have a grown-up, national health habit—although we are getting there.

People need to be educated on the virtue of medical care; how to use it; how to prevent disease. The greatest asset of any nation is a healthy, educated citizenry.

And now to what is perhaps the toughest problem—how can better medical care be extended to those who cannot afford it?

Your organizations have been particularly active in pressing voluntary health insurance. You and others have proven group insurance to be a sound, practical way. That is a great achievement. You can be mighty proud of it.

But I would not be frank—nor friendly—if I did not add what you know. It is not good enough.

Rome was not doctored in 1 day. It may be, as some have told me, that the needs of the bulk of our people can be met, given time, through voluntary insurance. What troubles me most are the needs of that sizable segment of society, which does not earn enough to pay for voluntary insurance.

The American Medical Association—its bureau of medical economics—estimated in 1939 that families earning $3,000 or less—two-thirds the population—cannot afford the cost of serious illness. Some of these can afford voluntary insurance, although inflation has reduced their number. But what of the little fellows who cannot?

I have asked that of nearly everyone with whom I have discussed medical care. Nothing has been suggested so far which promises success other than some form of insurance covering these people in by law and financed by the Government, at least in part—what some would call compulsory health insurance.

Since doctors, nurses, technicians, and hospitals already are strained, such insurance probably would have to move in stages. That requires careful study. Any program should utilize existing medical facilities to the maximum—it must to get started—and be organized to the local level.

Nationally, the program might well be administered by a body of doctors and nondoctors to keep medical care as free from politics as possible.

As to financing, my own preference runs toward the Government meeting only part of the cost, with part coming from pay-roll deductions from employers and workers. In time, these deductions will become absorbed in general costs of production. I have the utmost confidence in the efficiency of American industry—both labor and management—and which good health will stimulate. We can absorb these medical costs better than other countries which must also meet these needs.

The detailed problems raised by so-called compulsory health insurance are too numerous to be discussed tonight. I have weighed them most carefully. Many doctors and many lay people have sought to paint this issue as a choice—all black or all white. I have found every aspect of medical care to be gray—the happy color sensible compromise wears. All law imposes compulsion. A form of compulsory health insurance for

those who cannot pay for voluntary insurance can be devised, adequately safeguarded, without involving what has been termed "socialized medicine." The needs can be met—as in other fields—without the Government taking over medicine, something I would fiercely oppose.

Law protects society. It is the absence of law which destroys it.

I do not fear government taking its legitimate part in medicine, any more than I fear it in education or housing. There should be just one Federal agency, with Cabinet rank, for all health and human welfare problems. I do not like Government agencies to be like Mahomet's coffin, suspended between heaven and earth.

Some say many people do not know how to pick their doctors. So with any human activity. The best insurance against poor choice is improving the general quality of all doctors. But, good or poor, it must be the patient's choice. No one else's.

May I interject this about inflation? Should health schemes fail, be sure to ask—were they killed by the plan itself—by incompetent administration—or by an inflation which ruined the plan's financing.

In connection with this doctor-government relationship, it is a pleasure to point to the excellent medical progress in the Veterans' Administration—thanks primarily to Gen. Omar Bradley and Gen. Paul Hawley. They would never have accomplished their good work had they not refused to allow the politicos to move in on them.

I would like to see the President name a small committee of top-grade citizens—some doctors, some lay people—to act as a vigilant watchdog over the veterans' medical program, so the ground so arduously gained may not be lost when someone replaces General Bradley. He should be supported by the entire Nation—particularly by doctors. His is the kind of courage and vigilance which will assure good administration of any health program.

More doctors must be distributed to more places in the country, which requires, among other things, less stress on training specialists, more on general practitioners. A number of counties do not even have a doctor. This reflects, in part, a lack of facilities in which doctors can work. Happily, some of this will be corrected under the Hill-Burton Act for hospital construction, with Federal and State governments cooperating.

Orderly change is the American way of life. Remember the spirit of your oath of Hippocrates. Use your own good judgment to move along with humanity's legitimate aspirations in its trek toward better living.

I would hate to see any medical-care program under guidance of others than those who have the know-how. So would the American people. That is why I urge the doctors to get in and pitch—not stand by on the side lines. You need fear politicians or bureaucrats only to the degree you fail yourselves. You must take the leadership—no—yours is now the leadership. Keep it.

This meeting is an outstanding example of your deep concern to meet the need for action.

I have met people in all fields of human endeavor. I respect no group more—for your unselfish zeal and devotion to the sick, for the jealously with which you guard your professional virtue—placing beyond the pale the rare violator of your oath.

I envy you the thrill which comes from relieving a patient from pain and, often, snatching one from death.

I still am sorry that that phrenologist didn't let me become a doctor.

Your situation reminds me of something my father said back in 1873, while president of the South Carolina Medical Society:

"Let us not be silent, but offer our facts, and defend them while we may.

"As an Arabian sage has said, 'What good comes from Ali's sword, if it be sheathed?

"'What good from Sadi's tongue, if it be silent?'"

Address by Secretary of Labor Before Convention of American Federation of Labor

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, November 20, 1947

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the Secretary of Labor, Hon. L. B. Schwellenbach, before the convention of the American Federation of Labor, at San Francisco, Calif., October 6, 1947. The Secretary's speech is of universal interest at this time.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I received with gratitude the invitation extended to me to attend this great convention of the American Federation of Labor. I am reminded of a similar convention which I attended during the time I was in the Senate and Dave Deck asked me to go to Cincinnati to attempt to sell the idea of eating Washington apples to the delegates to that convention. The fact of the matter was that we needed new markets for our apples. It was either in 1937 or 1939. By that time we had lost one of the great markets for our apples. That was on the sidewalks of New York and on the main streets of other large eastern cities, where, during the depression years, unemployed, crippled veterans eked out an existence by selling apples on the streets. That condition need not and it must not be permitted again. One of the blackest blots upon the American escutcheon was made when we permitted economic conditions to be such that those who had lost their eyes, or had lost their legs or arms, were forced to go, like penitent beggars, upon the streets of our great cities to receive the reward which they thought a grateful government would give to them for their gallant service.

We are in a peculiar stage in our national economy. We are in a stage of prosperity. We have a national income of double that which we had in the peacetime years prior to the war. We are employing the 60,000,000 people, to whom President Roosevelt referred, despite the scoffing of everyone who opposed him. Yet, there are those in high position in the industrial life of our Nation who look forward to a depression. Some of them are inspired by fear. Some of them are inspired by the hope that by creating a slight depression they may lessen the labor market and get men and women to work for wages they set rather than for wages which have been arrived at by free collective bargaining. The president of the National Organization of Purchasing Agents a few weeks ago said that a little depression would be a good thing for the American people. Some people are in the whispering stage in their propaganda that a depression may soon recur. Both groups know not what they do. In the first place, no one knows, when they start a depression, the limits within which it may be contained. The leaders of American life who talk about and even think about a desirable small depression are stupid in their thinking and blind in their concept of the future of America. No economy which is permitted to remain static, or which is manipulated into being contracted, can continue to exist among the world-wide pressures of today. Our economy must expand. So many people today are talking about the desirability of getting back to the good old days of 1939. I was in the Senate at that time and I read my mail. There were a lot of people who weren't very happy then.

The economic problems today are intricate and difficult of understanding. Everything that is done in one industry has an effect upon other industries. I was interested in reading protests made by the president of the American Furriers' Association, begging all those who set the styles of furs in New York that they finally agree upon the length of women's skirts. I am frank to admit that I am not nearly so much interested in that subject today as I was 20 or 30 years ago. However, I was interested to find that the fur industry was losing millions of dollars a week while waiting for the stylists to determine for them the length of women's fur coats. That is typical of the extent to which our economy today is intermingled.

I am convinced that the most powerful force which can furnish leadership in the solution of our economic problems must come from the trade-union movement in the United States. Why? First, because it does represent the largest factor in our population; second, because it does touch more intimately than any other factor the problems of the great mass of the American people, whether they are within or without the organized labor groups. What you in organized labor have today is a tremendous responsibility which in turn gives to you a tremendous opportunity.

I now believe, and I always have believed, in the dignity of the individual man. He stands erect; he has a soul and a spirit, and he looks forward to eternal life. There is only one deficiency from which the individual man suffers. That is, that he alone has not been provided with a voice sufficiently loud to make his plea heard by very many people. Lacking in this, man has attempted to make up for it by organizing or by joining with groups that have organized. We in America particularly have followed the path of organization. We have organized governments, national, State and local. We have organized churches of many denominations. We have organized associations of manufacturers and a confederation of local chambers of commerce. We have organized Rotary Clubs and many other civic organizations. I have named just a few of the many organizations within our country. These groups had a perfect right to organize. They consist of groups who had similar ideas and wanted those ideas put into effect. They are respectable organizations. The press kowtow to them and the attainment of leadership in one of them carries with it the respect and acclamation of his neighbors. Nobody wants to outlaw them. Nobody wants to dictate to them. However, when we get into the field of labor, when the people who work and give the toil and the sweat which makes possible the most efficient operation of our mechanical equipment, when they try to organize, immediately they are suspect. Their efforts to organize are resisted, their efforts to effectuate some results for those they represent, take on a sinister aspect in the public view. Those who have joined in the rank and file of organized workers have been told that their leaders are deceiving them and attempting to sell them down the river to their employers. I remember a couple weeks after I took my present office receiving a visit from a man whose name I obviously cannot give, but who, if I did give it, would be recognized by each of you delegates as being one of the most outstanding leaders in the trade-union movement. He was retiring because of ill health. He was retiring in an attitude of unhappiness, chiefly because of the fact that his son had abruptly brushed him off when he suggested that he would like his son to follow in his footsteps in the trade-union movement. He said, "I have always tried to be honest, both with my members and with employers. I have tried to work for the best interests of the great mass of people in

America. I think I accomplished something. I consider my profession as an honorable one, but my son refuses to follow because he doesn't want to be classified as a labor leader."

Let me give you another example. Last spring when I appeared before the Appropriations Committees of the Congress and asked for a measly $116,000 to carry out the workers' education program, the committees held up their hands in holy horror. They were outraged to think that the Federal Government should spend that amount of money to attempt to give some education to the workers of America on questions of organizing, and by explanations on difficult clauses in contracts with their employers. I have no quarrel with the farmers, for example. Certainly they are entitled to such education as the Department of Agriculture provides for them through its Extension Service and through the use of its county agents, these selfsame Members of Congress who attacked with such vigor a measly appropriation that my department might be of assistance to the workers did not hesitate in appropriating millions for similar individuals on the part of the Department of Agriculture. I might point to other departments of the Government that receive substantial appropriations for similar activities.

I know how you can cure this situation. It is very simple. Just have each one of the international unions in the country direct that meetings of local unions shall exist exclusively for serving tea and ice cream and cake, with entertainment by local boys and girls of talent, and prohibit any discussion of economic affairs, political affairs, or relationship with employers. I promise you that within a month the attitude of everyone in the country who now abuses labor unions would be changed. You would become respectable. Your leaders would probably all be invited to membership in local organizations. Probably very soon some of your leaders would be invited to head up the committees that are engaging in drives for the raising of funds by welfare organizations. But what kind of a union would you have. What would men like Sam Gompers think about you? Down through the years the strength of the labor movement has come because of the willingness of its leaders to fight for what they thought was justice for their rank and file. The economic situation today requires that union leadership carry on in the same spirit as it had in the days of Gompers and the other great leaders who made the good fight when everyone else had turned against them.

I don't claim that all labor leaders are perfect. There have been many things done which have not reflected to the credit of the labor movement. I am only going briefly to mention two. First, the labor union leader who becomes satisfied and complacent. He who wants to maintain the status quo or go back to the prewar period. If his feeling of satisfaction and complacency result from old age, then he ought to be retired. The second group consists of those who receive their instructions and carry out the directions which are given to them by some foreign power. For them I recommend that they be picked up by the seat of the pants and the nape of the neck and thrown out bodily. The American labor movement can well meet its own problems without domination or direction by anyone whose orders come from places beyond the limits of the United States. In this, I do not apply it exclusively to labor unions. I apply it to every class of organization, particularly Government and political parties. If a political party can't win without such help, it can at least retain its self-respect and its character and its honesty.

This statement leads me to a discussion of the most important economic issue facing the United States at the present time. That is the high cost of living. It is important, not only domestically, but also in the matter of foreign relations. It is what the American people are thinking about today. It is a problem the answer to which must be found. I do not say that we cannot live in a world which is partially run by dictators and partially run by democracies. I do say, however, that we cannot live peacefully and prosperously and happily if the rest of the world is permitted to succumb docilely to the totalitarian idea. We should at least have learned that modern warfare does not permit of victory. Even the unconditional surrender of a large nation only means to those who receive it the cares and labors of supporting it. I can say to you with whole candor and frankness and honesty that since VJ-day I haven't heard even a hint that anyone in authority in our Government wants another war, but the situation which confronts us makes it necessary, if we are to avoid that war, that we provide for those nations which are willing to help themselves a sufficient amount of materials to prevent their docile acceptance of totalitarian leadership. As a consequence, it has become necessary to ship to those nations which come within the categories described by Secretary Marshall such part of American production as is necessary to prevent disaster in western Europe.

This leads me directly into a discussion of the cost of living and the causes for its increase and the possible measures that may be taken to prevent further increases. Just by way of interest and amusement, I want to discuss two proposals made by a very prominent Senator who recently visited the Pacific coast. While here in California, he propounded the doctrine that the solution of our problem would come from a reduction of wages and of profits to some figure not higher than 60 percent above the 1939 level. Apparently, as he traveled up the coast in his private car, he gave some thought to that solution. Apparently he came to realize the machinery of government which would be necessary to enforce it. It may be that he also, on thinking the problem through, came to realize the resistance that would come toward such a program. Although he might not be particularly interested in the resistance of the workers, the resistance of the ones who have been making profits since VJ-day would very definitely appeal to him. At any rate, he abandoned that theory when he got up to Seattle and put forth a new theory which was equally naive and equally amusing. He there said at a press conference that it was not the amount of price increases that was important. He said that it was because price increases hurt that they were important. He belabored the President for vetoing the two tax bills and said that if either one of them had been signed by the President that the reduction in taxes would have been sufficient so that everybody could afford to pay these high prices, they would not hurt anybody, and the problem of high prices would soon disappear from the minds of the American housewives. I call this naive and amusing because the actual fact is that for the great mass of the American people the reduction in taxes proposed by the tax bills was only $30 per year. If you don't know how much groceries $30 will buy, go home and ask your wife. Or, if you are impatient about it, just divide $30 by 365 days and then you won't even need the assistance of your wife in determining how unrealistic was the Senator's proposal.

I assume that most of you either heard the President's speech last night or read it in the morning papers. In it he called upon the American people for sacrifices. He asked them to eliminate waste. He asked them to realize the necessity of cooperation on the part of every American citizen. This war has not yet been won. It only will be won when the ideals and objectives for which we fought have been achieved. The President's message of last night should be counted among the war documents. He is determined to use all the power that the law gives him to meet this problem. He is determined to use such powers in cooperation with the American people and, if it is humanly possible, to avoid the asking of new legislation to implement his present powers. Whether or not he succeeds will depend upon the cooperation he receives and I ask you of the American Federation of Labor, who represent more organized workers than anyone else in the United States, to join in that cooperation.

I have a reason for asking this. You have a personal stake in the success of this effort. For over 2 years the favorite vocation of those opposed to trade-unionism has been to attempt to blame each price increase upon wage increases. There has been more or less of a let-up in that front since Labor Day, when a number of speeches were delivered concerning it. I think that I, as Secretary of Labor, and that you, as members of organized labor, should go out of our way to be fair in any analysis of this problem. If we do, it will be such a refreshing contrast to the campaign that has been carried on against you. I think we should admit frankly that there is a relationship between wage increases and price increases. At the same time, I think we should fight with all of our vigor any effort to continue the campaign to tie upon the wage earners of the country the label of being exclusively responsible for the increase.

I think that in part those who control the propaganda machines and who are opposed to organized labor want the American people to forget the prediction that they made in May and June of 1946, and to shoulder the blame upon their favorite whipping boy—the labor unions. The facts don't bear them out. The so-called economists whom they employ to get the figures to support their statements must blush with shame every time the publicity agent grinds out a release.

Let me repeat the statement that frankness and honesty compel me to state that there is a relationship between wage increases and price increases. It is not, however, a pushing process or a pulling-up process. All American labor attempted to do was to pursue prices and never, in the last 15 months, have they been able to catch up. Living costs during that period of time have increased 20 percent. Weekly and hourly earnings of factory workers have risen less than 15 percent. The $49 or $50 take-home pay of the average worker today buys just about the same goods and services that his $33 did just after Pearl Harbor. In other words, wage increases have been used as the excuse for price increases. To that extent responsibility must be accepted, but they have not been the cause of price increases because they have never succeeded in attaining a goal of level of price-wage relationship.

There is another simple answer to this question insofar as it refers to the organized workers. I have no quarrel with the farmers of this country, who take for their products amounts that result from speculation in the grain exchanges. Even if the farmers of the country unanimously agreed to a reduction in prices so far as they were concerned, that reduction would never reach the American consumer. It would get no further than the pockets of the speculators on the various exchanges throughout the country. Another cause of the increase of farm products comes from the use of so much grain by the distillers of whisky. In case some of you may be worried about the proposal of shutting down distilleries, I can say that I have it on

very high authority that there is enough whisky in the United States today to last for 20 years. That ought to put to rest the fears that anyone here might entertain. The fact is that the prices of food products have increased 72 percent over prewar prices and the prices of manufactured products have increased 48 percent during the same period. Very largely the people who grew and processed the food products are not organized into unions. Almost universally the people who produce the manufactured products are organized into unions. Therefore, the facts support the proposition that, regardless of wage increases brought about through collective bargaining contracts, the increase in prices due to other causes greatly exceeded that in the field where labor unions operated.

There are some who attempt to blame the increase in living costs exclusively on the exports to foreign nations. There again, the facts fail to support their conclusions. The year 1929, despite the disastrous collapse of the stock market toward the end of the year, is very typical of the so-called prosperous years during the last half of the 1920's. In 1929 we exported 6.8 percent of our gross national product. During the first half of 1947 we exported 8.8 percent of our gross national product. It stands to reason that this 2-percent increase over the 1929 picture cannot bear any substantial blame for the increase in prices since June 1946.

There is another factor which has been, let us conservatively say, submerged so far as the public presentation of the problem is concerned. That is the factor of profits. I accept fully the contention that any manufacturer or any corporation is entitled to make profits. The profit motive is the basis of our whole economy. I would no more favor a general regulation of profits than I would a compulsory arbitration of labor disputes. I also recognize fully the right and the need of any corporation to set aside a portion of the profits for future use. Good management demands it. I do contend, however, that to the extent that profits result in price increases they cannot be defended in this particular period of our national economy. Corporation managers say quite properly that they must set up reserves against the day when they might be subject to losses. What I do object to is that many of the same people who contend for that right—to make their corporations secure—also contend that the wage earners of America should dip into their savings and let their personal futures take care of themselves. I think the wage earner is as much entitled to get a nest egg of insurance for the future as is a corporation. It is a proved fact that savings by wage earners decreased 45 percent as between 1945 and 1946. It is a proved fact that the present savings of the great mass of the American people are 30 percent below what they were on VJ-day. I am frank to confess that I don't know and I don't believe anybody can lay down rules as to just what profits a corporation should make and how much it should retain for reserves. But I do know that for the first quarter of 1947 the profits of corporations were $857,000,000, compared with $323,000,000 for the same period a year ago. Corporations manufacturing automobiles earned almost half as much for the first quarter of 1947 as they did for the entire year of 1939.

I present these facts that you may know that the problem of prices entwines itself through every major problem which confronts your federation, your internationals, and your locals. The President has asked for a program of voluntary reduction. There are some who say the voluntary system won't work. It must work, and it can work. Let me give you one example. At the conclusion of the First World War the Chinese people decided, as a matter of national policy, that they would boycott the goods manufactured in Japan. China was then a much more disorganized country than it is today. The Chinese war lords had partitioned the country, and in domains of their own creation they were the unquestioned rulers. Yet, despite this fact, the Chinese people were able to effect a boycott so successful that in 1922 the Japanese Government, in return for the Chinese agreement to abandon the boycott, signed the Nine-Power Pact by which it agreed to respect the territorial integrity of China. It is true that 9 years later the Japanese violated this agreement. But, nonetheless, it gave to China a 9-year period in which to develop sufficient strength so as to prevent Japan later from completely enveloping the Chinese country. What they could do under those circumstances, with their problems of disorganization, lack of communication, and multiplicity of languages, we in America can do today in answer to the plea of President Truman.

I said at the outset that I appreciated your invitation. I appreciate it not merely because it gave me a chance to visit with a lot of old friends but also because it gave me the opportunity to present the point of view of the Department of Labor on some of the problems that lie ahead. If the workers of America, organized and unorganized, are to succeed in their efforts to secure a reasonable chance to live in comfort, decency, and peace, those workers, all of them, must have a strong Department in the Federal Government that will give them the services they need. I told you what happened to the workers' education program. While not so drastic, some more shackles have been put upon most of our programs. It is part of our job to assist the States in the promotion of health and safety measures. In order properly to carry out this function the President asked for $718,000. The House of Representatives eliminated the appropriation altogether. The House and the Senate, in conference, restored this to the extent of $200,000. That was done in the name of economy.

The President approved a budget of $6,764,000 for the United States Employment Service. It is part of our job to get jobs for people. This was reduced by 44 percent to $3,300,000, including the complete elimination of $893,000 for the Veterans Employment Service. Four hundred field assistants of this Service have been separated. How soon those who say they represent the American people forget the sacrifices and suffering of those that bared their breasts that American freedom might live!

Congress reduced the President's request for the Wage and Hour Division by more than $2,000,000. This reduction will mean that only 28,000 of the 550,000 covered establishments will be inspected during this fiscal year.

There is some talk about the next session of the Eightieth Congress increasing the minimum wage to 60 cents an hour. During the last Congress and this one I have advocated an increase to 65 cents, with a scaling upward to 75 cents an hour. Perhaps the Congress will pass a bill which will authorize a necessary increase in the floor under wages. I am not the least bit interested, however, if Congress passes such an authorization bill and then fails to provide sufficient funds with which to carry it out. There are two parts to this program. One is the authorization and the other is the appropriation. One cannot go without the other and if the first is passed, it will be a mere phantom bill, or, to use a more understandable phrase, it will be simply "a phony." This form of deception will not be permitted without forceable attention being called to it so that the American people may see what is happening.

The Bureau of Labor Statistics furnishes all the basic figures for most of the planning that is done not only by labor but by industry in the United States. Never so much as now is there necessity for accuracy of those figures. Never so much as now has it been necessary to cover the field which the Bureau wants to cover. Yet the appropriation for that purpose was reduced from $6,900,000 to $3,400,000. Repeatedly, prominent, important, and sincere Members of Congress have said that they would not commit themselves until they knew all the facts. The cutting of the throat of the principal fact-seeking agency of the Government lends some support to the thought that I may have used the word "sincere" inadvisedly.

If we are to have a strong Department of Labor we will need the support of those in the labor movement who are organized. The Department was created for you and for all of the unorganized workers of America. We need your support. I have come here to ask it. I want that support not merely when the bills are a couple of days away from passage. I want it throughout all of the weeks of the year.

I did not come here to lecture or even to point out to you the policies which you should adopt. Anyone who attended the Labor-Management Conference of 1945 knows the extent to which labor was handicapped because of the differences in its ranks. For myself, and I speak for myself alone, I look forward to the day when the Secretary of Labor is one who has behind him the background of actual experience in the labor movement. I tell you frankly that that day cannot come until more unity is achieved.

In conclusion, may I say that the problems which confront all of us inside and outside of Government are stupendous in their nature. They will not be solved by complacency or self-satisfaction. They will not be solved until the American people realize that our economy must be an expanding one. Those who wish for the "good old days" are simply thinking wishfully. The history of the world is one of advance. When the world failed to advance it deteriorated and almost rotted. We think back to what happened during the period of darkness following the destruction of the Roman Empire. Our eyes alight with the fire of enthusiasm when we turn the pages on to the days of the Renaissance.

America can advance. It must advance. It must advance if it is to survive. It can advance if the American people will it. This Nation, the richest in the history of thee world, containing more resources, more opportunities, and a future that can bring prosperity and happiness to all of us must not be permitted to lag. It will require stoutness of heart, loftiness of purpose, sincerity of method. The clouds of fear must never be permitted to darken the pathway of American progress. We must have faith in ourselves, faith in the system under which we live, and faith in God upon whom we rely.

In the vanguard of marching America, the faith, courage, determination, and the flag of the American Federation of Labor must always be found. I am sure it wil be there. With the support of the organized and unorganized workers of America our aspirations will be attained and there will be no end to America's road to success.

Training for Democracy

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, November 20, 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial

entitled "Training for Democracy," from the Washington Post of November 15, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRAINING FOR DEMOCRACY

The twelfth annual convention of the National Council of Negro Women, just completed in Washington, has afforded a heartening example of democracy in action. From some 24 States of the Union, delegates representing the 850,000 Negro women members of the organization assembled here for study and inspiration in dealing with the current problems of citizenship and of leadership in their home communities. The theme of the convention was: Building a Bridge to Universal Peace Through Understanding. And in the discussion understanding of issues was stressed no less than understanding of peoples. Four workshops were in session—on health, education and child welfare, on employment, on housing, and on legislative strategy.

These women will go home with knowledge of the Marshall plan, with a sense of the urgency of food conservation, with something of the know-how of mobilizing opinion and organizing for community action. This is the way things get done in a free country. We offer our congratulations to the National Council on their awareness of responsibility. And we offer them congratulations, too, on their perennially younger, more dynamic founder-president, Mary McLeod Bethune, one of the great women of America.

An Appeal to All Americans of Italian Origin

EXTENSION OF REMARKS
OF
HON. C. WAYLAND BROOKS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, November 20, 1947

Mr. BROOKS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter entitled "An Appeal to All Americans of Italian Origin," written by the supreme venerable of the order, Sons of Italy in America. The letter is a significant appeal by Americans of Italian extraction on behalf of their brothers and sisters in Italy.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AN APPEAL TO ALL AMERICANS OF ITALIAN ORIGIN

Our brethren across the sea are carrying a heavy burden in their struggle against the evil forces of communism; with poverty staring in their faces, and darkness immediately ahead, there is danger that the hand of Moscow may hurl them into a condition of servitude to the whims and caprices of Russia which aims to overwhelm the Italian people and to enslave them under atheistic communism.

We, who are in America and sense the common bond of blood, cannot stand idly by; we cannot evade nor ignore our own natural duty; we cannot fail to uphold our ideals of freedom and democracy at home and abroad.

To do this all Americans of Italian origin in the United States must make immediate, tangible sacrifices for them, our brethren in Italy. Help must be sent to them; packages of food, clothing, and medicinals must continue to flow from us to them, so that they may have the physical strength to oppose communism. Communism thrives on the confusion and chaos caused by the dire need of the people. Our material assistance to the Italian people will give them moral support and renewed hope in their fight to survive.

Do you want Italy to become communistic?

Do you want God dethroned from the altars and the hearts of the Italian people?

Do you want Italy to die?

I know that you do not.

Our thoughts must reach our brethren in Italy; what we think, what we believe, and what we feel we must impart to them in writing now and frequently. Our letters will form the links that will keep the chain of understanding unbroken. Russia will have to break that chain first, before she can engulf the Italian republic.

I beseech all of you, therefore, to write to your friends and relatives to keep the faith, to believe in the future of Italy.

We have faith in Italy.

America has faith in Italy.

The death of Italy as a nation would darken the whole world and we of her blood would betray our American way of life which opposes totalitarianism in all its form if we did not raise our voice in her defense.

Tell our people in Italy to believe in America, to believe in the sincerity of her human sentiments and in her unselfish friendship. Tell them to fight communism, to save and preserve the immortal Italian traditions of Christianity and civilization for our posterity.

This I ask of you in the name of the Order Sons of Italy in America, in behalf of our common heritage, in the interest of our people.

GEORGE J. SPATUZZA,
Supreme Venerable.
CHICAGO, ILL., *November 10, 1947.*

Issues Before Congress

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, November 20, 1947

Mr. WHERRY. Mr. President, the able senior Senator from Ohio [Mr. TAFT] made an excellent address on November 10 before the Ohio Society of New York. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to speak again to the Ohio Society of New York. For more than 50 years Ohioans have played an active part in the affairs of this great city and have gathered together from time to time to remind each other that they are still Ohioans and proud of it. Everywhere I go I find Ohioans active in the affairs of other States. They must have found it more interesting or profitable to reside elsewhere, but they still have a strong State loyalty. In spite of their absence, our population and agriculture and our manufacturing continue to increase. Ohio is a more complete cross-section of the United States than any other State. Its dynamic economy is typical of the results achieved in this Nation by a system based on liberty.

During the last 2 months I have talked to many audiences, presenting the record and the philosophy of the first Republican Congress in 16 years. Tonight I wish to discuss more completely the issues which will be before the special session of Congress meeting next week. I wish to say at the outset, however, that we are proud of the record of the party during the past session. To the extent of our ability we kept the promises which we made in the election of 1946. We brought an end to the war and eliminated most of the war regulations which remained. We reduced the expenses of the Government by approximately $3,000,000,000, although the President said we could not take 1 cent off without wrecking the Government. We passed two tax-reduction bills, which he vetoed. We passed a labor-management relations bill to free the people of this country, the employers, and the union members themselves, from the interference and control of arbitrary labor leaders. Over the most violent minority opposition I have ever seen we passed this bill over the President's veto, with the concurrence of more than half the Democratic Congress.

All of these measures were inspired by the basic philosophy of the Republican Party—liberty and equal justice under law. The whole world is divided today between those who believe in a government dominated by a free people and those who believe in a totalitarian government dictating in greater or lesser detail the lives of its citizens. In the domestic field, the Republican Party believes that the size of the government and its power to regulate its citizens should be reduced; that it should be an umpire and not play in the game itself; that it should not tell the farmer, the workingman, the business man or the housewife how to run their affairs. It believes that progress should be resumed in the fields of agriculture, production, public welfare and science under the same principles of individual and community liberty which have made this country the most productive country in the world. Certainly the government has a part to play, but it is that of adviser and assistant—and traffic cop if you will—and not that of dictator. At the first session of the Eightieth Congress the Republican Congress showed its ability to function as a party, to develop a program within its party philosophy, to carry out that program, and to keep its promises to the people.

The President has called us in special session next week to deal with two matters which were not before the regular session—the rapid increase in prices during the past four months and the question of emergency aid to Europe. The President himself had removed nearly all price control before the Republicans took over on January 1 of this year, although he could have continued it in many fields until July 1, 1947. Up to June there was reasonable belief that prices and wages had reached a point of stabilization—until the failure of the corn crop, the failure of European crops, and the tremendous effect of a greatly expanded export demand. Since Congress adjourned prices have resumed their rise, particularly in the agricultural field. I fully agree with the President that the situation is a serious one for many families in this country and that definite changes in Government policy are called for, most of them executive rather than legislative.

As far as the President's request for more European relief is concerned, the Congress at its first session appropriated what was requested by the administration up to July, and included in the $36,000,000,000 budget about $4,000,000,000 for Europe.

At the special session of Congress I do not see how we can confine our consideration to the questions of inflation and emergency aid to Europe. I do not understand how we can intelligently consider either of these problems without analyzing what is proposed in the more permanent Marshall plan, and also considering the effect of the present

huge Government expenditures and the corresponding tax burden on prices and business activity. I do not say that we can or should complete these matters before Christmas, but they must surely be given consideration in order to reach an intelligent conclusion on prices and emergency aid.

The Marshall plan is, of course, inflationary and means that prices will be higher than they otherwise would be. The very threat of the plan has contributed to the price rise. The emergency-aid program raises many of the same questions which must be dealt with in providing permanent aid. When the President spoke of emergency aid to the congressional leaders in September, it was apparently confined to enough food, fuel, and fertilizer to carry France and Italy through the winter. More than half the funds required for that program were found without congressional action. The emergency plan now presented calls for a much greater sum and covers all kinds of assistance to France and Italy, increased sums for the occupied areas, and the taking over in full of the British obligations in the British zone in Germany. In fact, for France and Italy it seems to be a 6-month edition of the Marshall plan. Therefore, it raises all the questions raised by the Marshall plan itself as to the character of goods to be shipped, the conditions to be attached, and the type of organization to administer the plan.

Nor can we act on prices without considering the effect of the huge Government expenses and the abnormal export demand, still unrestrained by any exercise of the President's legal power to limit exports. We cannot consider Europe unless we also consider the proposals for aid to China and our undertakings to Latin America. Who knows what these are? Where is the Wedemeyer report? Emergency aid to Europe has priority—but let's stop fumbling in the dark. Surely we have gone far enough on a piecemeal basis. Before anything else is done Congress ought to have the whole story, both foreign and domestic, if we are going to have a policy at all instead of drifting with the tide.

The so-called Marshall plan presents a complicated mixture of foreign and domestic policy. It involves huge taxes from the American people and Government expenditures. It affects the prices to be paid by 40,000,000 families. How far shall we make a present to other peoples of the fruits of our labors? Do the advantages to be gained in foreign policy outweigh the disadvantages at home? We have seen in the past 3 months the development of a carefully planned propaganda for the Marshall plan, stimulated by the State Department by widespread publicity and by secret meetings of influential people in Washington and Hot Springs. Yet only 2 weeks ago Secretary Marshall himself pointed out that there was as yet no Marshall plan at all. We knew only what the foreign nations had asked for. But the propaganda machine is ready to ballyhoo the Marshall plan, whatever Secretary Marshall finally says that it is. Let us have all the facts and debate them fully. The people have been urged and persuaded too often to accept on faith and without question the foreign policy of the administration. Anyone who opposed the policy of the moment has been labeled an obstructionist and an isolationist.

But the terrible economic condition in which the world finds itself today is the result of the administration's foreign policy at Teheran; at Yalta, and at Potsdam, and the idiotic Morgenthau policy we have pursued for the past 2 years in Germany. Prior to the entrance of Senator VANDENBERG into the picture our attitude toward Russia was one of complete surrender. We were told then that to save the world we must pour out unlimited lend-lease money to Russia, as now we are told we must pour out unlimited sums to defeat Russia. We gave them billions in goods under lend-lease without a condition looking to their behavior in the postwar world. We seemed to feel that we had to pay Stalin to keep him in the battle against Germany and we accepted his view of military strategy and attack. With the aid which we were giving him, he took over the Balkans, leaving us to conduct the war against Germany. When we could have occupied all of Germany, we stopped our armies and even withdrew from territory actually occupied in battle. We turned over Berlin and eastern Germany to the Russians, which gives them the ability to dominate by force the great countries of eastern Europe. President Truman and Secretary Marshall approved the policy of Teheran, Yalta, and Potsdam, and participated in it. Are we to accept their judgment on foreign policy today without the most critical analysis?

To a certain extent, the administration is trying to cover its faults by pointing to the bipartisan foreign policy. Most people do not realize that that policy had nothing to do with Teheran, Yalta, or Potsdam. It has extended only to Senator VANDENBERG's participation in the formulation of the United Nations Charter, in negotiations with European nations regarding peace in Europe, in the regional agreements with South American nations, and a few other subsequent policies. In these fields Senator VANDENBERG has taken the lead and accomplished results which could never have been reached without his force and sound judgment, but in most other fields of foreign policy he was not consulted until the policy itself had been formulated.

In 1945, with a blare of trumpets, we were told that the economic problems of the world would be solved by the International Bank and the International Fund, at a cost to the United States of $6,000,000,000. If this was done, we were told by the Treasury Department, loans to Great Britain would be wholly unnecessary. As I said at that time, the fund was utterly unsuited to the problems of the world at that time. It is now only serving the purpose of distributing a few billion dollars around the world without reference to merit or to need. These dollars are coming back to the United States to force our prices up.

In spite of the Treasury Department, we were soon faced with a $4,000,000,000 British loan. Again we were told it was necessary to save the world and would surely do so. Britain itself did not require so much for exports from the United States, but the loan was to make sterling a medium of world exchange and reestablish world trade. Today the loan is nearly gone and the problems of Britain are apparently as great as they were when it was granted.

Three billion five hundred million dollars was furnished to the Export-Import Bank, and that, too, has almost disappeared.

About $3,000,000,000 were spent on UNRRA, a large part going to countries under Russian influence and redounding to Russian advantage. At the end of 2 years no voice was raised in America to continue such an inefficient outlay of American money by an international organization.

I do not say that these sums were all wasted or that some action was not necessary. I do say that they were accepted by the American people because of high-pressure propaganda without careful consideration, that they were unsuited to the purpose, that proper conditions were not imposed, that the sums were excessive, and that a large part of the money was wasted. They have not only financed excessive exports from this country and thus increased prices, but they have scattered more dollars around the world which are yet to come back to exchange for our products. The administration can't get away from the New Deal principle that Government spending is a good thing in itself. They so overdrew the picture to convince our people that these grants were entirely for our own benefit that even the Europeans came to believe they were conferring a favor on us by accepting our loans—that we had to export to prevent a depression. It is our Treasury and our State Department who invented the fallacy of a dollar shortage for which they imply the American people are responsible.

I have been in a number of States from the Pacific to the Atlantic coast during the past 2 months. I know what the public attitude is about further loans to Europe. The man on the street is indignantly inquiring how long we are going to have to give away the products of our labor to other nations. Before further aid is granted he wants to know the reasons for and against continuing such gifts.

And so tonight, admitting the powerful reasons for continuing aid to western Europe, I wish first to describe the danger and cost which such aid involves to the people of the United States, particularly in the amounts and form suggested from Europe.

1. Aid to Europe at the rate proposed by the European nations means $8,000,000,000 of taxes in 1948 on the American people over and above what they would otherwise pay. If a billion dollars of this money is handled by the International Bank, perhaps the taxes need be only $7,000,000,000. But to balance this there would be at least another billion dollars to other parts of the world. Eight billion dollars is two-fifths of the total sum paid in personal income taxes by the people of the United States. It is almost equal to all the income taxes paid by corporations. The adoption of this plan means that every person in the United States must pay more tax than otherwise and that the pay-roll check will be subject to a much larger deduction.

In my opinion the great tax burden of today is already a dangerous threat to a free economy. Fifty-two billion dollars paid in 1947 in local, State, and Federal taxes amounts to about 30 percent of the national income. Every man is working 3 days out of 10 for the Government and only 7 for himself. The tax burden on individuals and on corporations is such that little incentive remains to expand production and give the new jobs necessary to have progress continue in this country. Furthermore, taxes on the lower-income groups are so heavy, the deductions from the pay-roll envelope so great, that employers have to increase wages, which means increased costs and increased prices. The best way to stop the spiral of inflation and relieve the condition of the lower-income workers is to give a general tax reduction instead of another wage increase. Such a reduction would be impossible if we accept the full figures of the Marshall plan.

2. The adoption of the Marshall plan has a direct tendency to inflate prices further in the United States. There can be no doubt that the tremendous rate of exports in 1947 played a material part in the increase in prices we have seen during this year. The exports of goods and services this year have been at the rate of more than $19,000,000,000 per annum, balanced by a rate of only $8,000,000,000 of imports. The excess of exports over imports, therefore, has been at the rate of more than eleven billions. To the extent that this excess has been balanced by budgetary items covered by taxes, it does not increase the total purchasing power in the United States, but it has only been so balanced to the extent of about $5,000,000,000. The other five or six billion dollars is inflationary, whether it comes from dollar balances accumulated by foreign countries during the war, or from other means of financing.

It is quite true that the price situation today is largely due to the tremendous income within the United States—to the fact that the American people are better off than they have ever been before. But the income of our people is practically balanced by production. When we impose on top of this balance $20,000,000,000 of foreign purchases,

of which some $5,000,000,000 is direct inflation, we can hardly be surprised that the great increase in demand outruns our supply and forces prices up.

I have read with much interest the report of the President's Council of Economic Advisers. If this had been prepared as a brief to support the full-sized Marshall plan, it could not have been more ingeniously argued. Their view seems to be that while the price of one or two products like grain may have been forced up by foreign demand, the tremendous export surplus has had little effect, and its continuation will have no effect at all if we impose a few domestic controls on grain and steel. But purchasing power is not static. It shifts from one article to another as price or supply changes.

In order to support their argument, the advisers have to take the extraordinary position that we should continue exports at the rate of $20,000,000,000 a year, even if a large part of the surplus is given away, and that any reduction in admittedly abnormal exports at this time would require a dangerous adjustment. Even in 1946 we only exported at the rate of $15,000,000,000 with plenty of artificial stimulation. The argument of the Council Report is just another form of the theory that the Government must spend to maintain prosperity. How could a reduction in exports possibly injure us when we haven't enough steel for several hundred home industries, or enough freight cars, or enough grain, or enough oil? The Council have let their realization of the needs of Europe affect their economic judgment.

It seems perfectly obvious that exports, even at the 1946 rate, are abnormal and cannot continue. If we begin to build up an economy based on such a rate of export, we face the same kind of collapse which occurred in 1930. From the point of view of our domestic economy nothing could be more dangerous than an export trade created or continued by dollar loans in an amount which cannot be indefinitely continued and ca never be repaid. Some excess balance of export is no doubt justified temporarily against the time when foreign countries will be able to export more goods. But the excess of 1947, if it is continued by the Marshall plan, is a menace to our economic safety.

The Council of Economic Advisers say that exports will be no larger, even if we adopt the Marshall plan. With this conclusion I cannot agree. There is no real evidence that foreign nations have exhausted their gold and dollar balances. Advances from the International Bank and International Monetary Fund will tend to increase rather than decrease. Through lend-lease and otherwise we scattered so many dollars around the world that they may well be coming back for years to come to compete with our own citizens in driving up the price of goods in short supply.

We granted to the President the arbitrary power to limit exports. He has failed to exercise it, and his failure to do so is one of the main reasons for the increase in prices. Few realize that of $15,000,000,000 of exports only $6,000,000,000 is going to Europe, and $9,000,000,000 to North America, South America, Asia, and Africa. Surely we should ration the rest of the world on steel, grain, and oil before we even consider rationing our own people. What sense does it make to prohibit distilling in this country while we ship millions of bushels of grain abroad to be used in distilling? Today the Russian Government has an active commission here buying American goods and paying gold for them—which is better than credit, but certainly inflationary. Much of what Russia is buying is heavy machinery, good for the manufacture of munitions. Why does the President grant export licenses for goods of this nature when steel and various types of machinery are insufficient for our own needs? If we don't want higher prices we will have to reduce exports to the rest of the world.

Broadly speaking, the President is asking for two completely inconsistent policies at the same time. If we want the Marshall plan, we cannot have lower prices. If we want lower prices we have to give up the Marshall plan. The Marshall plan may be worth the cost, but let's be realistic and face the fact that there is a cost.

3. The Marshall plan, unless very carefully administered, can easily be an encouragement to the continuation of unsound policies by European governments. I feel very strongly that we overestimate the effect of our dollars in foreign countries. I feel very strongly that 90 percent of the solution of their own difficulties lies in their hands and in the policies of their governments and their peoples—with one exception, namely, in Germany, where the solution lies rather in our hands. Those who have been abroad testify that where conditions are particularly bad it is usually due to the policies of the government.

In many countries inflation is rampant because of the failure of the government to balance its budget and reduce its expenses.

In many sections the people expect to improve their standard of living while doing less work. It is hard to see why our people should ship coal abroad, for instance, when the European shortage of coal is largely caused by the unwillingness of the miners there to work either long hours or continuously.

The situation in France—and even in England—appears to be made worse by the determination of the government to maintain the value of its currency at a figure well above its real value. Thus exports from France to this country are discouraged by the fact they cannot get the real value in francs of the dollars paid for such exports.

The more we loan money to these governments, the less pressure is brought against them to improve their own policies. Our loans have helped them balance their budgets without taxation. They do not suffer as they should from the unwillingness of their own people to work. They are enabled to maintain a false value for their currencies.

I opposed the British loan of $3,750,000,000 and suggested that instead we give them $1,250,000,000 and confine its use to purchases from the United States. Today practically the entire loan has been spent and Britain is little better off than they were when the loan was first granted. Without the loan necessary adjustments might have been made sooner.

It is said that this third objection which I have urged can be met by imposing various conditions upon our loans. I agree that conditions should be imposed, but I think their effectiveness can be overestimated. I doubt very much if the different plans for following our money to its ultimate use abroad are either desirable or practical. Some conditions would be impossible to enforce. When a government assumes obligations and chooses to repudiate them, that is the end of the story. Furthermore, conditions such as were imposed with the British loan required the British to do things which it turned out they could not possibly do.

If we go into these countries we open ourselves to charges of interference and imperialism. If we impose conditions which turn out to be unpopular with the people, we nullify to a large extent such credit which we might otherwise obtain. We give the Russians a basis for the charge that we are trying to dominate the countries of western Europe.

It seems to me that the only conditions which can surely be enforced are conditions as to the particular type of goods which can be exported from the United States, and a limitation of any commitment to 1 year. Whether it should continue after that year ought to be determined by the results in the particular country concerned. There might even be a continuation of aid in proportion to increased production, as suggested by Senator BALL.

Our experience with conditions under the original Marshall proposal up to date has not been very promising. One of the conditions was to be some kind of customs' union between western European nations. While these nations mentioned the subject in their report and agreed to consider it, there is not really the slightest hope that there will be any such union, and there is no way in which we can compel it.

4. The effort to export $8,000,000,000 of goods on Government credit will almost certainly force the reimposition of wartime controls. Even the President's economic advisers speak of allocations for domestic use, and minimum powers necessary for a frontal attack on price increases. Foreign nations are blaming us for high prices and suggest that we should ration ourselves so that more may be shipped abroad. The CIO is demanding the revival of OPA.

I would regard the return of price control in peacetime as a major calamity to the United States which no probable Marshall plan benefits can justify. Consumer rationing is only one degree less objectionable. I don't know just what allocation power means, but it certainly is the power of government to control priorities and decide how much of each controlled commodity American users can enjoy.

The trouble with all government controls over the free competitive system is that to be effective at all they have to be constantly extended to other related fields, until we reach the strait-jacket of the OPA, with a choking of all initiative and growth. In peacetime the American people won't submit to such controls, and black markets merely destroy legitimate business and enrich the racketeers. Also they create a complete disrespect for law.

Furthermore, few governments have the knowledge or the judgment to do the job as well as natural economic law—certainly not this administration. Look at the mess made of the voluntary food-saving program to carry out a highly desirable purpose. Meatless Tuesdays and eggless Thursdays never did make any sense, because, of course, everyone ate chicken and eggs on Tuesdays and meat on Thursdays, leaving them just where they were. Last Thursday morning on a dining car the steward told us that wherever eggs appeared on the menu he would substitute wheat cakes. So to save wheat for Europe the travelers ate wheat cakes in America. If the Government had had legal power to enforce its decrees, the plan would have been the same fool plan, and just as ineffective.

The reason this country has a surplus of food to ship and such tremendous productivity is that we have pursued a system based on liberty. The European Socialists do not seem to realize that if we are to continue a program for any length of time, it must be based on a continuation of that liberty; that while temporarily we might increase our output by government restrictions, in the end we would soon be subject to the same paralysis of initiative which exists in England and Europe today. In other words, Europe has to take the limitations which are inherent in a free system if they want the benefits produced by it.

We have shipped more food and other assistance out of this country than any other nation has ever before accomplished for the world. We cannot stretch that liberality too far or there will be nothing to ship. We cannot ship so much that under a free system it will lead to a period of "boom and bust."

I doubt if we can safely ship more than 400,000,000 bushels of wheat out of this coun-

try without disastrous results. If so, the European countries ought to be told now, so they are not left without grain before their next harvest. We cannot underwrite the food supply of the world, and we must not give the impression we are doing so.

It is suggested in the Harriman report that we can authorize "set aside" and priority orders. But this does not solve the price problem, for it leaves less for the domestic market and so forces prices up. We are likely to be led into price control and rationing only to find that they are broken down by black markets and inefficiency as they were after the end of the war.

The adoption of the European plan therefore would, first, continue an intolerable and dangerous tax burden; second, inflate prices further in the United States; third, encourage unsound policies in Europe; and, fourth, force futile and dangerous regimentation on American productivity.

I have tried to state clearly the tremendous cost of the European version of the Marshall plan and the objections to it, and yet I am prepared to support in some reasonable amount the general principle of aid to European countries to enable them to help themselves. The whole world is embattled today between the ideology of communism and the ideals of liberty. We must do what we can to prevent the spread of communism. I might point out, however, that many who want to pour out dollars to prevent communism abroad are criticizing a congressional committee for trying to find out who the influential Communists are in the United States. They are merely trying to bring Communist activity out in the open so the people can know where it is working underground. Surely if we want to fight communism we ought to begin at home.

Unquestionably our aid will create conditions abroad less favorable to the spread of communism. But in the long run, the people of France, for instance, are going to decide for themselves whether they go Communist or not. We are too much inclined to overestimate the effect of American dollars. A credit of American dollars, encouraging unsound policies and giving the basis for the charge that we are trying to dominate their country, may easily assist communism rather than prevent it.

No one can have anything but sympathy for those who have suffered such tremendous hardships and such tremendous destruction. Undoubtedly there are many things which need to be done in the rehabilitation of those countries which can be done only by machinery and other products made in the United States. Those countries can obtain them only if we extend the credit to buy them. The emergency situation leaves them with little food and inadequate coal and fertilizer. While our resources are limited, we can do something to carry them through until more normal conditions prevail.

Weighing all of the considerations, and even at some danger to our own people, I believe we should provide aid to western Europe in reasonable amounts, but I think that even the figure suggested by the Harriman committee is higher than is safe. That committee has laid down in forcible terms the true principles of aid to Europe and the necessary limitations on that aid. But the exact figure selected looks more like a compromise than a scientific conclusion. It seems to have been reached from the point of view of European needs, rather than of American safety. In a field of such uncertainty probably a scientific conclusion is impossible.

I would like to suggest that the German policy of the Government is even more important to the reestablishment of Europe than the Marshall plan. In fact, the condition which exists in Europe today can be traced very largely to the administration's own policy in Germany. In effect, we adopted there the Morgenthau plan, which was suggested at the Yalta Conference, and which was for all practical purposes approved at Potsdam by President Truman in the text released on August 2, 1945. The policy of occupation was designed expressly to convince the German people of their criminal responsibility and to reduce them to a level of subsistence only. Production of all important manufactured goods was to be prohibited or limited, with the exception of coal. Payment of reparations in kind was to leave enough to enable the Germans simply to exist without external assistance. Millions of Germans were to be deported from eastern Germany and thrown into the rest of Germany to feed and support.

The policy of Potsdam was carried out by a directive issued to the commander in chief of occupation in April 1945, known as JCS 1067. Thereafter, in spite of constant disavowal that we were enforcing the Morgenthau plan, this directive, which was in fact the same thing, remained in force until this year. It was officially declared to be at an end on July 15, 1947, but no one is confident today that it is at an end. Has it been revoked or not? We are still dismantling plants which could be made highly useful for the support of the German people. Any plant built for war purposes can certainly be converted to peace use.

The result has been to keep the German people so short of food that many of them believe that their starvation is our deliberate intention. The result has been to deter all economic recovery, so that it will cost us a billion dollars a year simply to bring the German diet up to a subsistence level. Not only has this policy deprived the rest of Europe of many products which could be manufactured in Germany, but it has deprived them of a market for their own exports. It has thus completely upset the economy of Europe, and now we are called upon for taxes from our taxpayers to remedy the failure of the administration.

There is only one way in which Germany can be effectively controlled—that is to control the production of a limited number of essential products. The Vandenberg plan proposes that we remain in Germany indefinitely, but only to prevent rearmament. If aid to western Europe is so essential, then it can be effective only if we really change our policy in Germany. Both President Truman and Secretary Marshall are personally responsible for what occurred in Germany during the past 2½ years. Are they prepared to say now that they have completely abandoned the policy which is so largely responsible for our present plight? Why don't they stop now the dismantling of German industries?

I cannot deal tonight with the problem of high prices. I pointed out in San Francisco last month that the present situation has been brought about by many years of administration policy, and there is certainly no panacea for its cure. For years the Government spent billions more than its budget and piled up a reserve surplus of purchasing power. For years the OPA held prices below wages. Then, after the war, the President adopted the extraordinary theory that there could be a general 20-percent wage increase without increasing prices, which theory was disproved almost before the increase was granted. The Government has continued its huge expenditures and the taxes to pay for them. Both high expenditures and high taxes have been reflected in higher prices. The tremendous export surplus, unrestrained by the President, has added foreign buying to demands at home. We can only wonder that prices have not increased more.

The most obvious remedies are a reduction of Government expenditures, a reduction of taxes in lieu of further wage increases, a reasonable provision of aid to Europe, and a limitation on exports elsewhere. Finally, there must be a powerful appeal to industrialists to forego profits, to wage earners to refrain from further demands for wage increases, and to consumers to eat less and save their money rather than spend it on food. We cannot eat our wheat and ship it too. Various measures of less importance must also be considered and acted on.

But this problem is not primarily a legislative problem. The first responsibility rests on the Administration to act, both under existing laws and under new programs authorized by Congress. The policies of one department insist upon higher prices, while those of another demand reduction. There has been no one in the Government concerning himself with the general problem of holding prices down. Particularly in the administration of the Marshall plan, there must be an independent board directly under the President to develop one consistent and effective policy on exports and foreign aid. If we are against communism, let's be against communism everywhere—in America and in China, as well as in western Europe. If we are for economic recovery in western Europe, let's be for economic recovery in Germany, which is an integral part of western Europe. If we want to hold prices down, let the Government bid every department to avoid the policies which raise prices.

After considering all the facts I believe that Congress will adopt sound policies, but there will have to be a substantial improvement in the administration and efficiency and consistency of the executive departments if those policies are going to get any of the results which are sought.

Foreign Aid

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, November 20, 1947

Mr. MYERS. Mr. President, the debate on foreign aid, and its corollary phases involving the mobilization of our own economy, will soon be getting under way. In view of the fact that influential voices in the Senate and in the Congress have been discussing these issues in the press and over the radio, as is perfectly proper, I ask unanimous consent to have inserted in the RECORD several editorials from outstanding newspapers discussing the two big issues of the day: Foreign relief and assistance and the domestic inflationary-control program outlined by the President. These newspapers are the Philadelphia Inquirer, the Philadelphia Bulletin, and the Washington Star.

None of these newspapers can be considered as subscribing to the doctrine of a regimented economy, of totalitarianism in America, of new dealism, or of any such tendencies whatsoever. One of these editorials, that from the Philadelphia Inquirer, maintains its anti-New Deal tradition in its comments and makes some references to the New Deal to which I, who support the principles of the New Deal generally, cannot of course subscribe.

On the other hand, there is so much in this editorial, and in the editorials from the other newspapers which I am placing in the RECORD which cuts through to the basic problems and issues facing us, that I think they will be extremely

interesting reading for the Members of the Congress.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Inquirer of November 19, 1947]

DON'T LET WORDS CLOUD MAIN ISSUES

Angry flare-ups in and out of Congress over President Truman's plea for stand-by power to invoke limited price-wage controls and rationing should not be permitted to obscure the main issues.

The main issues are, first, the need to curb soaring prices here at home; second, the need to strengthen our economy by these and other temporary controls so that it can endure the strains and shocks of our gigantic effort to save western Europe from starvation and communism.

This newspaper believes the Marshall plan should be supported vigorously and promptly by Congress and the people because such support will be vastly less dangerous to this country than might be the case otherwise.

America, with all its vast natural and productive wealth, can't hope to remain free and prosperous indefinitely in a world ruled by hunger, misery and fear. If we don't go all out to help nations which, like ours, want to stay independent, we can be very sure that eventually our way of life will be imperiled.

If we may regard the Marshall plan as a sort of superlative insurance policy for ourselves and the free world, some form of inflation controls—such as were suggested by Mr. Truman in his message to Congress—can be compared to the premium on the policy.

Price-wage controls and rationing, however limited and temporary, go against the American grain. In normal times they would be unthinkable. We had enough of them in wartime to last a long while. And before that, the Roosevelt New Deal drove business and industry almost crazy with restrictions, prohibitions and crippling dictatorship. We want no more New Deals, limited or unlimited.

But these are not normal times. Millions in our own country are having a daily battle to make income meet outgo. Food prices are sky high. So are prices of countless other things our people want and need. Something must be done to curb the cost of necessities.

And overseas other millions are looking to us to ease their war-imposed hardships and to help them resist communism, which feeds on poverty and woe. We must not fail them.

But when the Marshall plan hits full stride the tension on our price structure could be terrific if nothing had been done in the way of safeguards. Government economists believe that a new buying program for foreign aid might, without sound management, push prices of certain basic commodities as much as 30 to 50 percent higher. It doesn't take much imagination to figure what that would do to American consumers.

Senator TAFT and other critics are well within their rights in taking sharp issue with the President on the matter of controls. But does Senator TAFT suggest any effective curb on inflation to protect our economy against Marshall plan stresses? Not that we can see.

It is true, as he says, that a main cause of our present price inflation is the tremendous flow of exports from our shores. He would ease this factor by cutting down the exports. Yet such a measure would strike at the very thing we are trying to do in our own and the world's behalf—help other free peoples to save themselves.

We wish that Senator TAFT and those who go along with him on this question would, rather than get excited at the mention of temporary and limited controls, concern themselves with the imperative necessity of making the Marshall plan a success and of seeing to it that it has the benefit of hard-headed business management.

It is far more important to assure that the plan be administered by a businesslike agency, determined to make every dollar appropriated produce a dollar's worth of relief, than to waste precious time denouncing modified inflation controls as the instrument of a police state.

Let us keep the great issues in proper perspective and view our needs broadly; let us adopt the Marshall plan as an insurance policy for ourselves and the free world; and let us prepare now to pay the premium by whatever temporary controls are required to curb inflation and keep America strong for its stupendous tasks in this uneasy peace.

[From the Philadelphia (Pa.) Bulletin of November 19, 1947]

NO MORE DRIFTING

President Truman's proposals for the curbing of inflation are drastic. Some of them, particularly those involving the grant of powers to allocate and ration basic commodities and within limited range to fix wages and prices, are bound to prove unpopular with various elements their use would directly affect.

But Republican opposition to these measures, coupled with branding them as "totalitarian," is too prompt to indicate that they have been weighed with the seriousness their nature demands.

Few will deny that the country is threatened with increasing inflation. Few will defend the constant rise of prices, with its steady resulting pressure for higher wages. Few want to see us keep on in our present courses until we gratify the Russian expectation of a "bust."

So the need for legislative action is obvious. There is room for dispute as to what form it shall take. But can it be disputed, except for vote-getting purposes, that some grants of emergency powers to the executive, if only as brakes on our headlong rush, are needed?

It can be argued that control over distribution of scarce commodities and related powers would be ineffective without corresponding control over the primary cause of inflation in excessive supplies of money and credit. These points are covered in the Presidential recommendations. The program calls for consideration as a whole.

If better and more effective measures can be devised, it is a Republican duty to devise and advocate them. But it isn't too much to ask for a constructive attitude on the part of those who control the action of Congress. This is a time to think seriously of the national welfare and to leave elections out of the calculation.

If we start out with the proposition that the Truman program was devised to assist the Democratic Party in the coming Presidential year, only partisan reaction can be expected. But no votes are to be won by indifference to the plain signs of the times; and obviously the country will get exactly nowhere by continuance of a drifting policy.

[From the Washington (D. C.) Evening Star of November 18, 1947]

THE DEBATE BEGINS

The President's message to the special session of Congress and Senator TAFT's reply may be regarded as the opening passages in a debate which will shape the future of the world. At this stage of the matter the outlook is not reassuring.

Whether one agrees or disagrees with his proposals, Mr. Truman's message was admirably direct and to the point. There was no beating about the bush.

He asked Congress, first, for $597,000,000 as an emergency aid program to tide Austria, Italy, and France over the winter. It is expected that these funds will suffice until next March 31, when it is hoped that the long-range Marshall plan will be ready to go into effect. The details of the Marshall plan will be submitted to Congress in a later message.

Mr. Truman then outlined the measures which he thinks are necessary to deal with inflation in this country—an inflation which has already assumed serious proportions and which will be aggravated by the European aid program.

The counterinflationary steps advocated by Mr. Truman are ten in number, with the political dynamite being confined mainly to the last two. In these, Mr. Truman asked Congress to authorize consumer rationing on products in short supply which basically affect the cost of living; to authorize price ceiling on products in short supply which basically affect the cost of living or industrial production and to authorize such wage ceilings as are essential to maintain the necessary price ceilings.

It is almost a foregone conclusion that the President is not going to be given these powers. The comments of Senator TAFT and other Republican leaders are just about conclusive on this point. Perhaps the President did not expect to get them, for in discussing his proposals he said that the first five, taken together, would "aid substantially in relieving inflationary pressures."

The worst that can be said of the other proposals, however, especially the last two, is that they would be apt to prove unworkable. In an economy as complex as ours, selective rationing and selective price control at the consumer level is a doubtful business. If the experience with OPA serves as a guide, a resort to such measures now would be apt to do more harm than good, especially in view of the President's none-too-firm attitude in the matter of wage controls.

Still, to repeat, the worst that can be said of these proposals is that their workability is doubtful. And in fairness to the President, it should be recognized that mounting inflationary pressures may yet drive us to them.

Most certainly, there is nothing in the message which justifies Senator TAFT's extreme attack on the President. He was justified in attacking the soundness of the proposals. But when he went on to impugn the President's motives, to picture him as wanting a "police state" in this country, and to cast doubt on the genuineness of Mr. Truman's desire for world peace he was going much too far.

The exact position of Senator TAFT in this matter continues to be unclear. He blames high prices on the excess of consumer dollars competing for scarce goods. Yet he would increase the supply of dollars in the hands of consumers by cutting taxes. He says that he favors reasonable aid to Europe as a means of combating communism, yet he talks about aid at the rate of $8,000,000,000 a year. He must know that no such figure is contemplated under the Marshall plan. He dwells upon the generous manner in which this country has dealt with Europe, and concludes that we cannot afford to be more generous.

The trouble with this is that it seems to miss the point of what we are trying to do. If it were simply a question of whether we should be generous or ungenerous, one might agree with the Ohio Senator that we are doing enough. But generosity, as such, has little to do with it. The real reason for going to the aid of Europe is to prevent Communist domination of that continent, to head off the peril for us which would follow such domination.

Senator TAFT seems to give little weight to this cardinal point. And until he and his colleagues accept it, with all of its grim implications, the European aid debate will continue to be muddled and our own future will continue to be in jeopardy.

Industrial Research at University of Chattanooga

EXTENSION OF REMARKS
OF
HON. KENNETH McKELLAR
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, November 20, 1947

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Industrial Research at University of Chattanooga," by Dr. Raymond B. Seymour, published in the fall 1947 issue of Dixie Business.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDUSTRIAL RESEARCH AT UNIVERSITY OF CHATTANOOGA

(By Raymond B. Seymour, Industrial Research Institute, University of Chattanooga, Chattanooga, Tenn.)

The growth of our country has been geared to an expanding economy in which progressive men have continually pushed back frontiers and developed new territories. Even today, in spite of conflicting opinion among some of our country's leaders, frontiers exist that present opportunities undreamed of in yesteryear.

Ambition, imagination, and vision were the chief assets of the old frontiersman, but the modern pioneer must not only possess these attributes but, in addition, must be trained in scientific research methods. In past years the route was westward, but today progress takes place wherever adequate facilities for research and education are present. Unfortunately, most of the top-ranking institutions of higher learning and almost all the modern research laboratories are located north and east of the Ohio and Mississippi Rivers, respectively. Of course, that region is unable to supply many of the raw materials required for its new processes and products, but new industries are generally located where they are developed. Thus, sections having access to adequate research facilities are able to create new wealth in spite of a lack of natural resources.

The South possesses more than its share of raw materials which can be the basis of many new products and processes, and it seems obvious that new developments based on these materials should take place within the region. However, such developments do not occur spontaneously but require intensive investigation by adequately trained technologists in modern research laboratories. Over $750,000,000 is being invested annually in such laboratories throughout the entire Nation, but less than $25,000,000 of this is being invested in the South. Less than 2 percent of the country's research scientists having doctor of philosohy degrees are in this section, although many times this number have left the South to seek opportunity elsewhere, and thus are contributing to the development of other regions.

If the South is to secure its share of prosperity, it must provide adequate educational facilities for its youth and modern research institutes for its industry. It must produce a larger variety of agricultural products, using as much mechanized finished equipment as possible, and must process these raw materials to goods in the region. The South should adopt the slogan, "What the South can grow and make will make the South grow."

All available data indicate that the South is already in the early stages of industrialization, but the rate must be accelerated by investing in education and research. During the last 13 years the number of industrial research laboratories in the South has increased 160 percent. Nevertheless, over 43,000 manufacturing plants in this region are without research facilities. While these concerns have been able to sell all the materials they could produce during the war years, they will not be able to compete favorably in the future unless facilities for scientific investigation are made available to them.

Six years ago the Southern Association of Science and Industry was founded by civic leaders who realized that the future of the South would be dependent on the quality of its facilities for education and research. The objects of this association were to provide better education for youth and adequate research facilities for industry so that southern youth would have an opportunity to receive a better education and could help develop the resources of the South after graduation.

The establishment of the Industrial Research Institute of the University of Chattanooga in 1945 by civic leaders and industries fulfilled the objects of the Southern Association for Science and Industry and its record of accomplishment has indicated the soundness of these objects. This research institute has grown from an organization consisting of one scientist in November 1945 to an institute having a large technical staff of full-time men all with industrial experience and most having doctor of philosophy degrees from accredited universities. In accordance with the original plan, this organization is still growing, and is on its way to becoming the most important industrial research institute in the entire South.

In addition to the equipment found in most modern laboratories, the institute has a complete micro analytical laboratory; a recording polorograph; spectrophotometers; tensile, compression, and hardness testers; induction heating equipment; an emission spectrograph; metallograph; manaflux; high-speed cameras; high-pressure hydrogeneration apparatus; and adequate shop facilities. The main laboratories are housed in a modern functional building, while shop and testing facilities are in an adjacent building. Plans have been drawn for an addition to the present buildings which will make the Industrial Research Institute the largest non-Government organization, combining research and education in the region.

As a division of a privately controlled institution of higher learning, the Industrial Research Institute is free from political control and has the advantage of administration by officers of a university now in its sixty-first year of service. Since the faculty of the university is available for part-time investigation and consultation, the institute has access to talent which would not be found in an organization not on a university campus. It can be said that by integrating education and research for the benefit of the entire South, the University of Chattanooga is demonstrating its true character as a modern university in which the creation of new knowledge is known to be equal in importance to the conservation of the old.

Although the Research Institute will not complete its first fiscal year until September 1, 1947, it has already been recognized as one of the most important factors in aiding the development of a region comprising 15 States and a population equal to that of Great Britain. This organization has already signed 41 research contracts with business firms located in 8 different States. Its sponsors vary from large organizations, such as the United States Navy, the Sugar Foundation, Inc., and firms having their own research laboratories, to individuals who are interested in developing a new process or product. All research is done at cost.

Research is not magic, but many southern industrialists who have sponsored research projects at the institute are already receiving results. Its staff members have applied for nine patents which have been assigned to the sponsoring firms and six processes developed at the Industrial Research Institute are already in production in southern plants. The profits resulting from any one of these processes would easily pay for all research expenditures at the institute to date.

As a result of a project sponsored at the Industrial Research Institute, a Tennessee firm is now making an organic chemical which is being distributed to practically every State in the Nation.

A Georgia textile mill is now producing a type of cloth that previously could not be processed.

A southern manufacturer of alloys can now analyze his entire daily production by use of the spectrograph within 15 minutes of sampling. Previous methods required weeks and the product was usually shipped and fabricated before analytical results were obtained.

A North Carolina firm found that it could no longer purchase organic chemicals needed in its plant. The institute surveyed the potential market and determined what process was best adapted to the firm's requirements. Today, this company is manufacturing the chemical it could not purchase and distributes it to other firms throughout the South.

A Tennessee concern, which was engaged in the garneting business, was supplying raw material which was being processed into finished goods by firms outside the region, decided to add greater value to its raw material by processing it to a finished article. It assigned a project to the institute to develop a cloth disposable diaper which would be water absorbent on one side and water repellent on the other, yet competitive with laundry service. This product is now in production, using a patented process and the technologist who developed the process has joined the firm, according to plan in order to aid in future developments.

As other technologists are trained in modern research methods, they will also have an opportunity to use their experience to improve southern industry. Such a plan would be impossible if the institute were not on the campus of an accredited university. The medical profession has recognized the necessity for associating medical schools with hospitals so that their graduates could combine theory with practice. Modern universities interested in educating research scientists for industry must also provide the student with an opportunity to secure experience in research by establishing research institutes staffed by experienced technologists.

The philosophy of integrating education and research in order to catalyze southern progress has been reduced to practice at the industrial research institute of the University of Chattanooga. With the continued cooperation of southern industry and civic leaders this organization will continue to develop the resources of the region by placing "science in the service of mankind" for the advancement of the Southland.

RAYMOND B. SEYMOUR.

JUNE 28, 1947.

The Injection of Party Politics

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. KILBURN. Mr. Speaker, Walter Lippmann is known in our country as having a clear mind, being articulate and

above partisanship. His article on the President's message, which follows, is about the best statement I have seen. I think it reflects in a clear and able manner the opinion of most thinking Americans.

TODAY AND TOMORROW

(By Walter Lippmann)

THE INJECTION OF PARTY POLITICS

Between the first part of the President's message, which dealt with the European recovery program, and the second part, which dealt with the domestic inflation, there is a sharp difference in purpose and in quality of mind. Two different sets of advisers, two different standards, are only too evident. On the European recovery program Mr. Truman wants the President working with Congress, regardless of party, so that "the actions of this Government" may "be a stature to match the dignity and influence of the United States in world affairs." But on inflation, he was, alas, the politician and the candidate trying to put the other party in a hole.

This attempt to mix statesmanship with partisan politics is most unfortunate, and a great deal of good sense will be required to undo the harm that has been done. For by injecting a partisan calculation into the situation, Mr. Truman has made it much more difficult for Congress and for the people to deal wisely and dispassionately both with the European recovery program and with the domestic inflation.

The partisan monkey wrench was in the last 2 of Mr. Truman's 10 points: The request for authority to set up consumer rationing, and to impose price and wage ceilings. Mr. Truman knew perfectly well when he made these two requests that this Congress cannot grant them without an abject confession that the whole of the Republican Party, and a considerable part of the Democratic Party, have made a colossal mistake and are responsible for the high cost of living.

A month ago he himself characterized these measures as those of a "police state"—(which incidentally they are not) and is said to have told Members of Congress privately that he would decline to fix prices. Yet suddenly, and without consulting Congress, he is asking Congress to do something which he knows Congress will not do and that he himself is on record as saying he would not want it to do. If this is not partisan politics in an election year—a device to make the Republicans refuse him powers which he does not wish to exercise—then what is it?

On the merits, it may be said, I think, that consumer rationing, price and wage fixing, could not cure or even check the inflation; they could only divert the pressure from the few controlled commodities to the much greater number of uncontrolled commodities.

If the price ceilings are really effective—if there is no big black market—on the selected goods that are in short supply, the effect will be to divert the inflated purchasing power, and therefore labor and raw materials and transportation facilities, to the uncontrolled sections of the economy. The result is likely to be a decline, or at least no increase, in the production of these very commodities that are in short supply.

The inflation, of which we are now suffering the consequences, is due initially to the fact that in financing the war the Government raised about a quarter of its funds, not out of taxes and not out of savings but by selling its securities to the commercial banking system. This bank money was as purely inflationary as if it had been fiat money turned out by the Government printing press. At the end of 1945 it represented the huge sum of $95,000,000,000, all of its excess purchasing power for which there were no corresponding goods.

Against this initial inflationary force, the Treasury took substantial countermeasures. Since the end of 1945 it has used its surplus to pay off Government debt held by the banks, and at the end of June this year holdings of Government securities had been reduced by about 15 percent. This in itself would have been a genuine and effective means of arresting and even of reducing the inflation.

But the Treasury's measures are being offset by the creation of new inflationary funds in the banks. The credits extended by the banks have risen at a rapid rate. Because of the high reserves which they already have and the large reserves which they can still acquire from investors who sell their Government bonds, the country is threatened with an increasing inflation.

The President touched upon this—the central problem of the inflation—in his first point. But he did not give it anything like the emphasis it deserves, as can be seen by the fact that he put the restoration of consumer credit controls ahead of the restraint of inflationary bank credit. Yet the expansion of consumer credit is a small item as compared with the expansion of bank credit.

It is on that problem that our effort ought to be concentrated. Powers need to be given to the Federal Reserve System to check the creation of excess bank credit based upon the acquisition of Government and other securities and of gold by the commercial banks. This could then be supplemented by the power to allocate transportation facilities and scarce commodities which the President asked for in his message. The chief virtue—as regards inflation—of the power to allocate is that it can be used to postpone public works, and unnecessary private construction financed directly or indirectly by the inflationary bank credits.

If the President could now be persuaded to lay aside—at least until later in the session—the provocative and impracticable proposals about consumer rationing, price and wage fixing, and to concentrate on measures to check the real inflation, the country could still be saved the ordeal of having to meet the European crisis and our domestic difficulties in a whirling welter of partisan politics.

World Peace and World Government

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address on Armistice Day in Washington, N. C., by Dr. I. Beverly Lake, professor of law, Wake Forest College, Wake Forest, N. C.:

Commander Paul, veterans, and those who, like myself, cannot claim the distinction of having worn our country's uniform, it is an honor to be invited to join you in your celebration of Armistice Day and a pleasure which I have been anticipating these several days since my friend, Mr. Malcolm Paul, telephoned me and asked me to come. Armistice Day means even more to us now than it did when it was first proclaimed a national holiday for now it calls to mind the accomplishments of 1945 along with the great victory in 1918. The purpose of the holiday is to enable us to take the time to recapture the thoughts and feelings we experienced 29 years ago and again a bit over 2 years ago. It is good for a nation, as it is for an individual, to pause now and again to consider with pride the accomplishments of the past and remember with gratitude those who made them possible. It is good to recall the past, because it is only in the light of the past that we can plot our course into the future. Maitland, the great English legal scholar, said, "We study the day before yesterday in order that yesterday may not paralyze today and today may not paralyze tomorrow."

History is the story of real men and women like ourselves and faced with problems much like those confronting us. From it we learn what made those men and women strong and what blunders endangered their security and postponed the attainment of their ideals. From it we learn of heroes, and, learning of them, we are inspired to do heroic things, for from a careful study of history we see that the hero is not necessarily the glamorous and romantic knight of the Round Table, but is also the ordinary man turning aside from the pursuit of his dreams to do that which he loathes and fears because of devotion to an ideal and a willingness to sacrifice his dreams and his life for the protection of those he loves. It is because you veterans were ordinary North Carolinians who did not want to go into battle, who were, I am sure, afraid to go into battle, but went, nevertheless, and by going preserved for us all the opportunity which we call the American way of life that we honor you today as heroes. From history we learn that nations, not armies and navies alone, win and lose wars, and behind the Army and the fleet stand the planner, the executive, the artisan, the farmer, the teacher, the home maker, and the child, each contributing some part to the success of the Nation. So Armistice Day reminds us that ordinary men are heroic and that our Nation has weathered crisis after crisis, because in our great and cherished freedom to disagree we have disagreed about details and methods but have reached an amazing unity of purpose and agreement as to ideals and values and have worked together to reach our goals.

Armistice Day enables us to recapture the pride of achievement we felt in 1918 and 1945 and in that pride to face the future with a quiet confidence instead of hysteria. It reminds us of the joy you and we felt that you would soon be home and of how good it is to be safely at home in a nation at peace and how good it is to be with each other in spite of the minor irritations and petty disagreements that are the inevitable accompaniment of daily association. It reminds us of those who did not return, and in remembering them and the love we had for them and they for us we experience again the joy of the old association. In gratitude to them we determine to teach their names to our children's children, and like them spend our lives, if need be, to make and keep our children's children free to use and develop the things and minds and spirits God shall give them. Armistice Day reminds us of the gratitude we felt to God for the victory and the preservation of our civilization, and thus enables us to look ahead not only with confidence in our own strength but with a faith that He will guide and strengthen us in times to come as He has done in times past. Rejecting the old and pagan conception of God as a tribal warrior fighting for the nation He loves, because now we know that He loves them all, we also reject the more modern paganism which portrays Him as merely the personification of peace, coldly aloof from and neutral as to the outcome of wars. We know He is as concerned for the welfare of the German or the Japanese as for the welfare of the North Carolinian, but we also know that He is not neutral in a struggle between a philosophy which degrades and a philosophy which ennobles. "The stars in their courses fought against Sisera" is poetic license but we know as did Deborah that ideals should never be left out of the reckoning when an estimate is made of a nation's strength.

Armistice Day reminds us that we have not yet attained our two goals for which we fought in 1918 and in 1945—a peaceful world and the American way of life, by which we mean not the way of life we have but the way of life that is our ideal, a way which involves material comforts but also involves tolerance and a kindly neighborliness, not only the four freedoms of the Atlantic Charter but also the freedom and the opportunity to work out one's own destiny, and with that freedom the great blessing of responsibility for one's own destiny. Only free men have responsibility, only those willing to take it can be truly free. So our objective is a dual one. Of course, we want peace, especially those of us whose boys will be 18 in five more years, but Armistice Day reminds us that there are things more to be desired than peace. We could have had peace in 1939 and probably for a thousand years to come if we had been willing to accept the Nazi plan for a world government, but would you say to the spirit of the boy who died on the beaches of Normandy that his judgment of values was wrong? Shall we no longer teach our boys to ask, "Is life so dear or peace so sweet as to be purchased at the price of chains and slavery?"

Many who are frightened by the dire prophecy that we have only five more years and who are disheartened by the disputes and railings in the Council of the United Nations believe that organization is a vain hope which should be abandoned in favor of a United States of the World or at least a union of the so-called western democracies under a constitution similar to our own. Since a union of western democracies on the one side and Russia and her satellites on the other seems no great improvement over our present situation, let us consider briefly the suggestion of a United States of the World. It was before small groups of typical Americans that the Constitution of the United States was discussed and debated long before it was brought before the conventions of the States for adoption, and it was in the discussions of such groups as this that the merits and weaknesses of that Constitution were brought to light so that those who went from such groups to the conventions carried with them informed opinions. Through discussions in groups such as ours we may hope to find some of the strengths and some of the weaknesses to be anticipated in a United States of the World, so that the final choice may be made by an informed people and in an atmosphere as far removed as possible from either unreasonable sentimentality or unreasoning fear of that which is new

The existence of a world government is not of itself complete assurance of peace. Many, if not most, of the world's wars have been protests against government. Recently in China, Greece, Paraguay, and Indonesia we have seen such conflicts—wars, on a greater or smaller scale, being fought not because of absence of government but because of the presence of governments which are not satisfactory to some of those governed. The bloodiest war we ever fought—at least, in proportion to the number of people involved—was our own Civil War, which was fought because of a disagreement over the meaning of our Constitution. So we see that a United States of the World with a constitution such as ours is not necessarily a preventive of one more war. Such a government could conceivably supply the irritant which will set off a revolution or civil war—the most cruel and horrible of all. So if we form a United States of the World in order to avoid another war, we must look carefully to see that the governmental machinery will operate smoothly and so as to strike the happy medium between the welfare of the whole group and the freedom of the individual, between the welfare of the world and the freedom of the several nations of the world to regulate their internal affairs.

Let us consider some differences between the present situation and that confronting Washington, Hamilton, Jefferson, and Madison. The Constitution they and their associates drafted has worked remarkably well, the Civil War to the contrary notwithstanding. It, better than any other form of government I know, has harmonized the group interests and the individual interests. One reason is that it was designed for and molded by a people remarkably united in philosophy. Hamilton and Jefferson differed on details, not on ultimate beliefs as to the purpose of government. The American people, especially in 1788, were principally of one religion, one race (the Negroes then having no voice in the government, which wrong we are glad to see is being corrected), one cultural background, and above all one common passionate love of freedom and belief that governments existed for the benefit of the citizen, not the citizen for the benefit of the government. Differing in details, they agreed on principles, and especially on the principle that in freedom to disagree there is strength. We are now considering the wisdom of using this form of government to govern a world where there are different religions—not different denominations of the same religion but religions diametrically opposed to each other—different races, different cultural backgrounds, different governmental backgrounds, and different views as to what the purpose and nature of government is. It may be that the results will be as good in the world as they have been in the United States, and that we may even avoid World Civil War No. 1, but it will not do to assume that a system which has worked well in a country where singular similarity of ideals and backgrounds exists will also work well where there is a diversity of both. I realize that today there are many races and religions in America and barring minor irritations we work together pretty well under our Constitution, but in the critical early years when our constitutional government was developing its strength and weaving its way into our affections, these diversities did not exist, and the later arrivals came slowly enough and in small enough numbers to be assimilated and acclimated to our constitutional government before any large group could be developed with a sharply differing governmental philosophy.

Our Constitution does three things. It sets up a machinery through which the Federal Government can act, separating its activities and distributing its responsibilities and powers among the legislative, executive, and judicial departments, defining each so that it can operate in its zone free from interference by the others. Second, it deals with the relation between the Federal Government and the State governments. Broadly, its theory, as amended by the Civil War, is that of "an indestructible Union composed of indestructible States," to the end that the Federal Government may deal with the problems of Nation-wide scope, of which the two chief ones are national defense and interstate and foreign trade, and the State governments may deal with local problems. Third, it protects the freedom of the individual by setting limitations both upon the power of the State and the power of the Federal Government.

Taking these in order we run into difficulties with the first when we talk about a United States of the World. The legislature of such a government would be elected by the people of the several nations, each determining the qualifications of its voters. This would give to India and China over half of the representatives in the lower house, though they have, I believe, a very small proportion of the literate people of the world. Russia would have the next largest delegation, and we would be fourth. In the senate we would be on a par with Nicaragua. This is not, of course, necessarily fatal to a good government, nor to a peaceful and a free world, but it is one of the chief practical barriers to the formation of a United States of the World like our United States of America. Our position and Russia's position in world affairs would be far weaker. We would have no real assurance that our legitimate interests would be protected in such a legislature. North Carolina likewise has no power to control the United States legislation, but North Carolina knows that the interests and theories of her people are about the same as those of the people of Oregon or of Illinois. The political history of China and India may well cause some question as to whether they will elect representatives to whom we can afford to trust our well-being.

Jumping to the President, and his tremendous number of administrative assistants, we might reasonably expect an American to be elected first or soon afterward, but thereafter the president of the world would be an American about as often as the President of the United States has been a New Yorker. The Supreme Court would be composed of many judges, only a few of whom would be familiar with our constitutional principles or grounded in the Anglo-American legal philosophy. Their decisions might conceivably be better than some we have had from our own Court, but it is hardly conceivable that they would interpret the world constitution as our Court has interpreted our own, so, starting out with a constitution worded like ours, we would hardly go far before we would run into some strange doctrines and interpretations. The question is, Can we trust the population of the world to put into office men upon whom we will be safe in conferring the powers we now confer upon our Congress, our President, and our Supreme Court? This is not the place for either idealistic sentimentality about all men being equal and there being no superior race, nor is it the place for a conceited exaltation of our own abilities and scorn for people of other lands. We must answer this question in the light of history, or what we know about the other countries, their ideals, and their philosophies.

Turn now to the powers we wish to confer upon the United States of the World. It will not do to say we will simply give it power to prevent war, for that either means too little or too much. It cannot prevent war by simply saying there shall be none. It must be authorized to remove the causes of war and authorized to take action to punish violations of its safeguards. But our own history shows that administrations of all parties have sought to enhance their power by using the powers expressly granted as pretexts for doing things not specifically authorized and probably not even impliedly authorized. Surely there is nothing to indicate that a President from Bulgaria would be less inclined to extend his power by indirection than a President from New York. The power to prevent war or remove the causes of war is an elastic power which may be stretched quite out of shape in the hands of a zealous reformer, so we shall have to do more than simply confer this power on our United States of the World. Let us assume we give it the powers now given the United States in article 1, section 8, of our Constitution, and confine ourselves to the question of what might happen if we say, "The Congress of the World shall have power to regulate commerce among the several nations, with foreign planets and with the savage tribes," that being about as near as we could come to the commerce clause in our Constitution.

Under such a world commerce clause our tariff laws would be abrogated and the American market would be open to goods produced at low-wage levels in China, Russia, or England. This in turn would force

lower wages in America. Under such a world commerce clause it is probable that a nation could no longer prevent or control immigration. Certainly under this and other clauses in our Constitution one of our States cannot keep out citizens of other States. Under such a world commerce clause we could require quarantine and inspection of foreign goods and passengers only so long as the World Congress did not see fit to act in the field. We could prevent the importation and retail sale in the original package of opium produced in China only if the World Congress saw fit to permit us to do so. Now it is conceivable that the World and even ourselves might ultimately be in a better condition if there were no national tariffs, no national restrictions on immigration and travel, no national power to prohibit the importation of goods thought harmful, but it seems beyond question that such a surrender of our national power would have the immediate effect of lowering drastically American standards of living and American health and safety.

Turning now to what such a world commerce clause would enable the World Congress to do, we find some interesting possibilities. The World Congress might forbid an American factory to ship to Canada articles which are unobjectionable either in America or in Canada. It has happened here in the case of the lottery ticket. The World Congress might provide no goods can be shipped in international commerce which were made in a factory where wage levels are not as high or hours of work as low as the World Congress might think proper. Both have happened here. It might regulate wages and hours of a factory making goods intended for international commerce of the price of tobacco sold on an American market from which some tobacco may go in international commerce, or the right of an Ohio farmer to grow wheat on his own farm and feed it there to his own turkeys intended for his own table. All these have happened here under our own commerce clause. Since a labor dispute in a factory receiving some raw materials from abroad and shipping some of its products abroad would impede international trade, the World Congress might require the factory to refrain from discrimination against union labor, though no labor dispute exists in that particular factory. That, too, has happened here. It might be that the World Congress under such a commerce clause as ours could forbid international shipments to or from factories which paid too high wages, did not work its employees long enough, or retained in its employ a member of a labor union. None of these has happened here yet.

Time will not permit further multiplication of examples of difficulties to be contemplated if a world constitution similar to the United States Constitution were adopted. Enough has been said to show my own opinion that such a constitution would not be desirable in our present world. It has worked wonderfully well in the United States and may well be an ideal government for an ideal world, but we are confronted with a fact, not a theory—a realistic world, not an idealistic one.

This does not mean we can have no world government, no cooperation among nations to ease frictions and put out fires while they can be controlled. We have a world government now. There is at the moment much criticism of and impatience with the United Nations Organization. Here, as usual, we have expected a miracle and are discouraged when some problems remain. Let us remember that the United Nations is only 3 years old. Compare it with the United States at age 3. Are the disagreements between Mr. Gromyko and Senator AUSTIN more earnestly or more bitterly argued than those between Jefferson and Hamilton? Is the outlook for success more gloomy than was the prospect here in 1791?

Let us look very, very briefly at the United Nations Charter. Its purposes include the maintenance of international peace and the removal of threats thereto. Specifically with reference to threats to and breaches of the peace the Security Council is given tremendous power. It may decide whether a threat to peace exists or a breach has occurred or an act of aggression has been committed. When it decides that one of these exists or has occurred it may call upon all or some of the member nations to apply all or any of the following measures: Complete or partial interruption of economic relations and of rail, sea, air, postal, telegraphic, radio, and other means of communication, and the severance of diplomatic relations. Should the Council consider these drastic measures not enough it may take such action by air, sea, or land forces as may be necessary to maintain or restore international peace and security, including demonstrations, blockade, and other operations by air, sea, or land forces of member nations. In the meantime nothing in the Charter shall impair the inherent right of individual or collective self-defense if an armed attack occurs against a single member of the United Nations, until the Council has taken the necessary steps to restore peace.

This certainly seems ample to prevent Ecuador from attacking or threatening the peace of Peru, and even Russia or the United States might well hesitate to invade Greece or Mexico with such a threat hanging over it. The difficulty is that no such threat of action by the Security Council hangs over Russia or the United States, because all the decisions of the Council save on procedural matters require the affirmative vote of all the permanent members. A member may not vote on a decision to investigate or recommend a settlement of a dispute to which it is a party, but apparently it may vote on any decision as to enforcement action against it, which necessarily means there will be no enforcement action taken against one of the permanent members—the United States, England, Russia, France, and China—nor will enforcement action be taken against any satellite of one of the Big Five. Perhaps the veto power should be surrendered, but as yet we are all too suspicious of each other to surrender it. Certainly, if the Big Five are unwilling to surrender the veto power to a world government empowered only to act to remove threats to international peace, there is no possibility of their ratifying within the next 5 years a world constitution like that of the United States. Even with the veto power the Council can investigate and publicize the facts in a dispute involving one of the Big Five. Let us suppose Russia were to decide to annex Greece. With the veto power in existence does she not know that she would take that step at the risk that England, France, and the United States would as sovereign, independent nations go to the aid of Greece? Would Russia hesitate more if the Security Council had the power to call out the Chilean Navy also? Is it not true that the United Nations Organization and the members thereof can now bring exactly the same pressure upon Russia to let Greece alone as could be brought upon her by the Security Council freed from the restrictions of the veto power?

The simple truth is that no government by its mere existence and the perfection of its machinery for settling disputes, is an absolute guaranty of international peace. Nor is disarmament. Genghis Kahn did quite well as an aggressor using bows and arrows and swords. The only actual guaranty of world peace is to remove the desire for war—or more accurately, the willingness to go to war if only a nation may have what it wants. The only real guaranty of peace on earth is that which will come from a general acceptance by individuals throughout the world of the teachings of Jesus as practical rules of life. You may say that is a long way off and we cannot wait until then for the whole world may be destroyed before that comes about. We are 2,000 years nearer to that time than He was and He invested His life on the belief that there was then time for his principles to work. You and I may be called upon to invest ours in the same venture. There may be another war and even our country may go down in defeat but the world and the human family will not be destroyed by war, for Jesus did not make a foolish investment. It is because the day before yesterday tells us of His wisdom and of His faith in mankind, we do not regard ours as an age of fear but as the age of hope. The sun is rising—not going down. As we prepare for the new day that lies before us and are conscious of the many perplexing problems it will bring, and as we hear the dire prophecies of those who say there are only 5 years more, that our scientists like the fisherman of the fairy tale, have let out of the bottle a demon they cannot control, there comes to mind a bit of advice written long ago by a wise man to a young friend. Paul writing to Timothy in a day far more discouraging than our own, reminds him of his glorious heritage from his mother and his grandmother, and says "Wherefore I put thee in remembrance that thou stir up the gift of God which is within thee, for God hath not given us the spirit of fear, but of power, and of love, and of a sound mind."

The Strength of America

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of David E. Lilienthal, Chairman, United States Atomic Energy Commission, before New York Herald Tribune Forum at the Hotel Waldorf Astoria on October 21, 1947:

Generally speaking, it's not a good idea for an individual to think too much about himself. He can become so occupied with how his digestion is getting along that just fussing about it will get it out of order. Perfectly healthy people can give themselves the jitters by paying too much attention to their nerves and their mental processes. The advice "Let your mind alone" has a lot to be said for it.

I have a feeling that much the same thing applies to nations, and particularly to a nation as healthy and high-spirited as the United States of America. But a certain amount of national self-examination is inescapable, and indeed at this juncture in world events, it is not only inevitable but wholesome. The eyes of the world's people are upon us these days. Everything we do (and a good many things we don't do) and much of what we say, in this wonderfully talkative and uninhibited land of ours, occupy the attention of hundreds of millions of people in England, in France, and the Lowlands, in Italy and the Balkans, in Latin America, in the vast reaches of Soviet Russia. So that even though we might prefer not to talk about our own health, about what it is that makes us so fit, or about that occasional headache, the times just won't permit.

Each day all over the world we, the people of the United States, are given a physical and mental appraisal by the people of other lands. Some of this going over is so palpably false, so course and downright mean, that it

shocks most of us; for very few of us are given to such extremely bad manners when we talk about other peoples.

But whether the looking over we are getting around the world is sincere and temperate, as it often is, or deliberately false and incredibly mean—as much of it is—the justification for this constant appraisal of America is clear enough. For we no longer say: "Our war is good enough for us; please go away and don't bother us with your problems." Upon a world-wide stage we stand today as the exemplars and the active protagonists of certain heroic principles of human life, about which we feel so deeply that we are prepared to stake everything upon keeping them alive and flourishing. We assert that the principles by which we live are basically opposed to, and demonstrably superior to, those modern versions of tyranny over men that first enslaved and then destroyed the German and the Japanese people and that now threaten the peoples of all Europe and of Asia.

If I understand the essence of our evolving foreign policy, it is based largely upon what we believe to be the peculiar merits and the superior qualities of our domestic policy, that is our way of living together here at home. The anxious peoples of the world are bedeviled and often confused by many voices in their own lands telling them just what America is like, what our motives are. The confusion abroad is natural enough. But we should take care that we ourselves do not get confused about the sources of our strength, about what it is that makes America strong and that will keep her strong.

What is this source and this foundation of our American strength? The answer most commonly heard is: Our economic system. This system is variously referred to as the capitalist system, or democratic capitalism, or the system of free enterprise, or some similar expression.

The central role of free, competitive, private enterprise in the life of America can hardly be exaggerated. But neither this nor any other answer in economic terms can explain our basic vitality.

The basic source of the strength of American civilization does not lie in an economic system. The well-springs of our vitality are not economic. They go deeper still; they are ethical and spiritual. Our society in America is founded not upon the cold and bloodless economic man of the Marxist, but upon a faith in man as an end in himself. We believe in man. We believe in men not merely as production units, but as the children of God. We believe that the purpose of our society is not primarily to assure the safety of the state but to safeguard human dignity and the freedom of the individual. We are a people who have built upon a faith in the spirit of man, who conceive that the development and happiness of the individual is the purpose and goal of American life. I judge that we are not ready to trade in this luminous concept of a people's purpose for the notion that the America of the Bill of Rights, of Walt Whitman and Justice Holmes and Abraham Lincoln is simply a highly productive economic system.

What we have, actually, is not a system at all, but almost its opposite, that is a society of the greatest imaginable diversity and flexibility, taking things as they come, deciding how to handle situations by the facts of each situation itself—doing what comes naturally. The only way in which it can be said to be a system is to say that our system is to have no system.

What I have said may start an argument, but it will not be merely an argument over the meaning of words. I speak of the substance of things, not their expression in words. I am asserting that the vitality of our distinctive institutions of production and distribution of goods, ultimately depends not upon rigid and fixed economic principles but upon ethical and moral assumptions and purposes; that our unparalleled productivity and standard of living are not the consequence of an economic system, but rather the other way around, that our economic success and our flourishing economic institutions are the consequence of our ethical and moral standards and precepts, of our democratic faith in man.

We have ethical guide lines in this country. We have developed rather highly a sense of what is right and what is wrong, of what is fair and decent, and what is just crude use of arbitrary power. A cynical labor leader or business giant, a cynical politician or public official—those who conceive of American society as nothing more than a jungle in which the most ruthless prevails—we may not catch on to such men right away. We can be fooled for a time by a mask of pretense. Sometimes we are slow to repudiate cynical disregard of our democratic faith—but that faith is always there, the foundation of our buying and selling, our hiring and firing, our political and financial institutions. No factory can be operated, not a carload of wheat sold, not a labor dispute negotiated, not an election held, that these ethical, legally unenforceable precepts are not part of the transaction.

I do not see how our kind of society could flourish in any other way. A highly interdependent country, one capable of producing more than $150,000,000,000 worth of goods a year is too complex for rigid planning and the enforcement of detailed plans by law. We must function in a loose, informal way under sanctions that are largely ethical and moral, based upon commonly accepted standards of fair play and respect for human integrity. This is the way we do function, by and large, and this is why we flourish.

Some would have us believe that because we excel in making millions of the same kind of useful gadgets, that therefore we are free-men. No; that has the cart before the horse. It is because freedom for men is a primary ethical concern of ours that we do so well in making gadgets and raising food and doing successfully many other things—among them the winning of wars.

Diversity and flexibility rather than a stereotyped hard-and-fast system, is an essential part of such a noble concept of society as is ours. We get our economic services in the way that at the time seems to work best, that will in a particular situation best advance our underlying purposes. We do not start with all the answers, the economic or political answers. We make the answers up as we go along. Thus, American industry is owned and operated, by and large, by competitive private enterprise; yet a year ago the Senate of the United States voted unanimously to establish public ownership and management in one of our largest industries, and make it a Government monopoly; I refer, of course, to the atomic-materials industry. That appeared to be the thing to do at the time, for reasons related to the facts of atomic energy, not for ideological reasons taken out of some book of economic dogma. The most rock-ribbed midwestern town I know has for many years owned and operated its own electric power and light plant. Is this then a Socialist town? Hardly. Its water service has been privately owned for the same period. There is a privately owned university; a public junior college. No one considers that these things are inconsistent; and, of course, they are not, except to the dogmatist who thinks we have a fixed system. In the same town there is a farmers' feed cooperative that is not quite private or quite public, operating side by side with a big privately owned feed company. There are private banks, there are nonprofit insurance companies, there are State-owned liquor stores. We would never consider adopting Government ownership or control of newspapers partly because of their educational character; but our school system, the cornerstone of American education, is almost entirely publicly owned and managed. This is all part of the familiar picture of American diversity, of American flexibility.

The fact is that we have hardly an ounce of economic dogmatism in us. This characteristic diversity of ours, this capacity to adapt ourselves to any need, stands us—and the world—in good stead tonight. For in Western Europe there are many different kinds of economic undertakings and methods of control; and as befits world leaders we are peculiarly equipped by reason of our own economic diversity to deal effectively with each of these, without sacrifice of our own unifying sense of purpose and direction.

We ourselves should be very clear about American fundamentals, as we move into the most fateful role we have ever played in world affairs. For our leadership in large part depends upon our continued capacity to demonstrate how superior, in human terms, is our way of living. If I am right in what I have been saying, then it is important—desperately important—that we be clear in our own minds about the true sources of our strength; that we nourish and safeguard the ethical principles that make us strong.

Now no candid person—no honest person—would deny that there are today some disturbing tendencies in our country away from this concern for the individual, away from our standards of fairness between men. We are witnessing in some quarters as ugly a scene of hoggishness and money-mania as we have seen since the days of the twenties. Many of those who spent the years of their youth fighting for this country returned to find themselves the victims of legal crookedness and outrageous speculation. These and other evidences of disregard for our ethical precepts do exist in some quarters; and to the extent that they exist they poison the wells of our material as well as our spiritual strength.

These are days when we should recall the stirring words of old Walt Whitman:

"It is not the earth, it is not America who is so great,
It is I who am great or to be great, it is You up there, or any one,
It is to walk rapidly through civilizations, governments, theories,
Through poems, pageants, shows, to form individuals.
Underneath all, individuals, I swear nothing is good to me now that ignores individuals."

Price Control in Peacetime

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from a recent issue of the Wakefield (Mass.) Daily Item:

PRICE CONTROL IN PEACETIME

Prices are high, and, as a result, some people are beginning to look nostalgically back at the days of price control.

Movements are afoot in various parts of the country to revive something resembling the OPA.

The old habit of looking for an easy way out of trouble by cracking a joke, borrowing another few billion dollars, or writing a law seems to still be with us, although the time for such foolishness is clearly past.

Price control was an emergency wartime measure to force maximum war production.

It made no difference if an artificially low price on a certain nonessential article drove that article from the market; it resulted in the diversion of more energy into war material. Patriotism impelled the people to support any measure that would help bring hostilities to a successful end. That was why they sanctioned price control.

But there is no excuse for price control in the United States in peacetime. It would mean the scrapping of American ideas and the creation of a bureaucracy such as is throttling England.

It would mean political control over every detail of our lives.

Hope would give way to despair as productive activity was blocked by senseless red tape.

Controlled price tags would become a farce as there would be fewer articles to hang them on.

The black market would become the true supply-and-demand market of the country. The consumer, along with honest producers and retailers, would suffer.

The United States is a land of opportunity for energetic individuals. It is about the only spot left in the world where there is hope. Let's keep it that way.

Current Conditions Abroad—A Report to the People of Philadelphia by Hon. Hugh D. Scott, Jr., of Pennsylvania

EXTENSION OF REMARKS
OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. BOGGS of Delaware. Mr. Speaker, a recent radio broadcast by our distinguished colleague the gentleman from Pennsylvania [HUGH D. SCOTT, JR.], on current conditions abroad aroused wide attention in the Philadelphia area. His observations and report are of such vital interest that his colleagues and the people should have the benefit of it.

The broadcast on radio station WCAU on the evening of November 13, 1947, in the form of an interview by Mr. Charles Shaw, foreign correspondent for CBS, was as follows:

Mr. SHAW. This is a Congressman's report to the people. The Congressman is Representative HUGH D. SCOTT, Republican, of Pennsylvania, who represents Logan, Olney, Germantown, and Roxborough; and this is Charles Shaw to interview Mr. SCOTT. Congressman SCOTT is a member of the Subcommittee on Civil Aviation of the House Committee on Interstate and Foreign Commerce. As a member of that subcommittee, he has just returned from a 30,000-mile trip around the world, during which he visited 19 countries. The subcommittee's primary interest lay in the promotion of American aviation and of America's share in world trade; but Congressman SCOTT gathered information about a lot of other things, too. Before we go into details, Mr. SCOTT, how about a brief summary of why and where you went and what you did?

Representative SCOTT. Until last June 30 the President had authority under the War Powers Act to transfer to the Civil Aeronautics Administration airports, navigational aids and other air facilities abroad which were no longer required by our military forces. These facilities are much needed by American civil air lines, such as TWA, Pan American, Overseas, and Northwest Airlines.

We had more than 85 meetings in 46 days with our military representatives, including the high commissioners and chiefs of intelligence in all of the occupied countries, with our Civil Aeronautics representatives, with representatives of American and foreign air lines and with prime ministers, chiefs of states and cabinet officers of foreign countries, and particularly with the Minister of Communications or Civil Aviation in each country.

Mr. SHAW. What kind of reception did you get?

Representative SCOTT. We found the resident Americans abroad extremely glad to see us and very anxious to pour into our ears their comments, not only regarding civil aviation, but with regard to America's position in Europe and the Orient, generally.

Among persons we met who gave us valuable information were General Clay, the high commissioner in Germany; General Keyes, high commissioner in Austria; General Hodge, high commissioner in Korea; and General MacArthur, supreme commander in Japan; as well as all of the principal members of their staffs. We conferred also with President Auriol, of France; Chancelor Figl, of Austria; the President of the Philippines; the Prime Ministers of China and Siam; the Governor of Stamboul; and with our Ambassadors and their cabinet members in most of these countries.

Mr. SHAW. I understand you had an audience with the Pope.

Representative SCOTT. Yes; we were particularly impressed with our audience with His Holiness, whose wide and profound grasp of world conditions is outstanding and whom we were fortunate enough to visit at a time when he was free to discuss world affairs at considerable length. Incidentally, much of the discussion with His Holiness turned on the subject of the ever-present menace of communism, a subject never very far from the minds of any of us in view of what we had seen or what we heard.

Mr. SHAW. A lot of Congressmen have been traveling around recently. Generally, I think that's a pretty good idea.

Representative SCOTT. So do I. If I had the say-so, I should like to see every Member of Congress do some traveling for at least 30 days every year, because our commitments abroad are so vast, and the burden on our taxpayers is so great that I know of no other way in which Members of Congress can get at the facts. Getting at the facts is terribly important to all of us, because in some instances we can high light any shortcomings, we can discover economies which ought to be practiced, and most of all we can report to the people who employ us as to how the American tax money is being spent and whether it is being spent wisely and well. This sort of report I am now making is just what I have in mind. It used to be the custom of commentators and columnists to make fun of congressional junkets, and there may have been some justification in some cases, but it is my judgment that the cost involved in having Members of Congress see for themselves this summer will be repaid a thousandfold in experience which could have been obtained in no other way.

Mr. SHAW. Well, I understand your group paid at least half your own expenses; so your trip didn't cost us much at all. Now, to get to the heart of your report. How did you find things in Europe?

Representative SCOTT. Conditions in Europe generally are very bad. It is my observation that they are not exaggerated. The harvest in France is the worst in 100 years. Many of the people of Central Europe will be bitterly cold and very hungry this winter. Southern Europe, probably due to its warmer climate, will not be quite so badly off. Conditions in Japan are not quite as bad as in Germany and Austria, because within the limits allowed to them the Japanese are working hard and have rebuilt their cities to the extent of about 50 percent. Our occupation policy in Japan generally seems to be more successful than in Europe. In all countries visited, the fear of communism and hatred of the Communists is very marked indeed.

Mr. SHAW. How do they feel about the United States?

Representative SCOTT. General good will toward America still exists everywhere except in Egypt, but there is a most unusual feeling prevailing that America will abandon Europe and Asia to satisfy Russia. These people are not yet convinced that we will stand by our commitments. It is my belief that communism is its own worst enemy, but at the same time it is true that democracy seems to have more friends than zealous adherents.

Mr. SHAW. What do you consider the world's hot spots in our cold war with Russia?

Representative SCOTT. Behind the Iron Curtain in Austria, and in Trieste, and in Korea. I believe they are the three worst spots in the world. They are arresting many of our soldiers who drive or fly beyond rigidly narrow corridors in which the Russians in their zone keep us confined. I am sorry to say that until very recently we had not adopted as rigid a policy toward the Russians, but I am told we now assume the same attitude against them in connection with any situation they assume against us. For example, if they arrest an American, we arrest a Russian. We built an airport near Vienna which we are not permitted by the Russians to approach except along a single narrow road. To leave the road invites almost certain arrest. It still strikes me as outrageous that even General Clay in Germany cannot fly from Berlin to the American zone at Munich in a direct route but must fly twice as far through a Russian dictated air corridor and by a circuitous route around Berlin to the north of Germany and then turning south at right angles to Munich. These irritations are numerous, continuous, and intentional and every responsible person in our occupation forces asserts the belief that the Russians do not wish to cooperate with us and are engaged in a planned program to wait us out in Europe and to take over all of Europe if and when we abandon it to them, as they expect.

Mr. SHAW. Whan can we do about that, Mr. SCOTT?

Representative SCOTT. So far as I am concerned it is important to prove that the Russians are wrong and that we will remain where we have promised to stay in Europe until fair treaties of peace have been signed, democratic elections held, and governments established whose frontiers will be guaranteed by all of the world powers whose given word still means anything. For that reason we must maintain a strong army, navy, and air force in America and this is going to cost the taxpayers money—there is no doubt about it. While I am on the subject, it is perfectly silly for the administration to say to a special session of Congress, you must find a way to reduce prices and at the same time send a substantial portion of our goods abroad, which in turn increases the bidding among our own people and therefore raises the prices of the goods which are left.

Mr. SHAW. That, to me, Mr. SCOTT, seems to be the problem—to control that bidding for scarce items. However that's a subject that would require more time than we have to discuss. How do you feel about aid to Europe, in general?

Representative SCOTT. Our commitments are such that we cannot ultimately reduce the burden to the American taxpayer of the occupation costs until we find the means of stabilizing the relationship between production and demand abroad and the administration's policy requires that we send goods abroad for that purpose. We are still trying to keep this a bipartisan foreign policy and

I think we have got to go along with the sending of these goods abroad providing they are administered by persons whom the Congress and the people can trust, and provided the funds are used to restore the economy of other nations in a spirit of enlightened self-interest so that our own economy will not go down in the general debacle.

Mr. SHAW. Can you illustrate what you mean?

Representative SCOTT. Let me give you a good example: our occupation cost in Germany is 16 times greater than it should be for any items purchased against German production because we pay at the official rate of 10 marks to the dollar, whereas most business in Germany is conducted on the black market rate of 160 marks to the dollar. By the same token our occupation cost in Austria is 13 times as high and in Japan 6 times as high. Stabilization of these currencies would therefore mean a great saving in occupation costs to American taxpayers.

Mr. SHAW. And if the currencies aren't stabilized?

Representative SCOTT. Failure to do anything about Europe will simply skyrocket our occupation costs, will ultimately prevent our engaging in foreign trade, and will throw us upon the horns of a dilemma, namely, to pull out of Europe, write off the cost of the war and of the occupation, and arm to the teeth against a Russian Communist expansion which will certainly reach to Great Britain and to north Africa, or to maintain our occupation forces at constantly prohibitive rates as the soaring cost of goods increases astronomically while death and disease and chaos run wild.

Mr. SHAW. Some people would like us to pull out of Europe, don't you think?

Representative SCOTT. Yes; some of my friends have said to me that we ought to let Europe stew in its own juice and that it will not matter too much if some of them starve. It ought to be enough to remind the unthinking that spreading starvation means spreading disease and disease knows no international boundaries. The very growth of international air travel, of which we are so proud, would also make pretty certain that we would ultimately share in the spread of disease, as we would in the spread of international bankruptcy.

Mr. SHAW. How is aviation coming along, Mr. SCOTT?

Representative SCOTT. Our air lines are continually expanding and air freight is developing steadily. For example, in Siam we learned of pygmy elephants being carried by air. Most of the foreign nations we visited have or are projecting air lines of their own, which will give increasing competition. It will be necessary for us to back our air lines to the limit, as the British are doing, if we are going to make a better showing in the air lanes of the future than we have done during the better part of the past century on the sea lanes.

I might add that wherever we went we ran into the British parliamentary delegations, composed of both Laborites and Conservatives, who were obviously promoting trade and good-will for Great Britain. I must confess that at times we felt like competing foreign salesmen when we found ourselves together on the same doorstep.

Mr. SHAW. Did this trip of yours change any of your ideas, Mr. SCOTT?

Representative SCOTT. Yes. Many of my conclusions have been reached at considerable cost to my own illusions and it is not easy to have to change one's own views, but I do not believe that any of the Members of the House and Senate who have been traveling this year will survive the experience without a healthy reorientation of their views in varying degrees.

Mr. SHAW. Did you actually run into other Congressmen who had changed their minds after traveling abroad?

Representative SCOTT. Yes; I did. They're all convinced that the aid to Europe program has to be carried through. The only dispute is as to the methods. I know of four outspoken isolationists who have completely changed their views about our role in world affairs.

Mr. SHAW. Do you think Europe's doing enough to help itself, Mr. Scott?

Representative SCOTT. I have a strong conviction that Europe is not working as hard as it might, that no one seems to be willing to face up even to a 48-hour week. With the general desire for more pay for less work, there is a tendency to blame other peoples for their own misfortunes, and where some of our idealologists have gained a foothold, they have contributed by their advice and assistance to a startling lack of production in some countries.

Mr. SHAW. But, Mr. Scott, don't you think that some of that apparent disinclination to work a long day may be due to the fact that those people are very tired after more than 8 years of war and dreary postwar life, of inadequate diet, of man-killing work during the war years. In my 3 years abroad, when I had to live on European rations, I used to marvel sometimes that they worked as much as they did.

Representative SCOTT. That's quite true, Mr. Shaw, but it does point up my thought that if we help them to their feet, they must work harder and produce more, to help themselves.

Mr. SHAW. You make it quite clear, Mr. SCOTT, that you recognize the necessity and want others to recognize the necessity of going to Europe's aid. You said before that there are disputes as to methods. What is your method?

Representative SCOTT. All that I have said about American participation in foreign aid should be coupled with this caution. I am for it only if assistance is administered by capable and trustworthy American citizens and only where it is obvious that the use of the funds will make these nations self-supporting in the shortest possible time economically speaking. American resources are not a bottomless pit, this sort of thing cannot go on forever, and the policy of our Government up to date has proven wasteful and destructive of American assets.

Mr. SHAW. I suppose you heard plenty about waste over there?

Representative SCOTT. Nearly every American in China believes that most of the UNRRA funds there were shamefully wasted and no American in China wants any American money spent by Chinese officials.

The waste of American assets throughout the world has been a shocking and a deplorable thing. But, as often happens in business, it is necessary to make a further expenditure in order to salvage something from the wreckage. We can either lose it all, and perhaps have another war, or we can make this one great effort to salvage what we can from the general debris. I think we have got to go through with our commitments.

Civil Rights Report Is Impractical, Would Imperil American Freedom

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Mobile (Ala.) Press-Register under date of November 9, 1947. I believe this editorial voices the opinion of the overwhelming majority of the citizens of the Southern States, and of many in other sections of our Nation, who feel that the people of the South are best able to work out their own problems:

Not only southerners, but all Americans, of any race, have reason to be dismayed by the recent Report of the President's Committee on Civil Rights.

The authors of the report, blinded by emotional idealism, voiced conclusions not justified by the evidence compiled and recommended Federal regulations which would violate the existing civil rights of citizens and nongovernment institutions and organizations.

The report is a perfect example of a lack of common sense. It is a demonstration of impractical and headstrong theory running away with sound reasoning. It is a case of those who sincerely desire tolerance permitting that desire to carry them into the very depths of intolerance.

More than all this, however, the goal as set by the President's committee would be a direct assault on the American way of life. It would mean bureaucratic interference, enforced by Federal authorities in the personal and private affairs of every individual, business establishment, and institution.

It is not surprising that the report dealt so harshly with the South. There were only two southerners on the committee of 15. This lack of adequate representation for the South is reflected in the report's lack of perspective and in its complete indifference to the possible consequences of what the report recommends.

The lack of common sense in the report is demonstrated conclusively in the committee's majority proposal that all racial segregation be abolished immediately.

The committee's report recommends that segregation be prohibited by Federal law in schools, colleges, hospitals, housing, recreation facilities, and transportation. Although the report is not too clear on the subject, this would apply, presumably, to privately endowed, owned, and operated institutions as well as to those supported with public funds.

There is an unalterable conclusion that the forces behind this recommendation seek enactment of a Federal law which would be enforced against all churches, private schools, private hospitals, and at least to physicians and surgeons, if not to other professional people. In due time, and perhaps on the basis of this proposed law, there would be a clamor for enforcement of this law against labor unions, fraternal orders, and even social clubs.

Under this proposal, States which do not fall in line with this impractical, ridiculous, and dangerous mandate would be deprived of Federal aid funds for education, health, housing, and other public services. Nothing could be more foolhardy than to insist on such a program.

Segregation is a part of the South's pattern of living. It will continue to be a part of the South's pattern of living. For this committee to imagine, or to pretend to imagine, that the practice of segregation can be abolished overnight, with the approval of local court juries, and without bloody consequence, is preposterous to an unbelievable extreme.

This section of the report does nothing more than embarrass those southerners, white and colored, who have made great strides in the field of race relationships, with definite, distinct, and notable benefits to the minority whom the report pretends to serve. It entirely overlooks the fact that to deprive a State of Federal aid funds would deprive this minority of far more than it does the majority. It fails to recognize that Southern

States have made real steps toward a just apportionment of all community services and benefits, and are making further steps along that line almost daily, with far better results than could be gathered from dictational enforcement of an unworkable anti-segregation law.

In its recommendation for a Fair Employment Practice Act, the President's committee would have the Federal Government do more than take jurisdiction over Federal employment. It would step into private business to tell businessmen whom they could hire, and perhaps in what jobs they could use certain individuals they had been forced to hire.

The committee proposes that this FEPC be enforced by a central bureau in Washington, with nine regional offices in key cities throughout the country. "These offices," the report says, "should serve as receiving points for complaints arising in the areas and as local centers of research, investigation, and preventive action."

Though the members of the committee may not realize it, this is one of the most dangerous proposals ever made by any group with official standing. It would provide the perfect excuse for a snooping Federal agency interfering with the legitimate civil rights of free Americans. It would be a violation of one of the most cherished fundamental rights, about which the committee appears so concerned. The proposal contains germs of disease far more deadly than those which the committee seeks to cure.

There are other features of this report which make it preposterous. The committee would have Federal law supersede State law in dealing with law enforcement; it would tell the States what qualifications they can demand of voters; it would issue a mandate that a property owner cannot do with his property what he pleases.

In reference to its demand for new Federal laws superseding State laws in the investigation and prosecution of offenses, the committee report cites specific cases in which investigation and prosecution has been handled by Federal authorities under Federal law.

There is no evidence and little contention that the failure of court juries to return convictions in these cases was due to the presence of inadequate Federal laws, or State laws, on the statute books. There is, on the other hand, ample evidence that present State and Federal laws are adequate.

If the committee is proposing that defendants be denied trial by jury, or that convictions be forced no matter what the evidence or lack of evidence, then it is guilty of a suggestion so un-American as to be repulsive in its entirety.

In short, this report—based far more on unsound theory than on practicability—would imperil and jeopardize the rights of all Americans, including the very minorities whose rights it seeks to uphold.

Until a more sensible solution to the problems involved is advanced, this report of the President's committee will do nothing more than stir up discord. It should be forgotten as soon as possible.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, it is a pleasure to include the following radio broadcast made by my distinguished colleague, Congressman JOHN DAVIS LODGE, Fourth District of Connecticut, over Station WSPR in Springfield, Mass., during the recess:

I know that I need not recall to you in any detail the part played by Poland as our loyal and gallant ally in the war. Her military effort inside and outside Poland on practically all European fronts—on land, on sea, and in the air, the courage of her indomitable people, their fighting spirit and readiness to sacrifice their lives for independence and the principles that stake in the common cause greatly surpassed all estimates. In fact, Poland's record as a fighting nation, as as unswervingly faithful ally, as the only nation, which, regardless of Hitler's unprecedented barbarisms never produced a quisling, stands out unexcelled.

Now, the problem of Poland is one of great importance and urgency. It is a problem which many people here and abroad regard as the test case of American resolve for questions of international justice and that fair play among nations which alone can provide an enduring basis for peace.

The American people realize that, particularly with respect to Poland, the United States has suffered and is suffering strategic set-backs and loss in prestige all over the world.

This active interest in international affairs is further demonstrated in the press and in the unusual demand for literature dealing with problems of our international relations. In my own survey of public opinion, it appears to me that aside from the normal political considerations and desires arising out of readjustments to peacetime economy, basic problems of taxes and wages, and living costs, there is in America a ground swell of apprehension regarding the conduct of our foreign affairs. As so often happens under our system, the people are in this instance a step ahead of their own Government.

It appears to many Americans, that we have not only sacrificed moral principles, but also needlessly weakened our strategic and economic position in a confused effort to preserve by appeasement, something of what we gained by force of arms.

These concessions largely predicated on military position at the end of the war make it increasingly difficult for us to use our strength to achieve the peace which is the declared purpose of the United Nations organization.

In the betrayal of Poland, a particularly tragic case, we not only failed to live up to our promises, we also participated in the partition of Poland which has made our later problems much more difficult to solve.

For my own part, I am convinced that it is better to reach no agreement than to reach a bad agreement. By agreeing to the compromise on Poland reached at Yalta and implemented by further concessions at Potsdam, we assumed in fact, a responsibility for this fifth partition of Poland, and for the imposition of a provisional government composed mostly of Commintern agents known to have been selected by the Soviet oligarchy.

Our Government has failed to obtain the carrying out of the one and only condition upon which it attempted to justify its recognition of that government; namely, the holding of free and unfettered elections.

While I understand fully the desirability of maintaining contact with the Polish people through our diplomatic officials in Warsaw, it should be noted that this continued recognition of the Polish Government by the United States constitutes in the eyes of many people, a recognition of the validity of the very elections which we have officially condemned.

The fact that, in the case of Poland, we are once more given the opportunity to make a definite stand on a matter of fundamental principles, in which our immediate interests are secondary, should afford our Government a welcome opportunity to reassert our determination that these principles shall be established as the true basis for international relations.

Is it not time to admit that our policy urgently requires revision?

The coincidence of moral principles and strategic considerations in the case of Poland seems to me to indicate that Poland should be the starting point for such a new policy.

It is my considered opinion, although we must give firm and patient support to the United Nations organization, we must also take into consideration the elements of power and basic strategy which still operate in spite of the war's end, for we are living in a period of continuing conflict and it is vital that we make full use of our residual strength and strategical position in order to salvage at least some of those things for which the war was fought.

With that idea in mind, may I suggest that, in spite of our dwindling military establishments, in spite of the severe drains which have been made on our financial and industrial resources, we still have substantial bargaining counters left with which to insure the rights of self-determination guaranteed by the terms of the Atlantic Charter. We can in this way regain the initiative which was ours during the war. We can by this method give a vigorous demonstration to the world that we are prepared, in the interests of peace, to exercise the resonsibilities of leadership to which our military and industrial predominance entitle us.

Here is our opportunity to face up to the principles to which we have given eloquent lip service. Here is a challenge to the United States, which took a leading part in the creation of the United Nations, to take a leading part in its perpetuation and enhancement, by calling upon that body to decide one of the most crucial questions of the hour.

Since the Soviet position acquired since VJ-day is largely based on power, can we continue to sacrifice principles when we may ourselves have the peacetime power to make principles secure?

Now, these vast and explosive issues should not be oversimplified, I know, but neither should they be avoided. There's time for decision. The proposed aid to Greece and Turkey and the Marshall plan will give encouragement to the forces of freedom everywhere, if we follow this up with the determination to bring justice to stricken Poland by means of the United Nations; we shall not only be strengthening that body, we shall be solving a critical and urgent problem. In addition, we shall be serving on the world that although we have peace, we know that it cannot be predicated on weakness.

We shall have solemnly proclaimed the exhilarating fact that there are certain principles from which we will not depart and that we are resolved to devote our energies to a peace based on freedom, virtue, and reason.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. CLASON. Mr. Speaker, at a broadcast sponsored by the Polish-American Congress, Inc., western Massachusetts branch, over Station WSPR, on Sunday, November 9, 1947, one of our former colleagues delivered a dynamic address on justice for Poland.

As one who has frequently spoken out in behalf of stricken Poland and her people, I welcomed the opportunity to read the considered views of a former Congressman of outstanding ability, with a keen insight and broad knowledge of international affairs.

I am sure that all Members of Congress will be glad to have the opportunity to read this stirring appeal in behalf of the Polish people.

In 1939 a free independent Poland was brutally attacked by Hitler. It was attacked because it wouldn't give in to Nazi demands—as far stronger countries had. I was in Poland on the eve of that attack. I saw Polish people preparing to lead their little army into battle against German tanks, on cavalry horses. Well, the Poles knew that to meet Hitler's iron hordes on horseback meant slaughter, meant destruction, meant defeat, but they met them. God knows where they got the courage, it seemed such folly. And so it was—it was the folly of the cross, and when Stalin shook hands with Hitler on the Nazi-Soviet pact, Poland was crucified—crucified between two thieves.

Then Poland lived under a reign of double terror. The like of it the world has never seen. Wherever red hands or brown hands could be laid on Polish patriots and leaders, these leaders were put at forced labor, they were thrown into concentration camps, they were sent into Siberian exile, they were liquidated. There were 3,500,000 Polish Jews cremated.

Well, then the Nazi and the Soviet thieves fell out, and Hitler attacked Russia. Only then were the Polish men and leaders who had not already been exterminated by the Reds freed by Russia to form an anti-Nazi army. Well, the Poles don't have to be free to fight. In the very heart of Hitler-held Poland, Gen. Bor Komorowski formed an underground army. On a prearranged signal with Russia and ourselves, General Bor launched an uprising in Warsaw. But the Red Army that stood then at Warsaw's gates and had so smoothly promised to come to General Bor's aid—well, that army never showed. No, it never showed at all. Warsaw was reduced. It was reduced block by block and house by house to a city of rubble and mud, of blood and corpses. All during those days, you remember, America looked on the suffering of Poland and wept, and America promised. We promised in the name of the Atlantic Charter that at the war's end both Germany and Russia would leave Polish soil, promised that Poland would again be free. All day long during the war the American radio blared these promises by short wave to Poland. These promises had the sanction of our President, of the Secretary of State, of the American Congress. And isn't it so, they had the sanction of the whole American people. Were these crocodile tears that Americans wept, were we Americans being giants in our promises then pygmies in our performance afterward?

Well, I think a free American people must judge. Yalta was the measure of our promises. Yalta sanctioned the fifth partitioning of Poland, and Potsdam confirmed it. The week that the hush-hush news of Yalta leaked to the Allied armies, I happened to be visiting General Anders' army. It was fighting under Gen. Mark Clark's gallant United States Fifth on the Italian front. That, you remember, was the army recruited in Russian-held Poland and in Russia after Hitler had two-timed Mr. Stalin. Well, General Anders had marched his men thousands of miles through Russia and the Near East to join our American forces in the African campaign. His men had fought six long years. They had known neither leave nor rotation. Their homes lay ahead of them in enemy hands, and so, they used to say, did their replacements. In that week of Yalta I found it hard to look in the hurt, accusing eyes of General Anders' soldiers. I shall never forget how ashamed I was that day to be an American.

Now for any army but a Polish army, that betrayal by its strongest ally, the one that had wept most and promised loudest—that would have been the signal to quit, to quit in hate and despair. But General Anders' army did not quit. Why? Well, General Anders said to me, he said, "We fought all the way out to keep our country free and we will fight all the way in to make it free. If we don't fight, who in all the world is going to fight for us now?"

Well, you know the rest. You know the slow, mealy-mouthed acceptance by our leaders of Soviet expansion in Poland. You know our double-talk betrayal of Poland's real democratic leaders, the hypocritical countenancing by our Government of that disgraceful farce, the "free and unfettered" elections in Poland. Now there are some who call this conduct prudence and others call it power politics. Well, there are others who impeach it softly as appeasement, but in plain words it's either stupidity or cowardice, and neither of it is worthy of our Uncle Sam.

Hope this doesn't sound political or partisan. Why should Americans tremble to be called partisans of freedom? Should we blush to be found partisans of our country's honor? Should we apologize to be branded partisans of America's best interests? Oh, I wish there were no need to speak this way. It would be a fine thing if we could put Poland's case today on the sole grounds of democratic bounty and Christian charity. But we have got to be honest men and honest women. Poland's misery does more than twist our American hearts. It taunts our American consciences and we are free men living in a free country and we are mixed up beyond any dispute in the mistakes our leaders have made in our name. Well, we haven't inflicted the wounds that Poland suffers, but we have let them widen. And if we have broken no heads in Poland, we have helped to break Polish hearts.

Let me tell you a Polish story in closing. I suppose you would call it a Polish joke. It is a joke, at any rate, that is very popular among the Polish peasants just now. It is particularly popular among the ones who were hurled into jail for refusing to vote as they were told in those "free and unfettered elections."

Now, God, it seems, wanted an angelic estimate of how things were going on on His earth. So He sends the Angel Gabriel to make a survey, and Gabriel returns with this report:

"I visited America, and in America the people were talking of war. But they had cut down their armies, they had destroyed their air forces, and they had done away with all rationing.

"So I visited Russia (said Gabriel to the Almighty) and in Russia their leaders were all talking of peace, but the Russians were building a big army, they were building a vast air force, and they were rigidly controlling all foodstuffs.

"So I came back by way of Poland, and Poland was dominated and even occupied by an alien power. The Polish people had no shelter, they had no clothing, they had no food, they had no army and they had no air force, and they had no atomic bomb. But the Poles were all talking of victory and freedom."

Then God shook His head and smiled at the Angel Gabriel. "Those Poles," He said. "They always did count on me."

Well, it is said that God helps those who help themselves, but when a people is so sick and hungry and homeless—like the Polish people—that they can no longer help themselves, maybe God will help those who help them. So try to, please.

Niech zyje wolna Polska.

Antilynch Bill

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. KEATING. Mr. Speaker, this Congress, controlled by the party of Abraham Lincoln, should not close its doors before it has enacted and sent to the White House for signature an anti-poll-tax and antilynch bill. The House has already acted overwhelmingly to correct the discriminatory situation existing in some States affecting the franchise.

I am today introducing a bill to protect citizens of the United States and other persons from mob violence and lynching. This bill recites the undoubted fact and makes it a finding of the Congress that, notwithstanding the provisions of the fourteenth amendment to the Constitution, citizens of the United States and other persons have been denied the equal protection of the laws through mob violence, in many instances as the result of acts of omission on the part of State or local officials. The bill recites that these omissions on the part of State and local officials are not only contrary to the fourteenth amendment but also to the law of nations, which requires that every person be secure against violence to himself or his property by reason of his race, creed, color, national origin, ancestry, language, or religion, and specifically contrary to article 55 of the Charter of the United Nations, which pledges the United States to promote universal respect for and observance of human rights and fundamental freedoms.

This bill provides a punishment by fine of $10,000 or imprisonment not exceeding 20 years, or both, upon conviction of participation in a lynching and goes on to prescribe a fine of $5,000 or imprisonment not exceeding 5 years, or both, for any official found guilty of having willfully failed to protect a person in his custody from lynching or to apprehend or prosecute the members of a lynch mob.

The measure further provides for compensation to the victim of a lynching or, if it results in his death, to his next of kin in an amount not less than $2,000 and not more than $10,000 to be determined in a court of law. To make this provision effective, it is stipulated that, upon proper certification by the Attorney General of the United States, the amount of such a judgment may be paid out of unappropriated funds in the Treasury of the United States and be deducted from the amounts payable to the State, where the violation occurred, by reason of any of the many Federal grant-in-aid programs. It is believed that this provision will have a salutary effect in bringing the pressure of sovereign States to bear on local officials to wipe out this dark blot on the fair name of our great country.

To our credit let it be said that fortunately such crimes of violence as those to which this bill is directed seem to be on

the wane. It may be conceded also that the long-range solution of this problem lies rather with the aroused conscience of our people than in the enactment of punitive measures. Yet the fact remains that from the year 1889 through 1944 lynch mobs have caused the death of 5,144 persons in the United States. These are the latest figures available to me. Many of these unfortunates who suffered the extreme penalty had never been guilty of anything more than a minor misdemeanor or sometimes simply an indiscreet statement or motion. It is cold comfort to the family of the victim of such an outrage in the year 1947 to say that the situation is improving. This Congress should act and act now to put an end to a vicious and indefensible practice.

Either through choice or chance, our Nation has assumed a position of world leadership. We have made strides of material progress unparalleled probably in any other era of history. We shall, however, be faithless to our world responsibility and the great challenge and opportunity which is ours if we fail to match this advancement with comparable progress in matters of the spirit. We righteously and, indeed, sincerely preach to the world the gospel of the dignity of the individual and advocate the perpetuation and strengthening of fundamental freedoms, which must include freedom from violence and from the fear thereof. Yet these protestations become as "sounding brass and a tinkling cymbal" when we permit a condition to exist in our own country where, even though infrequently, our citizens are permitted to become the victims of mob violence, usually because they are a part of a minority either in race, creed, color, national origin, or religion. The speedy enactment of legislation to remedy this situation is necessary not only for our own domestic tranquillity, but also the maintenance of our proper position as a leader of other nations.

The objection most frequently voiced to antilynching legislation is that it is a matter to be handled by the individual States and that a Federal antilynching act is tainted with unconstitutionality. I have given some study to this legal question and am convinced that, if the decisions of the Supreme Court are to be taken at their face value, the Congress not only has the power but the duty to protect citizens of the United States under the guaranties of the fourteenth amendment from acts of omission on the part of State officials, as well as acts of commission.

Section 1 of the fourteenth amendment to the Constitution of the United States states that all persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside. Furthermore no State shall abridge the privileges and immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor shall it deny to any person within its jurisdiction the equal protection of the laws.

Section 5 states that the Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

There are indications that the authors of this amendment intended that Congress should have power to provide against the denial by rights by the States, whether the denial was in the form of acts of omission or acts of commission—see Flack, the Adoption of the Fourteenth Amendment. It will be recalled that the background period of this amendment was a stormy era in our history; that after the Civil War a bitter controversy arose in which President Johnson sided with the Southern States in the contention that they were entitled, as a matter of constitutional right, to unconditional recognition and readmission into the Union. Encouraged by the President's support, these States were unfortunately led to assume an attitude of defiance and to enact harsh laws directed against Negroes. The prevailing sentiment in the Northern States, on the other hand, was that all the fruits of war would be wasted unless guaranties were secured protecting white and Negro alike from arbitrary and oppressive State action in the South—see Guthrie, Lectures on the Fourteenth Amendment. In the atmosphere of this controversy the proposed amendment was submitted to the States.

Court construction of the amendment and the statutes which sought to implement it were circumscriptive to the extent that some of the broader powers which were sought to be conferred upon the Federal Government were never completely or effectively invoked. At times the Supreme Court has enunciated broad general principles but nevertheless decided the case on other grounds. An example of this noble language followed by narrow construction is the case of *U. S.* v. *Cruikshank* ((1876) 92 U. S. 542, 555), where Mr. Chief Justice Waite, speaking for the Court, said:

> The equality of rights of citizens is a principle of republicanism. Every republican government is in duty bound to protect all its citizens in the enjoyment of this principle, if within its power.

After making this bold assertion, he went on to say that the only obligation resting upon the United States was to see that States do not deny the right.

Broad statements of principles laid down in other cases are even more compelling. The following are illustrative *U. S.* v. *Reese* ((1876) 92 U. S. 214, 217):

> Rights and immunities created by or dependent upon the Constitution of the United States can be protected by Congress. The form and manner of the protection may be such as Congress, in the legitimate exercise of its legislative discretion, shall provide. These may be varied to meet the necessities of the particular right to be protected.

Civil Rights Cases ((1883) 109 U. S. S.):

> It (the fourteenth amendment) does not authorize Congress to create a code of municipal law for the regulation of private rights; but to provide modes of redress against the operation of State laws, and the action of State officers, executive or judicial, when these are subversive of the fundamental rights specified in the amendment (p. 11).

> And so * * * until * * * some State action through its officers or agents has been taken, adverse to the rights of citizens sought to be protected by the fourteenth amendment, no legislation of the United States under said amendment, nor any proceeding under such legislation, can be called into activity: for the prohibitions of the amendments are against State laws and acts done under State authority (p. 13).
>
> Many wrongs may be obnoxious to the prohibitions of the fourteenth amendment. * * * Such for example, would be * * * allowing persons who have committed certain crimes * * * to be seized and hung by the posse comitatus without regular trial (p. 23).

Barbier v. *Connelly* ((1885) 113 U. S. 27, 31):

> The fourteenth amendment * * * undoubtedly intended not only that there should be no arbitrary deprivation of life or liberty, or arbitrary spoilation of property, but that equal protection and security should be given to all under like circumstances in the enjoyment of their personal and civil rights.

Ex parte Virginia ((1879) 100 U. S. 339, 347)—The purpose of the fourteenth amendment—

> was to secure equal rights to all persons, and, to insure to all persons the enjoyment of such rights, (and) power was given to Congress to enforce its provisions by appropriate legislation. Such legislation must act upon persons, not upon the abstract thing denominated a State, but upon persons who are the agents of the State in the denial of the rights which were intended to be secured. Such is the act of March 1, 1875 (carrying penalties for exclusions from jury service on account of race, color, or previous conditions of servitude), and we think it was fully authorized by the Constitution.

Carter v. *Texas* ((1900) U. S. 442, 447):

> Whenever by any action of a State, whether through its legislature, or through its executive or administrative officers, all persons of the African race are excluded, solely because of their race or color, from serving as grand jurors, in the criminal prosecution of a person of the African race, the equal protection of the laws is denied to him, contrary to the fourteenth amendment of the Constitution.

This statement was repeated in the same terms in *Rogers* v. *Alabama* ((1904), 192 U. S. 226, 231), and again in *Martin* v. *Texas* ((1906) 200 U. S. 316, 319). The principle is equally applicable to a similar exclusion of Negroes from service on petit juries. *Strander* v. *West Virginia* ((1880) 100 U. S. 303). And although the State statute defining the qualifications of jurors may be fair on its face, the constitutional provision affords protection against action of the State through the administrative officers in effecting the prohibited discrimination. *Neal* v. *Delaware* (103 U. S. 370, 397); *Norris* v. *Alabama* ((1935) 294 U. S. 587, 589).

Truax v. *Corrigan* ((1921) 257 U. S. 312, 332):

> The due process clause requires that every man shall have the protection of his day in court, and the benefit of the general law, a law which hears before it condemns, which proceeds not arbitrarily or capriciously but upon inquiry, and renders judgment only after trial, so that every citizen shall hold his life, liberty, property, and immunities under the protection of the general rules which govern society. *Hurtado* v. *California*,

110 U. S., 516, 535. It, of course, tends to secure equality of law in the sense that it makes a required minimum of protection for everyone's right of life, liberty and property, which the Congress or the legislature may not withhold. Our whole system of law is predicated on the general fundamental principle of equality of application of the law. "All men are equal before the law," "This is a Government of laws and not of men," "No man is above the law" are all maxims showing the spirit in which legislatures, executives, and courts are expected to make, execute, and apply laws.

The guaranties of protection provided in the fourteenth amendment extend to all persons within the territorial jurisdiction of the United States without regard to difference of race, of color, or of nationality—see *Vick* v. *Hopkins* ((1886) 118 U. S. 356). They cover the action of the curators of a State university who represent the State in carrying out its educational policy of separating the races in its educational institutions by refusing to admit a Negro as a student in the university law school because of his race—see *Missouri ex rel. Gaines* v. *Canada* ((1938) 305 U. S. 337).

Where the proceedings in a State court, although a trial in form by reason of the use of United States troops, were only in form and the appellants were hurried to conviction under the pressure of a mob without regard for their rights, the trial, is without due process of law and absolutely void—see *Moore* v. *Dempsey* ((1923) 261 U. S. 86).

This antilynching bill affords the Congress a new opportunity for testing and expanding these principles and for discovering at this late date whether or not the fourteenth amendment means what it says and whether or not it grants to Congress the power intended to be granted by its sponsors.

Many will say that there are State and Federal laws which are ample. Perhaps there are but is their enforcement ample?

In this regard attention is invited to the drastic provisions of the act of April 20, 1871 (R. S. 5299; U. S. C. 50: 203) which reads:

Whenever insurrection, domestic violence, unlawful combinations, or conspiracies in any State so obstructs or hinders the execution of the laws thereof, and of the United States, as to deprive any portion or class of the people of such State of any of the rights, privileges, or immunities, or protection, named in the Consitution and secured by the laws for the protection of such rights, privileges, or immunities, and the constituted authorities of such State are unable to protect, or, from any cause, fail in or refuse protection of the people in such rights, such facts shall be deemed a denial by such State of the equal protection of the laws to which they are entitled under the Constitution of the United States, and in all such cases, or whenever any such insurrection, violence, unlawful combination, or conspiracy opposes or obstructs the laws of the United States, or the due execution thereof, or impedes or obstructs the due course of justice under the same, it shall be lawful for the President, and it shall be his duty, to take such measures, by the employment of the militia or the land and naval forces of the United States, or of either, or by other means, as he may deem necessary, for the suppression of such insurrection, domestic violence, or combinations.

It is submitted that there should be in the statutes at large some law affording protection and guaranteeing redress without the extreme expedient of calling out the armed forces. Such protection and redress are available in this proposed antilynching bill which places the Federal Government squarely behind the principle that all citizens of the United States shall have the equal and full protection of the laws and that this protection shall cover acts of omission as well as acts of commission by State and local authorities.

This Nation has just fought the costliest war in history in order that the forces of right, justice, and humanity might prevail over those of tyranny and oppression. It is time for us to destroy the vestiges of the concept of this defeated ideology as exemplified in the lynch mob in our own country. That is the purpose of this antilynching bill, which I commend to the favorable consideration of the House.

Irrigation Men to the Front

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. HORAN. Mr. Speaker, naturally we in the West are very much interested in the policies outlined by the National Reclamation Association. Under the privilege granted to extend my own remarks in the Appendix of the RECORD, I am happy to enclose a copy of the reactions to the recent meeting held in Phoenix, Ariz. It is indeed encouraging to see a more balanced position being taken by this association so all-important to the West:

IRRIGATION MEN TO THE FRONT

(By Rufus Woods)

ON A SOUTHERN PACIFIC TRAIN.—On our way home from the meeting of the annual convention of the National Reclamation Association. This great organization which has been organized through many years is made up of men from 17 Western States.

It has been in a position to be of invaluable service to the entire West. It has been useful in the past. But in the recent 3 or 4 years, it has been going astray from its full duty. In the past 2 years it has gotten so far off its recognized duty that the irrigation men have been pulling away their support. They have been attending and paying only their minimum fee of $2 a year to retain their membership.

The association went into the hands of men who acted as though their whole duty was to the private power companies—instead of the cause of reclamation. Reclamation was becoming a side issue. Matters came to a head 1 year ago when the association heads took it upon themselves to foster legislation by which the power rates of Grand Coulee and other dams of the West could be doubled.

The reclamation men—that is, those representing the irrigation districts of the West—were willing to be fair to the power companies and to the railroads. But they were not willing that these two groups should take control of the reclamation association and use it to carry on their power fight.

And so as the irrigation men went down on the train last week on their way from the Northwest to Phoenix, they were on the fight from the start. It was a friendly fight, of course. They knew all the men with whom they were cast on the train. But they gave it out in no uncertain tones that in their opinion the National Reclamation Association and the Washington State Association had better get back on the irrigation track, or they wouldn't get any support from the irrigation districts.

Among the real leaders in this movement are the men who make up the boards of the Columbia Basin project. One member expressed it very bluntly: "The National Reclamation Association must get in and help us—and then we can help the association. Otherwise we cannot." These Columbia Basin men had counted noses and found only one-fifth as many irrigation men as others represented.

One year ago at the annual meeting in Omaha the association leaders rode roughshod over the men who represented the irrigation districts. The irrigation men watched the heads of the association join in on a program to put over the most nefarious legislation in Congress ever attempted.

The real irrigation men of the West know that to pay the cost of irrigation there must be funds to help pay the cost. The cheap irrigation projects have all been built. Virtually all future irrigation must be built from funds brought in from power from these dams now built and to be built.

The average irrigation man is fair in his attitude to both the railroads and to the private power companies. They are willing to see the private power companies hitch on to the power brought out on these main transmission lines and help distribute it. But they are not willing to see this gigantic combination headed up in New York throttle down legitimate development of the water resources of the West.

In the 3-day meeting in Phoenix the irrigation men took heart. They lacked only a few votes of turning down the former secretary of the national association, F. O. Hagie, when he came up for member of the board of directors. Running against him was J. A. Weber, of Quincy, whose name was popped into the caucus on short notice. The other group had been organizing for months. Organized to the handle, they took another of those shocks similar to that when the organizations through the West united to oppose those dangerous bills in Congress which they promoted a year ago.

The attitude of the Columbia Basin men is that if a raise in power rates is justified, it can be done later. But at the present time the millions rolling in from the sale of power indicates that the price is high enough at 2 mills a kilowatt-hour to pay out on the dam and the transmission lines with interest, and at the same time pay three-fourths of the cost of putting the water on the land.

The old board for the past year had squandered much of the organization's money in trying to put over those several bills in Congress. So President Sawyer, in explaining the situation in his annual message, said:

"I can testify * * * that I have never seen an undertaking * * * so misrepresented both in official and other quarters * * * and never have I seen a propaganda machine working more smoothly to discredit your association, its officers, and its purposes.

"Your association lacks both a propaganda machine and the means of building one. Your officers and committees therefore have been unable to counter either in the field or in Washington itself, the slander that has been voiced and the libel that has been uttered regarding them and their motives."

But it wasn't propaganda nor was it libel. Rather it was a veritable ground swell of public opinion. Those bills inimical to the West and particularly to the Grand Coulee region were early sensed for what they were. Chambers of commerce outside of Seattle, community organizations, irrigation district boards, granges, newspapers generally joined the fight against this attempt to double the rates of Grand Coulee Dam.

And so the meeting at Phoenix was a harmonious meeting—the most harmonious and most satisfactory held for several years past. With the best attendance of any in years, with a proper regard for the main issue, the great reclamation program, has an opportunity of moving forward, provided, of course, some of the fool mistakes of recent years are not made by the regularly elected officers.

But the real irrigation men of the West have developed a sizeable bump of suspicion. They don't want to see any more smooth bills sprung in Washington, D. C. There will be some smashing political reverberations all up and down the West, we opine, if that is attempted.

High Cost of Living

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Manchester Boddy from the Los Angeles Daily News of October 27, 1947.

I believe that this statement will be of great value to my colleagues in understanding the problem that confronts us with regard to the present high cost of living.

Too many dollars chase too few things. So we impose rationing and price control. This is calculated to stop the pressure that sends prices sky high. But it also leaves a huge pile of unspent dollars in the hands of people who want to buy. To get these dollars we reduce the real income of citizens by imposing heavy taxes and cutting down on Government subsidies. This has the effect of transferring vast sums of money from private bank accounts to the Government and, as well, to the treasuries of large concerns that produce unrationed things that are free from price control. When this money gets into the hands of Government and private uncontrolled industry it again enters the market and exerts as much, if not more, pressure than it exerted before.

The Government buys in the food market and attempts to assemble vast supplies, often in excess of current production. Industry and business generally take flight from controlled operations and go into activities that offer the maximum opportunity for profit. So the people who start a little control find it necessary to extend price fixing and rationing to all phases of economic activity.

When Government thus lays down the law as to how many things can be produced and what the price of each shall be, it must of necessity extend the law to include complete regulation of working hours and wages. Since, quite naturally, labor, like capital, will flow toward the activity that yields the largest returns, the Government will be compelled to force labor to perform not the kind of work to which it is attracted, but the kind that public necessity says must be done.

Thus, with bewildering swiftness, our American way of life can be changed overnight, as it were, into a full-fledged system of state capitalism under which personal freedom cannot exist.

If we have learned anything from the experience of the past 15 years, it is that water, running down hill, eventually hits bottom. We cannot have rationing and price control in one sector of our economic activity without having it throughout.

This lesson has been too clearly demonstrated to allow the possibility that national leaders who now advocate a partial return to price fixing and rationing have anything but the full treatment in mind. They are able to present a plausible case for an opening wedge, but once they get that the movement, as they well know, will gather momentum and go the full route.

The alternative is full public compliance with President Truman's plea for voluntary saving. Anyone who so desires can make a convincing case against the voluntary system on the grounds that it is inefficient, slow, unequal in its application, and too uncertain. By the same line of argument, I could prove that a year-old tot should be carried from place to place. In learning to walk it falls on its face, scratches its nose, and is most inefficient. Nevertheless, it must learn to walk.

The American people suddenly have been thrust into a situation both new and strange. Overnight they have been forced from a comfortable position of isolation into world leadership. If they are to assume the resulting responsibility they must know all the "why's" and "wherefore's" involved; they must through understanding be prepared for individual responsibility. They will make grievous mistakes. No policy, whether domestic or foreign, will have complete support. Our democratic system is founded on the assumption that there always will be divergent points of view and a constant flow of propaganda inspired by passion and prejudice.

We cannot eliminate these without eliminating democracy itself. Often they perform the useful service of creating a common denominator which serves as the basic policy, not of government alone, but of the people themselves.

Col. Stephen H. MacGregor

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. CLASON. Mr. Speaker, during the active war years the employees of the Springfield Armory established a record for production of the famous Garand rifles which brought high praise to them from every outstanding military leader. During this period the commanding officers at the Springfield Armory worked devotedly in the interests of the great war effort. The last of the commanding officers during the active years of the war was Col. Stephen H. MacGregor. I am sure that all Members of Congress will read with interest and with pride a speech made by Mr. Ivan A. Swidlo, head of the industrial engineering department of the Springfield Armory, at a farewell dinner given by the employees for Colonel MacGregor on August 20, 1947. His remarks were as follows:

We are gathered here to make this fitting tribute of our esteem for one who, as commanding officer of the Springfield Armory, has endeared himself to all of us by his helpful understanding of the problems of the personnel of the armory, which was evidenced by many corrective rules and regulations including many privileges he has put in force here that have benefited all of us.

It may be fitting to add that it was due to his forward-looking ruling that responsibilities should go along with rights and privileges equally for both Army and civilian personnel.

The commanding officer will leave Springfield Armory not only with a feeling of satisfaction, but he will leave with us the memory of his ready assistance that will often call up a reminder of him in the years to come.

It is not often that an opportunity offers itself to us—the civilian personnel of the armory—to indulge ourselves in a pardonable bit of self-praise for past performance that seldom, if ever, meets the public eye or that gains a hearing in the public print, to the effect that we, that is armory personnel, are, and for a long time past have been a paying proposition for the Government and the taxpayers.

That we have produced millions of weapons that have met all specifications, passed all inspections, and that have given complete satisfaction, is a matter of record well known to us and universally accepted as true, so that there is no further need of dwelling on it here. That we have during the past few war years, produced more weapons than had previously been produced in all the 150 years of the Springfield Armory's existence, is a matter either imperfectly understood, or else not quite so well recognized.

However, there was not much said about the cost to the Government. We have, up to this moment, seen no glaring headlines announcing the fact that we produced over 3,500,000 Garand rifles at an average cost of only $26 against a lowest cost of $46 paid to private manufacturer for the same rifle.

Boiling this down to a few figures, this means that the average private manufacturer would have charged the Government at least 77 percent more for every Garand rifle that we produced, and that our operations effected a net saving of $70,000,000 to taxpayers.

These figures are astounding if for no other reason than that they have not as yet received any widespread publicity.

The extent of these operations, and the magnitude of the unprecedented savings effected is something we will leave to the historian, in the sure knowledge that the expression of a "right guy" and a "square shooter" was never more fittingly deserved than by one whose coming departure we will ever regret, our well-liked Colonel MacGregor.

Congressman Gordon Makes Vivid Report on the Poland of Today

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. MUNDT. Mr. Speaker, Congressman THOMAS S. GORDON, of Chicago, who was a member of the committee which I was recently privileged to head on a study of economic and political condi-

tions in 22 countries of Europe, has just submitted to me as chairman a most interesting and vivid report on the Poland of today. His report is especially informative and significant by virtue of the fact that Congressman GORDON was also in Poland in 1945, so he is able to describe the trend of affairs in that unhappy country over the past 2 years.

In view of the fact that Congressman GORDON is of Polish extraction, speaks Polish fluently, and is an objective and able observer, I asked him to make a special comparative study of Polish conditions on this trip and to prepare a separate report on that country. Under leave granted me by the House, I am taking this means of calling Mr. GORDON's carefully compiled report to the attention of the country and the Congress. In line with our committee policy of providing as many facts as possible for the general public, Congressman GORDON has also released his report to the Press and Radio Galleries.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., November 19, 1947.

HON. KARL E. MUNDT,
Chairman, Overseas Study Committee,
House of Representatives,
Washington, D. C.

DEAR COLLEAGUE: I am inclosing my report on the situation in Poland as I found it. As you will perceive I decided to dwell particularly on Poland because of the reasons given in the second paragraph.

It was a pleasure for me to go along and serve on your committee, and a fine job you made of it.

I have released the report to the newspapers and would like you to include it in your final one to the committee, as my contribution.

With many thanks, and every good wish, I remain

Sincerely yours,

TOM.

REPORT ON POLAND BY HON. THOMAS S. GORDON, MEMBER OF CONGRESS, MEMBER OF THE COMMITTEE ON FOREIGN AFFAIRS, UNITED STATES HOUSE OF REPRESENTATIVES

I was one of the members of a special congressional delegation which comprised six members of the House Foreign Affairs Committee and four members of the Senate Foreign Relations Committee, under the chairmanship of the Honorable H. ALEXANDER SMITH, of New Jersey, and the Honorable KARL E. MUNDT, of South Dakota. We covered 22 European countries, investigating their internal, political, economic, and social conditions.

Having the knowledge of the Polish language and there being a population of over 6,000,000 Americans of Polish descent in the United States, I chose to go deeper into the problems of Poland. I may add that I based my analysis of Polish problems on a comparison I was able to make between the conditions prevailing in Poland in October 1945, when I first visited there, and those prevailing at the present moment.

I am firmly convinced that Poland is in the claws of Soviet Russia. Poland has lost her independence as a result of the last war and the Polish nation has been deprived of any voice in the conduct of its national affairs and international relations.

I visited Poland as a member of a congressional group 2 years ago, in October 1945, and I revisited Poland in the last days of September 1947. During these 2 years the Soviet grip on Poland has been considerably tightened up. While 2 years ago certain domains of Polish political, social, and economic life were still under the control of non-Communist Poles, today everything is under the control of Soviet officials or Soviet agents acting in Warsaw on orders and in behalf of Moscow.

Two years ago I submitted a report to the House of Representatives in which I used the words "imported revolution" to describe the numerous changes in the Polish political, social, and economic life which I observed at that time. I can state today that this "imported revolution" has now become an accomplished fact.

The four Senators and six Congressmen who comprised our group were warned in Sweden that no permission had been granted to our group to fly over territories under Soviet military control. Thus, in a roundabout way, carefully avoiding territories over which the Soviet flag flies officially, after several hours' flight, we reached the Warsaw airport—where the Soviet flag flies unofficially.

The American Ambassador, Mr. Griffis, and the staff of the United States Embassy in Warsaw, greeted us at the airport, but representatives of the Polish Government were conspicuous by their absence. They knew perfectly well who were coming, but they deemed it necessary to advise our Embassy that everybody was so busy that no one could spare the time to welcome us. Unperturbed by this primitive rudeness, we proceeded through the ruins of Warsaw to the hotel.

I did not notice much reconstruction, but some very laudable patchwork has been done by the population despite the fact that building materials and tools are lacking. I noticed a few rebuilt houses scattered all over the city and housing some of the Government offices.

The Poles are in no haste to rebuild their dwellings since, unfortunately, as soon as a house has been rebuilt a Government commission takes it over from the owner and decides who is to occupy the premises. The occupant is always an official loyally serving the Communist Party (disguised under the name of the Polish Workers' Party—PPR) or the Communist government.

The same privileges are being accorded to loyal Communists or government officials in food distribution. Whoever works for the government gets better food rations; whoever refuses to have the yoke put on his head is sentenced to slow starvation unless he manages to buy some food at exorbitant prices on the black market.

One of the most interesting observations I was able to make is the use of taxes for political purposes. This political taxation system is particularly striking on the farms. Having decided to ruin the peasant who still owns some private property, the Polish Communist Government forces the peasant to deliver fixed quotas of grain, potatoes, vegetables, meat, etc. Over and above those quotas, or rather over and above this taxation in kind, the peasant has to pay taxes in money. If he is a member of the Polish Peasant Party (Mr. Mikolajczyk was the chairman of that party), assessment in kind and in money rises so fast that the peasant is ruined within a short time. Should he, however, follow the advice of the tax assessors and desert the Polish Peasant Party, or, better still, denounce this party publicly as a "stooge of American imperialism and American monopolies," his tax assessment slides down surprisingly fast.

The only weapon remaining in the hands of the peasant is to curtail his productivity, which, in turn, brings about a decrease of the production of food.

Thus, the war the government is waging against Polish peasants—stubborn supporters of the idea of private ownership—is greatly responsible for the scarcity of food in Poland.

It is my considerate opinion that the Polish people need food, and I shall do all I can to convince my fellow Americans that food should be sent to Poland, although it should be distributed by American agents under American supervision, because otherwise it will never reach the starving Poles.

As regards financial aid to Poland—the situation is different. In view of the ruthless exploitation of the Polish economy by Soviet Russia, whatever rehabilitation of the Polish industry could be achieved through the means of foreign credits will ultimately work for the benefit of the Soviet economy only. Very reliable sources in Warsaw summed up the situation for us in these words: "The present rulers of Poland tell the world that they need foreign money to increase their coal production, but under a multitude of agreements signed in Moscow by the Communist economic dictator of Poland, Hilary Minc, a Soviet agent, over 72 percent of Polish coal goes to Soviet Russia. Sometimes it is called 'export coal,' sometimes 'reparations coal,' sometimes 'compensation coal,' but the net result is that the Poles are freezing while their coal goes east. In other words, a dollar to Poland is a dollar to Soviet Russia."

But I want to stress again that relief goods in kind, such as food, medical aid, and special items for children and the sick should be sent to Poland, if a proper administration of distribution—American distribution—could be set up.

Next to the economic life the firmness of the Soviet grip on Poland could best be seen in matters of the press, radio, and publications.

The Communist Government took possession of all media of dissemination of news and comments. There is no independent press, no independent radio, and no independent publishing business in Poland. There is no criticism of Soviet Russia permitted in the Polish press and radio and there is no pro-American newspaper being published in Poland.

Two facts characterize this situation, the Communist government censors all papers and the Communist government controls all supply of newsprint. Every printed word in Poland is read by the Communist censor before publication and reviewed by the same censor after publication. Any paper could be put out of existence by denying it the government-controlled newsprint. The more anti-American a paper, the more newsprint it gets because the government is eager to increase its circulation.

The radio constitutes the Communist government's monopoly. All radio sets have to be registered. Slanted news and slanted comment is the rule in the radio in Poland just as it is in the press.

Both the press and the radio serve primarily to foster Polish-Soviet friendship, but a special widespread organization called Polish-Soviet Friendship Society reaches into every branch of public and private life in order to exercise anti-American and pro-Soviet influence.

I was able to ascertain that the Polish-Soviet Friendship Society maintains 23 branches in 310 counties and towns, 977 clubs, 10 book stores in Warsaw and some larger provincial cities. This organization sponsored within the last few months 1,377 public lectures on Soviet Russia and maintained classes in the Russian language in 110 schools.

There is, of course, no counterpart to this work on the American side because none has been permitted by the government. The declared policy of the Communist Polish Government in this realm is to "turn the Poles away from the West and turn them toward the East."

One does not have to live in Poland or to stay there for months in order to be able to notice that despite all this impact of Soviet propaganda, seconded by the brutal use of force displayed by the Bezpieka—a sister organization of the dreaded NKVD—neither the individual Pole nor Poland as a nation will

ever be turned against America. Just the contrary has been achieved by the Soviet masters of present-day Poland. The Poles hate Russians and Communists more than they ever hated them in their history, more than they hated the agents of the Tsar, and probably as much as they hate the Germans. Their only hope is America, and all their thoughts go to us. One's eyes fill with tears when the common man in the street, stopping at the sound of the English language and learning that one of the foreigners understands Polish, whispers, looking over his shoulder and asks naively the deeply touching, unanswerable question: "When are you Americans going to chase away this Asiatic horde, those gangsters, murderers, and despoilers of our land?" * * *

But there are not many Poles who dare to speak to a foreigner.

Two years ago many Poles came to visit me and many talked to me about their troubles and their tragedy. It is different now. The Polish NKVD succeeded in erecting a wall between the Poles and foreigners, just as the Soviet NKVD succeeded in building such a wall between the Russian people and the outer world.

A Pole who dares to approach a foreigner is shadowed by the Bezpieka agents. He is arrested and questioned. He is black-listed and he will not get a job. He will be starved, if he escapes a trial where he will be accused of conniving with foreign intelligence agents. The trials and the stiff sentences achieved their aim: the Poles do not dare to talk to foreigners.

However, I tried to speak Polish to one officer and two soldiers—in Polish uniforms all three of them—who paced up and down the street before a building housing a government agency. All three of them responded in good, pure Russian. None of them spoke Polish. I seemed to have had particularly bad luck in speaking Polish to "Polish" officers and soldiers. Two years ago, when I landed on the Warsaw airport, I approached two officers in Polish uniforms, greeting them genially in Polish. They answered politely in Russian informing me that they do not speak Polish. The same happened to me this time—2 years later. In that respect I did not notice any change.

John G. Winant

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, November 18, 1947

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks, I wish today to pay a well-earned tribute to a truly great American—John G. Winant. Mr. Winant's death was a blow to this Nation and a tremendous loss to the millions whom he served so faithfully through so many years of hard work.

His achievements for America will be long remembered and are legion. Foremost on the domestic front will be his establishment and launching of a social-security program in America for the first time. His vision in this sorely needed forward step, his leadership in its establishment, and his loyalty to the ideals of a real program will stand as an everlasting monument for John G. Winant.

Many of the reforms to make life better for the little people of America can be traced back to this quiet, thoughtful, and sincere public servant.

Not only was his service of paramount importance on the domestic scene, but his contribution to America in its relations with the world has been monumental. His long service with the International Labor Organization to improve the working conditions of labor all over the world required years of sacrifice away from his native country.

His service as America's wartime Ambassador to the Court of St. James's, where he endured the same dangers as all the people of Britain, will be long remembered. His quiet, helpful, unselfish service endeared him to all of the people of that heroic embattled island through the long years of war.

After the war his contribution and effort to establish a just and a lasting peace drained much of his reservoir of strength as he tirelessly sought everywhere to bring together the nations for peace through friendly world cooperation.

America has lost a great friend.

I would like to include with these brief remarks a tribute to Governor Winant by Mrs. Eleanor Roosevelt from her column, My Day, published in the Washington News and hundreds of other papers on November 5, 1947.

Her column is as follows:

MY DAY

JOHN G. WINANT WAS TRULY A WAR CASUALTY

(By Eleanor Roosevelt)

NEW YORK, Tuesday.—Just before 1 o'clock this morning, I turned on my radio to hear the latest news. We went from the strains of band music straight to the announcement of John G. Winant's tragic death.

My husband and I both admired him and, what was more important, we trusted him completely. He was an unselfish public servant who gave himself completely to his work during the war, and is as truly a war casualty as any of our other soldiers. In peacetime as well he was a valuable public servant, with a broad vision and a deep sympathy for all men.

He helped us win the war, and I am sure that, if he had kept his health, he would have filled some vital niche in the battle of winning the peace. He had imagination enough so that he might have helped us to find the thing we need above all others today—the key to building confidence between the eastern European states and ourselves.

I knew he was ill last summer when we were together at the Hobard-Smith College commencement. The pain and the desperate weariness could not be hidden then, and since then he had worked unceasingly. He had been to Switzerland and Britain this past summer, and had written feverishly, finishing his memoirs. His friends watched with deep misgivings, begging him to rest yet knowing quite well that something within him would not let him rest.

For his family, this way of going must have been a sad shock. But they have a heritage from which they can cherish all the days of their lives, for no one who knew the motives from which he acted could ever believe that courage and unselfishness were not the mainspring of whatever he did.

In the International Labor Organization and in the Social Security Administration, Mr. Winant has left two great achievements to which he contributed much. He was director of the former for many years, and he organized the latter. The ILO might easily have been lost in the war years had it not been for his foresight in moving its headquarters from Switzerland to Canada. The setting-up years of any experiment such as the Social Security Administration are crucial years. It was he who built the good foundation.

My husband counted on him heavily. And when people tried to belittle him, as is always the case with any man in public office, my husband would smile and hardly bother to refute the statements, for he knew so well that big men cannot be touched by little people.

The statesman and the people of Britain will mourn him, for they know better perhaps than our own people what his service as Ambassador to Britain meant to us all during the war.

The people of his own State of New Hampshire were fortunate to have his as governor during the depression years, for they owe many of their best developments to that period.

The record is a good one. One can say: "Well done, thou good and faithful servant." But the heart weeps for the loss of a friend and for the loss of the possibilities for service which still lay before him.

Radio Address to the People of My District

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, November 17, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WNBF on November 15, 1947:

Dear friends of the triple cities and my congressional district, the recent approval by New York State voters of the veterans' bonus issue gave me new hope and courage.

It is a well-known fact that enemies of the veteran and opponents of the bonus have spared no effort to sabotage every honest approach to this logical issue.

Of course, I have never swerved an inch from the path I charted. I have shouted for a national bonus for years. I believe a lot of us will live to realize its payment, too.

Naturally, I had to brave the wrath of several influential men when I advocated the bonus, as I was the very first in the Northeast to do so.

A well-known industrialist was very sarcastic with me one day. He proceeded to take me apart by calling me soft in the head for making such a proposal.

All of which makes little difference to me. Perhaps the men who challenge me because I want World War II vets paid a bonus are afraid these fellows will get on their feet. Perhaps they're afraid the boys might become too independent and couldn't be pushed around.

They can condemn me for favoring the bonus all they want to. However, I'll continue to push for it and agitate the question in Congress as long as I am there.

Those who were Members when we passed the GI bill remember the debates about the loan guarantee, we insisted the GI should have. We placed a limit of $2,000 as guarantee and later raised it to $4,000.

Everybody knows what a farce this GI loan is becoming. Everybody deplores the way this loan is tied up by red tape and

how difficult it is for the average veteran to get his hands on the money.

Congress intended that eventually this GI loan would be a bonus. I know I did when I voted for it.

Yes, I took some heat from the big boys when I told you I wanted this loan guarantee paid off to eligible veterans. What's fair for one is fair for all.

What's fair for one vet is fair for another. What's fair for one group is fair for the rest. Didn't they all fight in the recent war? Didn't all our boys, regardless of race, religion, color or position march forth to sacrifice their best years and their very lives for America?

So you don't need to ask me a second time how I stand on the bonus question. I'm for it for the boys of World War II right down the line.

Some smug individuals like to raise their eyebrows whenever the bonus subject comes up. I say to them, there's no argument now, you can't start one. The bonus is no longer an issue; it's a fact.

The precedent was started by the War I adjusted-compensation fight. The veterans who marched up Capitol Hill got tear gas in their eyes when they asked the reactionary leaders in those days to pay the bonus.

But Congress took the bull by the horns, approved the bonus and everything was fine. The country prospered while the veteran benefited.

Several million new veterans want to get on their feet. They want to buy homes, farms, and start in business. They want the GI loan declared a bonus and the way they're organizing they will certainly reach their goal.

As your representative, I'm in their corner. We are pouring billions into Europe and we're about to send billions more.

If we can afford this, we can help our own veterans who saved the country. We can lift them out of the mire while we're helping foreign countries.

Let's stop those who are shoving the veterans around. Let's give our boys a break and show the world we don't forget what these heroic men of War II did for us all.

Thank you.

Strange Prejudice

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. WELCH. Mr. Speaker, the San Francisco Call-Bulletin has been printing a series of informative editorials dealing with the necessity of maintaining an adequate American merchant marine.

An adequate merchant marine cannot be maintained unless it is given the right to meet foreign competition on equal terms. Every major maritime nation in the world encourages its merchant marine to operate overseas air lines paralleling their sea routes. This right has been denied to American merchant marine operators by the Civil Aeronautics Board while at the same time the CAB encourages foreign steamship operators in their operation of air lines by granting them landing and other necessary facilities in this country.

Mr. Speaker, this policy is wrong and must be righted. In accordance with permission granted me, I insert the following editorial from the San Francisco Call-Bulletin as a part of my remarks:

STRANGE PREJUDICE—WHY CAN'T CAB GIVE AMERICAN STEAMSHIP LINES EVEN BREAK IN COMPETITION WITH FOREIGN FIRMS?

Once again, and understandably, what seems to be a strange prejudice of the Civil Aeronautics Board has come under attack.

We refer to the CAB's odd reluctance to give American steamship lines an even break with foreign lines.

The CAB does exactly this when it refuses, as it has refused, the right of American shipping lines to operate auxiliary air transport service.

George Killion, American President Lines chief executive, declared in a speech the other day that this is "discriminatory interpretation of congressional intent."

He added:

"The CAB, with a logic that is applicable to no other flag has, in effect, placed its own veto on the evolutionary laws of progress."

In other words, every time American maritime commerce seizes a chance to get above water, as it were, the CAB winds up to smack it down.

There never has been a satisfactory explanation of this attitude.

Certainly American shipping lines need help.

Surely they deserve it.

It isn't as though they held the status of some fly-by-night vendor's stand, you know.

They not only are an important part of American economy but they are an essential and integral part of our national defense, as was proved by the role they played in the last war.

Rebuffing and disclaiming them, to the discomfort of the thousands of Americans who, in one way or another, earn their livelihood from them, and to the detriment of our national defense, is bad enough.

Thus handicapping them in the face of alien competition is much worse.

The least the CAB should do is give American steamship lines an even break in their efforts to keep on an even keel a business which is valuable to our country in peacetime and indispensable in war.

Our Responsibilities and Duties to Christian Principles

EXTENSION OF REMARKS
OF
HON. HARVE TIBBOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. TIBBOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered this morning by Mr. Arthur J. Morris, founder and chairman of the board of Morris Plan Corp. of America, New York City, before the House breakfast group, which is coordinated through the National Committee for Christian Leadership. The address is not only of vital importance to every Member of Congress, but also to the people of America and the world at large. The remarks of Mr. Morris are worthy and deserving of everyone's reading.

I deeply appreciate the opportunity of speaking briefly and informally before this distinguished membership of your Breakfast Club concerning a subject matter, the importance of which is not properly appreciated in the present stress of time and circumstances. And when I say "not properly appreciated," may I be forgiven if I add that such lack of apppreciation may be ascribed to some of us and, bearing in mind our education, our positions of leadership, our responsibilities, and our success in the world, not only impairs our leadership, but also imposes upon us a dereliction of our responsibilities to our fellow man.

I refer to the lack of spirituality and the failure to invoke Christ's philosophy in the solution of our daily problems and in the execution of our daily responsibilities.

You know, it is a queer thing to me in this generation in which you and I are living—when the world is confounded by a chaos such as history has never known—that we do not turn instinctively and more often to the leadership and to the principles of Jesus Christ in trying to solve the responsibilities our duties impose upon us.

In the last two wars there was no sacrifice too great for any of us to suffer without complaint. Time has not healed the wounds so recently inflicted by the sufferings and death of our sons and daughters who made the supreme sacrifice on the field of battle. There are no sacrifices in human existence comparable to the tragedies of war. And in view of the dark clouds of confusion hovering above us we may not be able to avoid the future calamities of war unless other nations worthy of our confidence, individually and collectively, believe in us—in our unselfish desire to help our fellow man and to do so in a practical and realistic manner.

And let me make it clear here this morning among you solons who are responsible for past, present, and future legislation and its effect upon the peace of the world, that you cannot acquire international confidence entirely by legislation or by purchase. Confidence is one thing that money can never buy. And while I am heart and soul in favor of the principles that inspire the Marshall plan, which, if properly organized and executed, should accomplish much, its resultant success and its contribution toward saving us from another international struggle and all its ensuing human tragedies, in the final analysis, will depend upon the confidence this Nation generates among other nations worthy of becoming our intimate associates. And that confidence will only come permanently as a result of a religious spirituality that will guide us in our daily thoughts, in our daily conduct, and in our daily conclusions in such a manner as will keep us alert and in harmony with the tenets of God Almighty.

You might say to me: Such a philosophy is applicable to all God-fearing nations; but what effect would it have on a nation like Russia whose leaders are reported to have no belief in and, consequently, no faith in any kind of religion? Assuming that reputation to be true—but not endorsing its authenticity—there are enough God-fearing nations in the world to convince me that if their individual and collective confidence is predicated not only upon political theses and financial succor, but also predicated upon humanitarian help in a manner consistent with the tenets of God Almighty and inspired by a faith in the fundamental principles of spirituality, such confidence obtained among a sufficient number of nations throughout the world will mold public opinion to such an extent that I defy Russia or any other irreligious nation to ravage the peace of the world.

Russia already realizes this philosophy by the very propaganda she is seeking to distribute among other nations in Europe in an attempt to create the idea that this country is a war-mongering nation. So it is obvious that Russia, religious or irreligious, is already amenable to international public opinion.

Quote from articles in New York Times, November 17:

1. The Bishop's Statement.
2. Duty of Christians to World.
3. Everyday Level Urged for Religion.

There can be no doubt about the fact that in these troublesome times the need for religious influence is daily filling the hearts of men and women who are conscious of the necessity of turning back to the fundamentals of moral dependability.

We have tried diplomacy; we have tried international commerce; we have tried lend-lease support; we have tried allied copartnership under deadly fire with military leadership; we have tried food contributions under UNRRA and are still very properly and humanely continuing food gifts. And now we propose under the Marshall plan to add substantial monetary support. Is it not reasonable for us to turn to the world's greatest leader, the Master Philosopher of human existence, to the Divine Character who was given to the world as His only begotten Son, and whose life was sacrificed that the world might be saved? Is it not reasonable, I ask you, that we turn to Him by day and by night in this great hour of tribulation and ask Him to help us guide the world to safety?

Letter to Gen. George C. Marshall from Hon. Fred E. Busbey, of Illinois

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the contents of a letter which was directed to Gen. George C. Marshall, Secretary of State, today by my colleague the gentleman from Illinois, Hon. FRED E. BUSBEY:

NOVEMBER 20, 1947.

Gen. GEORGE C. MARSHALL,
Secretary of State,
Washington, D. C.

DEAR GENERAL MARSHALL: I am considerably alarmed over the situation in the maritime field. While it ostensibly appears to be connected only with shipment of food to France, it seems to me to have implications that are far-reaching. If the reported statements of Mr. Joseph Curran remain unchallenged they are a potential threat to the economic and military security of the United States.

The New York Times of November 19, 1947, announces that "crew members of 2 United States ships in strike-bound Marseille supported 85,000 Communist-led French dock workers today in demanding that Moroccan troops cease unloading vital coal and food cargoes." According to the same account, these seamen expressed their support for the fight of the French Communists against the Marshall plan. A cablegram from the National Maritime Union, signed by Joseph Curran, president, to the Soviet-dominated World Federation of Trade Unions, printed in the Daily Worker (organ of the American Communist Party) of November 19, 1947, stated that further action by his union was contingent upon a request for assistance from the World Federation of Trade Unions.

You are undoubtedly familiar with the statements of responsible leaders of the American Federation of Labor that the World Federation of Trade Unions is a tool of the Soviet Union. I am sure that verification of published resolutions, and, even more important, of statements of leaders of the World Federation of Trade Unions, show clearly that the fundamental allegiance of the organization is to the Soviet Union.

In the light of these reported statements by Mr. Curran, an official of the CIO affiliate of the World Federation of Trade Unions, and president of the National Maritime Union, whose members will staff the relief ships to Europe, I would appreciate sincerely receiving advice from you. Unless you have a plan for meeting a situation of this kind it conceivably may defeat any program the Congress might vote for alleviating the sufferings of Europe.

In your opinion, according to the text of the New York Times dispatch, in the event situations of a similar character develop in France or Italy in the future, would not the discharge of duties by American seamen be contingent upon orders from the Communist-dominated World Federation of Trade Unions? Would this development not entail a threat to our marine life lines in the event of a possible conflict?

I would appreciate a personal interview with you or a letter from you informing me to what extent our Government is prepared to meet these contingencies.

Very truly yours,

FRED E. BUSBEY,
Member of Congress.

Agricultural Facts in Regard to Our Domestic Agricultural Situation

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, we listened with interest to President Truman's message. I was not, nor am I now, clear as to the effectiveness of a number of his proposals. Let us review some of the past legislative acts, and consider some of the proposals.

First. We had an OPA. The Congress voted to continue the OPA with provisions to eliminate controls as production increased. The President vetoed the bill. Another OPA, a less desirable act, was passed and this was signed by the President. Later in 1946 he repudiated it shortly before election. A month ago, according to the press, he stated that the OPA was a "police state" set-up. In his speech to Congress yesterday he asked for a revamped OPA with plenty of power, so he must want a "police state." Sometimes I wonder if he really is convinced as to what he wants. His shifting positions confuse the issue to say the least.

Second. We had the Steagall amendment added to the Price Control Act guaranteeing 90 percent of parity to certain producers during the war and 2 years thereafter. Certain products were listed as Steagall commodities eligible to support. Many supports have been announced. Some food products, like milk, have never had any announced support price. Why? The so-called basic commodities, such as corn, wheat, tobacco, peanuts, and rice, have a permanent support program based on 90 percent of parity. Special privileged crops, such as cotton and some types of tobacco, have loan features that would provide 98½ to 150 percent of parity as support. In addition to the Steagall amendment we have the La Follette-Taft amendment to the Commodity Credit Corporation Extension Act of 1944. This was passed in the Senate and accepted in conference. In fact, the La Follette-Taft amendment directed the administrative branch of our Government to follow the provisions of the Steagall amendment. In other words, the bureaucrats were directed to follow the law.

Third. The provisions of the Steagall support program were not followed: 1. On hogs in the winter of 1944. 2. On eggs in 1943 and 1944. 3. On milk in the spring of 1947. 4. On poultry at this very hour.

Fourth. Where, I ask today, are all the Members who waxed so elegantly about the Eightieth Congress keeping the fertilizer commitments last July when the Agriculture appropriations bill was passed? There can't be any arguments about the commitments made under the Steagall amendment because that is the law. There can't be any arguments about the La Follette-Taft amendment because that is the law. With poultry selling at 16 cents per pound in Wisconsin and less in some other States, it is evident that the law itself is not being followed. The parity price of chickens is 27.2 cents per pound, and 90 percent of that is 24.48 cents per pound. At this very moment the present administration is allowing the American poultrymen to be gypped out of from 4 to 8 cents per pound on his poultry. The support price is 50 percent above the selling price. The time has come when we should either insist that this administration live up to the Steagall amendment or wipe it off the statute books of our land.

In the President's speech yesterday his number five recommendation was "To authorize measures which will induce the marketing of livestock and poultry at weights and grades that represent the most efficient utilization of grain." The question is, if he is asking for authority to do this why does the administration allow these chickens to be selling for two-thirds of parity when the law says not less than 90 percent? When one realizes that there are over 2,000,000,000 pounds of poultry marketed a year, it is evident that the American poultrymen are due to be bushed out of over $100,000,000 annually.

Fifth. How would you like to be an AAA committeeman and go out and talk to farmers about their 1948 farm plan if you realized that these farmers know that they are not even given the legal lawful support for their chickens? How would you like to be a county agricultural agent and go out and talk farm problems with farmers, and have the poultrymen ask you why they are being paid off at 16 cents per pound when the law states 24.48 cents per pound for their chickens?

Sixth. The President had 10 points to his program. I have three. These three points will do much to obtain the results

that the President asked to be achieved. They are:

1. Ask Mr. Charles Luckman to resign at once. He has created confusion and he is not making any constructive contribution to this food program. He is muddying the economic waters. The sooner he is out of the picture the more food the American consumer will be provided. There is no place for a representative of a foreign corporation whose specialty is vegetable oils to be placed in a position to further wreck the livestock industry of our country.

2. Follow the provisions of the Steagall and the La Follette-Taft amendments before asking for any more laws or any more powers.

3. Allow the Agriculture Department and the farm organizations of this country to have more voice in these food programs and do not pay so much attention to the certain brand of New Dealer economist who always have the answers regardless of whether or not they have even heard the questions.

Housing Is No. 1 Domestic Problem

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. JAVITS. Mr. Speaker, the following is an address I made last night to the National Association of Housing Officials in their tenth annual convention at the Hotel New Yorker in New York City on the problem of housing which I called our No. 1 domestic problem when I introduced the Taft-Ellender-Wagner bill in the House on March 12, 1947, and which is still our No. 1 unsolved domestic problem:

The housing shortage still remains America's No. 1 domestic problem. The millions of American veterans who returned to the United States from barracks, tents, and foxholes have been relatively apathetic about their displeasure at having to double up with in-laws or pay exhorbitant prices for their own living accommodations. But there is a rising tide of resentment among this group in our population, which will explode soon unless something is done to relieve the housing shortage. The rest of the American people who have been suffering from the drastic housing shortage during recent years are also getting ready to take the matter into their own hands. I believe that many Members of the House of Representatives and Senate have been made aware of this fact, this very summer.

The Taft-Ellender-Wagner bill, a comprehensive housing program, for all practical purposes, has been under discussion in the Congress for more than 2 years now. The Senate has taken action on it and passed it once, but the House Banking and Currency Committee has not scheduled hearings on it since its original introduction. Recognizing the necessity for action on housing, I introduced the Taft-Ellender-Wagner bill in the House of Representatives on March 12, 1947, soon after Senator TAFT introduced the bill in the Senate, and I have been fighting for the consideration of it ever since. I believe that we have not done enough to get the housing bill passed, and that a job still lies ahead of us. I was rather amazed, during the first session of the Eightieth Congress, to discover that despite the housing shortage and despite the fact that there are between 15,000 to 20,000 veterans in my own district of upper Manhattan who are living doubled up or with relatives or in completely unsuitable accommodations, I received only a trickle of mail on this all-important subject, especially as compared with other minor legislative issues on which I built up bulging files. If this situation is true in my office, and I was the sponsor in the House of the Taft-Ellender-Wagner bill, I can visualize that an even worse situation existed in other offices. I can see how my colleagues, occupied with committee duties and the other matters brought to their attention on the floor and by their constituents, might not have pressed for action on the housing bill, since their own districts apparently took no great interest in it. I do not mean to say that organized groups did not write letters, send telegrams, and inundate us periodically with post card campaigns. This work is important, but it is not enough. The organized groups should have acted as leaders and not as a whole movement.

Congressmen are interested in what their individual constituents are interested in, they have to be. I believe now that the American people have seen over 2 years go by since the ending of the war and little has been done by the Federal Government to ease the housing shortage, but rather that it has become more acute in many ways, we should get a surge of interest from the grass roots, and, following that hearings by the House Banking and Currency Committee and passage of legislation by the House of Representatives.

The Foreign Affairs Committee, of which I am a member, is right in the midst of considering the Marshall plan proposals; the President's request that Congress appropriate interim aid of $597,000,000 to help Europe get over this winter, and on the average of $5,000,000,000 a year for 4 years to aid in European reconstruction. When I visited Europe this year, I saw in all its tragedy the poverty, starvation, and economic helplessness of the western European people who must receive our aid if they are ever to become productive, healthy members of the community of nations. Yet there has been criticism of the Marshall plan among our people on the ground that we have not even solved the housing shortage here at home so that we are in no position to help solve the tragic shortages in Europe.. There is some merit to this criticism, but the way to cope with it is not to stop aiding Europe and to jeopardize world peace, but to attack these two problems simultaneously. Housing and European recovery should be one program. We would be aiding ouselves, as well as the rest of the world, in laying the foundation for our future peace and prosperity by these two programs. The European recovery program, averaging as I have said, approximately $5,000,000,000 a year for 4 years, amounts to only 2½ percent of America's aggregate 1947 production of $200,000,000,000. A national housing program as outlined in the Taft-Ellender-Wagner bill is estimated to call for about $1,000,000,000 a year from the Federal Government, and over a period of 10 years or more, is not estimated to average a cost of more than $155,000,000 a year. A mere statement of these figures demonstrates the complete fallacy of conditioning domestic housing on international aid to needy countries, or vice versa; both should go forward together.

After making determined efforts to get action on the Taft-Ellender-Wagner bill last session, together with all of the other interested groups which were working toward the same objectives, I introduced a House resolution during the month of June calling for a select House committee to investigate every phase of the housing shortage—from the lack of housing to what was being done and not being done by industry, labor, and Government, including the need for modernization of building methods and municipal building codes. In other words, a comprehensive and exhaustive study to be undertaken by the House—for the House. I was very gratified when the House and Senate adopted that idea and at the close of the session authorized a joint housing investigation, although they did not adopt the specific resolution which I had introduced earlier.

As you all know, the Joint Committee on Housing has been holding hearings throughout the country in order to ascertain the extent of the housing shortage and just why it exists. Only last week the committee met briefly in New York, and although they were unable to hear everyone who wished to speak on the subject, I am sure that the able presentation of city officials and civic groups made the grim story clear enough—as it had indeed been made clear throughout the country—even in the time that was allotted.

As another aspect in getting the facts and suggesting remedies, before I left for Europe this summer I spoke to a number of leaders at Columbia University, which is in my district, in order to see whether that great educational institution could contribute its research facilities in ascertaining the causes and cures for the housing shortage which has plagued our district and the country for so long. I am happy to be able to make this the occasion for the announcement that the legislative Drafting Research Fund of Columbia University, under the able and inspired guidance of Prof. John Chamberlain, has undertaken to study various phases of the housing problem, and at this very moment they have not only accumulated and digested an immense amount of information on housing, but they are working toward concluding their study, with concrete proposals on several aspects of the housing problem which are basic to it. Prof. Harry Jones, of the Columbia University Law School faculty, who is directing the study, has decided to concentrate on the following subjects:

1. The question of "yield insurance," which is provided for in title 7 of the Taft-Ellender-Wagner bill. This measure was written into the bill to encourage large-scale housing investments by insurance companies and comparable capital groups, but thus far it has not been favored by the very groups for which it was designed and is said to be "unattractive" from their point of view.

2. Title 10 of the Taft-Ellender-Wagner bill, the farm-housing title. It would seem from what legal experts have said that this title is the least finished provision in the bill and needs reconsideration.

3. Finally, the definition of tenant eligibility. One of the things which has long plagued those who have tried to administer public housing. The Legislative Drafting Research Fund of Columbia University intends to make an exhaustive study of this question, and I believe that if we can come to a satisfactory definition of tenant eligibility we will have done a lot in helping to dissipate the opposition to public housing.

The approach of the present legislation on this apparently crucial issue is the 20-percent gap device. The legislative history suggests that the gap device has failed to satisfy either the opponents or the advocates of expanded public housing. The records reveal substantial agreement among all congressional groups that the legitimate area of public housing is the provision of decent, adequate accommodations for persons with incomes so low that private housing cannot profitably provide for them. If this agreement on broad principle is a real agreement, as it appears to be, it would seem that the biggest single job of legislative drafting involved in the present

legislation is to arrive at a formula which will express the principles in a form acceptable to all, and yet will not be subject to the legitimate criticisms which have been directed at the gap formula.

There is no doubt in my mind that it is the responsibility of the Federal Government to provide housing for the lowest-income groups who cannot have decent accommodations without it, and that is why it is so important for this crucial issue of tenant eligibility to be disposed of satisfactorily. The Federal Government not only has this responsibility to provide public housing for those with the lowest incomes, but it must also do something to meet the now chronic housing problem of those in the middle-income brackets. They can afford to pay for their own housing if it were available at reasonable levels but cannot and should not be forced to pay the inflated prices which are being asked today.

Nor can all the blame be placed on private industry for not providing this middle group with housing. Without seeing the final report which the Joint Committee on Housing will submit as a result of its investigation this fall, I believe, nevertheless, that the committee is likely to report that a multitude of things are responsible for the housing shortage—high material and labor costs, inadequate building methods, restrictive building codes, out-dated and inadequate financing techniques, restrictive labor practices, and distribution practices of material, men, and supplies.

I think that time and study have shown that private industry needs and even wants help so that it can provide middle-income families with housing. It would be foolhardy for the Federal Government to undertake a large-scale public-housing program for people in the middle-income brackets. This would really be an encroachment upon private industry and would break down from the mere administrative load, if nothing else. But the Federal Government cannot shirk its responsibility to help meet what is a wartime emergency, and it must take war-emergency measures to cope with it.

Two steps are necessary:

1. The immediate enactment of the Taft-Ellender-Wagner national housing bill.

2. A wartime housing program under which we will build housing for the middle-income groups just as we built ships, planes, and tanks during the war. This means having the Federal Government help cover the cost of private construction through special tax benefits and amortization provisions for new construction for people of moderate income. It means allocating scarce building materials where necessary. It means enlisting the patriotic cooperation of material suppliers and of American labor just as was done during the war on an emergency basis asking them to set aside normal working rules, regulations, and practices for the emergency in order to accelerate new housing construction. Such a program requires the intensive cooperation of the States and municipalities.

It means that instead of criticizing the public-housing title of the Taft-Ellender-Wagner bill, which calls for aid in the construction of only 500,000 public-housing units for the lower-income groups, the program should be materially increased and our sights raised. If the Federal Government will ask the construction industry, material suppliers and construction workers all to go forward together in an emergency program, public opinion will not permit any one group to hold back any more than it did during the war.

Finally, if enough housing cannot be made available in this way and an adequate program put under way, we must not be afraid to let the Federal Government subsidize home construction just as we subsidize a farm crop to get more production. Our democracy must show that it has the ability to house the people and will not be defeated by its devotion to its own principles of private enterprise when facing a major emergency. It takes courage to make democracy a success, and exceptions to prove a rule.

The housing problem cannot be considered apart from the general problem of inflation, as skyrocketing costs are the root of the housing shortage. It is true that the volume of construction of residential homes is increasing and has been increasing during the past several months, but so are costs. Last year at this time construction material shortages were a great problem but today this problem is on the way to being licked from the standpoint of supply but not from that of cost. Many dwellings are being put up today, but the very people for whom they were designed cannot afford to buy them except at the risk of their future economic stability. To saddle already hard-pressed veterans with highly inflated new housing would be equivalent to giving them a house with a time bomb embedded in its foundation.

Unless we can do something about the general problem of inflation which is sapping the financial reserves as well as the financial resources of our people, we will never really be able to solve the housing shortage. The mayor of New York City only last week said that it was impossible for the city to accept bids made by private builders because private builders refused to make estimates without putting in a "financial cushion" to protect them against the possibility of rising costs during the period of construction. The city cannot and should not pay a premium for housing because of the unstable conditions which exist today, nor is it fair to ask industry to saddle itself with a contract which may be inadequate to meet the cost of construction when it has to deliver at some later date. In New York City voluntary efforts are being made to stabilize prices and labor costs for a period of from 2 to 2½ years. No formal plan has yet been accepted in New York, but even if such a program is adopted here in the city, it will do no more than to stabilize already very high costs.

The problem of inflation is overshadowing everything else in this country today and we must attack high prices at the same time that we attack the housing problem if we are to succeed in the latter. Unless we do the entire economic and social structure will sag and may collapse. The program I have first outlined is designed to get housing despite costs. But a correlative part of such a program is to pound away at costs. Local and national combinations, whether of materialmen, distributors, contractors, or workers, or any combination of them which victimize the public must be smashed. An aroused public opinion in our country always finds a way.

It is time that we got militant about housing—we have been too supine for too long. Let us go out and fight for passage of the Taft-Ellender-Wagner bill, a war program for middle income new housing, and a reversal of the high cost of housing construction spiral and let us see that public officials feel how deeply we feel about housing—through votes—and we will begin to get results.

GOP Is Challenged

EXTENSION OF REMARKS

OF

HON. FRANK M. KARSTEN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. KARSTEN of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat of November 19, 1947:

GOP IS CHALLENGED

Republican reaction in Congress to President Truman's request for power to restore partial rationing, price and wage controls, has been violent and, we believe, not justified by the facts. There is the suspicion that, if an election year were not in the offing, opinion would have been much more tolerant of the President's viewpoint, and needed legislation would have resulted. As the situation is now, there is no chance the White House recommendations on controversial items will go beyond the debate stage in the special session, with scarcely brighter prospect for the regular session convening next January. This is not only unfortunate; we believe it is politically unwise.

It is charged that the Truman program is a "step toward a completely totalitarian Nation"; that it would mark the "end of economic freedom." These are the sentiments of Senator TAFT. Speaker MARTIN says the President called for a "colossal OPA." A dozen statements referred to planned economy and regimentation, distasteful in any democracy. But an alternate program to stop inflation was scarcely mentioned. True, Senator TAFT said that the cost of living could be controlled by cutting down Government expenses, reducing taxes, curtailing private credit, controlling exports, and modifying the cost of the long-range Marshall plan, but this was not a harsh departure from what the President included in his message, except for a tax cut, to which he is unalterably opposed, and the details of economic aid to Europe. This doesn't appear to be a double-fisted assault on inflation.

There was also talk about letting "free enterprise" do the job, about "more freedom and more production" instead of "more controls and less production." Higher wages and higher prices are the ingredients of inflation. More production is desirable, of course. It should be elementary to say that when production exceeds demand and eventually creates surpluses, prices will be reduced and automatically labor cannot clamor for higher wages with the plea of mounting living costs.

But until the law of supply and demand is the regulatory factor in our economy, there should be limited and selective use of allocations, priorities and even rationing of items in short supply. How else can order be restored amid the present confusion? And with this use of executive power which is, in fact, a continuance of restrictions normally confined to wartime, a natural concomitant is a ceiling on wages, without which the attack on living costs is meaningless.

It is eminently desirable, of course, that America return to a program of free industrial competition as soon as possible. This is the democratic way. Anything that even smacks of totalitarianism is utterly reprehensible in ordinary times. But these are not ordinary times. Although the shooting has ended, we are involved in the problems of war as deeply as we were when battles were being fought. We have a job to do at home, a job to do in Europe and the Far East. We cannot do that job well if the people in this country are spending a dollar that is worth only 70 cents, which means that ultimately the consumer will be priced out of the market. The escalator must be stopped—and soon.

The American people will not submit without bitter protest to complete price controls and rationing. Nor should there be such imposition, because it is not necessary. But the President would confine his authority to a selective list where commodities are in short supply. A Republican-controlled Congress should be able to prevent an expansion of this authority into other categories if the President indicated an ambition to go totalitarian, as some fear. We have sufficient confidence in Mr. Truman's common sense to

believe he wants no police state, and if he has irresponsible and fanciful advisers who have such designs he will shake them off.

The Republicans now have President Truman's challenge. They have bitterly assailed him. But criticism of his recommendations is not the answer. The cost-of-living index has risen alarmingly during the past 2 years. It is still going up. If the Republicans don't like what the President proposes, then what have they to offer? If, after Mr. Truman has laid down his program, it is refused and next fall finds the Nation in a still higher inflation spiral because of Republican impotency, it won't make much difference who is nominated by the GOP for President. He won't be elected. Smart politics right now is to bring that 70-cent dollar up to par. The 70-cent dollar is Mr. Truman's estimate. For most of us, it is considerably less, in the neighborhood of 55.

The Labor-Management Act

EXTENSION OF REMARKS
OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. RAMEY. Mr. Speaker, under leave to revise and extend my remarks, I include herein the following article from the August 1947 issue of the Journal of the American Bar Association:

THE LABOR-MANAGEMENT ACT: NEW LAW AS TO EVIDENCE AND THE SCOPE OF REVIEW

(By Theodore R. Iserman, of the New York bar)

(An urgent duty of American lawyers, alike whether they represent employers, labor organizations, or agencies charged with official relationships, is to do whatever they can to help make the new Taft-Hartley Labor-Management Relations Act of 1947 work fairly, justly, and effectively for the fulfillment of its purposes and the establishment of peace, fair dealing, law, and impartial administration, in the field of labor relations. A first step is an understanding of what this controversial measure does and does not do. For themselves, their clients, and the public, lawyers can do most to promote both understanding and cooperation. Mr. Iserman's article is intended as a contribution to those ends. The new act makes substantial changes in the law and the procedures. Some parts of it became effective upon its enactment; most of the amendments of the Wagner Act do not become effective until after August 22; other parts are operative at later dates or upon the expiration of contracts in force. Mr. Iserman discusses principally several aspects of the act which have a significance even broader than their effects on labor relations law. Changes are made as to evidence and the weight of evidence, the lawful bases of decisions by the NLRB, the scope of judicial review of NLRB orders, etc. These expressly go beyond what is in the Administrative Procedure Act sponsored by our association; they may portend possible amendments of that act. In any event, the relationship of provisions of the two acts should interest many readers whose practice is not extensively as to labor matters. With the present article there could well be read: "NLRB Procedures: Effects of the Administrative Procedure Act," by David Findling, of the NLRB (January issue, p. 14); also the editorial in this issue: "The Second Step of Labor-Management Relations." Mr. Iserman was born in Kansas, went to school in that State and Florida, was graduated from the University of Chicago in 1924, and obtained his J. D. degree there in 1926, practiced law in France for 2 years, and has practiced law in New York City since 1928. He is a member of our association and of the law firm of Rathbone, Perry, Kelley & Drye. His previous contribution to the Journal was in our December issue (32 A. B. A. J. 875). He is the author of Industrial Peace and the Wagner Act (McGraw-Hill Book Co.—1947), reviewed in our March issue, page 264. As counsel for employers he testified before the Senate and House committees which were considering labor legislation, and the charge was made in the Congress that he had been consulted on both substance and draftsmanship as to the bill which became law through bipartisan support over the veto of the President. Although by no means disinterested, his exposition of provisions of the new law, before they go into effect, become a part of the contemporary recording of interpretation and intent.)

Of all the clauses of the new Labor-Management Relations Act of 1947,[1] probably none holds greater interest for lawyers, and perhaps none is of greater general importance, than those that (1) change the make-up of the National Labor Relations Board, (2) revise its procedures, and (3) increase the power of the courts to review its findings.

The new law in effect separates the Board's prosecuting and deciding duties, vesting the former in a general counsel whom the President appoints with the advice and consent of the Senate (sec. 3 (d)). This important reform should go far to end the widespread belief that as complainant, prosecutor, judge, and jury in its own cases, the Board has tended to be unfair, and to restore confidence in the Board.

In the past, subordinate employees of NLRB, rather than its members, have in effect decided many cases, notwithstanding the ruling of the Supreme Court in *Morgan* v. *United States* (298 U. S. 468, 480–1), and the Administrative Procedure Act, both of which contemplate that deciders themselves, rather than subordinates, shall consider cases before them. The new law requires NLRB to adopt this essential element of a fair hearing. It forbids supervisors of trial examiners, who have not heard the witnesses or, ordinarily, read the records and briefs, to review and revise reports and recommendations of the trial examiners, and forbids a trial examiner to appear before members of the Board privately to justify and defend his reports (sec. 4 (a)). Another clause abolishes the review section of the general counsel's office, consisting of individuals who heretofore have prepared and sent to all members of the Board identical memorandums that frequently were the basis on which the members decided the cases (sec. 4 (a)). The new law enlarges the NLRB from three to five members, permits them to sit in panels of three, and allows them such legal assistants as they need. It thus enables the NLRB to reduce its backlog of cases and enables each member who sits on a case to give to it the individual attention that Congress expects (secs. 3 (a), 3 (b)).

PREPONDERANCE OF LEGAL EVIDENCE TO GOVERN RULINGS

If the new law has in the hands of the NLRB and of the courts the effect that Congress intended, it will (a) require the Board to act upon legal evidence, not hearsay, rumor, conjecture, assumed expertness, strained inferences and inferences not based upon facts in the record; and (b) require the Board to decide according to the weight of the evidence, not contrary to it or according to preconceptions of the Board or of its staff.

Rules of evidence are to apply:

The original Wagner Act said that in proceedings before the Board the rules of evidence should not be controlling (sec. 10 (b)). While the Supreme Court construed this to require the Board to rest its findings upon substantial evidence,[2] the Court has allowed to the Board great latitude in saying what is substantial.[3] Besides permitting the NLRB to go far in drawing inferences from facts in the record, the Court has permitted it to draw inferences from facts not in the record. The board has relied heavily upon what it modestly calls the expertness of its members, which often has been theoretic, if not nonexistent.[4] And the courts have gone so far in deferring to the Board's assumed expertness as, in effect, to abdicate to the Board.[5]

The House of Representatives, by H. R. 3020, amended section 10 (b) of the Wagner Act to say that proceedings before the Board shall, so far as practicable, be conducted in accordance with the rules of evidence applicable in the district courts of the United States, adopted by the Supreme Court of the United States pursuant to the act of June 19, 1934 (U. S. C. title 28, secs. 723–B, 723–C).

In reporting this clause of H. R. 3020, the House Committee on Labor and Public Welfare criticized decisions of the Supreme Court, and particularly the weight that courts have given to the Board's "expertness," and concluded (H. Rept. No. 245, 80th Cong., 1st sess., p. 41):

"Requiring the Board to rest its rulings upon facts, not inferences, conjectures, background, imponderables, and presumed expertness will correct abuses under the act."

Although the Senate Committee on Education and Labor likewise was critical of the too great tendency on the part of the courts not to disturb Board findings, the Senate bill (S. 1126) did not change the clauses of the Wagner Act that deal with evidence.[6] The Senate evidently expected that another amendment, enlarging the power of the courts to review decisions of the Board, would to some extent improve procedures before the Board.

In conference, however, the Senate conferees adopted the language of H. R. 3020 to make the ordinary rules of evidence applicable so far as practicable.

Congress evidently expects the NLRB and its trial examiners to apply the rules of evidence in the somewhat loose way that judges and referees apply them in sitting without juries; and it seems to have adopted the so-far-as-practicable phrase in order not to cause the NLRB embarrassment by reason of diversity in the rules of evidence in the various States.

Senator TAFT, in discussing this clause after the conferees adopted it, said that "widespread abuse of its latitude in admitting evidence was prevalent in the early history of the Board"; but he stated his understanding that it is the "current practice of the Board in its hearings generally to follow the rules of evidence prevailing in the courts."

Insofar as evidence in the record of NLRB's cases is concerned, Senator TAFT's understanding of the Board's current practice is

[6] Senate Report No. 105, 80th Cong., 1st sess., p. 26.

to an extent correct. However, the Board often departs from this practice, even as to evidence that appears in the record, admitting evidence that would not stand up in court, as well as opinions of witnesses on matters concerning which opinion evidence is not called for or admissible and concerning which the witnesses are not qualified to testify. On the other hand, the NLRB frequently has excluded admissible evidence, as when it denies to employees the right to testify as to the effect upon them of acts that the Board assumes were coercive. To the extent that, in such ways as these, the NLRB has departed from the rules of evidence in admitting and excluding it, the new law will modify the Board's practice.

In an even more important way, the NLRB departs from the rules of evidence in the weight it gives to matters not in the record, notably its own expertness in the form of strained or unsupported inferences, presumptions, and conjectures. The statement of the House managers that accompanied the report of the conference committee again makes clear the intent of Congress on the Board's expertness (H. Rept. 510, 80th Cong., 1st sess.). The statement says (p. 53):

"If the Board is required, so far as practicable, to act only on legal evidence, the substitution, for example, of assumed 'expertness' for evidence will no longer be possible."

There rarely is reason in cases before the NLRB for expert testimony. When there is use for it, in the future it must come from persons who on the record have qualified themselves as experts, and who have subjected themselves to cross-examining; it may not come full blown from the minds of the Board's members.

Another rule of evidence that the new law writes into the Wagner Act affects cases before the Board in an important way. This is the free-speech clause (sec. 8 (c)). This says that expressing or publishing any views, arguments, or opinion shall neither constitute nor be evidence of an unfair labor practice if the statement does not threaten or promise a benefit. In the past, the NLRB has held statements by employers that it regarded as antiunion to be unfair, or it has used such statements to bolster an otherwise flimsy case, or as background material in the light of which it held other acts to be unfair. This no longer is possible.

The weight of evidence shall be controlling: An equally important change in the act concerns the weight that the NLRB must give to the evidence. In the past, it has been free to decide as it chose, subject only to the rule that it must have in the record what the courts would regard as substantial evidence on which to rest its findings. It could seize upon trivialities, anything more than a scintilla or modicum of evidence, and rest its findings upon that, notwithstanding that incontrovertible evidence, and a mass of it, was the other way. This the NLRB at times did, invariably, in order to hold against employers.

Congress found that rulings such as these resulted in what the courts described as "shocking injustices," findings "overwhelmingly opposed by the evidence" or that "strain our credulity," and "remarkable discrimination" on the part of the NLRB in believing its own witnesses and in disbelieving others.[7]

To correct these abuses of the Board's powers, the House bill and the conference report amended section 10 (c) of the Wagner Act to require the Board to decide cases upon the preponderance of the evidence. Of this clause, the House managers in their statement on the conference report (p. 54) said:

"Making the preponderance test a statutory requirement will, it is believed, have important effects. For example, evidence will not be considered as meeting the preponderance test merely by drawing of expert inferences therefrom, where it would not meet that test otherwise. Again, the Board's decisions should show on their face that the statutory requirement has been met—they should indicate an actual weighing of the evidence, setting forth the reasons for believing this evidence and disbelieving that, for according greater weight to this evidence than to that, for drawing this inference rather than that. Immeasurably increased respect for decisions of the Board should result from this provision."

The provisions ought, also, to improve the quality of the decisions.

THE NEW LAW INCREASES THE COURTS' POWERS AND DUTIES OF REVIEW

What for a few years may prove to be one of the most controversial clauses of the new law is that which increases the powers of the circuit courts of appeal to review rulings of the NLRB. Its purpose is clear: To give to the courts full power to review all questions of law, even when they involve also questions of fact, and a real rather than a fictitious power to review findings of fact.

The original Wagner Act provided that the circuit courts, to which go petitions to enforce decisions of the Board or to review them, should regard findings of the Board as conclusive if supported by evidence. This meant evidence of the kind that in NLRB cases the Supreme Court has held was substantial. The House, in H. R. 3020, amended sections 10 (e) and 10 (f) of the Wagner Act to make the Board's findings conclusive unless it appeared to the court that the findings were (1) against the manifest weight of the evidence, or (2) not supported by substantial evidence. This clause would, in effect, have given the circuit courts in NLRB cases power such as they now have in other cases to review findings of trial courts and of referees (H. Rept. No. 245, supra, p. 59).

The Senate committee in its bill provided that "findings of the Board with respect to questions of fact if supported by substantial evidence on the record considered as a whole shall be conclusive."

The House conferees accepted this clause, instead of insisting upon their own manifest weight of the evidence test, and the clause appears in the new law.

This exact language does not appear in any other statute or, so far as extensive research discloses, in any reported case. The legislative history of the clause, when studied carefully, throws considerable light on what Congress intended the language to mean.

Senator MORSE stated during the debate on the Senate bill (S. 1126) that he and Senator IVES were the authors of the clause. Speaking on May 13, he took the view that the clause made applicable to findings of the Labor Board "the same rules regarding judicial review * * * as are provided for in the Administrative Procedure Act."

Whatever Senator MORSE's view was when he made his statement, it is clear that Congress did more than adopt the rule on judicial review that appears in the Administrative Procedure Act. In the first place, Senator MORSE made his statement concerning a bill that at the time did not have in it the clauses on the rules of evidence and on the preponderance of the evidence which are not in the Administrative Procedure Act but do appear in the Labor-Management Relations Act as Congress passed it. Furthermore, both the House and the Senate appear to have been unwilling to make the terms, not yet judicially construed, of the Administrative Procedure Act applicable to decisions of the NLRB, and most unwilling to do so if, as one school of thought contends, it does not enlarge the Court's powers.[8]

Even before the conference committee amended sections 10 (b), 10 (e), and 10 (f), the majority of the Senate committee clearly indicated a purpose to nullify decisions of the Supreme Court upholding rulings of the NLRB that involved mixed questions of law and fact and other decisions in which the Court allowed great latitude to the NLRB in making findings not based on evidence (Senate Rept. No. 105, p. 26).

After the Senate had accepted the House clauses on the rules of evidence and on the preponderance of the evidence, Senator TAFT, chairman of the Senate committee and a member of the conference committee, stated that the new clause "gave additional authority to the courts in review of Board cases."

The statement of the House managers on the conference report (pp. 55–56) is even more explicit. It points out that the new clauses on the rules of evidence and on the preponderance of the evidence will "in and of themselves, give rise to questions of law which the courts will be called upon to determine."

The courts, the statement says, "will be under a duty to see that the Board observes the provisions of the earlier sections, that it does not infer facts that are not consistent with evidence in the record, and that it does not concentrate on one element of proof to the exclusion of others without adequate explanation of its reasons for disregarding or discrediting the evidence that is in conflict with its findings."

In other words, while sections 10 (e) and 10 (f) require the courts to scrutinize the record to see if there is substantial evidence, sections 10 (b) and 10 (c) require them to determine, as matter of law, whether the NLRB in deciding its cases has followed the rules of evidence and has acted in accordance with the preponderance of the evidence.

The statement of the House managers says that the new power of review, as well as the earlier changes, "precludes the substitution of expertness for evidence in making decisions," and continues:

"While the Administrative Procedure Act is generally regarded as having (been) intended to require the courts to examine decisions of administrative agencies far more critically than has been their practice in the past, by reason of a conflict of opinion as to whether it actually does so, a conflict that the courts have not resolved, there was included, both in the House bill and in the Senate amendment, language making it clear that the act gives to the courts a real power of review."

The language of the new law as enacted supports fully the statement of Senator TAFT and the statement of the House managers. The courts clearly are under a duty to determine whethehr evidence on which the NLRB rests its findings is legal evidence, whether it is substantial, and whether the findings are consistent with the preponderance or greater weight of the evidence.

The emphasis that the committees of both the Senate and the House placed upon rulings of the NLRB that involve mixed questions of law and of fact adds significance to their using the phrase "with respect to questions of fact," in saying what findings shall be conclusive. Clearly, this means that, as to questions of law and as to the legal aspects of mixed questions, the courts shall have full and complete power of review. They need no longer consider the Board expert, either on questions of fact or on conclusions of law, except as to matters that the act expressly commmits to the Board's discretion; and even as to these matters they can, under the Administrative Procedure Act, correct abuses of the Board's discretion.

[7] *Wilson & Co.* v. *N. L. R. B.* (126 Fed. (2d) 114, 117 (C. C. A. 7, 1942)); *N. L. R. B.* v. *Columbia Products Corp.* (141 Fed. (2d) 687 (C. C. A. 2, 1944)); *N. L. R. B.* v. *Union Pacific Stages, Inc.* (99 Fed. (2d) 153 (C. C. A. 8, 1938)).

[8] NLRB Procedures: Effects of the Administrative Procedure Act. 33 A. B. A. J. 14 (January 1947).

Who are employees, what acts interfere with, restrain, or coerce employees, whether or not an employer dominates a union, and many others, all become questions on which the courts are as expert as the Board. Even under the old act, at least one court disagreed with a finding by the NLRB that a bargaining unit was appropriate.[9] Whether under the amended act the courts now will more freely review rulings of the NLRB on bargaining units and as to what remedies will effectuate the policies of the Wagner Act remains to be seen.

It is significant also that the evidence must be on the record. This strongly fortifies the view, expressed in the House managers' statement, that expertness, presumptions, and inferences that do not rest on evidence in the record no longer will be enough to support findings of the Board. Authorizing the courts to determine whether the record considered as a whole supports the Board's findings is consistent with requiring the NLRB to decide according to the preponderance of the evidence, and should lead to the courts' correcting its rulings when the NLRB discards strong evidence in favor of flimsy evidence, or when it gives little evidence more weight than much, or when it decides on shreds and patches, not on the record as a whole.

OTHER IMPORTANT CLAUSES OF THE 1947 ACT

The new law corrects a number of rulings that the NLRB has made in the past, most of which it probably would not have made had the new clauses we have just examined been in effect. Among these are rulings that supervisors, whom the Wagner Act by its terms defines as employers, are at the same time employees; that guards may subject themselves to control by unions of the men they police; that the NLRB may discriminate against independent unions and against craft unions; that employers are responsible for unauthorized acts of agents and even of strangers.

Other important clauses require unions to bargain, define unfair practices by them and provide remedies for the practices, correct procedures of the Board in certifying bargaining agents, limit compulsory unionism, require unions to report on their internal affairs, discourage Communist leadership of unions, put a six months' statute of limitations upon unfair practices, make explicit the right of employees to refrain from engaging in collective activities as well as the right to engage in them, increase the suability of unions, limit political activities of unions and of corporations, provide remedies for strikes that create national emergencies, limit payments to unions by employers, and forbid strikes by Government employees. Except in so far as the new clauses on procedures may preclude the NLRB from holding employers to be guilty of unfair labor practices when they are not guilty, the new law does not in any way relieve employers of the duty to respect rights of employees under the act. Rather, it increases that duty.

With some problems, the new law does not deal effectively; with others it does not deal at all. It sets up a Joint Committee of Congress to study them.

TIMETABLE OF THE TAKING EFFECT OF PARTS OF THE ACT

Although the President may appoint without delay the two new members of the NLRB and its general counsel the clauses on evidence and procedure, and most of the other amendments of the Wagner Act, do not become effective until August 22. The Board has already instructed its Field Division to conform many of their practices to the new law. It has discontinued prehearing elections and is not proceeding with cases involving unions of foremen.

[9] *N. L. R. B.* v. *Jones & Laughlin Steel Corp.* (146 Fed. (2d) 718).

Instructions of this sort should allay fears that NLRB will show the same reluctance to carry out the purpose of the new law as it showed in carrying out the Administrative Procedure Act.[10] At least one member of the old Board has favored many objects of the new law; the others have indicated a wish to make it work. One of the purposes of the Congress in increasing the size of the NLRB was to have on it men in sympathy with its objects. The members new and old will probably be guided largely by the intent of Congress as it appears in the legislative history of the law. As far as proceedings before NLRB are concerned, therefore, I think that the new law ought to be fairly effective. Some subordinate employees in the field, who have taken an emotional or political interest in their work, may be somewhat less than whole-hearted in carrying out the spirit of the new law. In time any such condition should correct itself.

Certifications of bargaining agents that issue under the old act before August 22 remain in effect for a year; or if, on or before that date, an employer has made a contract with the union, the certificate remains in effect until the contract expires or until August 22, 1948, whichever is sooner.

Contracts that call for forms of compulsory unionism that the new law does not permit may continue in effect until their original term expires if they were made before June 23, 1947. If they are made between June 23 and August 22, and if their term is for a year, they continue in effect for their term. Such contracts may not be extended.

Contracts calling for the involuntary deduction or check-off of union dues (i. e., without individually signed authorizations by the employees) are invalid if they are made after June 23. All such contracts, whenever made, are invalid after July 1, 1948. Employer performance of such contracts when they are invalid may result in fines and imprisonment.

Generally speaking, other clauses of the new law took effect on June 23, 1947, when the Congress passed it over the President's veto.

On the whole, the law is moderate. Its clauses received careful study. Many of them had passed one or both Houses of Congress in earlier years. Although unions generally express objection to the law, people of experience do not see in it grounds for their fears. On the contrary, there is reason to believe that in the long run advantage to the union movement will result from equalizing its relations with management and from protecting it against some of the people within it who, by their excesses, at times have brought discredit upon parts of it.

Sales of Permanent War Housing

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. MILLER of Connecticut. Mr. Speaker, this noon I introduced a bill to prevent further sales of permanent war housing in areas where rent control is still in effect. Sales in those areas would be prohibited as long as the Rent Control Act of 1947 remains in effect. Unless this bill becomes law, we face a very critical situation in central Connecticut, as well as in all communities where rents are impossible to find and where we have built so-called permanent war housing.

In only 12 Connecticut communities there are at present 3,807 families living in permanent war housing. There are also 11,706 families trying to secure a rent in these projects. If the recent order setting forth the procedure to be followed in the sale of Lanham Act housing is carried out, about three-fourths of the families now residing in these projects will be subject to removal at the end of a 90-day notice. I doubt if there are 25 houses, flats or apartments for rent within a radius of 25 miles of the city of Hartford.

There is no good reason for the immediate sale of these projects. There are no subsidies involved. The communities receive ample funds in lieu of taxes, and the projects are in fact self-liquidating. Further, these housing projects contain the only rental property for which there is any veterans' preference. To say that veterans not now residing in these projects should be given first priority in the purchase of these homes would be all fine if there were any place to which we could move the nonveteran families now residing in such projects.

Most of the veterans with whom I have talked, who are contemplating the purchase of one of these homes, will tell you quite frankly that they would rather not make the purchase but it is the only way they can be sure of maintaining a roof over the heads of their families.

At the prices these homes are offered for sale the veteran is not getting a bargain. In many cases he will simply assume the support of a white elephant. Many of them are poorly built, are not in accord with the local building codes, and in some cases they do not come up to the State health standards. These faults may mean heavy expenses for the purchaser in the very near future.

Even though nothing but emergency legislation may be considered in the present session, I feel very strongly that the bill I have introduced is an emergency measure. Keeping a roof over the heads of thousands of American families is just as important and much more our responsibility than guaranteeing shelter for families abroad.

I hope the House Banking and Currency Committee will give early consideration to the bill I have introduced today.

Resolutions of Wayne County (Iowa) Farm Bureau

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to present the resolutions adopted by the Farm Bureau administration of Wayne County, Iowa, as adopted

in the recent county convention of this group, to the end that all Members of Congress may know the position our farmers are taking on great State and National issues. The resolutions are as follows:

WAYNE COUNTY FARM BUREAU RESOLUTIONS, 1947

We, the members of the Wayne County resolutions committee, after due consideration present the following resolutions for the approval of the members of the Wayne County Farm Bureau. These are based upon a summary of township resolutions and the work of the county committee after due consideration:

"NATIONAL RESOLUTIONS

"1. Parity. We favor a long-range farm program completely written before the end of the 1948 assembly, and then changed as need arises. This should include a parity formula taking in consideration the cost of farm labor and based on a moving scale which uses the preceding 10 years.

"2. We believe we should keep and improve the present farm program and do not favor discarding it for some new, untried program that has not been worked out.

"3. We favor the Farm Bureau stand on high-analysis fertilizer and recommend increased efforts be made to get the fertilizer for Iowa.

"4. We find conflicting opinions relative to a general coordination plan; however, we favor coordination of agencies wherever the interests of the economy and efficiency can be better served, as a means of protecting these programs from critical public opinion resulting from overlapping functions and duties.

"5. We encourage the studying of an intensive research program in regard to the development of atomic power; however, we favor the United States retaining the full control of atomic explosives until such a time as it is safe to release them for the peace of the world.

"STATE RESOLUTIONS

"6. We recommend to the special committee appointed by the governor studying Iowa roads that they give first consideration to farm-to-market roads, and that the cost of financing an expanded road program be paid with gasoline taxes, motor license fees, and the ($41,000,000?) worrying the State officials. We would like to recommend to the committee the following three-point program: First, each county tax the maximum amount on property allowed by law; second, county engineer be approved by the highway commission; third, a long-range program of each county's farm-to-market roads that would take into consideration the most used roads, said roads to be built to standard specifications. When each county has complied with this program, they will be eligible for State road funds to be distributed on an equalization policy.

"7. We commend the last Iowa General Assembly for having returned State income collections to 100 percent.

"8. We favor legislation to reimburse the counties from the State general fund for all soldier exemptions.

"9. We recommend the top priority for available State aid should be given to the agricultural land tax credit fund to make effective the 15-mill ceiling on property taxes for school purposes levied against farm land in tracts of over 10 acres.

"10. We favor the continuance of the money and credit tax.

"11. We commend the State legislature for the progress made in school legislation, however, much remains to be done before we should be satisfied with our efforts. We recommend that 35 percent of school costs be paid by State aid.

"12. We recommend a minimum county appropriation of $5,000 to all counties in the State be made to carry on extension work. We reconmmend to the State extension service a better opportunity be given county extension directors for advancement in extension service.

"13. Since the problem of flood control is by nature too large to be solved on a county level, it becomes a problem of the State and Nation. We ask the aid of the Iowa Farm Bureau Federation and the American Farm Bureau Federation in carrying on an extensive program for this purpose.

"14. We recommend that Congress give due consideration to appropriations to complete REA lines and especially to the erection of power lines."

F. A. BAKER, *Chairman.*
MRS. HARVEY CLOVER,
ROY HART,
IVAN GIBBS,
CLARENCE DODSON.

The President's Message

EXTENSION OF REMARKS
OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. POULSON. Mr. Speaker, in accordance with my unanimous-consent request, which has been granted, I am including in the CONGRESSIONAL RECORD a copy of an editorial from the November 18, 1947, issue of the Richmond Times-Dispatch, of Richmond, Va.

In my opinion, this statement very clearly indicates the essence of the administration's paradoxical proposals to this body:

A POTPOURRI OF INCONSISTENCIES

Mr. Truman has asked Congress to certify a contradiction. He has urged it to approve the imposition of drastic Government controls upon the American economy in order to prove to the "weak of faith" among the nations that a free economy is preferable to an economy hampered by state regulations.

Mr. Truman only recently said that wage and price controls "savor of the police state" and that he did not contemplate a return to such devices. To what specific events of the last few weeks may we attribute the complete reversal of his convictions?

Instead of calling for the utmost ingenuity in arriving at a solution to the problems posed by foreign aid and inflation, and instead of appraising alternatives, he bids the American people to resign themselves to what he now conceives to be inevitable.

With blithe disregard for the lessons of experience, he proposes a solution expediently acceptable only to politicians. He tells us that this problem can be solved only by our granting more power to Government, by submitting to bureaucratic directives.

Does he expect us to remain oblivious to the injuries which the system of free enterprise would suffer by having this wedge driven into its foundations? In asking us to accept his power program for the duration of this emergency, he conveniently ignores the fact that history has been, and always will be, an endless chain of emergencies which the state will always be eager to solve by assuming more and more power over the lives of its citizens.

The President admits that the controls he seeks are drastic. He says that they would be imposed only upon basic commodities in short supply, such as food, clothing, fuel, and rent; he reassures us that price ceilings and rationing would not be needed for staple food and clothing items that are not scarce.

He would have us believe, in other words, that the American economy consists of a series of watertight compartments, and that the price and wage levels within those isolated compartments have no effect whatever upon each other, an assumption utterly refuted by the bewildering ramifications of wartime controls.

In October 1945 Mr. Truman made the headlines with the fantastic contention that national prosperity could be promoted by raising per-hour wages (already inflated by war) and that this could be done without raising prices and without further hampering production. In his message yesterday Mr. Truman executed an about-face. He said that wages would also have to be controlled, but he took the edge off that admission by adding that in all fairness, he thought there would be few occasions for the use of such wage controls. He said this, presumably fully aware that organized labor is at this very moment planning aggressive spring campaigns for an increase in wages.

A few weeks ago he endorsed the findings of his Council of Economic Advisers, which pooh-poohed the charge that foreign aid exports in the postwar years had created scarcities largely responsible for inflation at home. Although he skirts the issue, he implies that we cannot prevent or halt inflation caused by those exports (according to the Harriman report) without submitting again to wartime rationing and price controls.

The Harriman Committee on Foreign Aid assured us only a week or so ago, that exports to needy European countries in 1948 would actually be less than this year's. We had no rationing and price control this year. Yet with less exports, and with production at the same or possibly higher levels in 1948, we are asked to accept drastic Government controls.

At the time of the Nourse report, the President attributed inflation to the vast increase of national buying power. Yet that buying power was increased because of an all-time high in employment, the happy consummation of the "full employment" policy which has been so ardently embraced by Mr. Truman and his economic advisers.

In the face of all these patent incongruities, we are asked to take for granted that the ills arising from our inflationary prosperity can be cured only one way, namely, by giving Mr. Truman the wartime powers enjoyed by his predecessor, by once again entrusting our economic destinies, for an indefinite period, to bureaucratic controls which because of the unrealistic policies upon which they were based, resulted in widespread inequities and abuses.

During the war years the compulsion of patriotism helped to enforce controls. There is no such compulsion in peacetime, and far less inclination to accept restrictions which are often absurd and unfair. As a result black markets would flourish, as they do in Europe today.

The administration policy makers are most emphatic in assuring European governments that the first step toward rehabilitation of their war-wrecked economies calls for revision of their monetary systems. This can only be done, they are told, by taking the bull by the horns and letting nature take its course, that is to say, by relinquishing the artificial pricing of money, and letting it find its own level. But Mr. Truman says that inflation within our own country can be halted only by controls, that is, by creating artificial money values.

What are we to believe? We can only hope that there is enough genuine statesmanship in Congress to point out the inconsistencies in the President's message, and to propose reasonable, workable alternatives.

Resolution Petitioning Congress To Grant Powers to the Reconstruction Finance Corporation To Purchase GI Loans

EXTENSION OF REMARKS

OF

HON. GEORGIA L. LUSK

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mrs. LUSK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

"Whereas the demand for GI loans is such that under the real-estate lending powers of the New Mexico banks it is impossible for adequate service to be given to the demands of veterans for GI loans; and

"Whereas the New Mexico Bankers Association feels that it is most important that veterans of World War II be given an opportunity to provide themselves with adequate housing; and

"Whereas at the present time there is no adequate secondary market for GI loans: Now, therefore, be it

"*Resolved*, That the New Mexico Bankers Association hereby goes on record as favoring the reestablishment by Congress of the necessary powers by the Reconstruction Finance Corporation to purchase GI loans from banks and other lending agencies; and be it further

"*Resolved*, That Congress is further petitioned hereby to enact such legislation and to make such appropriations as will make effective the powers of the Reconstruction Finance Corporation to purchase GI loans; and be it further

"*Resolved*, That copies of this resolution be sent to the United States Senators and Congressmen representing the State of New Mexico, and also that copies hereof be sent to the Veterans' Administration in Washington so that such congressional representatives and the Veterans' Administration may be advised that the New Mexico Bankers Association is ready and willing to cooperate in every way possible in making GI loans, provided an adequate secondary market is provided for the handling of such loans."

It is hereby certified by the undersigned duly elected and qualified executive secretary of the New Mexico Bankers Association, having custody and control of the records of such association, that the above and foregoing resolution was adopted at a meeting of the executive committee of said association on the 25th day of October 1947, and the foregoing is a true and correct copy of said resolution as the same appears of record on the minutes of said executive committee.

Dated at Albuquerque, N. Mex., this 3d day of November 1947.

MARGARET BARNES,
Executive Secretary.

Goofy Gossip

EXTENSION OF REMARKS

OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. DAWSON of Utah. Mr. Speaker, on Monday the President of the United States addressed a joint session of Congress, setting forth his plan for solving the ills of the world.

I appreciate the great amount of advice he has received from both foreign and American sources, but in my opinion this message does not reflect the true views of the man on the street.

Back in my home town we have a grocer-philosopher who publishes a weekly column known as Goofy Gossip. I submit this week's column as representing the views of these forgotten people we were elected to represent:

GOOFY GOSSIP

From what I read in the papers and magazines and hear over the radio, I don't suppose that if I add my 10 cents' worth it is going to make much difference, but it will express mine and many of my customers' views.

Poultryless Thursday? This deal has been recognized as a sad mistake. Mr. Luckman possibly found out that live chickens sent him ate grain that should have gone to the starving countries. A chicken on the dinner table eats no grain and helps relieve the claimed meat shortage.

Meatless Tuesday? If present prices continue, we will not have to worry about the talked of meat rationing. People's pocketbooks will control that. Many families cannot afford to buy meat now. It has been steakless Tuesday for a great many people for some time and it will be stewless Tuesday unless something is done about prices.

We are told that we have millions of bushels of wheat that we did not know we had. That is good news. It is about time that somebody found it out. There are many families here in the good old United States of America that are not getting what they should have to keep our recognized standard of living. One-third of every dollar for taxes and we are told that if taxes are reduced it will cause inflation. I wonder what we are having if it is not inflation. It all sounds crazy to me.

We must recognize the situation overseas as serious and we are told that we must feed the hungry to keep them from communism. No one wants to see people starve but I sometimes wonder if we are not setting up a world-wide WPA. You are not going to stop communism by feeding a Communist. If he believes in communism he will eat our food and still be a Communist. If he believes in communism that is his privilege just as much as it is my privilege to believe in democracy. Let's not kid ourselves into believing that we are going to be the world's savior. We should help the unfortunates get on their feet so they can once more support themselves and see that they get that which it takes to make them self-supporting, but they should be made to prepare themselves.

An individual constantly supported becomes inert and resents the benefactor when that support stops. That principle applies to nations as well. Friendships were never built on dollars.

If the powers to be would listen to the housewives that stand in line at the grocery stores, as I see them every day, with a $5 bill that gets only half what that $5 should buy, then a lot of our troubles could be solved. Let's give some thought to keeping our people happy and contented and there should be no need to worry about communism at home. All this just does not make sense in supposedly the richest and most productive country in the world. Enough said. Maybe I have said too much. If so, come in and tell me what you think. This is still a government of the people.

So long 'til next time.

LAYTON COLD STORAGE,
B. M. ANDERSON, *Owner.*

The Hollywood Hearings

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. NIXON. Mr. Speaker, in view of the recent hearings on communism in Hollywood conducted by the Un-American Activities Committee I believe the Members of the House will be interested in a radio speech by Chairman J. PARNELL THOMAS over the ABC network, November 4, in which he discusses the issues involved in the hearing. The speech follows:

As chairman of the Committee on Un-American Activities, United States House of Representatives, I want to make a report to the American public on the investigation which the committee is now conducting on communism in Hollywood.

We have just completed the first phase of the hearing. We heard 39 witnesses. Most of them were identified very prominently with the motion-picture industry.

In undertaking the investigation, the committee was aware that it was bucking powerful influences. But we were not deterred by "glamour," intimidation, or influence. Nor will we be in the future. Nevertheless, in order to keep the record straight, I would like to point out a few facts which a current campaign of vilification directed against the committee's Hollywood investigation is endeavoring to obscure.

The Committee on Un-American Activities is made up of nine elected Representatives of the House. We function under Public Law 601 of the Seventy-ninth Congress. We are a standing committee of the Congress. Our authority and right to make investigations is historical and well defined. It is our duty to inquire into subversive or un-American activities in the United States. This is our delegated task, just as the Ways and Means Committee of the House is delegated to inquire into taxation, or as the Agriculture Committee is delegated to inquire into matters concerning agriculture.

The Committee on Un-American Activities is a fact finding body. We are not a court. We subpena persons to testify before us under oath, in order that we may get all the available accurate information on subversive or un-American forces at work in this country. If certain legislative action is needed to cope with the situation, according to the evidence, we must report the fact to the House.

The chief function of the committee, however, has always been the exposure of un-American individuals and their un-American activities. This is based upon the conviction that the American public will not tolerate efforts to subvert or destroy the American system of government, once such efforts have been pointed out. The Congress' right to investigate and expose undemocratic forces is as established and untrammeled as our Constitution.

The Committee on Un-American Activities resolved to expose Communists wherever they may be, whether in labor unions, Government, schools or Hollywood. The motion picture industry enjoys no special status with us. One reason we became so concerned about Communist infiltration in that field is because we knew that the movies, which draw over 85,000,000 spectators in the United States each week, exert a tremendous influence on the lives of American citizens. We knew that such a powerful medium of expression and propaganda, if controlled

outright or in part by antidemocratic elements, could have some disastrous consequences. And we knew that the Communist party had long ago recognized the power of the motion picture and instructed its members to seize control whenever possible in the industry. That many Communists attained strategic positions in the film industry is painfully evident from the testimony we recently received.

Prominent writers, actors, producers and directors in the motion picture industry told us in sworn testimony of the inroads which the Communists have made in Hollywood.

We then summoned the writers, directors, and actors who had been accused of Communist affiliations. They were asked if they were members of the Communist Party. What did they say? They screamed that their constitutional rights were being violated. And they refused to say whether or not they were members of the Communist party.

I want the American people to know that evidence was submitted to the committee which overwhelmingly proved the Communist affiliation of these 10 witnesses. Even their party registration cards were introduced.

Have they denied any of this? Of course not.

These witnesses were asked simple questions. They refused to answer. Therefore, the committee had no choice but to remove them from the witness stand and cite them for contempt. The law requires that we do so.

These witnesses identified as Communists have temporized by saying that the committee was illegally inquiring into their political affiliations. Let's get this straight. The Communist Party, as J. Edgar Hoover, head of the Federal Bureau of Investigation has repeatedly said, is in no sense a true political party. We did not ask these people about their political affiliations. It is a mistake to put the Communist Party in the category of a political party. The Communist Party first of all is a conspiracy to overthrow the Government; it is a conspiracy to destroy the American system of government and the American system of business; what is more, it is a foreign-directed conspiracy, busy here at all times carrying out the objectives of the Soviet Government in the United States.

The Communists here not only preach this hostile philosophy of Stalinism. They are also busy trying to stir up strife and dissatisfaction among the citizens of the United States. Race against race, religion against religion, capital against labor. This is internal warfare aimed at undermining the very foundations of the free economy under which we live.

Therefore, when we ask those $100,000 a year writers and directors who write the script and direct many of the movies which you and your children see if they are members of the Communist Party, we are not asking them of their political affiliations, we are asking them rather of their subversive affiliations.

As a matter of fact, who in the United States, what American citizen, would object to being asked if he were a Republican or Democrat? You even go out and register publicly. Why then, does a Communist refuse to say what he is? He refuses because he knows that he is engaged in subversive activities. He knows that he belongs to a secret conspiratorial organization—an organization which uses aliases for its secret membership rolls—an organization which sends its leaders to Moscow on false passports to get new instructions—an organization which an Attorney General of the United States has said from its very inception has sought to overthrow the Government of the United States by force and violence—an organization which our own committee 6 months ago unanimously found to be the agent of a foreign government, dedicated to the violent destruction of the American democratic way of life.

Permitting Communists to hold responsible positions in so strategic an industry as the motion pictures is just plain folly. Is there nobody in the United States capable of holding these jobs but these Communists? Oh, yes; some executives of the industry insist they cannot get rid of their Communist employees because it might be viewed as a conspiracy. It's a conspiracy all right, but these executives have their facts mixed. It's the Communists who are doing the conspiring.

The Communists don't like the Committee on Un-American Activities. I can't say that I blame them. But the Communist Party has concentrated this hatred in an all-out campaign to discredit and, they hope, abolish the committee. Communist Party headquarters in New York issued special memoranda last month calling upon all Communist-front organizations to work for the committee's dissolution. One of the favorite catchwords in this Communist campaign is freedom of speech. But what do the Communists actually think of this freedom?

Time after time the Communists have demonstrated that they will flaunt the banner of free speech only to serve their own interests. While vociferously demanding this constitutional right for themselves, they think nothing of going in and disrupting meetings where the views being expressed are not to their liking. They think nothing of throwing up a picket line or demanding a boycott against others who would share in the right of free speech.

And actually what did free speech mean to the Communists who were called to testify before the Committee on Un-American Activities in the Hollywood investigation? We wanted them to speak freely. We subpenaed them to defend themselves against allegations that had been made against them and to confront them with the evidence.

In return, these witnesses refused to deny their Communist membership. They shouted a well-rehearsed Communist-line speech of vilification at the committee. Why? Because they knew if they had answered freely and honestly they would have been exposed to the American people for what they really are.

They refused to do so, and these 10 have been cited for contempt by the committee. Their cases are now being referred to the United States attorney for prosecution.

Let me review for a moment the events of the last 2 weeks. Hardly had this hearing begun when all at once glamor flights began to converge on Washington, with stars and starlets. Full page ads began to appear in the newspapers. Expensive radio time was bought. Elaborate cocktail press parties were being held every hour on the hour. All at once there was put in motion in Washington, the biggest propaganda and public relations barrage that I have ever witnessed. For what? To discredit a committee of the Congress.

Why this elaborate campaign? Who is trying to cover up what? We are not dealing here with a few free thinking intellectuals who might be employed in Hollywood. We are dealing instead with a highly organized disciplined group of conspirators who are bending every effort to subvert our greatest entertainment medium to the cause of communism.

Oh, the Communists, their dupes and the high paid apologists of certain interests in Hollywood, are past masters at throwing mud and creating fog. They would like you to think that we are trying to censor the movies; that we are violating the civil liberties of individuals, but they have not succeeded. For this committee has not been diverted, nor have you people been confused. The issue is simple. We are exposing communism in Hollywood. We will continue to expose communism in Hollywood. They would like to think that this is the end of this hearing and this investigation. It is only the beginning. This hearing was only the first in a series of hearings, and when we resume in a few weeks, there is going to be subpenaed before our committee, many more high salaried Communists and fellow travelers from Hollywood, and their activities are going to be exposed and they are going to be exposed for what they are, because the American public will not tolerate any compromise with communism. Communism and Americanism are incompatible.

In closing, I wish to thank on behalf of the Committee, the thousands of Americans who, by their letters, telegrams, and telephone messages, have voiced their encouragement of the investigation into communism in Hollywood. I ask for this continued support by the American people.

Heat and Light Taken From GI Children

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, November 18, 1947

Mr. WEICHEL. Mr. Speaker, at the Plum Brook Ordnance Reservation at Sandusky, Ohio, there are more than 25 houses built by the Government, most of which are occupied by former members of the armed forces who are unable to secure suitable housing for their families. The War Department and the War Assets Administration and other designated agencies for the disposal of unused Government wartime property have made a mockery and a scandal of the sale of unused machinery, goods, and real estate used during the war. Lumber and construction materials have been shipped overseas so that there has been a continual shortage of building material and former GI's have been unable to secure material or build at reasonable prices.

These houses have been used for temporary occupancy by veterans until they can secure satisfactory homes, and now the War Assets Administration becomes very eager and alert and tells these war veterans that the heat, electricity, communications, water, sewer and other utilities now supplied to these houses temporarily occupied by veterans, will be terminated as of December 1947.

I am informed that there are more than 25 children residing with their parents in these houses. The letter to these war veterans from the War Assets Administration, Cleveland region, Cleveland, Ohio, is as follows:

You are hereby formally notified that as a result of the meeting held on Tuesday evening, October 14, 1947, all utilities at the Plum Brook staff houses will be discontinued as of midnight, December 31, 1947, and after that date the War Assets Administration will not be responsible for any utility service at the said location. You are hereby put on notice of this pending cessation of utility service at this time, in order that you may be enabled to make private arrange-

ments for such utilities as you may require on and after January 1, 1948.

Sincerely yours,

JOHN A. RETTER,
Deputy Regional Director,
Office of Real Property Disposal.

After all this time the bureaucrats are forcing the children and wives of former GI's out of a place to live in the dead of winter by cutting off heat, light, water, and other utilities. Times have changed little. Nearly 2,000 years ago there was no room for the Christ Child at the inn in Bethlehem. The bureaucrats have little regard for the rights of people, and it seems that they have much less for those who fought for our country.

Letter of Rev. Dr. W. O. H. Garman, of Wilkinsburg, Pa.

EXTENSION OF REMARKS
OF
HON. JOHN McDOWELL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. McDOWELL. Mr. Speaker, I insert in the RECORD at this point a letter recently sent to the Honorable Harry S. Truman, President of the United States, by the Reverend Dr. W. O. H. Garman, pastor of the Calandar Memorial Church of my home community, Wilkinsburg, Pa.

Dr. Garman was recently a member of a committee of American clerics who toured Europe under the auspices of the Secretary of War. Dr. Garman's letter to the President is a report of his findings and the ideas gained by him during this tour. I feel that his opinion on these matters should be made known to all Members of the Congress.

The letter follows:

WILKINSBURG, PA., *November 15, 1947.*

Mr. HARRY S. TRUMAN,
President of the United States,
Washington, D. C.

DEAR MR. PRESIDENT: This past summer the writer, together with 13 other clergymen, at the invitation of the Secretary of War, made a tour of Europe. For some time we have been desirous of calling to your attention certain conditions we observed in Germany, which we partially investigated on the field, and concerning which we have gathered further information since returning home. These conditions cause us great concern, and all the more so since we believe they have been somewhat responsible for the fact that Germany's recovery has not been more rapid, and that it has become increasingly necessary for the United States to flood Europe with relief.

Before describing these conditions we would like to state that the above tour made us fairly cognizant of the many problems involved in occupying and restoring Germany. We were not surprised that mistakes had been made and plans had to be altered to meet conditions that had not been anticipated. It was our impression that the Army is doing a magnificent job in its attempt to feed Europe. We had several frank interviews and conferences with General Clay and believe him to be most capable, sincere, and earnest. However, it is our opinion that General Clay would be free to do much more toward restoring Germany if it were not for certain weaknesses in our present plan.

With feelings and resentment running so high, and with so many having at that time pro-Russian sympathies, it isn't hard to understand why at the close of the war unduly severe and unwise measures were proposed to punish and control the guilty Nazis. We are also aware that unless Germany had been severely punished that many would have criticized our Government. However, we feel that the Morgenthau plan and the present modification of it which is in force, is too severe, unwise, and if we continue to follow it that Germany never will be restored and the United States will have to feed that land indefinitely. In attempting to enforce this plan we are hindering Germany's recovery and playing right into the hands of our Communist foes who do not want peace and prosperity in Germany, who thrive on confusion, and are doing all in their power to frustrate the effort of the United States to bring about peace in Europe. We declared in our report to the Secretary of War that it was our opinion that Russia was most responsible for the continued distress and misery in Europe. We don't want to see the United States held accountable in the least for retarding recovery in Europe as has Britain because of her policy in the Ruhr.

While on the above-mentioned tour we heard no little about the dismantling of German industries and the shipping of this equipment into Russia. It seems this is another one of those concessions we have made to the Russians. We also were informed that Russia to the contrary was reopening plants in her zone, and operating them with German labor and technicians, all of which meant food for the Germans and more goods for Russia. We have had a similar report from Czechoslovakia concerning Russian occupation there.

Only too obviously, our present plan is more to Russia's advantage than our own. The shocking thing is that under our present plan we propose to further dismantle German industries another 35 percent. This means that the German people will be deprived to just that extent of their chief source of income. So long as we pursue such a policy as this, Germany can never get back on her feet. The effect of such an unwise plan will be to make Germany eternally a pauper nation—eternally dependent on the United States for support and eternally resentful. This being true, the Marshall plan will never bring about recovery in Europe and the billions of dollars spent will be wasted. As long as such a plan is in effect, Germany will be confronted by the Communist menace. So likewise will Europe.

Personally, we feel that our present plan should be revised so that all crippling restrictions are removed. German industry simply can't be revived so long as the United States forbids the manufacture and use of such essentials as aluminum, vanadium, magnesium, ball bearings, synthetic rubber, gasoline, oil, etc.

Under our present plan, the United States, to hold off the Communists, is pouring billions of dollars in relief into Europe. If Germany were permitted to get back on her feet, this effort on our part would not be necessary, for the Germans and others, whose recovery would simultaneously take place with hers, would themselves hold off the Russian Communists.

Another matter, which caused us great concern while abroad and since, was the use by the Russians of plates given them by this country to print occupational money—all of which had to be redeemed by the United States. We went into this matter with the military and, although not responsible, they admitted that such conditions existed. They were unable, however, to estimate how much of this money Russia had already printed or intended to print. One estimate then made by the press was that the Russians had already printed $700,000,000 of such currency. A Congressman is reported to have recently declared that this figure has now reached the $2,000,000,000 mark. We recommended while abroad, and do so again, that our Government request the Russians to return these plates and refuse to redeem any more of this currency.

We also believe that the unfortunate secret agreements which were made at Yalta and other places and never ratified by Congress or the American people ought to be repudiated. As long as they are recognized Russia will continue to hold the whip hand. We saw the evil effects of this in Europe and the decided disadvantage our Government labored under because of these secret agreements. We see no relief for the present situation until these agreements are repudiated.

Upon our return from Europe we made our report to the Secretary of War, our constituent groups, the press and the Nation at large. Now, Mr. President, we report to you matters beyond the control of our military and not incorporated in our first report. We received perfect cooperation from our military while on the tour and they welcomed the constructive criticisms we made.

You should know that we in the American Council of Christian Churches are cooperating with our Army in feeding and clothing Europe and doing all in our power to bring to pass a spiritual revival on that distressed continent. Next summer we are planning to hold an international council of Christian churches meeting in Amsterdam, Holland. We will only be too happy to do everything in our power to help you bring to pass a real recovery in Europe or to cope with problems here at home. May God give you strength and wisdom for the arduous task that is yours.

Most respectfully,

W. O. H. GARMAN,
President.

P. S.—We are sure that you will want to know that our constituents continue to write in expressing their approval of a system of universal military training similar to the Swiss system. So far all have been opposed to teen-age boys being placed in army camps where intoxicants are made available by our Government and where moral conditions are often not what they might be. These parents are anxious to see universal military training undertaken in connection with high school and college training.

Prime Minister of the Dominion of India Enters Fifty-ninth Year

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, November 17, 1947

Mr. CELLER. Mr. Speaker, I herewith offer my congratulations to Jawaharlal Nehru upon the advent of his fifty-ninth birthday. The people of India should be congratulated likewise for having the services and talents of this great man at their disposal. His wisdom, courage, and sacrifice immeasurably aided in the granting of independence to India. The Government of India Information Services, in its November 17, 1947, issue, made some observations on this event, which I herewith insert, and with all of which I am in accord:

The new and free India celebrated the birthday of Mahatma Gandhi only recently.

Now another glad and equally festive occasion falls on her. On November 14, 1947, Jawaharlal Nehru enters his fifty-ninth year.

At this very fateful hour of her history, when her people have won back their stature and dignity, and are eager to contribute the lessons of their culture and free spirit to the common pool of democratic endeavor, India is grateful to destiny for her leaders. Foremost among them is Prime Minister Jawaharlal Nehru, one of the greatest democrats of the times. Educated in Harrow and Cambridge, and belonging to one of the most cultured and wealthy families in India, he came early under the spell of Mohandas K. Gandhi. The glory of India's past fascinated him, her subjection and helplessness made him indignant. Her reservoir of talent, natural resources, and that fund of eternal ideas which is sometimes called the "wisdom of the East" made him dream dreams of her future greatness. He had returned from England as a barrister. His father, the late Pandit Motilal Nehru, was at that time the most eminent lawyer in India. Young Nehru tried his hand at the bar. But already, in his mind, there was an absolute identity between the spirit of India and his own ideals. He could not devote his energies to seeking worldly success for himself while his people were constantly suffering from the deprivation of self-respect, honor, and the elementary necessities of existence. Through Gandhi the voice of India beckoned to him, and he obeyed.

But Nehru is tempestuous and vigorous. He was not content with half measures. First, he put all his heart into the Indian struggle for freedom. Second, he persuaded his aristocratic father to lean toward the revolutionary path. Then there was the spectacle of the Nehru family voluntarily renouncing all their wealth and their princely mode of life. Their palatial house in Allahabad was gifted to the Indian National Congress and became the headquarters of that party.

From then on Nehru's life presented one continuous spectacle of a man, who knows no fear, fighting implacably to vindicate the natural rights of men. The only period when he could rest was when he was thrust in prison by the British—and a major part of his political life was spent in prison—and, on each of these occasions his brilliant and restless mind refused to remain inactive and passive. Most of his published works like his Autobiography, Glimpses of World History, Toward Freedom, and the most recent, the Discovery of India have been written during his enforced incarcerations.

An examination of his writings and of his career as one of the greatest architects of Indian freedom shows that the one moving passion of his life is, and has been, an impatience with any fetters on man's capacity for free endeavor. Nehru's mind is too analytical and sensitive to permit his attaching himself to any dogma or "ism." For him, a method remains a method. The end is always the good of the individual.

The individual, thus being the unit of his thoughts, he has never been able to reconcile himself with any form of dictatorship. He has a record of consistency in this respect which is hardly equalled by any other statesmen in the world. In 1936, when he was passing through Italy on his way to India, he refused to see Mussolini in spite of the latter's most pressing invitation to do so.

Nehru is one of the few statesmen in the world whom hundreds of millions of people follow eagerly and without the existence of a "police state." In spite of the fact that he has occupied the seat of authority since August, 1947, the respect and affection which the Indian people bear toward him is not so much to one in authority as to a man who is still carrying on the eternal struggle of freedom against all the forces which British imperialism created in the past to divide and weaken the Indian freedom movement, and which have now sought so desperately, though unsuccessfully, to thrive on misery, strife and want.

Conditions Among the Navajo Indians

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Albert L. Warner, November 15, 1947, over Station WOL, of the Mutual Broadcasting System:

Washington is gradually becoming aware of a shocking condition among the Indians of the Navajo Reservation. In this land of plenty for most of us, men there are living on a diet of 1,200 calories a day—less than we provide for the inhabitants of occupied enemy Germany. Of the Navajo children, 50 percent die of disease before they reach the age of 5 years. Ninety percent of the Navajo Nation cannot speak or understand English. The Federal Government is bound by law, bound by treaty, and bound by common considerations of humanity to provide education for the Navajos. And it does provide schooling for 6,000 Navajo children. Between 20 and 24 thousand other Navajo children get no schooling. There just are no schools for them. With medical care it is the same story: Shockingly inadequate.

The rate of occurrence of tuberculosis among Indians is about the average of what it was for the country at large 50 years ago—that is, about three times what it is among our population today. As early as September of this year there were 450 Navajo families already on relief. The Bureau of Indian Affairs estimates that another 4,000 Navajo families are living on the equivalent of about $750 a year, and all of these thousands are potential relief applicants as the winter comes on. You know what relief is for a Navajo—$5 a month. That's what the Indian Bureau pays. The States of New Mexico and Arizona refuse to give them anything.

The plain fact about the Navajo situation is this: There are 60,000 of these Indians crowded into a reservation that can scarcely support half that number. The question at once arises why don't some of these Indians leave the reservation and get jobs. The answer is that while a few of them do so, 90 percent of these people can't speak English. They've been given neither the education nor the training nor the habits to enable them to compete and earn a living in the paleface's world. Their plight is desperate. Almost their only source of food and clothing is their sheep. And their reservation cannot support enough sheep to support this depressed population.

The Navajo Reservation is enormous in extent, covering 16,000,000 acres in Arizona and New Mexico. But most of these acres are desert.

When the Navajo were settled on the reservation some 80 years ago, by treaty, they numbered only 9,000 souls. Then the 16,000,000 desert acres were adequate for their support. They led peaceful, nomadic lives for years, with the Government encouraging them to raise more and more sheep. In the early 1930's the Government woke up to the fact that the tribe had increased greatly in population and that its sheep herds were rapidly destroying what sparse ranges the desert afforded. So, in New Deal days, the Government compelled the Navajos to cut their sheep herds in half. That destroyed half of their means of subsistence, but all during the 30's their situation was ameliorated by the expenditure of CCC funds, WPA funds, and other similar New Deal projects. Those funds stopped with the war. But the war brought its economic compensation. Thirty-six hundred Navajos were in the armed services, and their allotment checks helped keep things going back on the reservation. There was such a shortage of labor in the country that 15,000 Navajos got jobs off the reservation.

Now the Navajos are back. Their jobs are gone. Those who were good enough to fight are not good enough to be allowed even to vote.

Sixty thousand Americans are living on the borderline of starvation, in misery and disease. The congressional lack of awareness is reflected in the fact that this year's appropriation for the Bureau of Indian Affairs was trimmed to $37,000,000 from about $44,000,000 last year. The Bureau of Indian Affairs has what might be called a Marshall plan for the Navajos. It would cost $80,000,000 to bring water to some of the Navajo lands, bring schools to their children, teach them agriculture, and move about half of them away from their vast but overpopulated homeland. But an $80,000,000 Marshall plan for the Navajos may have tougher sledding than billions for Europe. Yet here is a responsibility we assumed as part of the historic process of taking away the lands on which the Indians might otherwise have lived. We took their lands; we owe them at least an opportunity to make a living.

Poland and Russia: The Historical Record

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a radio address given by William Henry Chamberlin over Station WSPR, in Springfield, Mass., on the Justice for Poland program.

Mr. Chamberlin was for 18 years foreign correspondent for the Christian Science Monitor, and is the author of several books. During the war he was a visiting lecturer at Yale University, Haverford College, and the Harvard School of Overseas Administration. His address follows:

In order to appreciate the full tragedy of what happened in Poland during and since the war one must understand two important features of Polish psychology. The first is a passionate desire for national freedom, made all the stronger by the immoral partitions of Poland in the eighteenth century and the oppression of the Polish people by foreign rulers. The Poles prize their national language and culture more deeply because of the efforts to make them into Russians or Germans.

The second is a deep distaste for Russian absolutism, whether that absolutism may

take the form of a Czarist autocracy or a Communist dictatorship. Most of the Poles fell under Russian rule after the partitions. The heroic uprisings of 1830, 1848, and 1863 were against Russian oppressors. It is a cruel and ironical aftermath of a war that started in Polish resistance to Nazi aggression that Poland should be, for the time being, under Russian political control, under a made-in-Moscow government.

In 1938 and 1939 Hitler made three proposals to the Polish Government, looking toward combined German-Polish action against Russia. The basis of these proposals was that Poland should cede to Germany those parts of its territory which had been under German rule until 1918. In return Poland was to get so-called compensation in the east, through annexation of territory in Soviet Byelorussia and the Soviet Ukraine.

These proposals were remarkably similar, in spirit, to the settlement which Stalin finally imposed on Poland, seizing more than two-fifths of Poland's prewar area in the east and giving as supposed compensation German regions in the west. The Polish Government, loyal to its treaty of nonaggression with Russia, rejected all Hitler's proposals.

Then the Nazi dictator changed his tactics. He proposed to Stalin a new partition of Poland and found ready acceptance. These two plebian dictators, Stalin and Hitler, repeated at Poland's expense the predatory exploits of their crowned predecessors, Catherine II and Frederick the Great. The only difference was that the Communist and Nazi rulers behaved with infinitely greater brutality toward the unfortunate Poland people.

It was Stalin's intention, just as much as Hitler's, to blot Poland forever from the map as an independent nation. Indisputable proof of this may be found in the following passage in a speech which Foreign Minister Molotov delivered before the Soviet Parliament on October 31, 1939:

"One swift blow to Poland, first by the Germany Army and then by the Red Army, and nothing was left of that ugly offspring of the Versailles Treaty, which had existed by oppressing non-Polish nationalities."

In 1939 Russia and Germany were acting in full understanding as close allies. In an exchange of compliments with the Nazi Foreign Minister, Von Ribbentrop, Stalin declared: "Our friendship is cemented in blood." Indeed, the Soviet-Nazi so-called nonagression pact of August 23, 1939, soon to be revealed as a mutual aggression pact against unfortunate Poland, was cemented—in Polish blood.

The first secret agreement for the partition of Poland, concluded before the outbreak of the war, provided for a line of demarcation along the rivers Vistula, Narew, and San, with everything to the east of this line going to Russia, everything to the west going to Germany. Lithuania, under this scheme for carving up eastern Europe, was left to Germany. Later, at the time of Ribbentrop's visit to Moscow on September 28, this first version of a robbers' agreement was modified. Lithuania was assigned to Russia and the German share of Poland was enlarged, with the river Bug as the boundary.

Nazi outrages in the part of Poland under their rule have been well publicized. These included forcible expulsion of Poles from Poznan, Gdynia and other predominantly Polish regions and cities, closing of universities and higher schools, ruthless decimation of the Polish intelligentsia, barbaric persecution of the Jews, culminating in a campaign of extermination against the Jews in Poland and throughout eastern Europe.

Soviet cruelties in eastern Poland are less well known. There were almost no independent foreign eyewitnesses. After Germany attacked the Soviet Union there was a strong tendency to hush up any criticism of Soviet actions in America and Britain. But it is well known to those who have studied the situation that vast deportations from eastern Poland took place under the Soviet occupation under conditions so inhuman that large numbers of the deportees perished.

The Polish government in exile was able to maintain an embassy in Moscow for 2 years, from 1941 until 1943. Through this embassy it was able to collect detailed information about the number and fate of these deportees. About 1,230,000 men, women, and children (about one-tenth of the population of eastern Poland) were deported. Of this number, 270,000 perished as a result of maltreatment, exposure, and undernourishment.

Both the circumstances of the deportations and the treatment of the Poles in Russia were extremely brutal. Families were deliberately broken up; deportees were packed like cattle into freight cars; there were appalling shortages of food and water; the sick and weak died in great numbers along the way. At the end of long journeys these uprooted people were either placed in slave-labor concentration camps or sent to forced labor in collective farms in the most backward and remote Asiatic provinces of the Soviet Union. Annual death rates of 30 percent and more were reported from the worst slave labor camps. Full and vivid details of what the people of eastern Poland suffered in these nightmare deportations may be found in the book, The Dark Side of the Moon, published by Charles Scribner's Sons.

The Poles did not stop fighting even after all Poland was overrun by the German and Soviet invaders. A government-in-exile, with representatives of the four leading Polish political parties, was set up first in France, later in England.

When Hitler attacked Russia, in June 1941 it seemed for a short time that a better era in Soviet-Polish relations might be in prospect. The Soviet Government concluded a pact with the Polish government-in-exile, then headed by General Sikorski, and recognized that "the Soviet-German treaties of 1939 as to territorial changes in Poland have lost their validity."

An amnesty was declared for Polish military and civilian prisoners in Russia. A Polish army under the command of General Anders was recruited in Russia. Had the Soviet Government been willing to see Poland restored within its legitimate boundaries under a government freely chosen by the Polish people, had it pursued a genuine good neighbor policy, a basis of permanent Soviet-Polish friendship could have been established.

Unfortunately, as soon the first German drive into Russia had been checked almost at the outskirts of Moscow, it became evident that the Soviet purpose of destroying Poland as an independent state, so openly announced by Molotov in 1939, had not been abandoned. What the Kremlin wanted in Poland was not an ally, but a vassal, not a friendly neighbor, but a puppet regime dominated by Communists who would respond to every string that might be pulled from Moscow.

One disability after another was imposed on the Poles in Russia and on January 16, 1943, it was decreed that all Poles who were natives of the part of Poland which had been occupied by the Soviet troops in 1939 should be considered Soviet citizens. A group of Polish Communists and Communist sympathizers which most inappropriately called itself the Union of Polish Patriots was given every encouragement to organize in Moscow as the nucleus of a future Polish puppet government.

The Soviet Government broke off relations with the legitimate Polish Government in London on April 26, 1943. The pretext was that the Polish Government had requested an International Red Cross investigation of the circumstances of the killing of several thousand Polish officers, whose corpses were discovered by the Germans in the Katyn Forest, near Smolensk, in Russia, then under German occupation.

This Katyn massacre was one of the darkest crimes of the war. Both Germans and Russians accused the other of having committed it, and on the basis of their records both Nazis and Communists would have been fully capable of committing such a crime. There is no direct independent testimony, because there were apparently no survivors of the massacre. But the following five pieces of circumstantial evidence point to Russian responsibility for this particular atrocity.

First, no messages were received from any of the slaughtered officers who had been captured during the Soviet invasion of Poland, after the spring of 1940, more than a year before the Germans invaded Russia.

Second, the Soviet authorities always put off Polish inquiries about the fate of the officers with vague surmises and never suggested that the camp in which they were confined had been evacuated before the Germans.

Third, it is highly improbable that thousands of ablebodied officers would have made no attempt to escape during the interval between the supposed Soviet abandonment of the camp and the arrival of the Germans.

Fourth, the bodies were found clothed in heavy overcoats, an unnatural detail if the Soviet version that the officers were killed by the Germans in the summer of 1941 is accepted.

Fifth, there is testimony from a Polish officer that Beria, head of the secret police, and his deputy, Merkulov, admitted in conversation that "a great mistake" had been made in connection with these officers.

As the Soviet armies advanced into Poland active nationalists and patriots were arrested, deported and shot, while Red quisling agents, Polish Communists with long Moscow training, were installed in key administrative posts. The policy of stamping out Polish national independence in league with Nazi Germany was replaced by the policy, equally abhorrent to patriotic Poles conscious of their country's western ideals and civilization, of making out of Poland a Soviet satellite, with the external forms of independence.

During the time of partition there was a Polish song which began: "God restore our freedom." After Poland became an independent nation again, the words were changed to "God preserve our freedom." Now Poles are again singing: "God restore our freedom." The restoration of Poland's freedom is an indispensable condition of a free Europe and a world of peace, justice and order.

Adequate Veterans' Hospital Facilities Needed in Pennsylvania

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. VAN ZANDT. Mr. Speaker, the veteran population in the great State of Pennsylvania, comprising over 1,800,000 citizens, is served by only four Veterans' Administration hospitals, three of which are in full operation at the present time.

The neighboring State of New York, with a slightly higher veteran population than Pennsylvania, has 10 Veterans'

Administration hospitals in full operation.

While it is true that additional hospitals are contemplated for Pennsylvania, the delay in the construction of these hospitals is seriously jeopardizing the health and welfare of the veterans of Pennsylvania.

The following letter from Mr. Lawrence Trainor, chairman, hospital construction committee of the Pennsylvania Department of the American Legion, adds emphasis to the concern that exists in Pennsylvania with respect to the need of adequate hospital facilities for veterans.

Chairman Trainor's letter is as follows:

THE AMERICAN LEGION,
DEPARTMENT OF PENNSYLVANIA,
Harrisburg, Pa., November 1947.

Hon. JAMES E. VAN ZANDT,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN VAN ZANDT: As you well know, we of the American Legion are gravely concerned with the present Veterans' Administration hospital situation in the Commonwealth of Pennsylvania. We are concerned from two angles: The very grave need for construction of new hospitals and the lack of such existing facilities in the Commonwealth.

May we call your attention to the fact that Pennsylvania contributed approximately 1,800,000 of its citizenry in the two World Wars and, therefore, has a veteran population of the above figure, all of whom under the law are entitled to hospitalization when the need for it is present. Yet we find that only four Veterans' Administration hospitals are actually in operation within the confines of our State: General Medical Surgical Hospital, Aspinwall, a similar institution at Butler, and a mental hospital at Coatesville—these three are in full operation. Another hospital, combination of general medical and mental, is under partial operation at Lebanon at the present time.

For sake of comparison, may we respectfully call to your attention the situation in our sister State, New York, where there are at present 10 such veterans' hospitals in full operation, the locations being Batavia, Bath, Bronx, Brooklyn, Canadaigua, Castle Point, Northport, Long Island, Saratoga Springs, Staten Island, and Sunmount.

Under the new construction program of the Veterans' Administration, additional hospitals are to be built in Pennsylvania at Wilkes-Barre, Erie, Altoona, Harrisburg, Philadelphia and two at Pittsburgh. Three of these hospitals are to be of 200-bed capacity, one of 475 beds, one of 1,000 beds, one of 1,250 beds and one of 1,200 beds. The only progress being made in actually having these hospitals built is the fact that we have been informed that the plans for the Wilkes-Barre, Altoona, and Erie hospitals are now in the hands of contractors for bids which are to be opened sometime early next January and construction is to begin on those hospitals within 60 days after the contract has been awarded.

It seems rather strange, by contrast, to find that despite the need for hospital construction in Pennsylvania, the best we have been able to get up to date is merely the facts as stated above, yet we find that at the present time there are under construction in our sister State, New York, hospitals at Peekskill, Albany, Buffalo, and Brooklyn. Evidently those in authority in Washington in the Veterans' Administration do not consider, or have given no consideration, to the great need of the Pennsylvania veterans who have made such great contributions in the two great conflicts. New York's veteran population is only slightly higher than that of Pennsylvania.

We could make comparisons with the situation as it exists in other States of smaller size than Pennsylvania but that would be time consuming. Be it sufficient to say that nowhere in the entire country is the need for veterans' hospitals as great as it is in our own State of Pennsylvania. May we respectfully urge you to check the facts and use every effort to see to it that the Veterans' Administration officials in Washington recognize both the contribution and the need of Pennsylvania and act accordingly and promptly.

Our committee, representing the various sections of the State, is and has been enlisting the aid of all civic groups in our Pennsylvania communities, as well as the citizenry in general, to awaken them to the fact that Pennsylvania veterans, when in need of hospitalization to which they are entitled, should and must be hospitalized in hospitals located within the confines of the Commonwealth of Pennsylvania. You will probably be hearing from many of these groups and we ask your earnest consideration of their pleas that are being made on behalf of those who served so well in time of emergency.

It is beyond our understanding as to the reason why there has been such long delay in the planning of the hospitals for which the Congress has appropriated the money and the construction of which has been approved by the Federal Hospital Board and the President of the United States. The time has come when those in authority in the Veterans' Administration must be made to understand that the delay in the construction program, particularly the Pennsylvania hospitals, is both unjustified and inexplicable and it is up to those in authority to proceed most promptly with this work. They must assume proper responsibility for all the unnecessary delays that can only be laid in their laps.

Specifically, we would appreciate the following definite information: When will the plans be ready and contracts awarded for these facilities: Pittsburgh, General Medical Hospital; Pittsburgh, Neuropsychiatric Hospital; Harrisburg, General Medical Hospital; Philadelphia, General Medical Hospital.

We would greatly appreciate hearing your comments indicating your interest.

Sincerely yours,

LAWRENCE TRAINOR,
Chairman, Hospital Construction Committee, City Hall, Duquesne, Pa.

Whose Liberty?

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes, from the Washington Daily News:

WHOSE LIBERTY?

(By Thomas L. Stokes)

Again we hear a familiar outcry. As if someone somewhere had set the tune, there rises from customary quarters the complaint that our liberty is being imperiled. It is being imperiled, they tell us, by President Truman's program designed to check skyrocketing prices that are eating us out of house and home and, unless something is done, will lead us straight to a crash.

Some of the eminent gentlemen who are so concerned about our liberty seem blind to the real wolf outside the doors of millions of homes, that lean and hungry animal we known as inflation.

In the name of "liberty" they would forbid the people, through their Government, to devise measures to make it possible to buy, at reasonable prices, the things people need for living, and which they produce by their own labor. That would seem to be an essential in a well-ordered democracy. But that endangers our liberty and the free-enterprise system.

The chief trouble with the free-enterprise system is the free enterprisers—those who manage it. They have been greedy, and it is this greed that will wreck the system in time, unless the free-enterprisers show some restraint.

Those who cry aloud that our liberty is being imperiled by proposals to restrain the greed that has run riot and now threatens the economic security of millions never have, themselves, hesitated to use the Government for their own selfish ends.

This can be documented in case after case. For recent samples we can take the last session of Congress. Twice they got through Congress a tax bill to cut substantially their own contribution to the support of Government while giving to millions in the lower-income levels hardly enough tax relief a week to buy more than a quart of milk and a loaf of bread at present prices.

The President, fortunately, was able to stop that.

They tried to weaken the wage-hour law designed to protect the incomes of millions of workers, and succeeded to some extent. They tried to nullify the protections we had built up through the years for the consumer of electricity and gas in order to please big private utilities and enhance their opportunity to gouge the consumer and boost profits.

Through the years they used the power of Government to fix high tariffs to protect their industries, increase their prices, and raise costs to the consumer. Fortunately we have stopped that "log-rolling" in Congress among special interests by the reciprocal-trade program that delegates tariff authority to the President through negotiations with other nations conducted by the State Department.

What license they made of liberty is an old story to anyone who sat through numerous investigations here in the last few years of banking practices, stock-market speculation, railroad and utility high finance—all so blatant that the people finally rose up and put restraints on that sort of profligate stewardship for private profit.

Whose Government? And whose liberty?

British Citizen Speaks

EXTENSION OF REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. RIZLEY. Mr. Speaker, a letter from a constituent of mine of Enid, Okla., the Honorable W. J. Otjen, a former member of the Oklahoma State Legislature and the Republican nominee for Governor in 1942, and likewise the Republican nominee for the United States

Senate in 1944, encloses an interesting letter from a British citizen, directed to a friend of his who also resides in Enid, Okla, Mr. Henry B. Bass. The letter speaks for itself:

[From the Enid (Okla.) Daily Eagle of October 24, 1947]

LETTER RAISES BRITISH LOANS QUESTION ANEW—LEADER BARES IN LETTER TO BASS PEOPLE DON'T WANT HELP

Do all Englishmen appreciate the gifts and loans the United States has given them, or do many of them see in these handouts a menace to the present and future of their country? That is a question raised by a letter received recently in Enid by Henry B. Bass, local contractor, from Duncan Swan, a leading British citizen, former member of the House of Commons and whose father served for 19 years as Privy Counselor for the Empire. The letter reads:

LONDON, *October 6, 1947.*

DEAR MR. BASS: It is high time that you and your fellow countrymen realized that, far from seeking further financial aid from the United States, it is the last thing that many millions of Englishmen want. Any funds supplied by you in the near future will merely go to bolster up the Socialists in power here, just as the first loan enabled these men to enjoy 18 months of giving the taxpayers' money to their supporters and fat jobs to themselves. I may say that the labor government hoped the loan would last till their term of office ended in 1950 and would carry these men to a triumph at the polls. The money, however, has been squandered, to put it bluntly, and Britain has been brought violently up against the distasteful fact that he who will not work, neither shall he eat.

This salutary lesson has got to be learned—the United States must not interfere with the teacher.

I am qualified to speak as a representative Englishman since my father was for 33 years an M. P. and a privy counselor for 19 years. I sat in the House of Commons for 4 years.

Yours sincerely,

DUNCAN SWAN.

Shipment of Pig Iron to Italy

EXTENSION OF REMARKS
OF
HON. ROLLA C. McMILLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. McMILLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Hon. RALPH A. GAMBLE, of New York, chairman, Joint Committee on Housing:

Representative RALPH A. GAMBLE, Republican, New York, chairman, Joint Committee on Housing, today issued the following statement attacking the proposal made this week by the State Department, that 30,000 more tons of pig iron be shipped to Italy, under the interim-aid program.

Chairman GAMBLE said: "When the Joint Committee on Housing began its work September 1, it learned that the No. 1 shortage was in soil pipe. This shortage was due to the lack of production in pig iron. Difficult as stimulation of production is proving, our muddled national policy—or perhaps lack of policy—on the export of building materials, including basic materials such as pig iron, now threatens further to aggravate the housing shortage. The shortage will most certainly be intensified if the request which the State Department made this week for increased pig-iron shipments to Italy is granted. We cannot hope to build more houses, cheaper, quicker, for American workers if critical materials are siphoned off as interim aid to Europe.

"In its statement before the Senate Foreign Relations Committee and the House Foreign Affairs Committee, the State Department lists as a requirement that should be satisfied, the shipment of 30,000 tons of pig iron to Italy in the 4-month period of December 1, 1947, to March 31, 1948. This pig iron could only come from United States sources for the reason that the Export-Import Bank is stated to be the agency that would finance it, and the Export-Import Bank can only finance purchases from American producers.

"In the production of cast iron soil pipe the normal practice is to use approximately half pig iron and half scrap in making the material out of which the soil pipe is cast. It is probable, therefore, that this 30,000 tons of pig iron, together with the use of a normal amount of scrap, represents a potential production of fifty-odd thousand tons of cast iron soil pipe and fittings. It is variously estimated that from one-quarter to one-third of a ton of cast iron soil pipe is required for each dwelling built. In other words, the proposed State Department export of pig iron to Italy would be taking out of the country a critically needed material which otherwise could supply soil pipe requirements for in the neighborhood of 175,000 new dwelling units, on a conservative estimate.

"The foregoing does not take into account the pig iron subsidy cost to American taxpayers.

"Last summer, when the Congress passed the Housing and Rent Act of 1947, provision was made for continuance of a premium-payment plan or subsidy on the production of pig iron. This was done at the urgent request of the Housing Expediter in order that pig iron production might be increased and channelled into the production of cast iron soil pipe which the Housing Expediter indicated was the No. 1 critical building material in short supply.

"The premium-payment plan on pig iron production was continued to December 31, 1947. In the first 9 months of this year premium payments of $8,064,000 have been made by our Government presumably to secure added production of 933,601 tons of pig iron. The maximum premium or subsidy paid was $12 per ton, the minimum $8 per ton, and the average $8.64 per ton.

"It is more than foolish—it is tragic—for the Government on the one hand to be subsidizing pig-iron production and on the other to ship this critical material abroad. In order to continue to help other nations effectively, we must give more thought to our own welfare here at home.

"Through May 1947 our soil-pipe production averaged more than 50,000 tons a month. Production is now running some 6,000 to 10,000 tons less per month. To Italy alone in the first 6 months of 1947, we exported 29,000 tons of pig iron—enough to make soil pipe for at least 175,000 American dwelling units.

"And it is not only in pig iron that our export and foreign aid policy needs checking and correction. It is in other critical or high-priced building materials such as gypsum products, nails, and lumber, as well.

"I am convinced that this latest proposal by the State Department points to the absolute necessity in any foreign-aid program of setting up an agency outside the diplomatic branch of our Government that will give consideration to our urgent home requirements as well as any aid that might be given abroad."

Address of Sterling Morton

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Sterling Morton before the Association of Republican Men and Women of New Trier, Inc., Winnetka, Ill., November 5, 1947:

If tonight you are expecting to hear a learned discussion, backed up with reams of documentation and yards of statistics, you are doomed to disappointment. I am not here to "explain the unexplainable, fathom the unfathomable, nor screw up the inscrutable." Furthermore, the opinions expressed are those of the speaker and do not necessarily represent the views of my sponsors. However, I will have my private opinion of the I. Q.'s of those who don't agree.

Our late summer trip to France, Switzerland, and England, with a short excursion to Belgium and Luxemburg, was undertaken solely for our pleasure and information. Of the former there was some; of the latter a whole lot. We were only over 6 weeks, with 5 days in England, a couple of weeks in lovely Switzerland, and most of the time in France, with more days in the country than in Paris. We hired a small French drive-yourself car and, as in the years between wars, went where fancy took us. We drove 2,400 miles in all. Both of us are at home in the language. In some cases we were taken for French—outside of France, that is—and occasionally for English. It was fun to play the parts assigned, and often we heard comments which would hardly have been made to Americans. French roads are in good shape, most of them having been rebuilt or resurfaced since the war. There are many temporary bridges, of course. Hotels and restaurants are functioning in fairly good shape; there is less difficulty in getting accommodations than in this country.

We had no official contacts. We were not "given the works," as the saying goes—no cocktail parties, no briefing by brass hats, no conducted tours or arranged interviews. We looked at things as ordinary visitors, but as ones with a fairly large background of Europe, through many trips, in my case dating back over 50 years. During my service with Teletype Corp., I had contacts with the officials of the posts and telegraphs of many countries, and, later attended several meeting of the International Chamber of Commerce.

We saw many poor people; we saw many shabby people; but in the countries we visited we saw no people who looked undernourished or starved. Other travelers—to Germany, Austria, and eastern European countries—reported much misery, and I have no reason to doubt them.

The great contrast we noticed was between the countries which have faced the actualities and those which have not. To go from England or France to Luxemburg, Belgium, or Switzerland, was like coming out of the desert into southern California. In these latter countries, food, although rationed, was plentiful; milk, butter, eggs, were to be had; the bread was abundant and good; the meats were up to the usual European standard; gasoline unrationed; stores full of goods; everyone busy; lots of building; and a general air of well-being. In the countries where

the situation has not been faced, the conditions are almost the exact opposite.

There were also great contrasts between France and England, largely a matter of temperament, I presume. The French find it hard to be dejected—they know very well that conditions are extremely serious, but "on sortira." They object to controls and are loud in their denunciations of red tape, but do not pay too much attention to these regulations, evading them wherever they think they can without too severe penalties. Whenever Parisians can get railroad fare or a little gasoline, they rush out to the country to buy food from the peasants. In town, they apparently have few compunctions about dealing in the black market. You continually hear all kinds of jokes and stories about what is going on. Even counterfeit money, which they say passes as readily as any other, is something to laugh about. The English, on the other hand, are very stolid and very serious. Traditionally law-abiding, they have practically no black markets—in fact, anyone known to deal on it would probably be ostracized. Whether the restrictions are more onerous in Britain than in France, I am not qualified to say, but I can testify that the British observe them much better. As a result, life in Britain is pretty grim. One must, however, admire their steadfastness and the fine spirit in which they have accepted the results of the war. That they now have to be afflicted with a government which has probably, in the long run, done more damage to British commercial, industrial, and national life than was done by the war, is indeed a tragedy. There is very little building going on, although the ruins have been neatly cleaned up. I was told that restrictions prevented any large-scale repairs or rebuilding.

One of the questions I have been asked most frequently since my return is whether the French and British are really working to pull themselves out. A proper answer is very difficult. Edmund Burke said that you could not indict a whole nation, and generalities are dangerous. Yet fairly numerous discussions bring the conclusion that the strict regulation of farm prices, the threat of practical confiscation in some instances, and the inevitable blunders of the bureaucracy, have reduced the willingness of the farmers of both countries to put in their traditional hard work. In England, the strict rationing of necessities and high taxes have likewise reduced the desire of miners, mechanics, and such manual laborers to put forth any great effort. Why work even 40 hours if you can live on less, especially when the Government takes away most of any excess you earn, and when rationing prevents you from getting more or better food or clothes with what is left? Much to the discomfiture of the Socialists, man still turns out to be a selfish animal.

In France, some business houses close Friday afternoon and open Monday noon, others close Saturday noon and open Tuesday morning, still others close both Saturdays and Mondays. As a result, both days are practically lost. So, to some extent, a 4-day week is in effect, and there are many holidays, too. On other days, electricity is cut off for hours at a time, and this means that lots of work in both stores and offices must be done most inefficiently by candlelight. I think it fair to say that in neither country are the working people producing as much as they could and would, were most of the restrictions removed so that a workingman could really get something of value through extra effort. The continual agitation of the well-financed Communists, who work everywhere to promote discord and disturbance, keeps people uneasy. Public opinion in France seems to be taking definite sides. I was not at all suprised by the gains made by General de Gaulle's party—only by the size of these gains. Everywhere, in stores and offices throughout France, one sees pictures of the general. The middle-road Socialists are alining themselves now with either the extreme right or the extreme left.

Hitler left many legancies to Europe, one of them the system of exchange and currency control inaugurated by Dr. Schacht. To my mind, many of Europe's troubles stem from attempts to keep national currencies at a much higher basis internally than they command externally. It creates an almost insuperable barrier to the resumption of large-scale international trade, and, morally, ranks with the unlimited and dishonest use of the printing press, both here and abroad. Now that the inhabitants of Yap have given up their stone money, I know of no country—no major trading country, at least—in which the paper currency is freely convertible to something tangible. I am old enough to remember when traveler's checks had printed on their face the number of pounds, francs, marks, lire, etc., for which they could be exchanged abroad. That seems almost unbelievable in these days. The much-maligned gold standard at least had the virtue of bringing about world-wide currency stability. If, by some miracle, the trading nations of the world could return to it, the economic future would immediately brighten enormously, and long-term commitments in international trade would become possible.

Wiser and better informed travelers can discuss much more authoritatively the matter of loans, gifts, Marshall plan, and all that. My own feeling is that any money loaned or given to foreign governments for their own use is worse than wasted—worse because of the effect on our own economy, manifested chiefly in our constant price rise.

Why are prices going up? Could it be that we have upset the economic balance by giving away a substantial part of the goods and services produced by our 60,000,000 jobs (and a somewhat lesser number of people working)? If our exports were really foreign trade that is, if other goods and services were received in exchange for those we send—the pressure on prices would be much less. But today a substantial part of things which our people would buy with their purchasing power is being removed. As a result, this unsatisfied purchasing power, largely generated by the unwise policy of wage increases begun on VJ-day, continues to bid up prices. Of course, if Washington would only stop its confounded attempts to manage our money, to say nothing of our whole economy, many natural brakes on the inflation would become operative. But we can't continue to give away a substantial portion of our tangible production and expect prices to stop rising, let alone go lower.

While on the subject of money—which, like electricity, no one really understands—may I interject that every Englishman I talked to was anxious to express the opinion that our gift-loans had hurt his country, and to urge me to oppose any further advances. They went out of their way to say this—in fact, the desire to get this message across made them much more approachable than usual. They feel that our aid is keeping the present government in power and so is helping in the socialization of Britain.

If, perhaps, the idea behind sending all this money abroad is to buy allies for a coming war against communism, I am afraid the effort will fail. You cannot talk to a European for a quarter of an hour without the subject of a war between Russia and the United States coming up. Most of them arrive finally at about the language of the flour advertising—"Eventually, why not now—while you have the bomb." But one and all are very firm in their hope and desire not to take sides. The British say they had enough of bombing and rockets to last them for a long time and would oppose to the bitter end any move to make their island a beachhead for our use. The French, too, look at their ruined cities and villages and are equally emphatic. If our war planners feel they need a foothold in Europe, they should be kinder to Senor Franco—the head of the only nation which has succeeded in throwing out the Communists after they were once established.

We might be curious as to whether the home effects of these spending plans do not carry great weight with the planners. Maybe some wish to keep this country in a semi-war economy, hoping to maintain the 60,000,000 jobs, are convinced that by pouring out money they can defer the day of reckoning and thus even—if I am not just too cynical—keep the ins in. Whatever the reason, you all know the results are already painful to those who have sought to provide their own security, and to our great religious, educational, and medical institutions, while the future looks blacker for all of us every day this crazy inflation is permitted—even encouraged—to continue.

But back to our European muttons. While I oppose any further aid at which in current Washington jargon are known as governmental levels, I feel we have a great stake in the rebuilding of Europe, and from self-interest, if for no other reason, should help. Four countries—Britain, France, Italy, and Germany—are the crux of the matter. They are the heart of Europe. To aid peripheral governments is like rubbing the feet of a sick man. Cure the head, heart, lungs, and stomach, and the extremities usually get well, too. Yet, I feel we should make a clear distinction between recovery and relief, and carry on separate operations in both fields, at a less exalted level. To speak first of recovery: We should make advances only to producers and for productive purposes. We should see to it that the funds provided are devoted solely to building up production. We cannot be sure unless we have our own people supervise the spending—and properly qualified people, at that. We should set up a sort of RFC in each of those four countries, after cleaning out of our German set-up those who are more interested in making things tough for the Germans than in the future welfare of Europe. Interest rates could be nominal, but there should be clear understanding that the advances are really loans, with eventual repayment properly safeguarded. The strictest care should be used to keep out political administration, for, even though the whole project is primarily political, its detail working-out need not be in any way political.

You may wonder why I include Germany. I do this because I know from long experience that Germany is the very heart of the European economy. Practically all European countries sold more to Germany and bought more from Germany than any other country. Besides, for a thousand years it has been the traditional role of the Teuton peoples to hold the barbarians from the steppes out of western Europe. We must get Germany to functioning if we desire any general improvement in the European situation. The silly lengths to which we carried the denazification policy—lengths not indulged in by any other occupying power—have in effect condemned the overwhelming majority of the managerial and executive brains of our zone to manual labor. The result is about the same as it would be here if pick-and-shovel work were made the only occupation open to anyone who had ever voted the Republican ticket. Punish the real Nazis, but do not pass bills of attainder against those who rode along only to avoid the penalties and disabilities meted out to dissenters.

Relief should be directly administered. Mr. Hoover set the pattern in Belgium. It should be under American control to the point of consumption and each distribution point should be marked in large letters—"Gift of the American People." Today, there is almost no realization, in France, anyhow, of the vast contributions we have made. On the other hand, the comparatively small

shipments of grain from Russia have been proclaimed from one end of France to the other, leaving out, of course, one important detail—that none left Odessa until the French Government had paid for it in American dollars. We might thus overcome some of the hostility toward the United States which our enemies have carefully cultivated, against a background of the destruction inevitably wrought by our armies during the liberation.

We, of course, pay little attention to the tirades of Mr. Vishinsky at the place ironically called Lake Success, but they are widely circulated abroad, thus serving their primary purpose. These statements, by their very reiteration, are influencing Europeans to believe that the United States is an imperialist nation, awaiting only the propitious moment to dominate the world. Why we should provide the setting and sounding-board for such diatribes is a mystery to them—and to me. Brazil sent the Soviet representatives packing for comments which seem almost like terms of endearment contrasted to those applied to our President and other officials. Of course the Russians will not agree to any steps to halt famine and chaos in eastern Europe. To do so would be to desert their strongest allies in creating the confusion on which they thrive. They hope our inflation will bring economic disaster. They hope we will pour more of our substance down the governmental rat holes of Europe, and they will continue to abuse, confuse, and sabotage any real efforts at recovery. Anyone who takes the trouble to read a few extracts from the writings of Lenin and Stalin will find nothing surprising in the conduct of our erstwhile associates. It is all set forth there as plainly as Hitler called his shots in Mein Kampf.

I was one of those who hoped that the United Nations might succeed, but now I am convinced that any further efforts are useless. The Russians have killed the United Nations, just as they started out to do. Why not give the corpse a decent burial in the marble mausoleum so hopefully erected at Geneva? There are many high-minded, sincere men in the United Nations organization—people who sincerely feel that this is the way to peace. It is my feeling that these men, however, lack realism, even though most of them do have in the back of their minds some realistic designs on Uncle Sam's pocketbook. The greatest danger to this country lies in the 6,000 hangers-on now enjoying special immunities and privileges. Many of these might well be described as panhandlers, confidence men, propagandists, debt welshers, spies, and saboteurs. My feeling is that the bad outnumber the good and that we should send the whole motley crew home instead of building a $65,000,000 home for them. Perhaps afterward we could rebuild an association of nations of like ideals, devoted to the dignity of the individual, to the preservation of human rights, especially the basic one of allowing a man to dispose of the product of his own labor or enterprise as he sees fit, which would establish just plain freedom—not a specified and limited number of freedoms—and which would be so desirous of peace and justice that it would be willing to stand up and fight for them all over the world.

To sum up, in my opinion, western Europe is not starving, although consideration must be given to a very bad drought this summer. Those countries which have minimized governmental interference with normal human and trade relations, put their house in order, reduced bureaucracy, while encouraging the average citizen to work long and hard, are fairly prosperous, well supplied, and on the road to recovery. Those nations which still feel the state can plan the individual's life better than the individual can himself, which complicate that life with all manner of rules, regulations, and restrictions, which allow only minimum hours of labor, load themselves down with a horde of civilian employees, and still seek and rely on outside aid, are understandably in bad shape.

We have put our light under a bushel too much in the help we have given Europe. We badly need some good publicity man in that field.

Our loans and gifts will not buy us enthusiastic allies, should war come, and we might not even have a European base of operations. At the same time, we are allowing a potential enemy many privileges he denies us, furnishing him a sounding-board for vituperative falsehoods about us and permitting him to encourage and maintain all manner of subversive and disloyal activities in our country.

Our present actions in foreign affairs just don't make sense to me. Maybe I am just an old mossback who still thinks Grover Cleveland was right when he said, "It is the duty of the citizen to support the government, not that of the government to support the citizen;" and that Teddy Roosevelt had something when he said, "Speak softly and carry a big stick."

But, above all, I stand with one George Washington, who said, "Europe has a set of primary interests which to us have none or a very remote relation. Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

I believe that that is just as good policy in 1947 as it was in 1796. But maybe, in taking this stand, I am just proving the truth of the old adage—"It's hard to teach an old dog new tricks."

What can be done about it? I think a quotation from Kipling's Islanders is appropriate: "On our own heads, in your own hands, the sin and the saving lies."

Editorial on FBI Check-up

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, November 20, 1947

Mr. CRAWFORD. Mr. Speaker, I have previously called the attention of the House to the plain-spoken and understandable answers given by FBI Director Hoover to the series of questions on loyalty investigations propounded by newspaper correspondent, Bert Andrews, of the New York Herald Tribune.

The Washington Post, by means of an editorial, expresses its opinion that Mr. Hoover has by his answers offered a convincing refutation of the wild talk, stirred up by enemies of our Government, which has been making the rounds.

For the sincere consideration of the Members of Congress I wish to call this editorial to your attention. It follows:

THE FBI CHECK-UP

The candid and explicit replies of J. Edgar Hoover, head of the FBI, to questions put by Bert Andrews, of the New York Herald Tribune, about methods of conducting investigations under the loyalty program should set at rest unfounded fears that the FBI has become a formidable secret-police force spying on Government employees, invading their privacy without cause, violating their civil rights, and threatening to reduce them to the status of trembling slaves of a tyrannical government. Mr. Hoover's account of the procedure followed in checking complaints shows the absurdity of such heated imaginings. He points out that the FBI agents do not start an investigation on their own initiative. First they must be supplied with information constituting a substantial basis for an investigation. Then the investigation follows in accordance with executive instructions. In other words, the FBI supplies on request the facts bearing on questions of disloyalty, but it does not hunt for suspects nor does it prosecute those individuals who come under its scrutiny.

Owing to the nature of their work, inefficient, overzealous agents of the FBI may make mistakes that result in damage to the reputation of loyal and law-abiding citizens. Mr. Hoover admits as much, but he also points out that employees of the FBI undergo a rigid screening process before entering the service, and are subsequently given an intensive training course, with special emphasis on protection of the civil rights of individuals. Moreover, if agents conduct themselves improperly, the citizen may appeal to the FBI for an investigation. By emphasizing all these and other safeguards for the protection of individuals who come under the scrutiny of the FBI, Mr. Hoover is able to offer a convincing refutation of the wild charges that have been going the rounds of late about the role played by the FBI in connection with the loyalty probes.

Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, November 17, 1947

Mr. CELLER. Mr. Speaker, on November 17 I offered three specific bills carrying out three recommendations of the President's Committee on Civil Rights. Additional bills carrying out other recommendations are to follow.

The vitalizing and dramatic impact of the report of the President's Committee on Civil Rights must not be permitted to dissipate itself by legislative inaction.

Congress cannot any longer evade its responsibility in securing civil rights to all the citizenry. Those of us who as Members of Congress have felt the need for civil-rights legislation have met with little success in securing passage of our bills which call for a Fair Employment Practice Act, antilynching, anti-poll-tax, and anti-discrimination bills.

The healthy publicity given to the President's Committee on Civil Rights and the consequent impetus it has given to the expression of public opinion places the onus on Congress to face these issues squarely.

The report is especially timely when we, in the United States, face what is aptly termed by the committee, "a state of near-hysteria" which "threatens to inhibit the freedom of genuine Democrats." I refer notably to the lack of regard for civil rights displayed in the recent hearings conducted by the Committee on Un-American Activities. There intimidation of witnesses unsubstantiated charges and general smear

tactics were a distinct invasion of civil rights.

I am particularly pleased to note the emphasis that was placed by the report on the role our abridged civil rights plays in international affairs. As the report states "An American diplomat cannot forcefully argue for free elections in foreign lands without meeting the challenge that in many sections of America qualified voters do not have free access to the polls." We are constantly being reminded by foreign governments to look to the beam in our own eye when offering criticism of the actions of foreign governments with regard to civil rights.

We must take moral leadership in the world today and translate that leadership into terms of internal behavior if we are to fight effectively the patterns of totalitarians, be they from the right or from the left.

Democracy's basic concept is that of the dignity of the human being. We cannot pervert democracy by acting as if life, liberty, and the pursuit of happiness were the prerogatives of the majority only. Majority rule does not mean majority tyranny.

Following is the text of the three bills to be offered:

I

Section 51 (Criminal Code, U. S. Code, title 18) shall be and hereby is amended to read as follows: Whoever individually or in conspiracy with others injures, oppresses, threatens, or intimidates any citizen in the free exercise or enjoyment of any right or privilege secured to him by the Constitution or laws of the United States, or because of his having so exercised the same, or whoever individually or in conspiracy with others goes in disguise on the highway, or on the premises of another, with intent to prevent or hinder his free exercise or enjoyment of any right or privilege so secured, he and each one of his conspirators shall be fined not more than $5,000 and imprisoned not more than 10 years, and shall, moreover, be liable to the party injured to an action at law, suit in equity, or other proper proceeding for redress.

II

Section 52 (Criminal Code, U. S. Code, title 18) shall be and hereby is amended to read as follows: Whoever, under color of any law, statute, ordinance, regulation, or custom, directly or indirectly, willfully subjects, or causes to be subjected, any inhabitant of any State, Territory, or District, to the deprivation of any rights, privileges, or immunities secured or protected by the Constitution and the laws of the United States, or to the deprivation of the right to engage in a lawful activity, or to discriminatory law enforcement, or to different punishments, pains, or penalties, either by malfeasance of nonfeasance, on account of such inhabitant being an alien, or by reason of his color or race, than are prescribed for the punishment of citizens, shall be fined not more than $5,000 and imprisoned not more than 10 years, and shall, moreover, be liable to the party injured in an action at law, suit in equity, or other proper proceeding for redress.

III

All other laws to the contrary notwithstanding, no person possessing all other qualifications which are or may be prescribed by law shall be denied naturalization on account of race, color, or national origin.

Amending sections 51 and 52 of title 18 of the United States Code will increase the protection of Federal rights against invasion by both individuals and public officers. The present penalty in section 51 is imposed on two or more conspirators. The amendment imposes penalties on individuals as well and, moreover, amends the statute so that redress by the victim can be sought in the civil courts in addition to criminal prosecution. Section 52 is amended to increase the penalties, add civil redress, and defines more specifically constitutional rights.

The third bill grants naturalization rights to every individual who otherwise, except for race, color, or national origin, is qualified by law. It is indecent, for instance, to deny the parents of American-born Japanese soldiers the right to citizenship. Many of these parents lost three and four sons in battle defending our country. By denying naturalization to individuals on account of race, color, or national origin, we do not serve the cause of world peace. Certainly, that is no way to make friends. Countries whose nationals are denied American naturalization rights resent bitterly the unjust stigma our naturalization statutes place upon them. These statutes are indeed gratuitous insults.

The President's Committee on Civil Rights should be commended for its vigorous and courageous approach. In my opinion, the text of the report should be on the required reading list of every public school in the country.

Director Hoover Describes FBI Role in Loyalty Check

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. CRAWFORD. Mr. Speaker, elements within our shores not friendly to our form of government are busily engaged in a campaign of vilification against the President of the United States, the Federal Bureau of Investigation and committees of Congress because of the loyalty program which is now getting under way.

It is unfortunate that we have waited so long to take this step to rid Government agencies and the public tax rolls of our enemies and their stooges.

Un-American elements are whipping up a campaign against both the Federal Bureau of Investigation and our own Committee on Un-American Activities.

The Honorable J. Edgar Hoover, director of the Federal Bureau of Investigation, has long been the target for blasts from the guns of American Communists and their fellow travelers and it is not surprising that they have opened up on his agency with such charges as gestapo and witch hunt in the current loyalty program.

Mr. Bert Andrews, capable and well-known Washington correspondent for the New York Herald Tribune, has rendered a highly valuable public service in submitting to Mr. Hoover a series of questions concerning the authority to be exercised by the FBI. Director Hoover, in turn, has given outspoken answers as to the part which his agency will play and he leaves no question as to the honesty and sincerity with which he approaches this problem.

As a matter of public interest I submit the article by Mr. Andrews and a portion of the questions he submitted to Mr. Hoover, as well as Mr. Hoover's edifying answers to them. The additional questions and Mr. Hoover's answers will be incorporated in my further remarks at a later date.

J. EDGAR HOOVER DESCRIBES ROLE OF THE FBI IN LOYALTY CHECK

(By Bert Andrews)

WASHINGTON, November 15.—A description of the role played by the Federal Bureau of Investigation in making security and loyalty checks of Government employees was obtained today by the New York Herald Tribune from J. Edgar Hoover, Director of the Bureau.

It is an account which is of unusual significance because of the fears of many Government employees that a "witch hunt" is on—fears that had become so widespread that President Truman saw fit yesterday to assure loyal employees that such is not the case.

It is of importance, also, because of the complexity of the tasks that will confront members of the new Loyalty Review Board just appointed by the President when they come to consider cases involving Federal workers.

Mr. Hoover's comprehensive story of the FBI's place in the security and loyalty picture came in the form of answers to 17 questions evolved as the result of a letter written to Mr. Hoover on Monday by this reporter.

The letter was sent in an effort to get at the truth behind the thousand and one rumors that have been flying around Washington since 11 State Department employees were dismissed without ever being informed of the charges against them.

The nature and extent of the rumors, which have served to make many State Department employees unhappy, suspicious, and frightened, can be illustrated by the variety of topics discussed by Mr. Hoover.

Some of the major ones are:

Is the FBI the "villain" in the cases of seven of the dismissed employees who are demanding that they either be allowed to resign without prejudice or receive a real hearing and be told the nature of the accusations against them?

Would the FBI object to letting the new Loyalty Review Board see material gathered by the FBI? (The State Department had implied that it could not turn over its files because they contain material from the FBI.)

Does the FBI have almost every wire in Washington tapped? Is there an FBI agent behind every tree?

What does the FBI say about Mr. Blank? (Mr. Blank, one of the seven dischargees, said the FBI shadowed him night and day. He said FBI agents took a picture of him crossing the street with a woman who worked in his office, and later showed the picture to his wife.)

Does the FBI either initiate witch hunts and Red scares or allow itself to be used by the other agencies to prosecute witch hunts and Red scarces?

Does the FBI have files on all people in the United States?

Does the FBI try to protect the civil rights of persons it investigates?

What does Mr. Hoover think of Henry A. Wallace's recent charge that the FBI is conducting a campaign of terror reminiscent of the early days of Adolf Hitler's regime in Germany?

These and many other questions—questions about the dangers of communism and whether the FBI initiates criminal prosecutions—are answered fully by Mr. Hoover in replies carefully prepared after many hours of work.

TEXT OF LETTER TO HOOVER

Here is the letter to Mr. Hoover which led him to give his answers today:

"NOVEMBER 10, 1947.

"Mr. J. EDGAR HOOVER,
"Director, Federal Bureau of Investigation, Washington, D. C.

"DEAR MR. HOOVER: The repercussions from the recent investigations concernnig certain State Department employees have led, as you know, to a widespread discussion of the whole security and loyalty problem and of the specific role played by the Federal Bureau of Investigation.

"I am sure from the work that I have done on this security question that a great many men and women in and out of government do not have a clear understanding of the role of the FBI.

"It may surprise you to know that I have had such statements as the following made to me in the many conversations I have had on the matter:

"1. That the FBI initiates loyalty or security investigations on its own.

"2. That the FBI shadows individuals or otherwise keeps surveillance on them without the advance knowledge of the agency or agencies employing the individuals.

"3. That a commonly heard statement is: 'Better be careful of what you say on the phone because everybody knows that the FBI has almost every wire in Washington tapped.'

"4. That another commonly heard statement is that the FBI is engaged in a witch hunt.

"5. That Washington is swarming with FBI agents, the implication being that there is an FBI agent behind every tree.

"These are just some of the loose assertions that any newspaperman can hear if he keeps his ears open.

"Because such talk is heard, I would greatly appreciate it if you, as director of the Federal Bureau of Investigation, would answer some specific questions as to the exact jurisdiction and authority exercised by the FBI.

"Yours sincerely,

"BERT ANDREWS."

THE QUESTIONS AND ANSWERS

The questions that were evolved and Mr. Hoover's answers to them follow in full:

Question:

As you know, some of the individuals in the recent State Department inquiry have complained that they were not able to learn the nature of the charges against them and therefore were unable to present a defense. Does the FBI object to letting a review board, such as the Civil Service Commission or the new loyalty review board, have access to its report on an individual? In other words, would the FBI be willing to have such review boards confront an individual with charges based on the FBI report? Or would there be any limitation that the FBI would have to place on the use of its files?

Answer:

The FBI has been assigned the task of conducting investigations under the loyalty program. Its task is clearly defined by the President's executive order, and it has no administrative choice as to what it will do or will not do. Obviously, there would be no use to submit a report unless its contents can be used. While the FBI does not approve its reports being made public, nevertheless, it expects the contents of its reports to be used, and it has no objection to a loyalty hearing board confronting an individual with charges based upon the contents of its report. The President's executive order provides that "the investigating agency may refuse to disclose the names of confidential informants, provided it furnishes sufficient information about such informants on the basis of which the requesting department or agency can make an adequate evaluation of the information furnished by them." * * *

In each instance where the real identity of the source of information is not disclosed, a representative of the FBI will be available to confer with other governmental officials or a loyalty hearing board and evaluate the source of the information by describing the degree of reliability. Insofar as is consistent with national security, the names and addresses of persons furnishing information will be set forth in FBI reports.

The procedures to be followed by the loyalty hearing boards in presenting charges, conducting hearings, and such procedural matters are matters not within the province of the FBI.

POLICY OF PHOTOGRAPHS

Question. It was recently disclosed that the FBI exhibited to a Federal employee's wife a photograph it took of him with another woman. Is this standard FBI procedure?

Answer. No. The real facts in this particular case speak for themselves. The FBI was informed by a source whose reliability has been thoroughly established that the Federal employee in question had been contacted by a suspected espionage agent of a foreign government, and in turn the Federal employee had been in contact with others who had been identified as associated with the Communist underground in Washington. The FBI had no choice but to ascertain the identity and activities of the Federal employee. At no time was he kept under 24-hour surveillance. His activities were spot-checked at periodic intervals. We needed his photograph to exhibit to a prospective witness, and not desiring to attract attention to him by going to his employer and requesting his photograph, we took a photograph of the employee as he left his place of employment accompanied by an unidentified woman. When he was interviewed later in his home, an agent took him aside and exhibited the picture to him for the purpose of ascertaining the identity of the woman. His wife would never have known of the existence of the picture had he not taken it out of the agent's hand and walked across the room and exhibited it to his wife, who was talking to another agent.

POLICY ON INITIATING CHECKS

Question. Does the FBI make security or loyalty checks of an employee of the State Department or other Government agency on its own initiative?

Answer. The President's Executive order establishing the Federal loyalty program places a threefold responsibility upon the FBI:

1. The fingerprints of all Federal employees are searched through the identification files of the FBI, which contain more than 105,000,000 sets of fingerprint impressions. If identified, data furnished the FBI by law-enforcement and other official agencies is then forwarded to the Civil Service Commission and in turn to the employing agency.

2. The names of all Federal employees are checked through the administrative and investigative files of the FBI. In the event of derogatory information revealed, it is furnished the Civil Service Commission and in turn to the employing agency.

3. In the event the name, when checked through our files, is identified with information pointing to activities of a disloyal nature under the terms of the President's Executive order, then the case is referred to the field service of the FBI for a full investigation. This same procedure is followed upon receipt of a complaint indicating disloyal activities.

In each case investigated by the FBI there must be a real substantial basis for the investigation. In other words, FBI agents do not start an investigation on their own initiative. There must first be the presentation of information or a complaint which, if established, would come within the directive set forth in the President's Executive order. When such information is received the FBI has no alternative but to investigate. It is merely carrying out the instructions set out in the Executive order.

At the same time the case is assigned for investigation, a summary of the allegation is furnished the Civil Service Commission for transmittal to the employing agency.

PROCEDURE IN MAKING CHECKS

Question. What is the procedure used by FBI agents in checking the loyalty or security record of an individual?

Answer. The investigation in each case is determined largely by the nature of the allegations. The first step is, of course, to definitely establish whether the allegation applies to the specifically named Government employee. From that point on it is a matter of checking every source of information to establish the truth or falsity of the allegation. The overwhelming majority of Government employees are honest, loyal American citizens, and based upon past experience I know that a large portion of the complaints or allegations will be found to be without basis in fact.

In making these investigations special agents of the FBI are instructed to limit their questions to the allegations and to do everything within their power to avoid casting suspicions upon an innocent Federal employee. In each interview the agent is instructed to exhibit his credentials so that the person interviewed will know that he is not talking to an imposter. Unfortunately, citizens frequently confuse other investigators with FBI agents.

Special agents of the FBI in handling the Federal employee loyalty program do not inquire whether the employee reads liberal or other publications, nor do they tap telephones, as has been rumored.

I lay no claim to infallibility for the FBI. We are a human organization and we can make mistakes, and when we do I want to know about them and to take steps to insure that the same mistakes are not made again. We always check on allegations of improper conduct on the part of our agents, but it is amazing to me how easy it is for some people to make charges and how unwilling they are to present facts to authenticate their charges.

NUMBER OF FBI AGENTS

Question. How many agents does the FBI have in Washington to use on such assignments? How many agents in all does the FBI have?

Answer. We have less than 3,800 special agents in the FBI who are required to investigate violations of some 120 Federal laws in the entire United States and in its territories. In addition to investigating violations of some 120 Federal laws, which last year resulted in 11,812 convictions, we have the responsibility of investigating candidates for appointments in the Department of Justice, Federal judgeships, United States attorneys, United States marshals, and, likewise, we make 6,000 applicant-type investigations for the Atomic Energy Commission each month.

We have less than 200 special agents assigned to handle all types and classes in Washington.

I, of course, am cognizant of many of the wild rumors that are being circulated concerning the Federal employee loyalty program. In fact, before we had made a single investigation and, in fact, before the program was even under way, an item appeared in a national news magazine that FBI agents were getting people out of bed at night to quiz them on their loyalty. This was absolutely untrue.

The folly of the impression allegedly existing in some minds that Washington and

other cities are swarming with FBI agents is answered by the simple fact that there is only one special agent for every 37,000 persons in the United States.

BASIS OF INQUIRIES

Question. What are the standards governing whether the FBI will or will not make an investigation?

Answer. These are clearly defined in the President's Executive order. The order provides if "on all the evidence, reasonable grounds exist for belief that the person involved is disloyal to the Government of the United States," then the individual is unsuitable for Federal employment. Activities and associations which are considered in establishing disloyalty are clearly enumerated by the President, as follows:

A. Sabotage, espionage, or attempts or preparations therefor, or knowingly associating with spies or saboteurs.

B. Treason or sedition or advocacy thereof.

C. Advocacy of revolution of force or violence to alter the constitutional form of government of the United States.

D. Intentional, unauthorized disclosure to any person, under circumstances which may indicate disloyalty to the United States, of documents or information of a confidential or nonpublic character obtained by the person making the disclosure as a result of his employment by the Government of the United States.

E. Performing or attempting to perform his duties, or otherwise acting, so as to serve the interests of another government in preference to the interests of the United States.

F. Membership in, affiliation with, or sympathetic association with any foreign or domestic organization, association, movement, group or combination of persons, designated by the Attorney General as totalitarian, Fascist, Communist, or subversive, or as having adopted a policy of advocating or approving the commission of acts of force or violence to deny other persons their rights under the Constitution of the United States, or as seeking to alter the form of government of the United States by unconstitutional means.

International Economic Stability

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, November 24, 1947

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the Secretary of the Treasury delivered in New York, on November 20, 1947, before the National Industrial Conference Board.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

World War II proved conclusively that no single nation, nor any narrow group of nations, can be self-sufficient. Today, national policies and programs which do not give full recognition to this fact cannot be sound in concept and effective in operation.

We in this country should realize now, as never before, that the United States, with all its resources, with all the practical and creative abilities of its people, cannot continue to grow and progress satisfactorily by itself. American economy to a great degree depends upon the economies of other countries. We could not long maintain our present high standards without international economic stability.

This meeting of your conference board takes place at a time when the people of the United States are approaching far-reaching decisions affecting the economic and financial future of the Nation.

In making these determinations, we are duly aware of the heavy cost of government today. Meeting the high cost of government is a matter of grave moment to every individual American. But I believe that a discussion on this subject could more appropriately be termed "meeting the high cost of civilization." For, in the face of present world developments, meeting the high cost of government is nothing less than defraying the cost of freedom and security and continued well-being.

I particularly welcome the opportunity to appear before you to discuss aspects of our financial and economic situation in its relation to present-day issues.

We are inextricably tied up with the fate of western Europe and other nations of the world. We could not escape the results that would follow world chaos. We know, particularly from our war experience, how interdependent nations are today. We witnessed wide restrictions to our own productive capacity when, at the beginning of the last war, the United States was cut off from the supply of strategic and critical materials from other parts of the world. We have learned, too, both during and after the war, the imperative need other nations have for American goods.

War disrupted and destroyed many essential industrial areas of the world economy, leaving many nations looking to us for goods and tools and technical knowledge to repair the damages.

Although 2 years have passed since the war, the devastation wrought was of such enormity that dangerous resultant conditions are yet a long way from correction.

Weighing our responsibility and our ability to aid the reestablishment of world economies, we should, in light of our experience, make a careful inventory of those things which the world needs from us now as balanced against the products which we need from other nations.

In many fields American industry would suffer materially if we could not obtain certain essential products or their constituent raw materials from abroad.

Crude rubber, copper, bauxite, lead, manganese, and zinc are examples of imports indispensable to us in the manufacture of a variety of products.

Certain strategic items, such as industrial diamonds, asbestos, cordage fibers, mica, graphite, quinine, and the like, are mainly produced outside our own country. Without them our civilian and military needs would not be sufficiently met.

Coffee and sugar are important examples of imports which affect intimately the life of the average American.

On the other side of the picture foreign nations are in vital need of American goods. Countries torn by war need supplies to replace capital goods destroyed and to provide foodstuffs which formerly they largely grew themselves. Even Latin-American countries, which, like us, did not suffer any physical devastation at home, have been unable during and since the war to obtain all essential materials.

The European situation is especially acute. Standards of living have been critically reduced over a large part of Europe, and the hard winter of last year did much to make the situation worse.

Food and fuel shortages are in evidence throughout Europe, particularly so in France, Austria, and Italy.

Reestablishment of productive capacities has been much slower than expected.

Coal production, dependent mainly on England and Germany, has been drastically retarded, and imports from non-European areas have been required to meet the barest necessities.

Due to the inadequacy of foreign exchange, imports of other raw materials have also had to be curtailed. The examples are numerous and important. The lack of wool, cotton, and other fibers gives rise to the general shortage of textiles—restricted steel availabilities to shortages of rolling stock, vehicles, and equipment in general—less than normal imports of timber to the slowing down of repairs and new construction.

The speed and efficiency with which measures are taken to relieve these conditions will be strongly reflected in our future international trade relations.

European recovery, for example, would make an important contribution to restoring international trade to private channels. And it would in turn go a long way toward releasing trade from the discriminatory government control which prevails in certain instances.

American business has suffered in times past from such practices in the allocation of quotas, in the determination of exchange rates, and in the more complex relationships of trade and exchange control. It has been one of the principal objectives of our foreign economic policy in the last 14 years to break down these barriers and to eliminate, as far as possible, world trade disadvantages to American business and American labor. European economic recovery is essential to this objective.

The European recovery program, which will shortly be under consideration by the Congress, is based upon cooperative effort of all participating countries and upon the United States making available to such countries certain necessary commodities and services which they cannot provide for themselves at this time.

The conditions under which this foreign aid will be offered are that the participating countries will make the most of their own resources and will make the most effective use of aid from the United States.

Both the interim aid program, which provides for urgently needed food and fuel during this coming winter, and the long range aid program, which provides for tangible recovery, are conceived with a full realization of the fact that our own resources are not exhaustible.

For all practical purposes, and within our means, we are committed to taking an active part in the rehabilitation of the world because, it is well to repeat, we recognize the interdependency of nations, because we know that we cannot continue in our own prosperous state while the rest of the world remains in such an unsettled condition, and because we are determined, to the fullest possible extent to bring about a stable world peace.

It would profit neither Europe nor the world if, in efforts to restore international stability, we should lose our own stability. For, although the United States is enjoying the greatest business activity in its history, and although we are making amazing records in production, in employment, in national income, and in business profits, we will be unable to continue to help ourselves, much less needy countries abroad, if we do not keep our own house in order. We must assure a financially strong government. We must maintain our national fiscal integrity.

It is unfortunate that a great many people today overlook this obligation. These people follow the line of least resistance by advocating tax reduction without regard to sound fiscal prudence.

As Secretary of the Treasury, I must consistently and forcibly advocate the policy of providing sufficient revenues to meet current obligations and to permit steady liquidation of the public debt.

The United States Treasury closed its last fiscal year with a surplus for the first time in 17 years. Certainly during this present

period of prosperity, we should maintain a balanced budget with adequate provision for debt reduction.

It is a sobering thought that although our public debt has been materially reduced from its peak, it still remains at the staggering figure of $258,000,000,000.

The public debt of the United States is a contract between the Government and the people of this country. Government bonds are held by individuals, by insurance companies, by banks, by educational and charitable foundations. We must not weaken public confidence in Government obligations by ignoring our debt at a time when we should reduce it.

I want to make it perfectly clear that I am not opposed to tax reduction. I believe tax reduction feasible and proper after we have met certain necessary prerequisite obligations. I am not convinced, however, that before deciding on tax reductions the Congress should first consider foreign aid within a balanced budget; second, adequate debt reduction; and, third, equitable tax revision. When these three necessary preliminary steps have been taken consideration of equitable tax reduction would be in order.

The Treasury Department has placed before the appropriate congressional committees a detailed study of various tax issues.

I should like to mention here certain of these fields in which the Treasury feels particular consideration is warranted in devising a sensible postwar tax structure.

Over the years, the rapid expansion of the Nation demanded a comparable increase of governmental services, which in turn made it necessary to seek additional sources of tax revenue Much of the existing tax system was enacted during critical periods of depression and war, and consequently, certain inequities have become imbedded in the tax structure.

For example, excise taxes should be revised, particularly those that bear substantially on business costs, or that tend to be pyramided, or are overly regressive in the process of shifting the tax on to consumers.

The corporate tax structure has a number of important areas for consideration in addition to matters of rates.

Careful thought should be given to the correction of the so-called double taxation of dividends.

Economic considerations must be given to problems of small business.

The role of Federal estate and gift taxes should be strengthened by better integration of the estate tax with the gift tax, and of both with the income tax.

Individual income tax should be revised to provide a method for treating family income on a uniform basis in all States.

Postwar tax revision should also strive to make some contribution to Federal-State tax coordination.

Substantial technical adjustments in the present law would go a long way toward smoothing the relationship between taxpayer and Government, providing equity, promoting simplicity for taxpayers, and easing administration for the Government.

But I would call to your attention that in making many of the needed tax adjustments to correct inequities, we will incur a substantial loss of revenue. Until such time as we determine the extent of this net loss, we should not be too hasty in using up our margin of surplus in a general tax reduction that might make impossible these vitally necessary adjustments.

The creation of a sound postwar tax system is a much more complex matter than the arbitrary revision of rates.

In closing, I would like to summarize the elements of a fiscal and tax policy calculated, in my belief, to have the maximum salutary effect upon our domestic economy at this stage, and upon the carrying out of our obligations to promote world peace and recovery.

We must maintain revenues at a level adequate to finance our interim relief and ultimate European recovery-program commitments within the framework of a budget, not only balanced but with a surplus devoted to public-debt reduction.

We must eliminate the inequities, inconsistencies, complexities, and unproductive elements of present-day tax laws.

We can thus maintain a sound, prudent, fiscal position.

When we talk of the high cost of Government, we must remember all these foregoing considerations.

But to arrive at the total cost of operating our Government, we must add the other expenditures of Government, namely; maintaining national defense to prevent World War III; provision for our veterans of all wars; paying interest on our present debt, which was largely created by World War II; our present commitments for international finance which grew out of events of World War II; tax refunds; social-security commitments; and the maintaining of all other departments of the Government.

The President earnestly endeavored to cut the budget last year. His work was so effective that the Congress found it impossible to reduce materially his submitted estimate of necessary Government expenditures.

Whether or not the expenditures of the Government can be greatly reduced this coming year in the face of present world conditions is a problem to which the President and his administration have been and are giving careful consideration and study.

But regardless of the outcome of this study, we must face the cold fact that in this transition period, our costs of Government are necessarily going to be high.

It will take the cooperation and forbearance of all our people and all elements of our national life to meet the challenge of maintaining our obligations while striving always to reduce as rapidly as is prudent the total cost of operating our Government.

Lowering the Cost of Government

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, November 24, 1947

Mr. TYDINGS. Mr. President, on October 27, 1947, the junior Senator from Maryland [Mr. O'CONOR] delivered an interesting and thought-provoking address in Boston, Mass., before the National Association of Attorneys General. Because a portion of the address related to the necessity for tax reform and the coordination of the fiscal systems of the various levels of government, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD a portion of the address by Senator O'CONOR.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

LOWERING THE COST OF GOVERNMENT

(By Senator HERBERT R. O'CONOR)

We have heard, from time to time, suggestions and even strong declarations to the effect that the dual State-Federal aspect of our Government has been outmoded, and that the changed governmental necessities of these times demand rather a strong centralized government, where all important matters, including tax and fiscal affairs, would be handled from Washington.

Even a cursory study of the American war effort in World War II, particularly in the initial phase of that conflict, will refute any contentions that the States have outlived their usefulness.

In the handling of internal defense, in the establishment of rationing of sugar and rubber and other matters most vital to a successful carrying out of war plans and, indeed, throughout the long years of that colossal conflict continuing evidence was given of the powerful adaptability of State governments to meet quickly the many problems that arose in the various localities.

There is no time here to develop this thesis, nor is there need, I believe, to adduce the many points of evidence that could be brought forward to substantiate the claim that America is strong primarily because of the combined strength of the 48 States.

As we attempt to go back to full peacetime administration in the States, however, it becomes clear that one very serious problem which has always been among the top State and local worries, has been aggravated sharply since the war's end. That is the matter of financing. The cost of State and local government has increased tremendously. Not only is there a backed-up demand for expansion of all the physical facilities of education, health, transportation, and the like, but people everywhere have had their thinking changed with regard to what they should expect from government so that their demands now far outstrip the adequacy of prewar tax revenues to finance them.

As a result, we face the inevitable fact that to keep the States and municipalities and counties functioning on a satisfactory basis, ways must be found to lessen the over all financial burden of our citizens.

The taxpayer is becoming increasingly aware of the fact that he is now a very substantial contributor to the project of government, whereas not so many years ago his payment, by way of taxes, were minimum and the number of taxes he paid was limited. He now finds that his total taxes require him to work one day out of three for government and that countless hours are required to take care of the necessary accounting and the preparation and filing of multitudinous reports. He is and has a right to be seriously interested in seeing that tax administration be efficient, thorough, and economic.

No one contemplating the number of taxes levied by the Federal Government and the vast army of tax collectors, inspectors, agents, and investigators can avoid questioning such a great, cumbersome, inefficient organization. Government inefficiency and waste is placing a direct burden on each taxpayer every day of his life.

Confronting this situation, after having labored for 8 years in the State of Maryland to bring some order out of the revenue collection system, and having witnessed the efforts of the Maryland Legislature to rewrite the tax code with an idea of simplification, I have felt the obligation of emphasizing the necessity for an immediate and thorough overhauling of the whole national system of revenue collection, with an idea of simplification, of elimination of overlapping and duplicating personnel, and development of a more businesslike tax system.

It is common knowledge that there is no definite revenue plan which runs through the whole system of tax levy and tax collection. The whole awkward affair is simply a creature of the developing necessities of an expanding Government. It is a complete hodge-podge of devices adopted from time to time to meet the needs as they have arisen. Each new tax brought with it the machinery for its collection. It would be bad enough if this meant only that Washington was overrun with Government employees where, under different bureaus and divisions, agents

were performing the same task and bombarding the same taxpayers with the same sort of an approach. Added to that, it has become necessary to develop field peresonnel all over the country until the average businessman has the feeling that the Government is behind his desk watching every move he makes, and is invading every inch of his factory, his store, and is even upon his own doorstep.

No honest citizen wants to evade his legal responsibility for taxes. No patriotic citizen wants to shirk his obligation to the Government. By the same token the average businessman does not want to be viewed as a criminal or a defrauder of his Government merely because it is utterly impossible for any private individual, without extensive schooling in the specialty of taxation to understand just what are his obligations to Government.

In this situation it is imperative that Government immediately set about the business of putting its house in order. A complete picture should be developed which will list every tax levied by the Government, the source from which it is derived, and the method of its collection. From this study there should immediately develop the duplications that now exist. This can be the ground work for the task of simplification.

To this task there should be devoted the best brains in the country, the kind of brains we are accustomed to call business brains. It manifestly cannot be the academic product of theorists who have had no contact with the task of developing revenue which the Government takes in taxation. Heretofore the task has simply been to amass what money the Government needs and then leave it to business, industry, and commerce to develop a way to pay this money without going out of business. This system cannot continue too long because it has within it enough dynamite to blow up our vaunted economic order.

The problem, however, does not end at this point. While the Federal system has been expanding and entering new avenues not ordinarily considered to be a proper field for Government, the State and municipal governments have gone on apace. It has inevitably followed that the costs of these governments have risen and the tax necessities have followed. The State government in the secondary position and the municipal government in the tertiary position have found almost every source of tax revenue preempted by the Federal Government so that they in turn have been forced to resort to devices which have resulted too often in building up tariff walls between States, between cities, and between counties. This has had the expected disastrous effect upon interstate comity and interstate commerce. It has within it the genius for the destruction of a dual federalism.

In the light of the huge total of governmental expenditures which face the various levels of government, some suggest that this is not the time for reduced taxation. On the contrary, however, I believe that the very nature of the demands upon our economy for the support of the octopus which our governmental taxing and spending system has come to resemble make it incumbent upon all responsible officials of government to examine more closely than ever the demands upon government and likewise the methods utilized to raise and spend the revenues. Only thus can the sum total of tax moneys be controlled and savings effected on behalf of the taxpayer.

First, let us discuss some means toward this very desirable objective of tax reduction. As individual citizens, each one of us is subject to triple taxation, at the very least. We have our Federal taxes, our State taxes, and our county or municipal taxes, or possibly both. Here you have a picture of the same lone taxpayer being preyed upon by three or possibly four tax-collection systems, each with its separate force of tax collectors whose maintenance must come out of the tax receipts.

Furthermore, in not a few instances, two or more of those tax-collection systems operate within the same field. Income taxes are one example of this. The liquor tax is another, tobacco levies still another, and the list could be lengthened considerably. It all adds up to vast annoyance for the taxpaying citizen, plus the absolute necessity of gouging him for considerably more than would be required were it not for the huge tax-collection armies which must be maintained.

In preparing my biannual budgets for presentation to the Maryland Legislature, I was always impressed by the absurdity of this scramble between various levels of government for tax moneys. One of the first interests I had on going to Washington was to help to clarify this unfortunate condition through Senate Joint Resolution 90, and some progress has been made in this direction. The National Nonpartisan Tax-Study Commission which would be established under this resolution would provide a Nation-wide effort to ascertain just where and how the tax moneys of the Federal, State, and local governments are being raised. Once these facts were assembled and the Commission in its report to the President and to Congress had made its recommendations, it would be possible to correct duplications and wasteful methods. With the projected Federal-State fiscal authority as the supervisory agency, it would then be possible by legislation to divide tax sources among the various levels of government much more equitably than at present, and with resulting great economy. I am highly gratified to be privileged to play some small part in these worth-while endeavors.

While firmly convinced that such an overall study and reallocation of tax sources is absolutely necessary, I am not convinced, however, that corrections in present tax inequities, and much-needed tax reductions along certain lines, need wait the completion of such a study.

There are tax reductions which can be achieved, perhaps gradually, but certainly beginning immediately. Just as the 1947 Federal budget showed some reduction in projected expenditures over the previous year, so, I believe, will the 1948 and succeeding budgets continue to reflect additional savings each year. At least part of these savings should be passed on to the taxpayer, in several ways.

First, there must be a reduction in income taxes. By such relief persons in the lower income brackets would be enabled better to meet the higher costs of living now prevailing. Secondly, those whose incomes, running into larger figures, reflect the results of business ingenuity and industrial enterprise, must be permitted to retain a larger share of their earnings so that there may be incentive to expand profitable businesses, and to initiate new enterprises, all of which will redound to the interest of the workers and ultimately result in increased returns to the Federal Treasury.

At the same time, the Federal Government can make a beginning toward the proper reallocation of tax sources by withdrawing, either immediately or gradually, from certain fields of taxation which more properly belong to the States and to local governments. There was general agreement among the conferences of the States and the Congress in the first tax coordination conference at Chicago last month that gasoline taxation should be left to the States and localities, because upon them rests the primary responsibility for construction of highways and streets. Further, the States were in the field of gasoline taxes long before the Federal Government; and finally, the Federal gasoline taxation represents diversion of highway funds, because it is not earmarked for road construction.

Other tax sources which the Federal Government should relinquish promptly for local use are the amusement and admission taxes, and levies on local telephone calls and intrastate electrical energy.

In the interest of justice to all our citizens, I might mention, too, the necessity for Federal action with respect to extending the benefits of community property laws to the citizens of all our States. It is a manifestly unfair system which permits a resident of one State to save an appreciable percentage of his income, simply by dividing it with his wife for income-tax purposes, while his neighbor just across the border in another State is denied this saving because of the absence of a State law.

Any of the measures suggested will help towards the much desired goal of lower taxation. Combine them with a spirit of economy among Federal and local administrators generally, which would hold expenditures to a basic level of absolutely necessary and desirable projects, and the result can be a tremendous lessening of the taxpayer's burden everywhere. Unless we do adopt such an attitude towards taxing and spending, and if people everywhere continue to expect more and more benefits from government, the time will not be far distant when the entire fiscal system of our country will be burdened beyond all reasonable limits.

The States play a tremendously important role and the States have perhaps the most substantial stake involved. If a satisfactory plan can be evolved, statehood and State autonomy can retain the dignified position demanded for them by the Constitution and the Bill of Rights. If no such system can be evolved, they may lose their valued rights by the sheer force of economic necessity.

I stand where I have always stood for constitutional dual federalism. I fully realize the enormity of the task involved in maintaining this order in the face of the extraordinary necessities of the moment. However, my confidence in the inherent righteousness of our republican form of government brings to me the conviction that we will find the proper way to adjust this situation and that we can bring substantial order out of the present chaos and move along to a fuller realization of the blessings of democracy.

This miracle that is America—this union of 48 smaller nations which so astounded the world at its inception—has flowered and flourished while older forms of government have decayed and died. Today it is more vigorous, more competent to deal with the problems of its own people and of liberty-loving peoples everywhere, than at any stage of its long and proud history.

This is so because the America we know and love was born of high principles, was founded on the recognition of the inherent dignity of even its lowliest citizens. Today, fused into a more perfect union by the trials and sacrifices of a global war, America stands on the threshold of a new world order, in which the tenets of American political faith shine forth as a beacon of hope to down-trodden peoples everywhere.

Ours is a wonderful heritage—and ours in a special manner, because of our official positions, is the solemn responsibility of treasuring and strengthening those priceless freedoms with which a Benevolent God has enriched us. Let us keep the faith—let us preserve unimpaired the integrity of our 48 sovereign States to the end that America, in the glory and prestige of its role of world leadership, may have the courage, and the God-given wisdom, to elevate the world from its present abyss of chaos and misery to a bright future of economic happiness and enduring peace.

Full use of State processes will make for strength and stability of these Sovereign governments. It will also operate eventually to the proper and restricted use of the Federal power. In short, it will make for and maintain the original and the all-desirable pattern of "an Indestructible Union of Indestructible States."

The Meaning of International Trade

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, November 24, 1947

Mr. WILEY. Mr. President, recently it was my pleasure and privilege to address the International Trade Club, a distinguished group of businessmen in Milwaukee, Wis. I feel that the subject of my remarks has gained added significance, particularly because of the recent announcement of the Geneva 23-nation pact involving literally thousands of tariff changes and reductions. I therefore ask unanimous consent that the text of my talk be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INTERNATIONAL TRADE—ITS MEANING

I am grateful for this opportunity to appear before you today on this vital subject. It is a source of regret to me that I am unable to visit with you folks here in Milwaukee more often. As you know, in recent years the Congress has been in almost continuous session, and I have been unable to get back to Milwaukee to talk things over with our people here as often as I would like.

As you know, too, even now I am about to return to Washington to be on hand at the opening of the sessions of the Foreign Relations Committee. On November 17, of course, the whole Congress will convene. At that time, this entire subject of our economic relations with Europe and the world will be thoroughly studied and evaluated.

During my recent 6 weeks' trip to Europe, I had the opportunity to make a number of observations on this problem, although I lay no claim to being anything of an expert.

OUR SUBJECT TODAY

It is particularly appropriate that today we look into the meaning of international trade. By meaning, I do not refer to the mere formal definition of international trade as the interchange of goods and services between sovereign nations. I am referring to the meaning in terms of potential value to peoples when they exchange their goods and services—the value to the people of Wisconsin, for example, from healthy, wholesome international trade and to the people of the United States, as well as to foreign peoples. Yes, I am referring too, to the meaning in terms of potential disadvantages of some types of trade which I believe we can avoid.

I am reminded of the Biblical saying: "Without vision, the people perish." We need vision in international trade, just as we need vision in our domestic policies. I am certain that you gentlemen who have signified your interest in international trade will be contributing greatly to America's understanding of its importance and also of the need for caution in our experience with it.

MIDWEST STAKE IN FOREIGN TRADE

When I'm out in Washington in the National Capital, I frequently hear the city slickers from the eastern seaboard give the impression that the Midwest is a kind of intellectual and economic "isolation ward" with very little interest in world economy and world trade.

I wish that some of my friends from the east coast could have the privilege of joining with me in meeting with your splendid group here today. Here certainly is evidence of Milwaukee and Wisconsin interest in foreign trade.

As a matter of fact, this isn't a new interest for Milwaukee. Milwaukee machinery and equipment is known—and favorably known—throughout the civilized world.

We are all proud that our farms and our factories contributed so directly to the war effort. We can be equally proud in realizing that Wisconsin is now making its contribution to the work of assisting in revitalizing the world's paralyzed economic nerve centers.

We often read that the volume of foreign trade represents the margin between red ink and black ink—the difference between depression and prosperity. I am always suspicious of these broad generalizations, but this one does have behind it, certain undeniable statistics.

FOREIGN TRADE AND MILWAUKEE INDUSTRY

The Foreign Trade Committee of the Milwaukee Association of Commerce has developed some interesting figures in this connection. Let's analyze these figures:

First. Goods valued at $73,222,000 were exported from Milwaukee County in 1946.

Second. This volume of export business represented 17,372,814 man-hours of work, with an average weekly wage volume of $391,844.

Third. The export business of Milwaukee County last year provided a full year of employment for 8,187 production workers at an average annual wage of $2,488.

Those figures give an idea of what foreign trade means to Milwaukee's industrial community—and what it means to Milwaukee labor.

Milwaukee is one of the world's most important machinery-producing centers. We know that machinery of all kinds is desperately needed by the war-devastated countries, and we know that the European machinery-producing centers aren't able to do the job.

In other words, it is painfully obvious that the burden of world reconstruction is lodged in the United States. It is equally apparent that vital, key production centers such as Milwaukee are playing an important part in the reconstruction of the world's economy.

The Milwaukee Harbor Commission, on the basis of its statistical data, concluded that the great port of Milwaukee is growing in stature as a seaport and as an export-trade center. There are at the present time four ocean-going lines of steamers operating from the Great Lakes directly to European ports. There are 40 ocean sailings scheduled for 1947 and about 50 ocean sailings scheduled for 1948.

At the present time, we understand that European shipowners are building new ships to serve the Great Lakes ports. That construction is apparently being undertaken on the assumption that the Great Lakes area will interchange a growing volume of trade with Europe. Incidentally, I understand that Wisconsin manufacturers are already using these services to advantage so that we already have some statistical record of the transportation economies of direct shipping services.

WISCONSIN BENEFITS FROM FOREIGN TRADE

We know that goods exported from Wisconsin farms and factories flow into foreign markets from Great Lakes ports and from ports on the three seacoasts.

I have tried to secure accurate figures on Wisconsin's over-all export volume, but apparently it is impossible to secure any such figure from a single source. On my return to Washington, I hope to suggest the desirability of a centralized clearing house in Washington where such information could be accurately assembled on the basis of port reports.

Probably the best estimate we can make is that the State export business now exceeds a hundred million dollars a year. That is an extremely impressive figure. It demonstrates how the Wisconsin farmer and the Wisconsin worker can participate in a balanced two-way foreign trade where domestic production in some degree at least my utilize imported raw materials.

We know that we can inspect the wharves of any great port in the United States and find stenciled on the shipping crates, the names of the great manufacting enterprises of Wisconsin.

On my recent European trip, I found that Wisconsin industries were well represented in the supplies and goods being sent abroad.

It is my understanding that some Wisconsin manufacturing enterprises are currently shipping into 30, 40 or even 50 countries simultaneously so that even the far-off islands of the Pacific are receiving American machinery and equipment. The demand for our production is world-wide.

As you so well know, among the major Wisconsin industries which figure importantly in international trade are those producing electrical machinery, motor vehicles, bodies, parts; paper and allied products, iron and steel products, meat and meat products; condensed and evaporated milk, tobacco manufacturers, petroleum, coal products; rubber products; leather, tanned, curried, and finished; textile mill products, lumber and wood products, and certain canned fruits and vegetables.

In fact, in 1939 (the last year for which complete figures are available) the aggregate value of Wisconsin businesses whose operations were substantially affected by exports was almost a billion dollars. Other Wisconsin enterprises which I have not listed, which are vitally affected by exports to a lesser degree are corn and barley growing, hog raising, flour milling, and the manufacture of wooden boxes. You, no doubt, can name many other Badger industries vitally affected by trade; my list is not intended to be complete.

IMPORTS FOR WISCONSIN

Imports also are vital to Wisconsin industry, supplying many of the raw materials which we need here to produce. For example, our iron and steel industry, our leather and leather footwear industries, sheet metal, tin can, tinware, and other industries are vitally dependent upon foreign raw materials. It has been estimated that around three out of five of the working folks in Wisconsin are in businesses which are vitally affected by international trade. The remaining two-fifths of our people are affected indirectly by international trade, because they prosper insofar as the export industries prosper.

OPEN GREAT LAKES TO COMMERCE OF WORLD

The direct shipping services operating between Great Lakes and European ports have given us a laboratory demonstration of the potential transportation economies of the St. Lawrence seaway.

I do not intend to review this familiar subject with you today because I know that as export and import experts, you are already familiar with the seaway project. I should like to comment in passing, however, that as one phase of our foreign trade, it is highly desirable for the Great Lakes area to have a direct artery—a life line to the sea—a corridor to the commerce of the world for the great landlocked empire of the Midwest.

BASIC TRADE VALUES

You and I are, of course, basically familiar with the tremendous values of economic trade between nations. We know how important to international peace and understanding are the contracts between peoples when they exchange goods. We know how standards of living can improve when goods can be brought from abroad to furnish comforts and conveniences of life to other peoples. In any discussion of international

trade, particularly in our own State, the matter of the St. Lawrence seaway naturally looms large.

CURRENT TRADE

Let's turn for a few moments to a brief review of our present international trade position. We know these facts:

In the first half of this year, according to latest figures, the value of our exports constituted around 12 percent of the total amount of movable goods produced in the United States. This ratio compared with 7.6 percent in 1939; 12 percent in 1944 (at the height of lend-lease shipments), and 16 percent in the comparable year of 1919 when the world was also looking to the United States for supplies for relief, reconstruction, and rehabilitation.

During the first half of 1947, we had a tremendous expansion in our overseas exports, around 60 percent over and above the value of the first half of 1946—all told, around $7,500,000,000 worth of goods—94 percent in cash, commercial exports. Of course, much of this high value (in fact, around one-third of it) was brought about by the rise in prices of our goods. Our imports also increased by about 25 percent over 1946 to a height of around $2,800,000,000. This first half-year figure for United States imports was the highest on record except for the first half of 1920 when the value of incoming goods was just a little short of $3,000,000,000.

OUR FAVORABLE TRADE BALANCE

We can see that during the first half of 1947, the excess of our exports over our imports was $4,600,000,000. In 1946, during the entire year, the excess was $4,800,000,000. This is in contrast to the relatively small balance in 1936 to 1938, when our favorable export balance was $478,000,000. It is reported that around three-fifths of the increase in our export balance occurred because of increased trade with countries of the Western Hemisphere; that is, with Latin America and to a lesser extent was brought about by trade with Africa.

It is obvious that with so tremendous a balance of exports in our favor the dollars which we have been making available to foreign countries will be drawn back into the United States much as a vacuum cleaner draws dust. Trade experts have pointed out that this tremendous export balance in our favor has further aggravated the shortage of dollars abroad and that Europe cannot possibly continue to import from us at this rate unless we make available more dollars. The big question, therefore, is how to make available these dollars.

HOW TO AID EUROPE

We cannot and will not and must not give out dollars like a Prodigal Son or like a Santa Claus. We simply cannot afford to be anything but a Good Samaritan, helping foreign peoples to help themselves, to be able to buy from us and sell to us on sound economic terms.

DANGER OF CUTTHROAT COMPETITION

Yes, international trade is of tremendous meaning and of tremendous value. But, as with all good things, there may be a tendency in some quarters to overlook disadvantages which may accrue if (and note that I say if) we pursue a trade policy that may recklessly damage in some instances the prosperity of some home industries.

Competition, of course, is the lifeblood of American free enterprise—competition at home and competition abroad. But you and I know that there is such a thing as cutthroat competition where business cannot possibly survive. We know, too, that in the event foreign goods of a particular type come in at cut-throat rates which will completely destroy a local home industry, throw local workers out of employment, we are obviously not looking after the needs of our own people. You will recall the words of St. Paul: "He who does not look after his own is as unworthy as an infidel."

What I am saying in substance is that while we must seek to encourage our international trade, it is vital that we note the effects upon given home industries rather than recklessly assume that "all trade is good," simply because it is trade.

For a long time to come, because of the ravages of war, Europe may not be able to compete with us. But there will come a day when she will be able to send vast floods of goods over with relatively cheap labor, as will Asia. It is against that day that I make these comments and ask that we be on the alert rather than asleep at the switch.

Let us bear in mind these essential facts:

1. It has been estimated that around 1 out of every 12 American workers is directly dependent upon export industries and upon free flowing international trade. While this is a tremendous figure which must be borne very carefully in mind, let us not forget about the other 11 American workers who are dependent basically upon domestic sales. Let us not forget that the greatest market in the world is the market of the American people themselves, who are now producing and consuming goods at the rate of $160,000,000,000 a year.

BLACKMAIL AGAINST UNITED STATES

2. We know that it is necessary that foreign countries secure the necessary dollars for trade with the United States. But in the same foreign quarters, this fact is used as a sort of "blackmail" on the United States. Some foreigners seem to be saying substantially this: "You had better give us the dollars pronto or else, because we are flat broke and unless we get the dollars, your own country is going to smash." The American people do not like that sort of verbal blackmail.

We recognize that it is to our economic self-interest to have adequate imports and exports. But we do not believe that these countries have a right to assume that foreign countries can order us around and tell us off, because they are supposed to have a life and death hold on our economy. We want to help them to help themselves. We want to have an adequate trade with them. But we do not believe that they have any right to assume that the dollars we may furnish them "we owe them." Since the beginning of the war we have given foreign lands $58,000,000,000. Let us not forget that stupendous sum.

TRADE CONCESSIONS

3. We are familiar with the many trade concessions negotiated with foreign countries which have permitted import of American motorcycles, American cars, electric machinery, iron and steel products, paper products, etc. But we are also familiar with the fact that deluges of cheap foreign goods, for example, cheap foreign shoes, or cheap foreign furs, have rendered tremendous damage to American industry. That is the reason why we must exercise care in our reciprocal trade agreement programs. We are willing to make reasonable sacrifices in permitting the influx of foreign goods. But we are not willing to have our own vital domestic industries smashed and thousands of our own workers thrown out of employment.

DOING BUSINESS WITH RUSSIA

4. We are doing business with Russia—and with Russian satellites. It's a two-way trade conducted for cash. The Commerce Department reports that in the first 6 months of this year, business has run ahead of prewar years.

These figures, of course, relate solely to nongovernmental exporting and importing. Our exporters may be sending over a hundred million dollars worth of material this year—on the basis of the 45,000,000 we had sent up to July of this year. That would mean that this year we may hit the highest volume of trading ever to exist between our two countries.

There is some talk in Washington to the effect that the United States may consider placing all exports to Russia under specific licensing controls. The Government can do this. In fact, it did take such action, and rightly so, in the case of oil which was going from west coast ports to Russian Siberia prior to last July.

At the present time, we have specific export controls only with Spain, but there is a possibility for increasing these controls along the lines mentioned above. Russia naturally could retaliate—and in fact there is some talk to the effect that Russian satellites are already limiting their shipments of strategic materials to this country.

We do a little trading with some of these smaller countries. We do have some trade with Poland, Czechoslovakia, Hungary, Bulgaria, Yugoslavia, and Albania.

It cannot be denied that some of the material sent to Russia has been material which could be used for war purposes. Aside from private trade with Russia, the Government has sent the Soviet Union some $3,000,000,000 worth of lend-lease supplies for which we have never had a satisfactory accounting.

There is a growing feeling in this country that it is poor policy to supply any goods or material or American know-how to Russia—particularly when the needs of western Europe under the Marshall plan are so great. The State Department appears to be heading in this direction, and it may be that American exports to the Soviet-controlled areas will be curtailed in favor of more cooperative countries. That policy will find general acceptance throughout the United States.

The declaration of principles adopted by your national foreign-trade conventions have been very thought-provoking on the questions of our export business.

PRINCIPLE OF MUTUAL BENEFIT

I have been particularly impressed with the recognition by your national group of the principle that "Mutual benefit is the motivating force that underlies all trade."

That single principle is an entire speech in itself. It presupposes both imports and exports—and it presupposes the projection of American capital abroad—with proper safeguards and limitations.

ELIMINATE DISCRIMINATORY TREATMENT OF AMERICAN INTERESTS ABROAD

Groups such as this have a right to expect that in the extension of financial and material aid to foreign nations and the settlement of accounts, consideration be given to the elimination of unfair and discriminatory treatment of American interests abroad.

AMERICAN ECONOMY CAN BE DYNAMIC FORCE

I am not selling American prospects short. One eastern economist has estimated that we can have a national income of $260,000,000,000 by the years 1956 to 1960. I don't know how he arrives at the figures and I don't know how much credence can be placed in such figures, but I also know that it is possible for us—whatever our national income may be—to use that income wisely—in the interests of peace.

SUGGESTIONS FOR MORE TRADE

Now, gentlemen, against this background, how are we going to facilitate European trade? Right now around 37% of our exports are going to Europe, which I might note, is the smallest share in our trade history except in 1941. It is, however, of course, still very substantial.

(a) Of course, the major means by which we can help international trade is to enable Europe to get back onto its own feet, prosperous, thriving, producing. That is the major work of the special session of the Congress that has been called. There are, however, many questions which we will want to have answered before we render the aid. Many of these questions I have submitted to General Marshall already and the State Department has replied in general terms to me.

I asked: Will our aid be a mere palliative and will we be merely pouring money down a bottomless rat-hole, only to be faced later on with still more demands without having achieved any substantial good? Will we be subsidizing European socialism, recklessly facilitating socialistic experimentation and further ruin to the free enterprise system abroad? Or will we indicate our basic American desire to have free enterprise and free flow of goods restored insofar as possible abroad?

We know that many countries now have single State trading corporations, like Russia's Amtorg, and that there is no such thing as private trading between private businesses in many lands.

Are we going to fight that trend?

Let me ask, gentlemen, too, why we cannot, in return for our dollars, secure sound business collateral, like foreign mineral resources which we can stock pile for national defense. That seems to me to be good "horse sense" which as you'll remember, Dooley said was the scarcest commodity on the market.

STIMULATE TOURIST TRAVEL

(b) A second way to stimulate international trade is to stimulate American tourist travel abroad. Such travel leaves hundreds of millions of dollars in foreigners' hands for the purchase of American goods and services, at the same time as giving cultural enjoyment and education to our citizens who travel. Sixty million American visitors went on the road in the United States last year and there are more than enough visitors who are willing in these times to go abroad.

(c) Another means by which we can help international trade is, of course, to cut the red tape, the unnecessary forms, which are involved in so much of trade and which so many foreign countries impose on their imports of our goods and services.

CONCLUSIONS

Gentlemen, I've tried to review some of the advantages of international trade and some of the problems involved in it.

You and I may not entirely agree on every last one of these matters, but I'm sure we respect one another's viewpoints. As you know, of course, I am interested not in serving this or that industry of Wisconsin, or this or that industry of America, but in serving all industry, all agriculture. That is the function of a United States Senator. I am sure that you will agree, that a look at the whole picture is essential rather than a mere concentration upon this or that segment of American enterprise. We have legislated segment-wise far too much in Washington, thinking only in terms of prosperity for this or that group. It is time that we think in terms of prosperity for all America. Let us bear that always in mind in our consideration of international trade.

Gentlemen, I want to thank you for your courtesy and your attention and I express my fond hope that I'll be able to see all of you again very soon.

Foreign Aid and Prices

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, November 24, 1947

Mr. HILL. Mr. President, I ask to have printed in the Appendix of the RECORD an address on the subject of Foreign Aid and Prices, delivered by the senior Senator from Utah [Mr. THOMAS] over radio station WRC, of the NBC network, Friday evening, November 21, last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

During this period of unrest President Truman has climbed to an even higher level of statesmanship. Above the hysterics of communism, above the rumbles of fascism, above the fear of the unnumbered multitudes of Europe and Asia menaced by famine, we have heard the President's inspiring summons to rational and humane action. In his message last Monday, he clearly pointed out the path—the only path—that can lead us out of chaos into stable peace and equitable prosperity. That message came like a beam of strong light on a dark and gloomy world.

We must not make the mistake of minimizing the facts. These are days of peril. The whole world is suffering in an aftermath of war. Mankind is weaker from the death of millions, poorer from the waste of resources, unbalanced by the annihilation of cities and farms, the dissolution of families, the disintegration of cultures, and shocked by fears and prejudices. Asia is on fire with civil wars, Europe rocked by strike and riot, America menaced by run-away inflation.

This is not the time for muddled thinking. This is not the time to practice the policy of too little and too late. This is not the time to hesitate with faltering steps and then to retreat in confusion. Never before in the history of the world has there been more need of courage. The President has offered us courageous leadership.

In his message the President vividly summarized our situation. Europe will collapse unless we provide immediately food, fuel, fertilizer, and other economic necessities. America is able to provide these without unbalancing our economy or imposing privation upon our people. But we are in a period of inflation. We must help the nations of Europe to help themselves, and we can do that only if our own economic system is in order. With respect to the scope of our aid to Europe, the President said, "The actions of this Government must be of a stature to match the dignity and influence of the United States in world affairs." To do less will debase our dignity, diminish our influence, and leave the world without hope. The President has presented the need. The opposition suggests that we cut the President's estimates.

If Austria needs $42,000,000 during the next 4½ months, then half that sum will be too little, and after that period it would come too late. If France needs $328,000,000 to tide her over the winter, then two hundred million will be too little, and prodigal relief next summer would come too late. The President has fixed prudent limits on the amounts we must provide and the time within which we must act. And this is precious time we must not waste.

But what will it avail us if we provide Europe with a vast amount to spend and compel her to spend it in a market demoralized by inflation? The President has told us that the housewife who buys food today in an unrestrained market must spend $10 to buy what $7 bought a year and a half ago. If we permit prices to soar, then even if we provide Austria with $42,000,000 a few months hence, it may buy only thirty million or twenty million or perhaps $10,000,000 worth of necessities. And what we had supposed was enough would prove to be too little.

We will be untrue to ourselves if we give Europe the illusion of enough to enable her people to live through the winter, but allow the substance of our aid to evaporate in uncontrolled inflation. And so the President wisely and prudently has proposed reasonable measures to check inflation. Prompt enactment of his program will arrest inflation. He has asked that we curb credit, that we regulate speculative trading in food and other vital commodities, that we control inventories, that we put an effective ceiling on rent. He has asked that we strengthen our export controls so that vital commodities may freely flow to areas where they are most desperately needed. He has asked that we regulate transportation so that these commodities may move freely. He has reminded us that in a world of scarcity the only democratic way to insure that all shall have enough to eat is control. In the past year we have seen what happens to prices without controls. If we are going to stop inflation, we must have controls. Here is a wise, prudent, well-integrated program to curb inflation and it is based solidly upon our own painful experiences in the last war.

The reports of all of the experts who have studied this problem prove that if America controls inflation, America can provide the aid which will save Europe and ourselves. Here is a program built upon faith in American institutions, dedicated to American ideals, and fashioned by the American genius for direct, vigorous, and efficient action. It is a program of liberalism designed to promote a just and lasting peace. It is a program free of fear, unhampered by prejudice, sustained by the progressive, forward-looking principles which have built America and made her what she is. If the Congress will immediately enact the Truman program, we thereby will have made a safe investment in America's future.

Historians of the future will doubtless find amusement in the contrasts of our times. They will look back and be amazed to learn how much pettiness could thrive in the shadow of so much greatness. We had just been inspired by the vast, powerful, and practical world outlook of our President when the recognized leader of the Republican Party hastened to the radio to tell us what he thought about it. A quip is presently current in the news galleries of Washington that this self-appointed prophet of republicanism has the greatest mind in Washington until he makes it up. Well, he has made it up, and in an eloquent speech has presented it to the American people as an alternative to the Truman program. We were startled by what this Republican Senator said, not because it was new, but because it was so patently stale. Here is the program of this Senator in his own words: "In short, the way to hold prices down is for the Government to spend less money and reduce taxes, to limit exports, and to hold the Marshall plan within a reasonable figure, and to control the growth of private credit." These phrases have a familiar ring. They were the death knell of Hooverism. They are the steps in the spiral staircase which led us down to panic. Listen to them: "Hold * * * spend less * * * reduce * * * limit exports * * * hold the Marshall plan * * * control the growth."

This is the pure gospel of reaction. Instead of increasing production, this program would decrease it. In place of an expanding economy, it would give us retrenchment. Against the wise and adequate generosity of President Truman is contraposed penny pinching that would not save the people of Europe. As obstacles to the swiftness, the adequacy, and the intelligence of the administration's strategy in world affairs, this spokesman of Republican policy would place the booby traps of isolationism. But the American people will not heed this voice. It is the same voice which told us that the abolition of price control would bring prices down. It is the same voice which told us that the way to raise the living standards of the poor was to lower the taxes of the rich. It is the same voice which told us that the way to liberate the workingman was to shackle labor. It is the same voice which said that the full-employment program,

which is now our national policy, was taken from the Soviet constitution. It was the same voice which told us that the way to insure reclamation projects in the West was to stop appropriations for them. It was the same voice whose most cogent contribution to political economy was that Americans should "eat less." That admonition must have a hollow ring in the ears of workers whose bigger pay checks this year buy less food than smaller pay checks last year.

But the tragic fact about this Republican program of scarcity is that it will work—it will bring prices down. We know that from experience. We started in 1929 with a boom. We spent less money, we reduced taxes, we limited exports, we stunted the growth of credit, and prices came down. They went down to panic levels. The price of wheat fell so low that it was more economical to burn it than to ship it to market. The prices of livestock fell so low that it was more economical to let cattle starve on the range than to slaughter them for beef. The prices of labor went so low that 15,000,000 workers were without jobs. Do we want this again?

When I used to teach government and politics, students frequently asked me the difference between a politician and a statesman. There could be no clearer illustration in our history to answer this question. In the arena of current events we now have pitted against each other the statesmanship of Truman and the opportunism of reactionaries. The people and the Congress must make the choice between American statesmanship with world-wide vision and the petty strivings of little men. Once before in our time we were confronted with the necessity of making such a choice. We made the wrong choice. We listened to selfish prejudices. In preference to world peace and prosperity our people chose isolationism and domestic reaction. That choice forced us into depression and then into war. We must not again allow ourselves to be guided by short-sighted reactionaries. We must adopt the Truman-Marshall program of world security and domestic stability. The President has given us the path to peace and a better world. It is for us to tread that path.

Address by Hon. James A. Farley Before Associated Industries of Georgia

EXTENSION OF REMARKS
OF
HON. WALTER F. GEORGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, November 24, 1947

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable James A. Farley at the annual meeting of the Associated Industries of Georgia, Atlanta, Ga.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It goes without saying that I am delighted to be again in Georgia. I have visited this State many, many times throughout the years. I have innumerable warm friends here, and I have always had the deepest interest in the progress of this section. Consequently, I feel privileged to discuss your progress and well-being.

The basic economic problem of Georgia is no secret. It is the problem of balancing your agriculture and your industry. Since the agricultural side is already heavily weighted and your industry is not yet what it must be, I shall talk about the industrial side, for until that side is strengthened many of the good things will lag in coming to you. Community progress is based on economics. Now in reaching this balance, I urge you not to rely upon outside forces. Don't pray for a deluge. Rely upon yourselves, and pray only for rain.

The country is watching this section, and the State of Georgia, particularly. There are many reasons for this, such as the climate and the available supply of labor, which the war proved was loyal, industrious, and capable. With each passing year, the Southeast consumes more and more American goods. Every year the demand for certain products tips the scales until a sales office or a warehouse or a branch factory must be established to serve this section. The minute that opinion is reached, the question immediately arises as to where this sales office or this warehouse or this branch factory should be located. Since distribution should come from the center and not from the fringe, almost inevitably this area wins as a result of research and facts. It is geographically an ideal center; its railroads, its airplanes, and its highways radiate in every direction.

Many recent decisions indicate the extent to which Atlanta is being considered by national institutions for their southern distribution point. And, other parts of the State have been selected for good and sound reasons for special lines of endeavor. Dozens and dozens of companies have actually committed themselves, or are in the process of committing themselves, to settling in this State. This, you naturally welcome. It will make a great contribution toward bringing your economy in balance. It will provide labor with employment; it will give government additional taxes; it will mean more orders of every kind, but it lacks one element to make it almost perfect, and that element is that part of the profit will go elsewhere.

The location of numerous national organizations within the limits of your State would benefit you. But the greatest possible advantage to your section must come from the steady development and expansion of your own existing institutions, more or less small in size, southern-owned and southern-operated.

Just as rainfall is indespensable to agriculture so is the independently owned institution, well equipped, gradually and intelligently developed, indispensable to the industrial wealth of a community. It has the additional advantage of keeping profit at home, and of inevitably bringing about further expansion and further development at home.

You all know that New England is highly industrialized. There we have, in a measure, the reverse of Georgia. New England, by nature of climate and soil, lacks extensive agricultural possibilities. As a result, the industrial side of the scales is weighted. We are prone to regard the industries of New England as stupendously large. We hear that New England is a machine tool area, a textile area, a shoe area. When we analyze the figures we find that while there are some large national concerns in New England, by and large it is a section of small enterprises, locally owned and locally operated. And when we hear of certain New England factories belonging to national organizations we find that they are but branches similar to those that may be located in your section. The backbone of New England, industrially, rests upon a large number of small industries. This may account for the individualism of the people; their belief in themselves, and their ruggedness of character.

Your own section has many hundreds of individual, locally owned enterprises. They are succeeding, but practically every one of them could be made to flourish even more by the application of vision and the fertilization of adequate capital. So the problem that faces you is like the problem that faces everybody in all the world; but much of the world has not your advantages.

Some of you have told me that industrial research lags a bit in the South; you have asserted that because of the present size of your enterprises and some lack of money you have not been able to go all-out in coming up with new, advanced products. In many cases you are continuing, some say, to make outmoded products, which is just another way of saying that you have been forced to be followers instead of leaders; that you have permitted the pattern of your progress and development to be set elsewhere. Let's bring this home to ourselves. Assume that we wish to go into some general industrial business. Let's take textiles, for instance. Let's assume that southern businessmen are interested in opening at some place in this State a textile mill. They are all right as to the location of the raw material, the availability of labor and of power. They can have the mill excellently designed and drawn, and have no difficulties until they come to the question of what kind of textiles to make. Immediately what I regard as the main difficulty appears. They may be unable to do the requisite market research. What goods are in demand? Are there any new things in demand? In what volume can they be sold? What price can be obtained? So, being limited as to our ability and vision in regard to market research we do nothing new, but we decide, because someone else is succeeding in a certain type of textile, that that's the line we will make. That having been decided, the issue then arises as to patterns, color, style, count. Some may do nothing in the nature of research, but adopt and imitate the fabrics of others. From the first day they are followers instead of leaders—a condition applicable to too many enterprises, I am told.

The next point that I would mention is that our proneness to feel that the only requisites to establishing a business are plant, raw material, capital, and one man who knows how to make the product. We fall down because we fail to realize that no business on earth is simply production; that no business on earth is simply know-how in the realm of manufacture. Business means teamwork. Sales, merchandising, accounting, finance, costs, public relations, labor relations, and innumerable things are essential ingredients to business success. The merchandising end is just as important as the production end, and we can only grow in output by growing in sales.

Too often we find individually owned enterprises in the hands of men of production talents who pay themselves large salaries and who dominate the entire institution. Frequently men of that mind or that type or temperament do not have a full appreciation and comprehension of the requisites which encompass the field of merchandising, and therefore hires just anybody as sales manager. In my opinion, there are many enterprises already existing which could be multiplied manyfold if an adequate team, properly integrated, operated the enterprise instead of one individual.

Most of what I have said, of course, is very general. It comes from one who does not pose as an expert in the field but it is a report by an outsider of some of the things that he has heard here. But I hope I may start a chain of thought with profitable consequences to the region.

I find, as I travel over the country, that businessmen throughout the Nation—and so the South is no exception—are more conscious of the export field than ever before. We cannot live alone; there is no such thing as isolation; each nation is but a part of the whole scheme. We find that we cannot have a sound economy in America if the economy of the rest of the world is unsound. We find

that the world is not a series of independent ponds, with no connection, but one sea.

Now international economics have come much to the fore, and have become the problem of governments and of peoples, and it is only natural that we are now more export conscious than ever before. All businesses, large and small, are intrigued by the possibilities of export.

In this realm I feel I can say more and with greater confidence than I have said up to now. For some years now I have been covering the world. Last year I circled the globe in one trip, and since January I have been in Mexico and in the Central and South American countries. Exporting is now my business and the company with which I am connected has established branches or outposts extending to 84 countries. I feel, as a result of the range of this distribution, that many of the possible problems that could arise have presented themselves to us.

We should start off with a very large, illuminated sign reading, "Caution—Go slow, Feel your way." The export business, whatever else be said about it, cannot be regarded as simple, for it is far from simple. As good businessmen we must master the other fellow's language or use an interpreter. Just as different and just as unhandy to us Americans as the language problem, are the methods and policy and system of doing business in other countries.

Until we try it we are no more adept in the methods and systems of business in foreign lands than we are in their native tongues. We cannot overnight wish that everyone in the world with whom we do business become a master of English, and we cannot shape the habits, customs, ideals, and systems of the rest of the earth to our own mold. When someone from abroad comes to us to live or to visit, he must adapt himself to our standards and our customs and our systems and our methods and our economy. When we go abroad, whether as individuals or as businessmen, the rule works the other way.

The idea that all one has to do with an American product which is universally in demand or for which there is unquestionable foreign need, is to take it to another country and market it, is so far from reality that it is ridiculous. Going to the country with the product is simple enough, but there we stop. Outside of the United States, the protocol, the ceremonies, the courtesies, the manner even of presenting yourself, to say nothing of your product, are an immediate handicap.

Let's assume that you can sell the product; that you can get the order signed. Then you have only started on a series of intricate problems that are innumerable and difficult. No sale is complete or worth while unless you get the money for it. What money? Liras at what rate? Francs at what rate? Yen? A day's hotel bill in Shanghai may amount to 150,000 Chinese dollars. What money? Why, of course, American money. But they may have no American money. Between you and the getting of your money are sterling blocs, currency restrictions, import licenses, tariffs, and so on and so on and so on.

There is every conceivable bar to the free flow of goods, and this at a time when we must export and the rest of the world must import.

Do not judge me as a pessimist. As much as anyone, I realize the importance of exports. I have great hopes as to the contribution which export can make toward solving problems of the world and its peoples.

I would urge you to become students of export trade and of all its intricacies against the day when the barriers that now exist will largely be lifted in the main.

In the American stock resident in this section I have every confidence. The blessings of providence are obvious everywhere I look. Better thinking and sounder planning and proper effort applied by each individual in business in this section, regardless of what his business is, will yield each day increasing evidence that the South is making strides toward a balanced economy. When that balance is struck, there will be an amazing net, not only in tangible profits but in all the highly desirable intangibles which make for the good life.

Canadian Imports and Exports

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, November 24, 1947

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a speech by the Honorable Douglas Abbott, Minister of Finance of the Dominion of Canada, explaining the reasons for restrictions on imports into Canada. I have had several letters complaining about it, from persons who obviously did not understand the matter, and I had requests to insert this as the best explanation why Canada took that step. I have an estimate from the Public Printer that this will make about three and one-half pages of the CONGRESSIONAL RECORD, and will cost $248.50. I ask unanimous consent that it be inserted in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This evening I have some important announcements to make which have been foreshadowed by the Prime Minister who has just finished speaking from London. As Mr. King has emphasized, the trade agreements recently concluded at Geneva are a great step forward in the direction of freer trade and world recovery. Taken with the Marshall plan which is now under consideration by the United States, the Geneva agreements hold forth rising hope of world recovery and of orderly and expanding trade between nations, toward which objects Canada has been striving in her foreign economic policy.

EMPHASIS ON CONSTRUCTIVE APPROACH

The fact that the rapid depletion of our exchange reserves now compels us to take some special actions to strengthen our trading position implies no lessening in our determination to work toward the objective of world recovery and expanding trade. Indeed, the program I have to announce is designed to overcome our present exchange difficulties in the shortest possible time through constructive rather than restrictive actions and policies. Restrictions are used only to the extent that they are essential to bridge the gap between the present and the time when the full effects of the constructive longer-range measures can be realized.

REDUCTION OF EXCHANGE RESERVES

There can be no doubt that action to safeguard our national position is urgent and essential. We came out of the war with very substantial reserves of gold and United States dollars—about $1,500,000,000 at the end of 1945.

Last year we ended up with $1,245,000,000. Thursday our reserves were down to slightly over $500,000,000. This is a trend which cannot be allowed to continue. It has of course been a matter of grave concern to the Government for some time. The Government felt, however, it would be unwise to reach a final decision in regard to its program until it knew the results of the difficult and far-reaching trade negotiations which were being carried on at Geneva and until the prospects for implementation of the Marshall plan became more definite. I am satisfied that course was the right one.

REASONS FOR LOSS OF RESERVES

Our heavy loss of exchange reserves arises from two major developments. The first is Europe's critical economic position. The second is the tremendous increase in the quantity and costs of imports from the United States. We had expected to draw substantially on our exchange reserves for a period of 2 or 3 years after the end of the war. Economic recovery in Europe and Asia was clearly going to take some time. It was also clear that our imports from the United States would be very large. But as events have transpired, recovery in Europe has suffered disappointing setbacks, bad weather and poor crops have intensified the need for outside assistance and the assistance made available so far, though large, has proved insufficient for the task. Europe's ability to send us more goods in settlement for purchases from us has shown little improvement and that in turn has accentuated our dependence on imports from the United States. Moreover, the level of our own consumption and the rate of expansion in our physical capital have exceeded the most optimistic forecasts and these, combined with the marked rise in prices in the United States, have swelled our dollar imports to a truly remarkable extent.

You can look at our position in this way: When a country sells goods on credit it must export more than it imports or draw on its foreign exchange or other capital assets to pay for part of its imports. In 1946 we sold more goods and services abroad than we purchased, with the result that the loss in our exchange reserves was not large. This year, however, we have increased our imports to such an extent that we have bought about as much as we sold. A substantial part of our sales, however, has had to be on credit, and therefore we have had to dig deeply into our exchange reserves to pay for our increased imports. In other words, we have been financing a very high level of consumption and investment at home by drawing on our exchange reserves.

A MANY-SIDED APPROACH

There is no simple or painless way of correcting our dollar problem. It is so large that it must be attacked from many sides. The Government has considered just about every feasible course of action and has arrived at what I believe to be a balanced and constructive program.

CURRENCY NOT TO BE DEPRECIATED

One commonly discussed course of action—depreciation of our currency—has been considered and rejected. Currency depreciation is a measure which may be appropriate to deal with a situation where a country is in balance of payments difficulties because its costs and prices are at a level which does not enable it to compete in world markets. This is far from being our case. Costs and prices in Canada are lower than they are in most countries with which we compete in world trade. Price competition with others is not restricting our exports. On the contrary, our difficulty in obtaining United States dollars in adequate amounts for our exports arises from the international financial difficulties in which some of our best customers find themselves, and these would not be corrected by depreciation of the Canadian dollars.

So far as imports are concerned, we find no reason for thinking that exchange depreciation of an amount which could be deliberately undertaken would exercise any considerable restraining influence. After all, the prices of our imports from the United States have risen by nearly 40 percent since June 1946, and at the same time our imports have continued to rise month after month. What

reason would there be to assume that a further price increase of, say, 10 percent brought about by currency depreciation would restrict to any worth-while extent our buying in the United States? Of course, if we were to reduce the value of our currency far enough we could restrict imports from the United States, but the penalty would be an immediate and violent rise in prices far beyond anything ever experienced in Canada.

To the other unavoidable upward pressures on prices the Government does not propose to add currency depreciation.

In the program which we have worked out, the emphasis is on constructive and nonrestrictive measures which in time should be sufficient to meet our exchange problem.

GENEVA AGREEMENTS AND MARSHALL PLAN VITAL STEPS

It will be quite clear that the most effective and desirable solution would be to see Europe and Asia again in a position to engage in multilateral trade and to pay for their purchases from others in goods or convertible exchange. The conclusion of the Geneva agreements and the development of the Marshall plan are vital and encouraging steps in this direction.

The form in which the Marshall plan is implemented will have a very important bearing on our exchange situation, and, indeed, on the formulation of our policy in many fields. It will necessarily have a bearing on our continued participation in the European recovery program. In relation to its productive capacity, Canada has played a major part in the postwar program for world reconstruction. Our ability to continue this contribution depends in part on our ability to maintain at a high level the importation of essential materials and equipment from the United States; and this in turn depends on the volume of our United States dollar earnings. We have pointed out to the United States how our difficulties in buying from that country arise very largely from our inability to sell to Europe for dollars, and we have expressed our concern that dollars made available by Congress for aid to Europe will be used in part to purchase supplies in Canada and elsewhere that are not readily available in the United States.

EXPECT USE OF MARSHALL PLAN FUNDS IN CANADA

The United States Government has now recommended to Congress that it should authorize the use of funds voted for aid to Europe in making purchases outside the United States. In the expectation that this policy will be implemented, we are ascertaining what supplies can be made available from Canada for this purpose. A program of this kind would resemble in many respects the Hyde Park agreement that proved to be so effective and constructive during the war. Our actions in the past have demonstrated clearly our concern with the recovery of Europe which is the purpose of the Marshall plan. Despite our exchange difficulties, we intend to permit the countries to which we have authorized credits to use at an appropriate rate the still considerable unexpended balance, if at all possible. We intend to do so because we are convinced that the recovery of Europe is vital to Canada's prosperity.

MAXIMUM ECONOMIC COOPERATION BETWEEN CANADA AND THE UNITED STATES

We are not, however, in a position to wait for European recovery which will take time. We must increase substantially our supply of United States dollars. Canada has depended heavily on sales overseas to provide the foreign exchange with which to meet our requirements in the United States, and we are finding this to our disadvantage today as we have on several occasions in the past. The new trade agreements announced tonight will help to improve this condition but they will not of themselves be sufficient. We propose to take further steps to bring about a better balance of trade with the United States. We are determined to find a lasting solution to our difficulties in the expansion of our trade rather than in the strait-jacket of restrictions. There are a number of constructive lines along which we can work and we must use them all. The Governments of Canada and the United States are consulting on measures designed to facilitate the earliest possible removal of the temporary import restrictions to which I shall refer in a moment and to achieve the maximum degree of economic cooperation between the two countries.

DIVERSION OF EXPORTS

One obvious way in which we could increase our dollar receipts would be to divert to United States dollar markets exports which we are now selling elsewhere on credit. To some extent this is feasible and necessary since many of our overseas customers are in a position where they are restricting their purchases from us. We do not wish, however, to go too far in such a diversion of exports both because of the urgent needs of the United Kingdom and other overseas countries for some of our products and also because of our interest in maintaining essential markets.

CONSTRUCTIVE MEASURES FOR TRADE DEVELOPMENT

The more positive approach is to expand our production for export to the United States and to develop our natural resources and manufacturing industry in a manner that will permanently reduce the undue lack of balance in our trade with that country. The reduction in United States tariffs under the Geneva agreements should much increase the opportunities of certain Canadian industries in the United States market. The Government hopes and expects that such industries will adapt their production to take the fullest advantage of their opportunities and in many cases expand their capacity. Some of our natural resources can and should be developed and further processed in a manner that will help to ease our dollar problem.

BETTER BALANCE IN BRANCH-PLANTS OPERATIONS NEEDED

Another very important aspect of the effort to achieve a better-balanced position concerns the operations of branch plants in this country. We have always wished to encourage development of United States branch plants, but in the face of our exchange problem today we suffer from the disadvantage that these plants are heavy importers of parts and materials which must be paid for in United States dollars while they are exporting to countries which find it difficult or impracticable to pay in dollars. It is, therefore, essential that such manufacturing industries should concentrate on the development of United States dollar sources of income with which to offset their United States dollar outlays. It should be possible, for example, for the Canadian automobile industry, which produced large amounts of the cheapest and most efficient Army transport during the war, to produce automobile parts or models for sale in United States dollars to balance the large purchases of components and materials which they make in the United States.

PROGRAM OF ENCOURAGING EFFICIENT DEVELOPMENT

The Government will make every feasible effort to encourage and to cooperate in the development of these plans. I should make it clear, however, that what the Government has in mind in this whole program is not the stimulation of uneconomic production but rather the encouragement of more rapid development of our resources and industry in an efficient manner.

STIMULATION OF GOLD PRODUCTION

Development along these lines must be pursued vigorously. It will take time to work out its concrete application and the need is pressing. Meanwhile, there is one Canadian industry in particular which should be able to effect a rapid and substantial increase in its production if some assistance is provided now. I refer to the gold mining industry which has at the present time a large unutilized capacity and which produces a commodity for which there is an unlimited dollar market. Increases in the costs of gold production which have occurred during the past few years have made much of our potential production unprofitable. This has reduced the output of certain existing mines and has slowed down prospecting for new properties.

The Government has come to the conclusion that, as part of its general program for dealing with the present exchange emergency, it should take additional steps to assist in removing the deterrent effect on production of rapidly rising costs combined with a fixed market price for the product. In considering the form of action, we must have regard not only for administrative considerations but also for our obligations under the International Monetary Fund Agreement. The precise details will therefore not be made known until they are laid before Parliament, but in order to avert speculation in the interval, I will state now that it is the intention of the Government to defray for a 3-year period, to be defined in the legislation, the costs of additional gold production over and above the amounts produced in the year ended June 30, 1947, to the extent of $7 for each fine ounce of additional production.

The constructive program I have outlined obviously cannot be put into effect overnight. It can be started at once but it will take some time before it can be fully effective in stopping the drain of United States dollars to which we have been subject.

TEMPORARY RESTRICTIVE PROGRAM

This means that we must develop a temporary restrictive program to meet the immediate emergency. This short-run emergency program consisting of measures designed to restrict our use of United States dollars includes sweeping restrictions on imports and on pleasure travel and the imposition of special excise taxes for the purpose of restricting the purchase of many of the durable kinds of consumer goods which are either imported or contain a significant import content.

First as to the import restrictions. These will involve the complete prohibition of the imports of some consumer goods and the imposition of quotas on others.

CONTROL OF CAPITAL GOODS IMPORTS

With respect to what are generally known as capital goods neither a complete prohibition nor a quota system is applicable. It is proposed therefore to place specific classes of capital goods in a category under which imports may be controlled and restricted. The Minister of Reconstruction and Supply who will be charged with administering this phase of the program, will be in a position to review with industry proposed expenditures involving imported machinery, equipment, and materials with a view to seeing to what extent such drains on our dollar resources may be eliminated, reduced or postponed.

IMPORT PROHIBITIONS

Turning now to the restrictions on imports of consumer goods, the list of outright prohibitions is a long one which covers principally goods which are already produced in Canada to a substantial degree or are in some cases of a semi-luxury or non-essential type, and it includes such items as jewelry, candy, novelties, typewriters, radios, refrigerators, washing machines, and furniture. We are

also, at the outset, prohibiting temporarily the importation of all motor vehicles, but we intend in the near future to replace this complete prohibition with a restrictive quota system.

QUOTAS ON IMPORTANT CLASSES OF IMPORTS

There are other classes of imports which though important and desirable have grown to excessive proportions in relation to our needs and our capacity to pay out hard currency. To these classes of goods we are applying quota restrictions. Obviously, I cannot give complete details in this talk, but in the fruit and vegetable field, for example, oranges, grapefruit, lemons, fruit juices, potatoes, apples, and onions are being placed under a quota. Imports of almost all out-of-season fresh fruits and vegetables as well as almost all kinds of canned goods are being prohibited but no restrictions are applied to bananas, raisins, figs, and prunes. In textiles no restrictions are placed on raw materials and yarns but almost all other textiles, whether in the form of fabrics, or made-up wearing apparel, or other finished goods, are to be under another quota. There are two more quotas, one including all leathers, all kinds of footwear, gloves, leather garments, and luggage, and the other a group of sundry items including clocks and watches, cutlery, games, toys, sporting goods, and smokers' supplies.

Each of these four quotas will be divided into two parts—one part applying to imports from countries which we must pay in dollars and which we do not know to be short of dollars, the other part applying to imports from all other countries, being either countries which we do not need to pay in dollars or which are short of dollars themselves and whose trade we should encourage if we can. The quotas are set for each group of countries on the basis of twice the prewar value of imports except for the textile quota which is four times prewar. Individual importers share in the group quota in accordance with their share of the imports concerned during the 12 months ending June 1947. The current rate of imports from the ground of countries short of dollars is far short of the quota and it will not be necessary to restrict these imports from such countries so long as their trade remains below the quota level. Imports from the first group of countries, however, will be under strict control and will generally be cut severely.

IMPORTANT CONTROLS NONDISCRIMINATORY

This system of quotas is, of course, hard to explain in a short talk but detailed explanations and examples will be found in the newspapers tomorrow and full details and instructions will be available to importers from their local collectors of customs. Goods now in transit to Canada will be admitted without reference to these new prohibitions and quotas but this exemption will not apply to goods on order. The plan does not involve discrimination against imports from some countries in favor of the same goods imported from other countries. Prohibitions apply to imports from all countries; quotas are based on prewar trade, and permit the maximum flexibility in their use that we can afford. In selecting items to be restricted we have, of course, endeavored to pick those which we must pay for in United States dollars, and we have tried to interfere as little as possible with the export trade of those countries which are short of gold and foreign exchange.

RESTRICTIONS EFFECTIVE NOW

At the coming session of Parliament a special bill will be introduced concerning these emergency restrictions. In order to avoid widespread anticipation and evasion of these restrictions in the next few weeks, which would cost us many millions of dollars that we cannot afford, we will ask Parliament to make this new law apply as from midnight tonight, and we will put these restrictions into effect in advance, as we do in the case of budget proposals. This can be done under the provisions of the Foreign Exchange Control Act. At the time this act was passed the Government did not believe that such power was contained in the act but we are now advised by the law officers of the Crown that it provides the legal basis for such restrictions as are proposed. In the urgent circumstances which face us we have decided that this power should be used until Parliament has the opportunity to pass specific legislation.

CUT IN TRAVEL EXPENDITURES

The travel restrictions which are going into effect are approximately the same as those which prevailed immediately after the war. Effective from November 15, the annual ration of funds for pleasure travel will be fixed at an amount not to exceed $150 per person for those who desire to travel in a United States dollar area. Applications for travel funds when required for genuine reasons of business, health, or education will be dealt with on their merits. We take this step reluctantly since it limits the friendly contacts between our people and our neighbors to the south, but we simply cannot afford the large sums of United States dollars that Canadians are spending in pleasure travel.

SPECIAL TAXES ON DURABLE CONSUMER GOODS

Import restrictions alone will not be enough to keep down our use of goods which contain a high proportion of parts or materials from the United States. Many of these goods are produced on a large scale in Canada and we cannot properly limit and ration the imported parts and materials. I am, therefore, proposing to use the same fiscal devices as we used during the war to restrict purchases of this type of goods. The Government will ask Parliament to place an excise tax of 25 percent on a wide range of these durable consumer goods, the purchase of which can normally be postponed by the average family if necessary and most of which are of a less essential character. This tax will apply to sporting goods, outboard motors, pleasure launches, firearms, oil burners, motorcycles, musical instruments, cameras, radios, phonographs, and to most types of electrical home appliances. In some cases there is already a 10-percent tax that is to be increased to 25 percent. In the case of automobiles, the present 10-percent tax is to be increased to 25 percent on the value up to $1,200 with 50 percent applying to the additional value up to $2,000 and 75 percent on the excess over $2,000. These taxes, of course, will apply on the manufacturer's price, not the retail price.

TAXES DESIGNED TO LIMIT PURCHASES

These new or additional taxes are not being proposed for the purpose of raising revenue. Their purpose is to limit expenditures on these goods and thereby on the steel and other imported materials or parts which they contain. We should partially defeat our objective if, after banning many such imports, domestic production of the same type of articles were to expand to fill the gap at the cost of further substantial imports of components and materials.

TAX REDUCTIONS

While the cold facts of our dollar position make it necessary to impose these special types of taxes, we are proposing to remove or reduce certain other taxes in cases where this should result in a lowering of the prices of essential goods which have to be purchased by all Canadian families. With this in mind I am proposing that the excise tax of 1 cent a pound on sugar be removed, that the import duty on tea from the normal sources be removed, that the duty on coffee be reduced, and that electricity and gas used in dwellings be exempt from the 8-percent sales tax.

Now that the Government's proposals have been announced, we propose to follow the usual budgetary practice of asking Parliament to make them effective from the time of announcement, and taxes at the new rates will, therefore, be collected on all sales by manufacturers and on imports, beginning tomorrow morning.

SHORT-TERM CREDIT FROM UNITED STATES EXPORT-IMPORT BANK

While the effects of this whole program will be very substantial, there will still be a deficit in our trade with the dollar area, which will not for a time be fully offset by our receipts of United States dollars from the United Kingdom and other countries to which we are selling a portion of our exports on credit. To provide for this situation, and in order to supplement our holdings of gold and United States dollars and our rights to draw upon our quota in the International Monetary Fund, we have believed it prudent to arrange for temporary financing in the United States. A foreign loan is not, of course, a solution to our dollar problem. It merely provides a supplement to our exchange reserves to take care of a temporary deficit until the constructive, longer-run measures which are going into effect get into full operation and produce a more reasonable balance in our commercial and financial relations with the dollar area. Not only does it give more time for the constructive solutions but it also permits the adoption of a program less upsetting to business than would otherwise be necessary. Without the margin of safety which a loan provides, the program of restrictions would have to be much more severe which would not only cause undue dislocations to the Canadian economy and to many of our suppliers in the United States, but would impair the contribution which an efficiently functioning North American economy should be able to make to the economic restoration of the war-shattered countries.

In the ordinary course of events, dollars borrowed by the Dominion of Canada in the United States would have come from private investors. In the present circumstances, however, it was felt that the magnitude of the sum required, and the necessity for quick decision, made it advisable to approach a public institution, namely the Export-Import Bank of Washington. Arrangements have been made with that bank for a credit of $300,000,000.

The step taken in arranging for a credit from the Export-Import Bank is a departure from our normal practice of securing necessary United States dollar financing by sale of our obligations to banks or other private investors in the United States. In the near future, however, we intend to investigate the possibility of borrowing in this form. It is the statutory responsibility of the Export-Import Bank not to compete with but rather to encourage and supplement the use of private capital in financing United States foreign trade. With this in mind, the Export-Import Bank always welcomes the prepayment of loans or reduction of its commitments to lend if borrowers are able to obtain their requirements from other sources.

UNITED STATES ATTITUDE

You will observe that one of the foundations of this program is cooperation with the United States both in respect to mutual trading problems and to assistance to other countries. In discussing this plan of action with the United States authorities and in securing their cooperation we have had a most understanding and helpful reception. I do not know how generally is realized the magnitude of the responsibilities that are falling upon the Government, the Congress and the people of the United States at this highly critical time in the world's affairs. We in Canada, situated so similarly, are perhaps in a better position than most to appreciate

their problems, and I think it is fitting that we should note and acknowledge what the United States is doing and planning to do in the task of world reconstruction.

RESTRICTIONS UNAVOIDABLE BUT TEMPORARY

I am well aware that the restrictive aspects of this program will come as something of a shock to many Canadians. It is regrettable that such action has to be taken, but to adopt a lesser program would be to risk failure and to invite conditions which would necessitate far more drastic restrictions. The program has to be sufficient to meet the problem. We cannot temporize with our national welfare. The emphasis is on the longer range constructive measures which will steadily work to produce conditions under which the restrictive aspects of the program will become unnecessary. We intend to get rid of these restrictions just as soon as circumstances will permit.

INDUSTRY AND PUBLIC CAN HELP MAKE PROGRAM WORK

The speed with which these constructive measures will produce the necessary results depends to a very important degree on active and vigorous cooperation by business and the public generally. We believe in a free economy in this country and we do not want to get entangled in a massive system of restrictive controls. That means it is up to all of us to make the constructive and basic part of this program work. The responsibilities of business and industry to expand their United States dollar-producing activities are clear, and greater opportunities are being provided. Industry has also the responsibility of working and cooperating in efforts to reduce and offset the drain of United States dollars which is involved in many of our manufacturing operations. In addition the business community can help greatly by deferring less essential plans for physical expansion. The import controls over capital goods will necessitate reconsideration of a good many such plans but these controls will be less restrictive and the pressure on building costs will be eased if businessmen carefully reexamine their plans and defer for the time being those which are not urgently necessary. The responsibilities of the general public, if less specific, are also clear. Let us constantly remind ourselves that one of the main reasons for the great expansion in imports from the United States is the high level of consumer purchases in this country. To the extent that we can defer for the time being our larger expenditures and economize in our day-to-day spending, the dollar problem will be lessened and the upward pressure on prices reduced.

PROSPERITY RELATED TO WORLD CONDITIONS

The truth is that we in Canada have been living somewhat beyond our means during the last year or more—not beyond what we could afford if the rest of the world was restored to economic health, but beyond what we can afford in the world as it is today. We cannot expect to be completely prosperous when much of the rest of the world in which we live and on which we depend for a large part of our trade is just beginning to recover from the terrible destruction and dislocation of the war.

So we have to make adjustments to bring our national living standard within the limits of what we can afford in the difficult conditions that surround us. For most of us, this moderate measure of austerity will mean inconvenience and for some it will create difficulty. But a problem of this magnitude, cannot be solved painlessly.

CANADA'S BASIC POSITION SOUND

At the same time, let us keep our difficulties in their right perspective. In comparison with most of the rest of the world we are a very fortunate people. Our trouble arises from the misfortunes of other countries, not from any basic weakness in our own economy. Our basic position is sound. Our level of employment is at the maximum. We have a great and expanding capacity to produce. We are producing at a high level and at relatively low cost. This country of ours has had a notable record of achievement during and after the war—a record which has given us self-confidence and raised Canada's stature in the eyes of the world. Let us keep up that record in surmounting the present emergency, conscious of our responsibilities and confident of our great future.

Postwar Canadian commitments for financial assistance abroad

	Millions of Canadian dollars
1. Intergovernmental credits:	
Belgium	100.0
China	60.0
Czechoslovakia	19.0
France	242.5
Netherlands	125.0
Netherlands Indies	15.0
Norway	30.0
United Kingdom	1,250.0
U. S. S. R.	3.0
Miscellaneous guaranteed credits	12.8
Total	1,857.3
2. Military relief	[1] 95.6
3. UNRRA	154.0
4. Post-UNRRA relief	20.0
5. International Refugee Organization (estimated)	5.3
Total	[2] 2,132.2

[1] Of this total about $7,600,000 have been recovered. Part of this expenditure was incurred before the end of hostilities in Europe.

[2] This figure represents approximately $170 per head of population.

The Food Crisis in Europe

EXTENSION OF REMARKS
OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, November 24, 1947

Mr. CAPPER. Mr. President, I have before me an article by Dr. Clinton N. Howard on the current food crisis in Europe. This article will appear in the December 1947 issue of Progress magazine.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON THE BRINK OF CHAOS

The first day of the special session of Congress, called by the President, has just closed. It was brief but momentous, impressive, and historic. Few times, if ever, in the history of this Nation was the entire world listening with bated breath on the Voice from Washington. This feeling of concern, if not apprehension, was shared by 140,000,000 Americans at home.

ISAIAH DESCRIBES IT

It was recognized that we have a world afflicted with a malignant disease. As the Prophet Isaiah said concerning Judah and Jerusalem, "A sinful world laden with iniquity, a seed of evil doers, children that are corruptors; they have forsaken the Lord, they have provoked the Holy One of Israel to anger: the whole head is sick and the whole heart faint, from the sole of the foot even unto the head there is no soundness in it, but wounds, and bruises, and putrefying sores that have not been closed, neither bound up, neither mollified with ointment."

A WORLD-WIDE PLASTER

The world today is a terrific parallel. America seems to be its last hope; the one nation which, as Abraham Lincoln said of a previous national crisis, has a plaster as big as the sore. Would the President rise to the occasion? Would the patriotic partisans agree to bury politics and unite to save a starving world, with hands stretched across the sea crying, "Come over into Europe and help us."

IN THE BEGINNING GOD

The Congress got off to a good start. In the Senate, 83 Senators answered to their names, others were absent on official business; Senator WAGNER by illness, Bilbo by death. His successor, JOHN C. STENNIS, was escorted to the dais and sworn in, and the Senate proceeded to the momentous business for which it was called into special session.

This is the story on the Senate side with one most important omission. "Blessed is that nation whose God is the Lord, and the people whom He hath chosen for His own inheritance." The first order of business was the prayer by the Chaplain, Dr. Peter Marshall, pastor of the New York Avenue (Lincoln's) Presbyterian Church. The Senate and the crowded galleries stood in reverent silence while the Chaplain prayed:

"O God our Father, we pray for Thy wisdom and Thy guidance for the Members of this body as they meet in this troubled hour to consider what this Nation should do about hunger that knows no politics and want that will not wait.

"We cannot escape history; that we have found out. May we also discover that we cannot evade responsibility. By Thy Holy Spirit awaken the conscience of America, that our people may be willing to put humanity first.

"Give to our leaders the highest motives, and the courage to propose that which will be worthy of Thy blessing, lest we do the right things for the wrong reasons.

"Help our Senators to see what Thy plan is, in the name of Jesus Christ, who, being rich, for our sakes became poor, that we through His poverty might become rich. Amen."

The editor sat in the guest gallery and thanked his God that this is officially, as the Supreme Court has said in a unanimous decision, "A Christian Nation." This petition was offered "in the name of Jesus Christ."

When the proclamation by the President which called the extraordinary session was read, the closing paragraph said, "Done in the city of Washington this 23d day of October (date of call), in the year of our Lord 1947," following the same language found in the closing paragraph of the Constitution and every proclamation since the days of Washington, including every Thanksgiving Day, and special calls to prayer.

"For the kingdom is the Lord's, and He is the Governor among the nations."

THE CALL OF THE HOUSE

Over in the House end of the Capitol and at the same hour, the same order was followed. The first order of business, after the reading of the President's proclamation, was the invocation by the venerable chaplain, Dr. James Shera Montgomery, for 27 years chaplain of the House, whom the editor knew when we met on the chautauqua platform 40 years ago, when his flowing mane and mine was as black as a raven. He prayed to a standing House, which joined heartily in the closing divine paragraph:

CHRIST IN CONGRESS

"God be merciful unto us and bless us, and cause His face to shine upon us; that Thy way may be known upon earth, Thy saving health among all nations. Let the

people praise Thee, O God; let all the people praise Thee. O let the nations be glad and sing for joy; for Thou shalt judge the people righteously, and govern the nations upon earth. Let the people praise Thee, O God; let all the people praise Thee. Then shall the earth yield her increase; and God, even our own God, shall bless us. God shall bless us, and all the ends of the earth shall fear Him.

"Let us pray together our Lord's Prayer: 'Our Father, who art in heaven, hallowed be Thy name. Thy kingdom come. Thy will be done, on earth as it is in heaven. Give us this day our daily bread. And forgive us our trespasses, as we forgive those who trespass against us. And lead us not into temptation, but deliver us from evil. For Thine is the kingdom, and the power, and the glory, for ever and ever. Amen.'"

At 1 o'clock and 20 minutes the Doorkeeper of the House announced the arrival of the Members of the Senate, who took their places in the seats reserved in front of the Members of the House. At 1 o'clock and 20 minutes the Doorkeeper anounced the arrival of the ambassadors and foreign ministers. At 1 o'clock and 28 minutes the Doorkeeper announced the arrival of the President's Cabinet, seated in front of the Senators. At 1 o'clock and 30 minutes the Doorkeeper announced the arrival of the President of the United States with his distinguished escort, the Congress and overflowing galleries rising amid very generous applause, until the gavel fell and the Speaker announced, "Members of Congress, I have the distinguished honor of presenting to you the President of the United States."

THE PRESIDENT'S SPEECH

You have all either heard it over the radio or read in the press. We thought he was in good form. We heard his speech of acceptance before the united Congress in the same room following the sudden death of President Roosevelt. He has grown since that time, and is more sure of himself and effective as a public speaker. His voice is appealing rather than dictatorial. He makes a good impression, and most of what he recommended we recognize as a proper subject for editorial discussion in a reform publication. With modifications, we believe the President should command the united support of the country in this world crisis. Other things must wait.

A RESPONSIVE CHORD

With regard to his appeal for food, fuel, and money to meet the famine situation in Europe and the world he had a united house; while on domestic problems it was evident by the absence of applause that his house was divided. The President made it clear to all that our own stability, prosperity, and future existence depended on the rehabilitation of the world, of which the immediate necessity was food and fuel on the verge of winter, and that a starving world meant the collapse of civilization. Self preservation required that we take up the white man's burden for economic recovery, prosperity, and lasting peace.

A SAD SITUATION

We leave the discussion of his program to the master minds of both political parties in Congress and out, but we would not be true to our calling and the supreme object of our International Reform Federation if we did not express our disappointment that complete omission was made of any reference to the sinful waste of grains being diverted from the staff of life to the manufacture of intoxicating liquors, or the nearly $9,000,000,000 annually spent by the American people "for that which is not bread and our labor for that which satisfieth not."

CONGRESS

The President was most eloquent in diagnosing the disease, but less convincing in prescribing a remedy. Not a word was spoken about stopping the sinful waste of bread grains on the part of the distillers and brewers and the President contented himself by saying, "Grain, for example, is too badly needed to permit wasteful feeding to livestock." Would the President have us starve the cattle and poultry at home in order to increase our exports of grain to the hungry abroad without any control over those food grains taken from our cattle, whether it is to be used exclusively for bread in those starving nations or made by them into intoxicating liquors? They are doing this with their own food grains now and might substitute ours.

LESS FEED, LESS FOOD, LESS FATS

Also the President must know that less feed for our cattle and poultry must mean less meat, less poultry, less milk, fewer eggs, less butter, less fats, less fertilizer, and less leather at home. It seems to us that that is a false economy and offers no permanent remedy.

Furthermore, the President ignores entirely that wastage of food grains in excess of 150,000,000 bushels consumed by the brewers and distillers, in addition to the tons on tons of sugar, rice, potatoes, fruits, and grapes which would feed the starving world until the next harvest. Yet, he wisely warns, "If we fail to prepare and disaster results from our unpreparedness, we will have gambled with our national safety—and lost."

BEARDING THE BEAR

The President was much more courageous in dealing with our enemies without than our enemies within. Without mentioning the target at which he aimed his shaft, he said: 'We have found that not all nations seem to share our aims or approve our methods. * * * Yet we cannot afford, and we do not intend to let our current differences with some nations deter our efforts to cooperate in friendly fashion and to assist other nations who, like us, cherish freedom and seek to promote the stability of the world."

THE ENEMIES WITHIN

As strong and courageous a word of warning spoken for the enemies within our gates would be like apples of gold in pictures of silver. All in all, it was a great day for humanity for a conquering nation to apply the Golden Rule to its defeated aggressor and to proclaim to the world the Gospel of St. Paul, "Therefore, if thine enemy hunger, feed him; if he thirst, give him drink. * * * Be not overcome of evil, but overcome evil with good." This means bread for the hungry and milk for the children.

THE GOLDEN RULE

"Ye have heard that it hath been said, Thou shalt love thy neighbor and hate thine enemy. But I say unto you, love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you."

This is the Christ plan for peace, in contrast to compulsory peacetime military training and atom bomb. We cannot hope to avoid war by preparing to fight. Alcohol and the atom bomb are the twin devices of Satan to destroy the world. Both should be prohibited.

Parliamentary Procedure

REMARKS

OF

HON. OTTO E. PASSMAN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. PASSMAN. Mr. Speaker, in supplementing the remarks made by several of my colleagues from Louisiana, I would like to add that I do not believe that the CONGRESSIONAL RECORD is the place for Louisiana politicians to air their Louisiana gubernatorial politics. I shall not attempt to attest to the virtue of either of the gentlemen involved nor try to prove either of them to be saints or sinners. But if there should be a resolution introduced to expunge from the RECORD remarks purported to be made by another one of my colleagues from Louisiana, then I shall support such a resolution. The more I talk, the less you Members will remember about the incident. Therefore, I yield back the remainder of my time.

Editorial Comment on European Situation

EXTENSION OF REMARKS

OF

HON. HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, November 24, 1947

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding editorial entitled "Commenting," from the Vermillion (S. Dak.) Plain Talk.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMMENTING

(By G. S. D.)

From out of the wilderness of silence into which I withdrew a few weeks back I steal again, typewriter in hand, to pound out some of my feeble comments on the current scene.

It is amazing, of course, how a fellow with such a proven record of ineptitude in handling his own affairs can have such a fine grasp of problems national and international. But the Congress of the United States, as it is often designated in speeches, has been summoned willy-nilly to whip up a program of relief for Europe, and so I want to expound a few of my own views on the subject. And I am aware that the clatter I hear is not the sound of congressional chairs being pushed over in the mad rush of the people's representatives for the nearest copy of the Vermillion Plain Talk.

But judging from what I read the consensus is that the Congress is going to be asked to vote some money for Europe. The theory is that the people in the European countries are hungry and discouraged, and by helping them to regain their feet economically we will prevent them from accepting Russian-dominated governments.

To me this is the same type of thinking which has controlled our whole foreign policy to date. It is the blundering type of policy which must make the United States appear to the world as a well-meaning, visionary, ineffectual giant operating on a hopelessly idealistic level and being outwitted at every turn by the pygmies who ply their trade in the realistic, self-seeking strata well below our cloudy heights of idealism. To me it is also the type of self-delusion into which the whole Nation retreated before the war—a refusal to face facts. From this retreat it took a Pearl Harbor to bring us blinking into the harsh light of realities.

Now, it seems to me that in Europe we are called upon to make a difficult decision, and we are shrinking from it. Instead of facing the alternatives we turn our eyes from them,

try to compromise—and as we did before the last war—try to buy ourselves out of our dilemma.

To me this idea of sending money to Europe to bolster up those nations against the onrush of communism is puerile in its conception.

The popular picture of Europe today is of groups of poverty-stricken people who turn to the United States and say, "Send us money or we will embrace communism and accept Russian-dominated governments because any alternative is preferable to the shape in which we now find ourselves." The picture then, as it is presented, has us sending over money and goods and within a short time these countries are reestablished economically, there is food, and the people are happy, well-fed and contented. So they turn to Russia and say, "Begone. We are well satisfied and will have none of your communism. We shall choose instead the freedoms of democracy as practiced by the United States." The finale could be something with a group of happy, chubby Europeans in national costumes, looking out over the ocean into the sunset toward their benefactor, the United States. Someone could, of course, too, break out an American flag as a backdrop and the band could swing into The Stars and Stripes Forever.

But I don't believe it is all that easy. I don't believe it is poverty and hunger which have pushed little nations into the camp of Russia. It is force and the absence of force. It is the absence of American force and the presence of the Red army. Poverty and economic maladjustment make populations susceptible, of course, to change. But such conditions don't turn people to communism as exemplified by Russia, because they realize that Russian communism has nothing to offer which would better their situation.

Not all of the nations which have accepted Russian-dominated governments have even been poverty-stricken. In fact some of them have been comparatively well fed on American food at the time they capitulated to Russian expansion. It hasn't been the absence of food which has pushed nations into the embraces of the Red Bear. Russia has only taken advantage of the political vacuum created when the United States, to all effects, retreated from the European Continent at the close of the war just past.

It is true, of course, that the confusion which has followed the war has made it easier for Russian-trained leaders of communistic groups to take over power in European countries. But this confusion isn't the primary reason—nations have been joined to Russia by communistic groups because the forces representing democracy in Europe haven't been bulwarked by active United States support.

Which brings me to the two alternatives which this country has in regard to Europe. I believe we must either stay in Europe—in force—or get out. I don't believe that the Congress should decide on whether or not to send money to Europe. It should decide whether keeping western Europe in the hands of democratic forces is worth the effort which must be expended and the possible precipitation of a crisis with Russia.

The one alternative, as I see it, is to resolve to keep western Europe democratic. And to do this means sending goods to Europe, and exacting something in return for every pound of food. It means that we should get in exchange military bases, air fields, and the privilege of training European armies to work in conjunction with American troops which would be stationed there. It means that we demand a hand in the governments of the various countries who are receiving our aid in order to assure that democratic elements be placed in power. And what is more, it means American troops in Europe—many, many more than are now stationed there.

The other alternative is to default Europe to Russia. If we decide that trying to keep Europe dominated by democratic groups isn't worth the money, the men and the sacrifices which would be required, then we should get out. If we feel that bringing face to face the forces of the two great powers of the world carries with it the risk of the generation of a spark which might well set off another war, and that retention of a democratic Europe isn't worth that chance, then we should get out of Europe.

I don't believe we can compromise these two alternatives. I don't believe we can oppose the spread of Russian force and Russian influence with a check book.

The two alternatives are fearful—neither is desirable. It would be much more pleasant if we could avoid them both. And that, I believe, is what the people in this country are attempting to do. They don't want to face the facts and make the decision, and with a typical American reliance they are trying to buy their way out of it. Checkbook diplomacy, you might call it, but I don't believe it will work.

I believe that sending only money or food to Europe is an indication of a hazy plan, dictated by a refusal to face facts. Admittedly, it is the easiest program, but I don't believe it will accomplish any good.

In a world of force I believe we must meet power with power, we must oppose realism with realism. If we decide to try and preserve democracy in western Europe we must either be prepared to go all the way in combating Russian communism, or we shouldn't try at all. We shouldn't, however, weakly throw a bunch of money over the wall with a hope and a prayer, and then run. It will be only money thrown away.

I imagine there are only two people in the whole country who worry about such colossal problems, and that is Truman and myself. Only he gets paid for it.

Justice for Poland

EXTENSION OF REMARKS
OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. CLASON. Mr. Speaker, at a broadcast sponsored by the Polish American Congress, Inc., western Massachusetts branch, over Station WSPR, on Sunday, November 9, 1947, one of our former colleagues, Mrs. Clare Boothe Luce, delivered a dynamic address on justice for Poland.

As one who has frequently spoken out in behalf of stricken Poland and her people, I welcomed the opportunity to read the considered views of a former Congresswoman of outstanding ability, with a keen insight and broad knowledge of international affairs.

I am sure that all Members of Congress will be glad to have the opportunity to read this stirring appeal in behalf of the Polish people.

In 1939 a free independent Poland was brutally attacked by Hitler. It was attacked because it wouldn't give in to Nazi demands—as far stronger countries had. I was in Poland on the eve of that attack. I saw Polish people preparing to lead their little army into battle against German tanks, on cavalry horses. Well, the Poles knew that to meet Hitler's iron hordes on horseback meant slaughter, meant destruction, meant defeat, but they met them. God knows where they got the courage, it seemed such folly. And so it was—it was the folly of the cross, and when Stalin shook hands with Hitler on the Nazi-Soviet pact, Poland was crucified—crucified between two thieves.

Then Poland lived under a reign of double terror. The like of it the world has never seen. Wherever red hands or brown hands could be laid on Polish patriots and leaders, these leaders were put at forced labor, they were thrown into concentration camps, they were sent into Siberian exile, they were liquidated. There were 3,500,000 Polish Jews cremated.

Well, then the Nazi and the Soviet thieves fell out, and Hitler attacked Russia. Only then were the Polish men and leaders who had not already been exterminated by the Reds freed by Russia to form an anti-Nazi army. Well, the Poles don t have to be free to fight. In the very heart of Hitler-held Poland, Gen. Bor Komorowski formed an underground army. On a prearranged signal with Russia and ourselves, General Bor launched an uprising in Warsaw. But the Red Army that stood then at Warsaw's gates and had so smoothly promised to come to General Bor's aid—well, that army never showed. No, it never showed at all. Warsaw was reduced. It was reduced block by block and house by house to a city of rubble and mud, of blood and corpses. All during those days, you remember, America looked on the suffering of Poland and wept, and America promised. We promised in the name of the Atlantic Charter that at the war's end both Germany and Russia would leave Polish soil, promised that Poland would again be free. All day long during the war the American radio blared these promises by short wave to Poland. These promises had the sanction of our President, of the Secretary of State, of the American Congress. And isn't it so, they had the sanction of the whole American people. Were these crocodile tears that Americans wept, were we Americans being giants in our promises then pygmies in our performance afterward?

Well, I think a free American people must judge. Yalta was the measure of our promises. Yalta sanctioned the fifth partitioning of Poland, and Potsdam confirmed it. The week that the hush-hush news of Yalta leaked to the Allied armies, I happened to be visiting General Anders' army. It was fighting under Gen. Mark Clark's gallant United States Fifth on the Italian front. That, you remember, was the army recruited in Russian-held Poland and in Russia after Hitler had two-timed Mr. Stalin. Well, General Anders had marched his men thousands of miles through Russia and the Near East to join our American forces in the African campaign. His men had fought 6 long years. They had known neither leave nor rotation. Their homes lay ahead of them in enemy hands, and so, they used to say, did their replacements. In that week of Yalta I found it hard to look in the hurt, accusing eyes of General Anders' soldiers. I shall never forget how ashamed I was that day to be an American.

Now for any army but a Polish army, that betrayal by its strongest ally, the one that had wept most and promised loudest—that would have been the signal to quit, to quit in hate and despair. But General Anders' army did not quit. Why? Well, General Anders said to me, he said "We fought all the way out to keep our country free and we will fight all the way in to make it free. If we don't fight, who in all the world is going to fight for us now?"

Well, you know the rest. You know the slow, mealy-mouthed acceptance by our leaders of Soviet expansion in Poland. You know our double-talk betrayal of Poland's real democratic leaders, the hypocritical countenancing by our government of that disgraceful farce, the "free and unfettered" elections in Poland. Now there are some

who call this conduct prudence and others call it power politics. Well, there are others who impeach it softly as appeasement, but in plain words it's either stupidity or cowardice, and neither of it is worthy of our Uncle Sam.

I hope this doesn't sound political or partisan. Why should Americans tremble to be called partisans of freedom? Should we blush to be found partisans of our country's honor? Should we apologize to be branded partisans of America's best interests? Oh, I wish there were no need to speak this way. It would be a fine thing if we could put Poland's case today on the sole grounds of democratic bounty and Christian charity. But we have got to be honest men and honest women. Poland's misery does more than twist our American hearts. It taunts our American consciences and we are free men living in a free country and we are mixed up beyond any dispute in the mistakes our leaders have made in our name. Well, we haven't inflicted the wounds that Poland suffers, but we have let them widen. And if we have broken no heads in Poland, we have helped to break Polish hearts.

Let me tell you a Polish story in closing. I suppose you would call it a Polish joke. It is a joke, at any rate, that is very popular among the Polish peasants just now. It is particularly popular among the ones who were hurled into jail for refusing to vote as they were told in those "free and unfettered elections."

Now, God, it seems, wanted an angelic estimate of how things were going on on His earth. So He sends the Angel Gabriel to make a survey, and Gabriel returns with this report:

"I visited America, and in America the people were talking of war. But they had cut down their armies, they had destroyed their air forces, and they had done away with all rationing.

"So I visited Russia (said Gabriel to the Almighty) and in Russia their leaders were all talking of peace, but the Russians were building a big army, they were building a vast air force, and they were rigidly controlling all foodstuffs.

"So I came back by way of Poland, and Poland was dominated and even occupied by an alien power. The Polish people had no shelter, they had no clothing, they had no food, they had no army and they had no air force, and they had no atomic bomb. But the Poles were all talking of victory and freedom."

Then God shook His head and smiled at the Angel Gabriel. "Those Poles," He said, "They always did count on me."

Well, it is said that God helps those who help themselves, but when a people is so sick and hungry and homeless—like the Polish people—that they can no longer help themselves, maybe God will help those who help them. So try to, please.

Niech zyje wolna Polska.

Long-Range Program for European Aid

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, November 24, 1947

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent to have printed in the Appendix of the RECORD two letters which I have just received, which comment on various phases of the proposed long-range program for aid to Europe. One letter is from J. E. McDonald, Texas commissioner of agriculture at Austin; and the other is from George A. Raymer, secretary of the Orange County Taxpayers' Association, 118 West Fifth Street, Santa Ana, Calif.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

STATE OF TEXAS,
DEPARTMENT OF AGRICULTURE,
Austin, November 19, 1947.

Senator ARTHUR CAPPER,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: Perhaps you will be interested in reading following copy of telegram I sent President Truman yesterday, giving Texas farmers' views on his request for power to establish controls:

"Hon. HARRY S. TRUMAN,
"President of the United States,
"Washington, D. C.:

"In reference to your address to Congress asking authority to fix prices and wages, may I bring the following to your attention:

"First, this means return of OPA, black markets, and tens of thousands of Government bureaucrats. This would mean return to conditions which upset our economy and helped bring about existing scarcity in many commodities and goods. It would eventually result in our country having to import food.

"Second, despite existing shortages our country still has the most plentiful supply of food, cheapest prices, and best marketing system in the world. This is proven by the fact that foreign nations who have price and wage controls are now asking that we feed and aid them.

"Third, the only preventive against inflation is adequate production and economy in government. Therefore, agricultural and industrial production should be encouraged and not discouraged through price ceiling.

"Fourth, our country has never been and cannot be prosperous with low prices. Furthermore, the national debt and taxes cannot be paid and the budget can never be balanced without a high price and wage level.

"Fifth, the economic and the American way is equitable adjustment of wages of both labor and white collar workers to meet the cost of living and not through Government bureaucratic control.

"Sixth, we know a government does not and cannot produce as this must be done by the people. Therefore, we must not swap our liberty for government control and regimentation. It would be infinitely better for our people to suffer temporary inconvenience and privation than to lose our heritage of free and constitutional government.

"Free enterprise upon which this Nation was founded is functioning. Our farms and factories are producing. Let's don't return to bureaucratic controls which may destroy confidence, bring unemployment, and throw our Nation into an economic tailspin."

Sincerely yours,

J. E. MCDONALD,
Texas Commissioner of Agriculture.

ORANGE COUNTY TAXPAYERS' ASSOCIATION,
Santa Ana, Calif., November 19, 1947.

Hon. ARTHUR CAPPER,
United States Senator,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR: Our daily paper contained an article on your address to the United States Senate in relation to the long-range financial aid to the European countries.

I bespeak the sentiment of the association named above when saying that we most enthusiastically and heartily endorse your address with reference to scattering promiscuously the taxpayers' dollars throughout Europe.

The time is at hand when both branches of our United States Congress will have to be firm in doling out stupendous sums of money for the rehabilitation of Europe.

Much to our dismay, we read in the papers of large shipments of supplies from the east coast to Russia. Only recently, there were several Russian freighters left the San Pedro Harbor with gasoline and oil for Russia. Apparently, the communistic New Dealers who are in power in Washington are about to impoverish our country and then laugh at us if we protest their action. Would to God that many more real Americans in the United States Senate, like your good self, who would fight this Nation's battles loyally as you have done and are now doing.

Yours for victory,

GEORGE A. RAYMER,
Secretary.

Warning on Hawaii

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, November 24, 1947

Mr. IVES. Mr. President, on the 25th of last August there appeared on the editorial page of the New York Herald Tribune a letter by Nicholas Murray Butler, concerning the question of statehood for the Territory of Hawaii, a subject which is now before the Senate. Because of the great importance of this question, and because of the significance of this matter, I ask unanimous consent that the letter be inserted in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WARNING ON HAWAII—DR. BUTLER URGES THOUGHTFUL STUDY OF STATEHOOD BILL

To the New York Herald Tribune:

It would be a tragedy if the bill now pending in Congress to admit the Territory of Hawaii to statehood were to become law without its thorough study by the American people as a whole and without their complete understanding of all which it would involve. This bill has already passed the House of Representatives without any adequate discussion or without any general public consideration of its vital importance to our Nation. Fortunately, it has still to be considered by the Senate, and it is not too late to bring it to the attention of the public opinion of our entire people.

Hawaii is a Territory in the Pacific Ocean some 2,000 miles and more from our Pacific coast. In population, in language, and in economic life it is distinctly a foreign land. Its admission to statehood might easily be the first step in bringing to an end the United States of America as established by the founding fathers and as we have known it. The next generation might well find itself faced by a United States of the Pacific and other ocean islands, since the admission of Hawaii would certainly lead to pressure, which would be hard to resist, to admit also Alaska, Puerto Rico and other islands in the Atlantic and Caribbean as well as the distant Philippines.

As I have previously pointed out, all of these islands have backgrounds of their own wholly different from those of the United States of America. To place them, each and all, on the same plane as Massachusetts, New York, Illinois, California, Texas, or Virginia would be a fatal step. In language, in historic background, and in racial conditions they are not and could not be members of

the United States of America in any true sense.

The obvious course would, in my judgment, be for our Government to set up the Territories of Hawaii, of Alaska, and of Puerto Rico as independent self-governing democracies, as has already been done in the case of the Philippine Islands, subject to two conditions: First, their formal relations with foreign powers should be subject to the approval of the President and Senate of the United States. This would prevent their being used by any foreign power to our disadvantage. Second, litigants in any one of these independent nations should have the right of appeal to the Supreme Court of the United States. This would insure a uniform system of public law and of civil law in this part of the world. This right already exists in the case of Puerto Rico and has been used obviously to great advantage and to the satisfaction of its people.

It is imperative, in my judgment, that the press of the country and the leaders of public opinion should see to it that the question of admitting Hawaii to statehood is thoroughly studied and examined by all our people before final action on the pending legislation is taken.

NICHOLAS MURRAY BUTLER.

SOUTHAMPTON, LONG ISLAND,
August 22, 1947.

Statement of Hon. Walter C. Ploeser, Chairman, Select Committee on Small Business, House of Representatives, Before Committee on Ways and Means of the House of Representatives, November 24, 1947

EXTENSION OF REMARKS
OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

Mr. Chairman, my appearance before your committee today is as a result of your invitation and an obligation on the part of the Select Committee on Small Business to present whatever information it may have which may be helpful to the Ways and Means Committee's consideration of the tax problems growing out of certain exemptions allowed by the Internal Revenue Act and Treasury rulings to cooperative types of enterprise.

Our committee has been at work for several months, both in public hearings and in exhaustive staff research. Our hearings have not been completed and, therefore, the results of our work which I present here today must, of necessity be considered the knowledge which we have gained to date. It cannot be considered as a report of the House Small Business Committee because this committee will not be ready to submit a report until it has exhausted the subject. Accordingly, the data which I offer are presented by me as an individual Member of the Congress, in the hope that it will be helpful in your consideration of the problem.

This subject has many ramifications and cannot be settled by emotional arguments or a mere reliance upon economic theory.

The Ways and Means Committee is faced with a very practical situation from the standpoint of revenue, while the House Small Business Committee is faced with the very practical study affecting competitive forces in our economy. Our interest is not identical, but the facts involved affect the work and studies of both committees.

PROCEDURE

For a number of months, a subcommittee of the House Committee on Small Business has been making a study of the legislative and administrative privileges enjoyed by cooperatives for the purpose of endeavoring to determine whether such privileges impose unfair burdens upon proprietary businesses. Tax-exemption privileges of cooperatives have been particularly studied. Two avenues of inquiry were explored. Does tax exemption permit cooperative enterprise to grow more effectively than proprietary enterprise? Does tax exemption permit cooperative enterprise to market products, distribute products, manufacture products or perform services at prices which are more attractive to its customers than to the customers of competing proprietary corporations?

The committee prepared a list of about one hundred cooperatives. Included in this list were samples, large and small, of the various kinds of cooperatives: Agricultural marketing cooperatives, agricultural purchasing cooperatives engaged in distribution, manufacturing, or the furnishing of services, and urban consumer cooperatives. To each of these selected cooperatives, the committee sent the following letter and questionnaire:

"Gentlemen: The House Committee on Small Business is making an investigation into Government competition with business and Government financial assistance to business. One line of inquiry which the Committee feels it must pursue is the governmental privileges enjoyed by cooperatives alleged to be imposing an unfair burden upon private business competing with cooperatives. Many complaints have been received by this committee from private business, making this charge, and in fairness to all, the committee feels that they should either be sustained or disproved.

"The committee is fully cognizant of the fact that cooperative business is lawful and legitimate, is engaged in by many persons of the highest standing in their local communities and has been singled out by the Congress from time to time for legislative recognition. The committee's inquiry is being made solely for the purpose of enabling it to report to Congress whether the governmental privileges conferred on cooperatives by Congress have put private business at an unfair disadvantage. I feel confident that you will see nothing unfair in Congress reappraising from time to time any benefits which it has conferred upon special types of business.

'I therefore ask you to assist the committee's efforts by promptly furnishing to it certain information specified in the enclosed questionnaire. The furnishing of such information requires mainly only the forwarding to the committee of annual audit reports already prepared and in your files. The committee requests that these annual audit statements described in detail in question 3 of the enclosed questionnaire be sent to the committee so they may be received in Washington as soon as possible but not later than ———.

"Attached to this letter is a Government frank which will relieve you of all costs of shipment of the material.

"Sincerely.

———, ———.

"COOPERATIVE QUESTIONNAIRE

"1. Give date of organization of your cooperative and the original financial set-up.

"2. Does your cooperative have a tax-exempt status under section 101 of the Internal Revenue Code, and if so, how long has it had such exemption?

"3. Please send to the committee a copy of your annual audit report for each year including 1935 to the end of your latest accounting year. These reports should contain a detailed balance sheet at the end of each year; a detailed operating statement for each year, and all supporting schedules and exhibits as prepared by your accountants in their annual audit. The comments and conclusions of the accountants together with their certificate are also generally included in these reports.

"The material requested above will be kept securely by the committee and returned to your cooperative, if you so desire, as soon as the committee has finished with it. Please, therefore, indicate when you forward the material whether you wish part or all of it to be returned, or whether the committee may keep such material for its files."

ACCOUNTING DIFFICULTIES

In general, the cooperatives requested to answer the committee's questionnaire gave excellent cooperation. Only a few either ignored the committee's request or turned in data which was totally inadequate. A considerable amount of data, however, which was turned in to the committee by these cooperatives who showed a genuine desire to assist the committee presented certain serious difficulties from an accounting standpoint. It was found that a number of cooperatives, in auditing their books, do not observe in many cases standard accounting practices generally adhered to by proprietary businesses. In making this statement, I do not intend in any way to reflect upon the integrity of cooperative bookkeeping. I simply point this fact out because in the exploration of the voluminous data which the committee received and the effort we had to make to bring the accounting techniques employed into line with standard accounting practices was necessarily very time-consuming and not infrequently the results obtained were not usable. There was also a number of cases in which the data furnished by cooperatives, with no intention to obstruct the committee's efforts, was found to be insufficient to make a satisfactory accounting analysis of the economic factors responsible for their growth. Finally, the problem of attempting to estimate Federal taxes that would have been paid by certain cooperative corporations had they been proprietary corporations receiving the same net income involved a great deal of work and extended conferences between the committee's accounting staff and tax experts of the Bureau of Internal Revenue who consented to furnish the committee with technical advice which had no bearing upon policies of the Bureau.

Where possible, the committee sought to obtain the following information from the audit reports of cooperatives:

1. Net worth of the cooperative at a given date. (Generally 1936.)

2. Net worth at latest accounting date. (Generally December 1946.)

3. Increase of net worth during the period studied.

4. How much of the increase in net worth could be attributed to the reinvestment of tax-free earnings?

5. Net income of the cooperative for each year for the base period 1936 through 1946.

6. Amount of taxes collected each year from the cooperative through the Federal tax on corporate income.

7. The taxes that would have been paid by a proprietary corporation having the same amount of net income each year as the cooperative corporation.

8. Increase of net worth of the cooperative corporation minus total taxes that would have been paid by a proprietary corporation.

9. Analysis of the increase in net worth as reflected in the balance sheet of the cooperative:

A. Increase in working capital.
B. Increase in fixed assets.
C. Increase in other assets.
D. Increase or decrease in long-term debt.

10. The ratio of total patronage refunds paid in cash to total net income for period 1936 through 1946.

Though the audit reports of many cooperatives were examined, it was found possible, within the time permitted and the accounting difficulties encountered, to utilize the case histories of only eight important cooperative corporations. From the audit reports of these corporations, however, it was possible to perceive clearly the effect of tax exemption upon their growth.

At the beginning of the base period (averaging 10.8 years for each corporation) the eight cooperatives had a consolidated net worth of $11,122,319. At the end of the base period the eight cooperatives had a consolidated net worth of $72,704,344. The total increase in net worth of the eight cooperatives was therefore $61,582,025.

For the base period these eight cooperatives had an estimated total net income of $94,589,587.

ANALYSIS

Now for our first important question.

How much of the total increase in the net worth of the eight cooperative corporations during the base period amounting to $61,582,025 was due to the reinvestment of net income?

On a conservative accounting basis, it is estimated that $49,171,532 of the total increase in net worth of $61,582,025 was due to the reinvestment of net income. The difference between $49,171,532 and $61,582,025 is $12,410,493 and represents the total increase in net worth not attributable to the reinvestment of net income.

Since I am having to use many figures in this presentation, I think it advisable at certain intervals to recapitulate them in table form. So I now invite your attention to table I.

TABLE I

Number of cooperative corporations	Consolidated net worth at beginning of base period	Consolidated net worth at end of base period	Total increase in net worth	Total increase in net worth due to reinvestment of net income	Total increase in net worth due to other sources
8	$11,122,319	$72,704,344	$61,582,025	$49,171,532	$12,410,493

Now let me attempt to show the advantage of tax exemption in the growth of these eight cooperatives.

All of the eight cooperatives were corporations. Substantially all of them were wholly tax exempt under section 101 of the Federal Internal Revenue Code.[1] Consequently, their total net income during the base period of $94,589,587 was tax exempt.

On a conservative basis, it is estimated that had the annual net income of these eight cooperative corporations been subject to the Federal tax on corporate income and not exempt from it, i. e., had they been proprietary corporations, they would have paid total taxes to the Federal Government in the base period amounting to $47,306,672. Substracting such estimated Federal tax of $47,306,672 from the total net income of the eight cooperative corporations during the base period leaves $47,282,915. This latter figure represents what would have been the total net income of the eight cooperative corporations had they paid on a basis equal to a proprietary corporation. This is the sum that would have been available to these eight cooperative corporations after Federal taxes.

I now invite your attention to table II.

TABLE II

Number of cooperative corporations	Estimated total net income during base period	Estimated part of total net income reinvested	Estimated Federal taxes on total net income	Estimated total net income after Federal taxes
8	$94,589,587	$49,171,532	$47,306,672	$47,282,915

Had the eight cooperative corporations paid an equal share of Federal taxes, how much of their total net income, after such taxes, would have been reinvested?

With tax exemption, their total net income of $94,589,587 was distributed as follows:

Approximately $49,171,532, or approximately 52 percent of their total net income, was reinvested.

The difference between this $49,171,532 and the total net income of $94,589,587 or $45,418,055 (representing approximately 48 percent of the total net income) can be credited to the payment of either cash patronage refunds or cash dividends on stock since none of it is considered to have been reinvested.

Applying the same percentage to the total net income of these eight cooperatives during the base period and after the Federal tax on corporate income, we can estimate that approximately $24,587,116 (52 percent) would have been reinvested, while approximately $22,695,799 would have been paid out in cash payments.

Let me recapitulate these figures in table III.

TABLE III

Number of cooperative corporations	Distribution of total net income with tax exemption		Estimated distribution of total net income after Federal taxes	
	Reinvestment	Cash payments[1]	Reinvestment	Cash payments[1]
8	$49,171,532 (52 percent)	$45,418,055 (48 percent)	$24,587,116 (52 percent)	$22,695,799 (48 percent)

[1] Wherever the term "cash payments" is used it means in the case of a proprietary corporation the payment of cash dividends on stock. In the case of a cooperative corporation, it means either the payment of cash dividends on stock or the payment of cash patronage refunds or both.

[1] In some years and in some cases these cooperative corporations had subsidiaries which did pay a small amount in Federal taxes. But the total Federal taxes paid in such instances is estimated to be less than one-half of 1 percent of the total estimated Federal taxes used.

Now I believe we are in a position to estimate the advantages of tax exemptions in the growth of our eight cooperative corporations.

During the base period, these eight cooperative corporations had a total increase in net worth of $61,582,025. The reinvestment of net income, it is estimated, accounted for $49,171,532 of the total increase in net worth. Growth "from other sources," it is estimated amounted to $12,410,493. Such "other sources" may be disregarded. They do not involve in any way the problem of the effect of tax exemptions on the growth of these eight cooperative corporations. It is only the increase in net worth of $49,171,532, resulting from the reinvestment of net income that relates to our problem of estimating the advantage of tax exemption in the growth of the eight cooperative corporations.

With tax exemption, the eight cooperative corporations were able to increase their net worth through a reinvestment of their net income by $47,171,532.

If these cooperative corporations had paid an equal share of Federal taxes, and if they had distributed their total net income after such taxes on the same percentage basis that they did with tax exemption, they would have increased their net worth through a reinvestment of their net income by only $24,537,116.

Thus, through the reinvestment of net income on a tax-exemption basis, the eight cooperative corporations were able to increase their net worth by approximately one hundred percent more than they would have increased it had their net income borne its comparable share of Federal taxes.[2]

The result is represented by table IV.

TABLE IV

Number of cooperative corporations	Increase in net worth due to reinvestment of 52 percent of net income on a tax-exempt basis	Estimated increase in net worth due to reinvestment of 52 percent of net income on a taxable basis	Percent advantage of tax exemption in growth due to reinvestment of net income
8	$49,171,532	$24,587,116	100

There is still another way of estimating the advantage of tax exemption in the growth of our eight cooperative corporations. Many cooperative corporations in the past decade or so have embarked upon vigorous expansion programs financed chiefly out of the reinvestment of their net income. In carrying out these expansion programs, a high percentage, and in some cases a very high percentage, of the net incomes of such cooperative corporations has been retained in the business resulting in only a small amount of cash-patronage refunds being paid out. Let's assume in the case of our eight cooperatives that during the base period they had reinvested 95 percent of their total net income on a tax-exempt basis. If they had done this, they would have increased their net worth through a reinvestment of net income by approximately $89,860,107, and would have made cash payments of approximately $4,729,480.

Now let us assume eight proprietary corporations in competition with our eight cooperative corporations during the base period, and assume further that such proprietary corporations earned similar net income and reinvested 95 percent of their net income after Federal taxes in an effort to hold their own with their cooperative competitors.

The proprietary corporations would earn a net income of $94,589,587 before Federal taxes. But on this net income, they would have paid Federal taxes amounting to $47,306,672 so that after Federal taxes they would have had a net income of only $47,282,915. If 95 percent of this net income after Federal taxes was reinvested, our proprietary corporations would have increased their net worth by approximately $44,918,769.

[2] The difference between $49,171,532 and $24,587,116 is $24,584,416 and the latter figure is approximately 100 percent of $24,587,116.

Estimating the advantage of tax exemption in the growth of our eight cooperative corporations on this basis, they would be able to increase their net worth by approximately 100 percent more on a tax-exempt basis than they would have on the same taxable basis as proprietary corporations.

Table V summarizes the advantage of tax exemption in the growth of the eight cooperative corporations on the different bases I have pointed out.

TABLE V

Number of cooperative corporations	Percent growth advantage with a reinvestment of 52 percent of total net income on a tax-exempt basis contrasted with the reinvestment of 52 percent of net income on a taxable basis	Percent growth advantage with a reinvestment of 95 percent of total net income on a tax-exempt basis contrasted with the reinvestment of 95 percent of net income on a taxable basis
8	100	100

From the standpoint of making cash payments, tax exemption appears also to have been an advantage. On a wholly tax-exempt basis the eight cooperative corporations distributed in cash payments approximately $45,418,055. Had the net income of these cooperative corporations been subject to the Federal tax on corporate income, they would have had only $22,695,799 available for cash payments—48 percent of $47,282,915.

Thus tax exemption made it possible for our eight cooperative corporations to pay out in cash a sum approximately 100 percent more than they would have paid out if their net income had borne an equal share of Federal tax and if the net income on a taxable basis had been distributed in the same proportion between reinvestment and cash payments as was done on a tax exempt basis—52 percent to reinvestment and 48 percent to cash payments.

Table VI summarizes on a percentage scale the advantage of tax exemption to the eight cooperative corporations in their capacity to make cash payments during the base period.

TABLE VI

Number of cooperative corporations	Allocation of 48 percent of the total net income on a tax-exempt basis of the 8 cooperative corporations during the base period to cash payments	Allocation of 48 percent of the net income after Federal taxes of the 8 cooperative corporations to cash payments	Percent advantage of tax exemption in capacity of cooperative corporations to make cash payments
8	$45,418,055	[1] $22,695,799	100

[1] Ratio of $22,695,799 to $45,418,055 minus $22,695,799 is approximately 100 percent.

Now our estimates of the advantage of tax exemption to the eight cooperative corporations from both the standpoint of growth and their capacity to make cash payments take in the whole of the base period which generally began with the year 1936 and went through the year 1946. For the first 5 years of this base period, the Federal tax on corporate income was relatively low. For the 5-year period from 1941 through 1945, it was extremely high because of the imposition of the excess-profits tax. If this latter part of the base period (1941–45) is taken, the capacity of tax exemption to give cooperative corporations a differential on growth over proprietary corporations is considerably increased.

During the 5-year period 1941 through 1945, the eight cooperative corporations had a total net income of $64,593,057. Assuming that during this 5-year period the net income was divided 52 percent to reinvestment and 48 percent to cash payments, the net worth of these eight cooperatives was increased by approximately $33,588,390 while approximately $31,004,667 was paid out in cash payments.

However, had the net income of these cooperative corporations been subject to the Federal tax on corporate income, they would have had a total net income of only $26,267,762 since, on a conservative accounting basis, we estimate that the Federal Government would have taken away $38,325,295 of their total net income of $64,593,057.[3]

If 52 percent of this net income of $26,267,762 after Federal taxes had been reinvested in the business, the net worth of these eight corporations would have been increased by only $13,659,236.

If 48 percent of this net income had been distributed in cash payments, there would have been distributed a sum of only $12,608,526.

Hence, from the standpoint of growth, tax exemption made it possible for the eight cooperative corporations to increase their growth by approximately 146 percent more on a tax-exempt basis than they would have increased it on a taxable basis.

Table VII summarizes the advantage of tax exemption in the growth of our eight cooperative corporations during the period of the excess-profits tax, i. e., from 1941 through 1945.

TABLE VII

Number of cooperative corporations	Time period	Per cent growth advantage with a reinvestment of 52 percent of total net income on a tax-exempt basis contrasted with a reinvestment of 52 percent of total net income on a taxable basis
8	1941–45	146

From the standpoint of capacity to pay cash dividends, tax exemption during the period of the excess-profits tax was also of great advantage to the eight cooperative corporations. If 48 percent of the net income of these cooperatives on a tax exempt basis during the period of the excess-profits tax was paid out in cash payments, we arrive at the sum of $31,004,667.

If, however, the net income of these cooperative corporations had been subject to the Federal tax on corporate income to the same degree as proprietary corporations, and if 48 percent of their net income after Federal taxes had been paid out in cash payments, we arrive at a sum of only $12,608,526.

Thus, tax exemption during the period of the excess-profits tax enabled these eight cooperative corporations to pay out approximately 146 percent more in cash payments than they could have done had they been on a comparable tax basis with proprietary corporations.

Table VIII shows the percent advantage of tax exemption to the eight cooperative corporations during the period of the excess-profits tax from the standpoint of their capacity to pay cash dividends:

TABLE VIII

Number of cooperative corporations	Time period	48 percent of the total net income of the 8 cooperatives on a tax-exempt basis paid out in cash dividends	48 percent of the total net income of the 8 cooperatives after full Federal taxes	Percent advantage of tax-exemption in capacity to make cash payments
8	1941 through 1945	$31,004,667	$12,608,526	146

Today the excess-profits tax has been repealed. It was repealed in 1945 and does not apply to the year 1946. The Federal tax on corporate income is therefore at the moment lower than it was during the war, but it is still sufficiently high and is likely to be for many years to come to make tax exemption be a considerable advantage to cooperative enterprise from the standpoints of growth and capacity to make cash payments.

Let us take the year 1946, which was the first year after the repeal of the excess-profits tax on corporate income. In that year, the eight corporations used in our study had an estimated total net income of $15,444,000. On a conservative basis, it is estimated that had this total net income been subject to the Federal tax on corporate income, the eight cooperative corporations would have paid in Federal taxes $6,158,542. With tax exemption, these cooperative corporations could have used $8,030,880 of their total income for growth (52 percent of their total net income for reinvestment) and had left $7,413,120 available (48 percent of their total net income) for distribution in cash payments.

However, had these eight cooperative corporations been proprietary corporations, their capacity for growth as well as their capacity to make cash payments would have been substantially reduced.

[3] Estimates of committee's accountant.

As proprietary corporations, they would have had a net income in 1946 of only $9,285,458 because the Federal tax on corporate income would have taken away $6,158,542 in Federal taxes. Utilizing 52 percent of their total net income after Federal taxes in 1946 for reinvestment, we arrive at a figure of $4,828,438.

Contrasting this latter figure with $8,030,880 (representing 52 percent of the total net income of the eight cooperative corporations operating on a tax-exempt basis in 1946) one can see that these cooperative corporations, through tax exemption, could have increased their net worth by 66 percent more than they could without it.

From the standpoint of declaring cash dividends, they would have been in a substantially better position as cooperative corporations than as proprietary corporations. As cooperative corporations enjoying tax exemption, these corporations in 1946 could have made cash payments of approximately $7,413,120 (48 percent of their net income).

In other words, as tax-exempt cooperative corporations, these eight corporations could have paid out 66 percent more in cash payments as they could have operating as proprietary corporations ($7,413,120 as against $4,457,020).

Tables IX and X show the percent advantage of tax exemption to the eight co-

operative corporations from the standpoints of growth and capacity to pay cash dividends under the present rates applicable to the Federal tax on corporate income.

TABLE IX [1]

Number o. cooperative corporations	Time period	Reinvestment of 52 percent of the total net income of the 8 cooperative corporations on tax-exempt basis	Reinvestment of 52 percent o the total net income of the 8 cooperative corporations after full Federal taxes	Percent growth advantage of tax exemption
8	1946	$8,030,880	$4,828,438	66

[1] $8,030,880 minus $4,828,438 is $3,202,442. The figure of $3,202,442 is approximately 66 percent of $4,828,438.

TABLE X [1]

Number of cooperative corporations	Time period	48 percent of the total net income of the 8 cooperative corporations with tax exemption paid out in cash dividends	48 percent of the total net income of the 8 cooperative corporations after full Federal taxes paid out in cash dividends	Percent advantage of tax exemption in capacity to pay cash dividends
8	1946	$7,413,120	$4,457,020	66

[1] Ratio of $4,457,020 to $7,413,120 minus $4,457,020 is approximately 66 percent.

OTHER ADVANTAGES

From our study of cooperatives this far, tax exemption appears to give cooperative corporations advantages other than those of capacity to grow and capacity to make cash payments. It appears also to give cooperative corporations two other important advantages. Tax exemption enables cooperative corporations in competition with proprietary corporations in the marketing, distribution, manufacture of products or the performance of services to give their customers better prices than they would otherwise be able to do. Tax exemption also appears to give cooperative corporations a definite market advantage in the buying of business properties. Let me now comment briefly on each of these advantages.

PRICE ADVANTAGE

Where cooperative corporations can pay more cash payments to their patron owners through tax exemption than they would otherwise be able to do, their capacity to give their customers more attractive prices and hence to obtain a competitive advantage over competing proprietary corporations is automatically increased.

In a marketing cooperative for instance, the more cash dividends it can pay its producers, the greater the profit of those farmers from the sale of their products and the greater the capacity of the marketing cooperative to attract farmer customers away from competing proprietary corporations.

Consider an example of a prosperous marketing cooperative engaged in the marketing of poultry and eggs studied by the committee.

This cooperative from 1935 through 1946 had an estimated net income of $15,753,325. During this period, it had a total increase in net worth of $5,637,985. We estimate that approximately $4,953,000 of this total increase in net worth was due to reinvestment of net income.

We also estimate that had this cooperative corporation paid a comparable share of Federal taxes, it would have paid to the Federal Government a sum amounting to approximately $7,366,645.

On a tax exempt basis, this corporation reinvested approximately 31 percent of its net income amounting to $4,953,000. It had left therefore for cash payments approximately $10,800,328 (69 percent of its total net income).

If this cooperative corporation had paid a comparable share of Federal taxes, it would have had a net income of only $8,386,683. Had it reinvested 31 percent of its net income after such Federal taxes, it would have had left only $5,786,811 (69 percent for cash payments). The percent advantage of tax exemption of this cooperative corporation can be measured on two bases. First, if it had applied all of its net income to cash payments on a tax exempt basis, it would have been able to have paid out nearly 100 percent more cash payments than if it had paid a comparable share of Federal taxes.

Second, if it had reinvested 31 percent of its net income on a tax exempt basis, it would have also been able to pay out nearly 100 percent more in cash payments than if it had paid its share of Federal taxes. Tables XI and XII show the percent advantage of tax exemption to this cooperative marketing corporation in making of cash payments.

TABLE XI

Total net income of marketing cooperative corporation, 1935 through 1946	Estimated total net income of cooperative marketing corporation after Federal taxes, 1935 through 1946	Percent advantage of tax exemption to cooperative corporation to make cash payments if total net income was utilized to make cash payments
$15,753,328	$8,386,683	87

TABLE XII

Total net income of marketing cooperative corporation, 1935 through 1946	Estimated reinvestment of net income, 1935 through 1946	Estimated net income available for cash dividends	Estimated total net income after Federal taxes, 1935 through 1946	Estimated net income for cash payments after Federal taxes and after reinvestment of 31 percent of total net income	Percent advantage of tax exemption to make cash payments
$15,753,328	$4,953,000	$10,800,328	$8,386,683	$5,786,811	87

Let me take the case of a large cooperative corporation engaged in the manufacturing of butter, cheese, and the processing of other dairy products. If this cooperative corporation can make more cash payments to its patron owners under tax exemption than without it, it is automatically in a position to offer lower prices to the purchasers of its products. Such capacity is a definite advantage in its competition with proprietary corporations vending the same products.

This cooperative from 1935 through 1946 had an estimated net income of $12,217,220. During this period of time, its net worth increased from $273,736 to $12,329,147. Its total increase in net worth was, therefore, $12,055,411.

We estimate that approximately $8,810,500 of this total increase in net worth was due to reinvestment of net income. We also estimate that had this cooperative corporation paid its comparable share of Federal taxes on corporate income, it would have paid taxes to the Federal Government amounting to $7,151,467.

On a tax-exempt basis, this cooperative corporation had net income available for cash payments amounting to $3,406,720.[4]

On a taxable basis, this cooperative corporation would have had a net income of only $5,065,753. On a tax-exempt basis, this cooperative corporation reinvested approximately 72 percent of its net income. Had it reinvested 72 percent of its net income after Federal taxes, it would have had left only $1,418,411 available for cash dividends.

The percent advantage of tax exemption, therefore, to this corporation in its capacity to make cash payments is estimated at approximately 140 percent.

Had this corporation applied all of its net income to cash dividends, both on a tax-exempt and a taxable basis, we estimate that the percent advantage of tax exemption in its greater capacity to make cash payments would be also approximately 140 percent.

Tables XIII and XIV show the advantage of tax exemption to this important cooperative processing corporation in its capacity to offer more attractive prices to the buyers of its products.

TABLE XIII

Estimated total net income of cooperative corporation from 1935 through 1945	Estimated total net income of cooperative corporation from 1935 through 1945 after Federal taxes	Estimated percent advantage of tax exemption if all of a corporate corporation's total net income from 1935 through 1945 had been distributed in cash payments
$12,217,220	$5,065,753	140

TABLE XIV

Estimated total net income of cooperative corporation from 1935 through 1945	Amount and percentage of net income reinvested	Estimated amount and percentage of net income available for cash dividends
$12,217,220	$8,810,500 (72 percent).	$3,406,720. (28 percent).

Estimated amount of total net income of the cooperative corporation from 1935 through 1945 after Federal taxes	Estimated amount of total net income available after Federal taxes and after reinvestment of 72 percent of total net income	Percent advantage of tax exemption with a reinvestment of 72 percent of net income in capacity to make cash payments
$5,065,753	$1,418,411	140

[4] $12,217,220 (total net income) minus $8,810,500 (reinvested net income) equals $3,406,720.

I could use more illustrations. But I think these two will suffice to illustrate the principle I am seeking to develop. Whatever the degree of tax exemption, there appears to be an advantage (greater or less according to the degree of Federal taxation on corporations) in the capacity of cooperative corporations enjoying such tax exemption to give their customers better prices than they could without it. From the standpoint of price, therefore, tax exemption, in my opinion, does give them an advantage over proprietary competitors also doing business under the corporate form of enterprise.

ACQUIRING BUSINESS PROPERTIES

From the standpoint of business growth, tax exemption also appears to yield a further advantage. Reinvested net income may be put into new plants or may be used to purchase other businesses. Such other businesses can also be purchased through the borrowing of money. But since the purchase of other businesses is widely used as a method of growth in the corporate world, it is important to stress the advantage which tax exemption appears to give cooperative corporations in bidding on business properties over proprietary corporations. Where a cooperative corporation bids on a business property operated by proprietary owners, it can through tax exemptions afford to bid substantially higher than proprietary bidders. The reason for this is that if it gets the property, the income from such property can become tax exempt, which means that such property under cooperative ownership will have more net income than under proprietary ownership.

Let me make use of an hypothetical illustration. A cooperative corporation enjoying tax exemption and a proprietary corporation are trying to buy proprietary corporation X which over a period of years has had an average net income of $1,000,000. This is its net income after Federal taxes which have amounted to approximately 38 percent a year. Under these assumptions the corporation's net income before Federal taxes was approximately $1,612,900. If the cooperative corporation obtains this property, Federal taxes on it will cease and its net income will be approximately $1,612,900. If the proprietary corporation bidder obtains this property, it will continue to yield only a net income of approximately $1,000,000. Hence, to the cooperative corporation bidder, the property from an income standpoint is worth $612,900 more than it is to the proprietary corporation bidder. Assuming that the market rate of return on investments in general is around 5 percent, the corporation is worth approximately $20,000,000 [5] to the proprietary bidder. But to the cooperative bidder it would be worth approximately $32,258,000.[5] Hence, the cooperative bidder could afford to pay two or three million dollars more for the property. In fact, it could afford to pay $12,000,000 more for the property. But, of course, it would not have to go this far. A couple of million more would probably be sufficient to top the price of the proprietary bidder. On this basis the cooperative corporation not only gets the business property, but through tax exemption of its income after its acquisition by the cooperative corporation, it has a definite advantage in amortizing its investment over the proprietary corporation had it acquired the property. If the cooperative corporation bid $22,000,000 for the property, from a business standpoint, it would expect to earn on its investment 5 percent a year, or $1,100,000. But through tax exemption the property would be earning approximately $1,612,900. The cooperative corporation consequently would have some $512,000 extra revenue with which to amortize its investment.

Because of the present high rates of Federal taxes on corporate income and because of the prospects that such rates are likely to continue for an indefinite time in the future, cooperative corporations enjoying tax exemption appear to have a substantial advantage over proprietary corporations in shopping the market for businesses which they desire to acquire. The advantage of tax exemption in the purchase of business properties has caused some cooperatives to point out to their patrons that "factories are free." They mean by this, of course, that the property could ultimately be substantially paid for out of net income which would not be taken by the Federal Government and which would be available to liquidate the investment.

[5] Net income multiplied by twenty.

NON-TAX-EXEMPT COOPERATIVES

In our study of cooperatives, we have found that it is important to distinguish what are called non-tax-exempt cooperatives from wholly tax-exempt cooperatives. The eight cooperatives which have figured so largely in my presentation this far were wholly tax-exempt cooperatives. Now I wish to point out to the committee that even if they had been non-tax-exempt cooperatives, the advantages of tax exemption which I think appear in their case as wholly tax-exempt cooperatives would exist also if they were non-tax-exempt cooperatives.

The words "non-tax-exempt cooperatives" are misleading. They imply that such cooperatives pay to the same degree as proprietary corporations their share of all taxes. Indeed, the supporters of cooperatives have at times taken particular pains to so represent non-tax-exempt cooperatives. In the committee's hearings on the Greenbelt Consumer Services, Inc., a number of press stories insisted on picturing this non-tax-exempt urban consumer cooperative corporation as one which paid all taxes. Such representation, however, of non-tax-exempt cooperatives amounts to deliberate deception. Non-tax-exempt cooperatives may pay all the forms of taxes but they do not pay all forms to the same degree as proprietary corporations.

Particularly, they do not pay to the same degree as proprietary corporations their share of the Federal tax on corporate income. Though they pay to the same degree as proprietary corporations their share of Federal excise taxes, State and property taxes, their failure to pay to the same degree as proprietary corporations their share of the Federal tax on corporate incomes gives them a tax advantage which in many cases is very little less than that enjoyed by wholly tax-exempt cooperatives.

A wholly tax exempt cooperative makes no payments under this Federal tax. Wholly tax exempt cooperatives are confined to agricultural cooperatives. But to qualify for complete tax exemption, an agricultural cooperative must be substantially in the hands of farmers. Its business opportunities are also restricted. If it is a marketing cooperative, the business which it does with nonmembers cannot at any time exceed the business which it does with farmers. If it is a purchasing cooperative engaged in distribution, the total amount of business which it can do with nonmembers is limited to 15 percent of its total business.

A non-tax-exempt cooperative may make some payments under the Federal tax on corporate income, but the payments it makes are never equal to the amount that would be paid by a proprietary corporation having the same net income. Thus, in general, the wholly tax exempt cooperative appears to enjoy a greater capacity to grow because of such tax exemption than a non-tax-exempt cooperative corporation when both are contrasted with a proprietary corporation having the same net income.

However, the difference between the advantage of complete tax exemption and the tax exemption which can be enjoyed by a nonexempt cooperative corporation is apparently so slight that the committee has been informed a number of cooperatives now qualifying for complete tax exemption are considering going on a non-tax-exempt basis.

Some managers are weighing in their minds whether it is more profitable to have a slightly greater tax exemption by being a wholly tax exempt cooperative with the handicaps of having to do business with a restricted clientele or to have wider markets through eliminating the restrictions on the kind of members they must do business with and having to pay for this privilege by tax exemption which is only slightly less than that of complete tax exemption.

It appears also that some cooperative managers believe the day has arrived when tax-exempt privileges should be eliminated and that it is better business for cooperative corporations to be treated like all other corporations.

Let me now point out to the committee (on the basis of our studies to date) the slight difference that exists between complete tax exemption for cooperatives and taxation of cooperatives on a non-tax-exempt basis.

It appears possible for the net income of a wholly tax-exempt cooperative corporation to be distributed in any way the management sees fit without one penny being collectible under the Federal tax on corporate income. The management of a wholly tax-exempt cooperative corporation has plenary power to determine how much it will pay out in cash patronage refunds and how much it will keep in the treasury.

The management of a non-tax-exempt cooperative corporation, however, appears not to have the same plenary power to dispose of its net income if it wishes to avoid paying Federal taxes. But—and this is the important point—it does appear to have the power to so arrange the distribution of its net income so that it can either avoid completely the payment of any Federal taxes or can limit the amount to only a fractional part of what it would pay were the cooperative corporation a proprietary one.

Once the net income of a proprietary corporation is determined, the Federal tax on corporate income applies without further deductions being allowed. If, for instance, a proprietary corporation has a net income of $1,000,000, it must pay under the Federal tax on corporate income $380,000 to the Federal Government. (This assumes the present rates under this tax.) The proprietary corporation, therefore, would have left only $620,000 to distribute in cash dividends or to reinvest.

If, however, a non-tax-exempt cooperative corporation has a similarly computed net income of $1,000,000, that income can be made subject to further deductions before application of the Federal tax on corporate income. All patronage refunds paid in cash may be deducted from the million-dollar income. If the whole million dollars is distributed in cash patronage refunds, no Federal taxes will be paid. Under this condition, a non-tax-exempt cooperative corporation can be made as exempt from Federal taxes as the wholly tax exempt cooperative corporation.[6]

A further deduction is permitted from the net income of a non-tax-exempt cooperative corporation. Any part of its net income which is kept in the corporate treasury and against which is issued to the owners of the cooperative corporation stock or other evidences of equity interest may be deducted from the net income of the cooperative cor-

[6] Actually the Bureau of Internal Revenue excludes from gross income the deductions I am referring to before arriving at the net taxable income. For purpose of simplicity of comparison, I have used the terms "net" and "similarly computed net."

poration before arriving at its taxable net income under the Federal tax on corporate income.

Consequently, if all of the similarly computed net income of a non-tax-exempt cooperative corporation is kept in the treasury and stock or other evidences of equity interest are issued to the owners representing its retained dollar value, a non-tax-exempt cooperative corporation would not have to pay a penny in Federal taxes. Under this condition it would appear that a non-tax-exempt cooperative corporation can be made as exempt from Federal taxes as a wholly tax-exempt cooperative corporation. They can plow back their entire earnings tax free into competitive capital.

Theoretically, therefore, it is perfectly possible for a non-tax-exempt cooperative to be as exempt from Federal taxes as a wholly tax-exempt cooperative. By declaring a part of its net income in cash patronage refunds and retaining the remainder in the business through issuing against such retained income stock or other evidences of equity interest, a non-tax-exempt cooperative can avoid the payment of even a single penny under the Federal tax on corporate income.

In practice, however, non-tax-exempt cooperatives do pay some taxes under the Federal tax on corporate income. But, the taxes they pay are never equal in amount to those paid by proprietary corporations. Indeed, they are generally only a fractional part of the Federal taxes paid by proprietary corporations.

In three cases only is the net income of a non-tax-exempt cooperative subject to the Federal tax on corporate income.

The first case is where the non-tax-exempt cooperative corporation pays a fixed rate of dividends on outstanding issues of common or preferred stock. Such payments are not deductible from the net income of a non-tax-exempt cooperative corporation in computing its taxable income under the Federal tax on corporate income.

For example, let us assume a hypothetical non-tax-exempt cooperative corporation having a net income of $1,000,000 and committed to annual fixed payments on its common and preferred stock of $100,000. In order to make this payment, it will have to reserve out of its total net income a sum which after application of the Federal tax on corporate income will yield $100,000.

If the Federal tax on corporate income is 38 percent, our hypothetical non-tax-exempt cooperative corporation will have to subject approximately $162,560 of its million dollar net income to Federal taxation. After paying a tax of 38 percent on this $162,560, it would have left $100,000 to pay the dividend commitments on its common and preferred stock.

The second situation where the net income of a non-tax-exempt cooperative corporation can be made subject to the Federal tax on corporate income is where such cooperative corporation sets up what is technically called an unallocated reserve. An allocated reserve is one against which there has been issued to the owners of the non-tax exempt cooperative stock or other evidences of equity interest equal in face value to the amount of the retained income. An unallocated reserve is one which represents the reinvestment of net income without the owners of a non-tax-exempt cooperative corporation receiving any paper evidences that their equity interest in the net worth of the cooperative has been increased by an amount equal to the reinvested net income.

Unallocated reserves, it should be pointed out, can be set up in a wholly tax exempt cooperative without such reserves being taxable under the Federal tax on corporate income. But since in a non-tax-exempt cooperative corporation such reserves are taxable, they are apparently infrequently used. Where used, the amount of the net income of the non-tax-exempt cooperative must be set aside which after payment of Federal taxes is equivalent to the amount of the unallocated reserve desired.

The third situation where the net income of a non-tax-exempt cooperative corporation can be subject to the Federal tax on corporate income is where such cooperative corporation derives income from nonmembers and fails to admit such nonmembers to full membership in the cooperative. This situation, however, is relatively unimportant since the cooperative corporation can generally use the income derived from business with nonmember customers to assign on its books a membership share (generally of very low value to each nonmember) and admit such new members to full rights in the cooperative, thereby avoiding the Federal taxation of this income.

As between the three situations where the net income of non-tax-exempt cooperative corporation is subject to the Federal tax on corporate income, the first is by far the most prevalent, i. e., application of the Federal tax on corporate income to the net income of non-tax-exempt cooperative corporations which must be paid out to meet fixed annual dividend commitments on their common or preferred stock.

During the course of our hearings on cooperatives, a thorough investigation of only one non-tax-exempt cooperative corporation was made. This was the Greenbelt Consumer Services, Incorporated, a non-tax-exempt urban consumer cooperative corporation.

From 1940 through 1946, this cooperative corporation had a total net income of $163,821. On this total net income, taxes levied under the Federal tax on corporate income amounted to $25,299. Had Greenbelt Consumer Services, Inc., however, been a proprietary corporation, it was estimated that it would have paid total taxes under the Federal tax on corporate income amounting to $85,447. Thus, this non-tax-exempt cooperative corporation paid only approximately 30 percent of the taxes it would have paid under the Federal tax on corporate income had it been a proprietary corporation.

The principal reason why it paid so much less in taxes under this Federal tax is that as a non-tax-exempt cooperative corporation, it was permitted to deduct from its total net income of $163,821, the sum of $88,689, representing deductions from net income for the payment of cash patronage refunds or for the reinvestment of net income against which stock or other evidence of equity interest had been issued. Thus, while a proprietary corporation would have been taxed on the full amount of a net income amounting to $163,821, Greenbelt Consumer Services, Inc., was taxed on only $75,132 of its total net income of $163,821. This $75,132 could not escape taxation because it was used to discharge after taxes the obligations of the cooperative corporation to make fixed annual interest payments on outstanding issues of common and preferred stock or represented taxed income derived from business with nonmembers where such nonmembers were not admitted to membership.

Thus, the differences between a wholly tax-exempt cooperative corporation and a non-tax-exempt cooperative corporation may range from no difference at all to the payment of some taxes under the Federal tax on corporate income. Consequently, a non-tax-exempt cooperative can escape 100 percent any payment of Federal taxes or it can pay only a part of the taxes it would pay on its net income were it a proprietary corporation.

Recent developments, however, indicate that even the principal situation whereby the small amount of the total net income of non-tax-exempt cooperative corporations is taxable under the Federal tax on corporate income is likely to be eliminated.

EXPERIMENT IN TAX AVOIDANCE

The Consumers Cooperative Association of Kansas City, Mo., one of the largest cooperative corporations in the United States, has recently embarked on a reorganization of its financial structure which, if successful, will make tax exempt that part of its net income which would be taxable under the Federal tax on corporate income, i. e., that part of its net income used to meet fixed annual dividend payments on outstanding preferred stock.

Up to a few months ago, Consumers Cooperative Corp. was a wholly tax-exempt cooperative. Its managers, apparently desiring to do more business with nonfarm members (urban consumers) announced that this cooperative corporation would give up its status as a wholly tax-exempt cooperative corporation and become a non-tax-exempt cooperative corporation. At the same time its management announced a program for having the holders of its outstanding preferred stock exchange their shares for "certificates of indebtedness."

These certificates of indebtedness have a definite maturity date and provide for a fixed annual interest rate. Spokesmen of the Consumer Cooperative Association have already said that through this financing plan, they expect to convert the corporation's outstanding preferred stock into securities having the nature of bonds so that all of the interest paid on them can be deducted as a cost of operation and be, therefore, exempt from Federal taxation.

If the Consumer Cooperative Association can do this, it will have established a method for making tax-exempt that part of the net income of non-tax-exempt cooperative corporations which is at present reached by the Federal tax on corporate income. Such a method, if established, is certain to be widely imitated with the result that non-tax-exempt cooperative corporations will be practically as fully tax-exempt as wholly tax-exempt cooperative corporations.

There is, however, a very important legal difference between the tax exemption enjoyed by a wholly tax-exempt cooperative corporation and a tax exemption enjoyed by a non-tax-exempt cooperative corporation. The tax exemption enjoyed by a wholly tax-exempt cooperative corporation is the result of congressional legislation. It is wholly statutory in its origin. Section 101 of the Federal Internal Revenue Code is the source of the legislative authority for the complete tax exemption enjoyed by tax-exempt cooperative corporations.

TREASURY RULINGS

The tax-exemption privileges of non-tax-exempt cooperative corporations, however, rest upon no statutory authority. Their source is Treasury rulings. These rulings, proponents of cooperatives have declared, are supported by decisions of our courts. Though the committee staff was not able to make an exhaustive inquiry to determine to what extent such Treasury rulings were supported by judicial decisions, it was informed from various reliable sources that this is not the case.

There appear to be, I am informed, several decisions of the tax courts which lend some color to the Treasury rulings which permit non-tax-exempt cooperatives to deduct patronage refunds paid in cash or net income reinvested before arriving at net income taxable under the Federal tax on corporate income. But the committee staff has been unable to find any decisions of our district courts, circuit courts, and particularly the Supreme Court of the United States, which, on their face, unequivocally sustain the Treasury rulings referred to above.

It is extremely important, however, to observe that if existing Treasury ruling relating to non-tax-exempt cooperative corporations continue any effort to put cooperative corporation business and prorietary corporation business on the same taxable basis will be frustrated under the existing system of Federal taxation of corporate income. Congress can repeal section 101 of the Federal

Internal Revenue Code, which will eliminate statutory tax exemption for cooperative corporations. But if administrative tax exemption, i. e., Treasury rulings, remain in force, cooperative corporations will continue to enjoy tax exemption to a very substantial degree—even to the same degree as under statutory tax exemption—though statutory tax exemption has ceased to exist.

AGENCY

Now, Mr. Chairman, if you will permit me, I would like to make a few comments on arguments that the committee has listened to during its hearings in cooperatives—arguments contending that cooperative corporations cannot be legally taxed even though Congress should repeal statutory tax exemption. These arguments are directed toward justifying the legal validity of present Treasury rulings which make it possible for non-tax-exempt cooperative corporations to enjoy practically all the benefits of complete tax exemption under statutory authority.

Now, Mr. Chairman, I am not a lawyer; I am only a businessman. But, as a businessman, my common sense has been forced to take issue with the arguments I have heard regarding the legal nontaxability of cooperative corporations.

We have been told that a cooperative corporation is merely the agent of its members. As an agent it cannot be taxed for having in its possession money belonging to its principal. Now, as a businessman, I have had some experience with agency. It seems to me that a basic characteristic of a genuine agency relationship is the unlimited liability of the principal for acts of the agent performed within the scope of his authority.

Suppose I hire Jones to be my agent, give him the power to borrow money on my behalf, which I instruct him to use in business ventures out of which I except to make a profit. Suppose Jones' use of the borrowed money results in its total loss. If that happens, it seems to me that, under true agency, the lenders could collect from me as principal.

Now a cooperative corporation has the power to borrow money. And if the analogy of agency is relied upon, it exercises that power on behalf of its principal and within the scope of the authority conferred upon it by the principal. Yet, if the money it borrows is totally lost and the assets of the cooperative corporation are insufficient to repay the borrowed money, the lender or lenders cannot have recourse against the principal of the cooperative corporation (patron owners of the corporation).

These members enjoy limited liability since they are liable only to the extent of the assets of their cooperative corporation. If they are really principals, they can't limit their liability for money borrowed by their agent (the cooperative corporation). And, if they have limited liability for such authorized activities of their agent, they can't be principals and therefore it appears to me that the agency theory seems to disintegrate.

This, of course, reveals the falaciousness of argument by the contenders that cooperative corporations and co-partnerships are comparable.

Furthermore, it seems to me that no true agent can receive money from a principal, make a profit on the use of that money in transactions authorized by the principal, and fail to return to the principal all of said profits minus legitimate expenses. Yet, in a cooperative corporation, some of its patron members may contribute money which is used to purchase—say a building or a plant. The plant or building may subsequently be sold at a handsome profit. But in the period between its acquisition and its sale, some of the patron members who put up the money for its purchase may have either died or given up their membership in the cooperative corporation. These patron members or their estates may in the case of some cooperative corporations be entitled to get back the capital they originally advanced. But the profit which ultimately accrues is held for the benefit of other patron members as principals. At this point, the basic principle that an agent must return all profit to his principal likewise disintegrates.

REFUNDS—REBATES

We have been told that patronage refunds are not federally taxable because they are in substance only rebates or trade discounts. This argument, too, has, it seems to me, bugs in it.

A rebate, from my business experience, is a fixed refund which is agreed upon by a business before such business realizes any net income. It is paid out automatically as business is transacted over the year and does not necessarily depend on the realization of any net income by the business. In the case of mutuals and reciprocals participating dividends are not firmly fixed.

Patronage refunds, on the contrary, are paid out only if a cooperative corporation has a net income. The size of the rebate is not fixed in advance and its size depends on the amount of the net income after it is realized. If there is no net income, there will be no patronage refunds. Logically, there is argument that refunds are only paid to members in a cooperative corporation.

ADDITIONS TO PRICE

We have been told that patronage refunds are not taxable because they are either additions to or subtractions from price. In the case of a marketing cooperative corporation, this theory holds that the initial payment, progress payments (where they exist), and the final payment are all additions to price and that, therefore, there is no profit or net income in the treasury of such cooperative corporation to distribute.

As I see it, there is in agricultural cooperative marketing corporations, under certain circumstances, a problem of where additions to price ends and profits begin. But that a cooperative corporation does earn net profits seems evident. The Treasury Department has referred to profits of cooperative corporations, the Supreme Court has referred to them as profits and reference to profits can be found even in the charters of cooperative corporations themselves.

In a proprietary marketing corporation net profits are established in the following way. From the gross income of such corporation, there is deducted payment for the product or products marketed, other costs of operation and deductible reserves permitted by the Bureau of Internal Revenue.

Where agricultural cooperative marketing corporations have competition, we have observed they tend to pay the same market price (represented by the initial payment) for their products as do their proprietary competitors. Where this condition exists, the determination of profits probably should involve exactly the same process of computation as is applied to a proprietary marketing corporation.

Where, however, marketing cooperative corporations enjoy a monopolistic position in the market, they are able to pay less than market price and a problem does emerge, complicated by progress payments, as to where additions to price leave off and profits begin. The division point is difficult to determine. One way this problem could be quickly settled might be found in the proposal that all such marketing cooperative corporations be taxed on the net income retained in their treasuries at the close of the fiscal year. If such a rule existed one may be sure that cooperative corporations would make every effort to pay out of their treasuries as much cash as possible for distribution before their final payment at the end of the fiscal year. This final payment would represent profits since the farmers probably could have been already paid the market price for their products.

FOR THE FARMER'S BENEFIT

It is important to emphasize that the farmers of this country who are members of cooperative marketing corporations would welcome some means which would encourage greater cash distribution so that they could get as much as possible as quickly as possible from their marketing cooperatives. This might be one case where corporate taxation would become a great benefit to the individual farmer.

SUBTRACTIONS FROM PRICE

In the case of agricultural purchasing cooperative corporations engaged in either the distribution of products, the manufacture of products, or the rendering of services, or urban consumer-cooperative corporations, engaged in only the distribution of products, cooperative theory contends that patronage refunds are in the nature of overcharges on price, i. e. subtractions from price and, therefore, are not taxable. This contention also seems to me to be open to criticism.

A proprietary corporation engaged in either the distribution or manufacture of products or the rendering of services sells its products or services to customers at market prices. From its gross-sales income it deducts all expenses and all allowable reserves. The remainder is net taxable gains or net taxable profits

Now a cooperative corporation engaged in either the distribution or manufacture of products or the rendering of services does exactly the same as a proprietary corporation. It, too, sells its products or services to customers and generally—it is claimed—at the same market prices charged by competing proprietary corporation. From its gross-sales income after deducting all expenses and allowable reserves it, too, has a remaining sum.

Because the cooperative way of doing business, this remaining sum, if paid out in cash patronage refunds, is paid to the customers of the cooperative corporation who bought its products or services.

Does this fact make the payment any less a distribution of net income or profits? The test of profits, it seems to me, is not to whom they are owed or how they are owed but how they were created. The fact that if money is distributed by a corporation the individual recipient of such money can look at his amount either as a refund on various prices he paid at various times in the past before the close of the fiscal year of the corporation or as a return on his pecuniary interest in the corporation seems to me to be immaterial from the standpoint of determining whether the money distributed is or is not profits.

Since cash patronage refunds in an agricultural purchasing cooperative corporation or an urban consumer cooperative corporation are paid out of a remainder fund, which is speculative, created by deducting all expenses and allowable reserves from total gross sales, this remainder fund appears to be profits to me.

We have been told—and this seems to be the most prevalent argument and the one most relied upon—that cooperative corporations are not taxable under the Federal tax on corporate income because such corporations have a previous contract in force with their customers which expressly stipulates that any money received by the corporation over and above expenses does not belong to the corporation but to the customers of the corporation. This theory holds that since the cooperative corporation cannot take title to what it has in its treasury over and above expenses the money does not belong to it and hence it cannot be taxed through the Federal tax on corporate income.

In my opinion, this argument needs thorough appraisal. Are one group of businessmen doing business one way to be allowed to make use of their private contractual power to prevent the Federal Government from taxing all business corporations on an equitable corporate income basis? If such contract is valid, then the patron owners of cooperative corporations possess the crushing power to compel proprietary corporations to convert themselves into cooperative corporations so that they may also enjoy tax exemption, or to fight an unfair battle against cooperative corporations armed with such tax exemption or to force the Government to abandon its tax on corporate income. Does such a contract amount to an abuse of private contractual power, since it is contrary to the public interest which should be to have the Government treat all corporations alike in taxing their corporate income?

But competent lawyers tell me that strictly from a legal point, this theory does not hold water. They say it is not to whom money is owed but who actually makes that money which determines tax liability, and that since the cooperative corporation makes the money that is ultimately distributed, it cannot avoid its Federal tax liability simply because it has a contract with its members to return such money to them.

ENGLISH AND CANADIAN PRECEDENTS

The common law of some countries abroad throws further doubt on the legal validity of the contentions the committee has listened to which attempt to justify administrative tax exemption as inherent in our common-law system. For instance, in England, which is the mother of our common-law system, the courts have already gone a long way in knocking out such contentions. They have held that a cooperative corporation does have net income, that it does make profits, and that those profits are taxable by the central government. English courts have already established that any net income of a cooperative corporation which is kept in the Treasury is taxable. Cash patronage refunds, however, are permitted to escape taxation by the central government though they are of course, picked up under the British individual income tax. And there is impressive investigational precedent for believing that eventually the courts may get around to taxing cash patronage refunds at the corporate level. In 1933 the Chancelor of the Exchequer's select committee investigating British cooperatives unanimously recommended that they be treated in all tax matters as ordinary corporations.

In Canada, which also derives its common law largely from England, the courts have held that cooperative corporations do have net income, do have net profits, and that such net profits are subject to a central tax by the central government. The central government's taxation of cooperative corporations in Canada goes a little further than it does in England. All of net income retained in the business is taxable just as it is in England but, whereas in England cooperatives can escape the central government's tax on cash patronage refunds, the Canadian courts limit the amount of such cash patronage refunds that can escape taxation by the central government.

Mr. Chairman, from what I have heard, our courts have not confirmed the fact that administrative tax exemption is inherent in our common law system. Therefore, should the Congress proceed to put cooperative corporations on the same Federal tax basis as proprietary corporations and ignore such Treasury rulings? If such a program is enacted into law, the Treasury Department will be compelled to discontinue its rulings permitting tax exemption. Cooperative corporations may then be expected to challenge such action of the Treasury Department in the courts. Within a reasonable time we can count upon a final decision from the Supreme Court of the United States. Should that decision declare the inability of the Federal Government through its tax on corporate income to put both cooperative corporations and proprietary corporations on the same tax basis, then the Congress will have to reconsider the whole matter.

SUMMARY COMMENT

This formal presentation which I have made is, as I stated in my introductory remarks, a result of information gained by a study being conducted by the House Small Business Committee dealing with the various competitive forces in our economy and their effect upon small business. And I repeat that it is not a committee report, that the committee cannot report intelligently until it has exhausted the subject. What I have said here today are observations which I have gained from our study as of this date.

The data used in our tables were supplied by competent accountants under the principal supervision of a certified public accountant during many weeks of work. It was a difficult task in that these accountants, after they had received helpful information from these various cooperative corporations, had to, in a measure, reconstruct the cooperative accounting results so as to make them comparable, as far as possible, to the standard practices generally understood in proprietary corporation accounting.

I have copies here of the individual comparisons made of the eight corporations which I have had lumped together in the tables used. I have not contained them in my formal statement because I did not choose to use my discretion as to the use of the names of these various cooperative corporations. I have no desire to embarrass anyone. My only hope is to get competent analyses and intelligent understanding of a difficult subject. There are three documents which I am presenting to the Ways and Means Committee for their executive consideration. The composite of these documents have been used in the tables, and I have used them in composite form so as to not reveal specific identity. I can think of no fairer approach to the public consideration of the problem.

I later requested our certified public accountant to make the same analyses, deleting from consideration actual cash refunds. It is true, however, that the percentage proportions of advantage as shown in the tables will not vary. I am placing before the committee for its executive consideration, a copy of the letter of enclosure from the accountant supervising the accounting phase of the study which comments briefly on the tax amount differentials which might be anticipated, but it also makes clear the fact that I could not have such data ready in time for the committee's consideration. I intend to have such data completed in the future study of the committee and when that is done, they will be made available to your committee. I submit, therefore, three documents, plus individual analysis sheets on some of these cooperative corporations, comment of the accountant and a copy of his special memorandum to the chairman of the Select Committee on Small Business. All of these for the executive consideration of your committee. The composite figures have already been presented publicly.

It has been argued by cooperative leadership, as I have tried to point out at various points in my testimony, that the cash refunds can in no sense be considered corporate money or a part of corporate profits. I repeat that it is most difficult to determine in the case of the marketing cooperative corporation where personal profit of the patron ends and corporate profit begins so far as the cash refunds are concerned, but my observation leads me to the belief that both elements exist. And, as I have already suggested, might be resolved to the benefit of the farmers by the application of corporate income taxes on the net income which is retained in the cooperative corporation.

In the marketing cooperative corporation, I can see a degree of merit in both arguments relative to personal or corporate profit. I have not gained any such impression in relation to purchasing or urban consumer cooperatives.

From our study this far, it is my firm belief that legal and honest enterprise of whatever pattern should be allowed to operate in a free competitive system. But all such enterprises should compete under the same ground rules where government seeks either to regulate, operate, or tax such enterprises. Our Committee on Small Business is not looking merely at what special privileges cooperatives may possess. Our cooperative investigation is only a small part of our general program to study the competitive forces in our economy as they effect small business.

I think it is important, however, to relate here and now that from the beginning of our cooperative investigation, the operators of farm cooperatives have impressed on me in private that they are not blood brothers of the urban consumer cooperatives—and curiously enough, the operators of urban consumer cooperatives have been claiming that they are identical twins with farm cooperatives. We are trying to learn by exhaustive study just where each fits into the pattern of our competitive economy. As of this date, it appears to me personally that there is room in our economy for all types of cooperatives which seek through fair competitive enterprise to improve the standard of living of their members.

But I must admit that in the course of our cooperative investigation, I have gotten the impression that farm cooperatives apparently stem from one ideology, while urban consumer cooperatives apparently stem from another.

I am convinced—and I am glad to say this publicly—that farm cooperatives where not monopolistic, seem to be a logical part of a competitive capitalistic profit system. But I have not been able to determine in my own mind as yet, in what kind of an economic system the urban consumers cooperative finds its natural and logical place. It is my determination, however, to learn through the further progress of our study on cooperatives.

During the course of these studies, I have had numerous opportunities to discuss these problems at great length with outstanding leaders of the farm cooperative movement in America. I am impressed with the sincerity of their claims. I have also been impressed with the sincere desire of some of them to find an equitable solution for the problem which is before your committee.

There is no reticence on their part to condemn diversionary arguments in behalf of the cooperatives. They show no disposition to approve or take advantage of the diversionary arguments in their behalf. They are practical businessmen and have impressed me as being men of outstanding ability and integrity. I have spent many hours in discussion with the small and independent businessmen in this country who are claiming and fighting these exemptions which they call tax discrimination as between themselves and cooperative corporations. I am impressed with their sincerity and integrity, and I deplore the attitude of those who seek to make a football out of this discussion.

The controversy does not shape up as farmer against businessman because we have such outstanding and recognized farm leaders as former Chairman FLANNAGAN of the House Agricultural Committee who has stated, "Believing as I do that farming is a business, honesty demands that I state in this connection, * * * if farmers get together and form a cooperative to further their business interest, the cooperative so formed should be taxed just like any other business enterprise is taxed. There is no

economic justification for any business enterprise, including cooperatives, that has to depend on tax exemption or tax evasion for its existence."

The recent resolution adopted by the Indiana State Grange on October 30, 1947, shows the reasonable recognition of the problem before you by the agricultural leaders of an outstanding agricultural State. Their resolution demonstrates a sincere desire to aid in its solution.

As a result of my many conferences with cooperative leaders, and taking into account what I have observed in the long study that I have now given the subject, certain points seem to naturally suggest themselves and they are these:

1. For tax purposes all deductible reserves in corporations shall be clearly defined and the definition be made applicable to all corporations alike with regard to the computation of their net taxable income under the Federal tax on corporate income.

2. For tax purposes all corporate income should be treated equitably at whatever rate is determined by the Congress for all alike and all corporations should be permitted to deduct from gross income dividends paid in cash on stock and all patronage refunds paid in cash as a result of contractual obligations, provided section 101-12 of the Internal Revenue Code is repealed.

3. All stock dividends and patronage refunds paid by evidence of ownership or debt but not in cash should be treated alike for the purposes of taxation. Only when a corporation gives a clear option to the beneficiary of such stock dividend or refund either to redeem within specified reasonable time for cash or to make a capital contribution to the corporation, shall such amounts as are thus contributed to the corporation be tax exempt at corporate level.

4. All of the above presupposes a continuation of the Federal tax on corporate income. (During the course of the committee's hearings, the suggestion was made by cooperative leaders, and even by the former chairman of the Small Business Committee, that the solution of the problem could be best accomplished if the Federal tax on corporate income was repealed. The very fact that this proposal was made indicates to my mind that such persons realize that there is inequity in the present application of the Federal tax on corporate income. Such a suggestion fails to take into consideration the present day enormous cost of government on the one hand, and on the other hand, the heavy concentration of corporate reserves. This would be a terrible injury to small business whether it be proprietary or cooperative.)

5. I definitely recommend to the committee that you consider in your tax revision an exemption on the first $25,000 earned net income for all corporations.

Such an exemption will, in my opinion, be a much needed incentive for the birth and growth not only of small propietary corporations, but small cooperative corporations as well.

Such a proposal is just because it gives equal competitive opportunity to probably 80 percent of all cooperatives and small property corporations. When you have accomplished this solution, you will eliminate most of the present day controversy.

This recommendation is directly in line with the expressed belief of most cooperative leaders that the elimination of double taxation would solve the problem. I am proposing to eliminate double taxation with respect to the first $25,000 of net earnings which will give life and opportunity to grow to 80 percent of all corporate enterprises whether proprietary or cooperative.

A Resolution of Inquiry Asking the Secretary of Commerce to Provide Congress With Full Information Concerning the Sale and Delivery of Heavy Equipment, Machine Tools, Freight Cars, Farm Equipment, and Other American Supplies to the Soviet Union

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. MUNDT. Mr. Speaker, I have today introduced in the House a resolution of inquiry the text of which will be found at the conclusion of these remarks. Its purpose is to provide Congress and the country with complete information concerning the shipments by American firms and individuals during 1947 of farm machinery, machine tools, freight cars, and heavy machinery to Soviet Russia.

Inasmuch as President Truman is reported as having said in his last press conference that Russia had purchased 216 freight cars from the United States between April and October of this year and that he saw no reason why shipments of this type and of such other equipment as machine tools, tractors, farm machinery, and similar supplies should not be sent to Soviet Russia, I felt it was only appropriate that we be given a full bill of particulars on these shipments. My resolution also calls for a report on the unfilled Soviet orders for this type of equipment now on file or being processed in the United States.

Mr. Speaker, it is sometimes very difficult for ordinary Americans like myself to keep up with the twisting and turning of our foreign policy. On November 17 in his special message to this extra session of Congress, President Truman said:

> Export controls should be continued and strengthened. Goods that we cannot wisely export must be kept here, and the shipments we make must go where they are needed most.

Mr. Speaker, that Presidential paragraph seems to make sense. But it is extremely difficult to reconcile that statement with President Truman's alleged statements in his press conference of last week indicating that he believed that it was highly appropriate to send to Soviet Russia such items as freight cars which are in desperately short supply in the United States. Certainly, if Russia is the place where freight cars or farm machinery or machine tools are needed most then we have been called back into extra session by mistake and the Marshall plan becomes a hideous travesty.

Mr. Speaker, Russia is the fountainhead of communism and communism is the pagan philosophy which today threatens world peace and seeks to enslave Europe. In my opinion, we have been rightfully told that American food can help win the peace and defeat communism abroad since chaos is the mother of communism, and misery, hunger, and want are the forerunners of chaos. Our American farmers have responded with typical patriotic energy and success to the call to raise more food. However, last year and this, much of this food has deteriorated in value or failed to reach the central markets promptly through a shortage of boxcars in the farming areas. Farmers were told that boxcars were being built as rapidly as possible but that limitations of shop facilities, material, and labor were making their completion much slower than desired. Farmers were not told until last week, however, that many of the freight cars they needed so badly were being manufactured for and being sent to Soviet Russia. The country is entitled to all of the facts in this connection. My resolution proposes to smoke out those facts for better or for worse.

Great as is the productive capacity of the United States, Mr. Speaker, we cannot at the same time supply our own needs and take care of both the Communist and the anti-Communist countries of the world. I do not favor setting up economic sanctions against Russia at this time but certainly until the United States and the countries willing to work with us to preserve the peace have had their needs supplied we should not be shipping to Russia the very equipment of which we are already critically short. Let us sell Russia radios if she will buy them; sell Russia, if we must, hand tools, hammers, saws, and material for constructive purposes; sell her magazines and books and consumers' goods where we have them in abundance. Let us not, however, deprive our farmers of the equipment they need with which to raise and handle the food required in this fight to win the peace through making it available to the very country whose aggressive program is compelling us to meet in extra session for the purpose of finding means, if we can, to protect the free countries of Europe against the Communist domination which it threatens.

There follows the text of my resolution:

> Resolution requesting the Secretary of Commerce to furnish information to the House of Representatives disclosing the shipments of supplies to the Soviet Union by firms or individuals within the United States
>
> *Resolved*, That the Secretary of Commerce of the United States be requested, if not incompatible with the public interest, to furnish the House of Representatives with complete information concerning the shipments of heavy machinery, farm equipment, and freight cars which have been made to the Soviet Union between the dates of January 1, 1947, and the most recent date for which figures are obtainable.
>
> The Secretary of Commerce of the United States is requested to supply the foregoing information in complete detail including the names of the American firms or individuals making these sales, the dates on which the orders were received and the supplies delivered, and the nature of the payments made in return for these supplies; in addition, the Secretary of Commerce is also requested to furnish the House of Representatives with all

information available to him revealing the extent of unfilled orders for heavy machinery, farm equipment, machine tools, or railroad equipment which the Soviet Union as of today has on record with firms or individuals in the United States.

Americanism, Communism, and Fascism—A Comparison

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, November 24, 1947

Mr. PATMAN. Mr. Speaker, permission having been granted for that purpose, I am inserting herewith a statement prepared by Mr. J. Frederick Richardson, Coordinator of Information for the United States House of Representatives.

House Resolution 183 was adopted by the House of Representatives May 2, 1947, creating the Office of Coordination of Information of the House, and gave the power of selection to the Speaker of the House, the Honorable JOSEPH MARTIN. Speaker MARTIN made an excellent appointment in the selection of Mr. Richardson as Coordinator, who has furnished the Members with much valuable information and has been helpful in many ways. This statement by Mr. Richardson, which is to be inserted in parallel columns, is especially timely now and it gives information that is very interesting and informative. It is as follows:

AMERICANISM, COMMUNISM, AND FASCISM

(A comparison compiled by the Coordinator of Information for the U. S. House of Representatives)

The national conscience, under free government of laws, is the composite conscience of all its individual citizens. It operates through the process of proposal, disagreement, discussion, and compromise.

Under a centralized government by men there is no national conscience—only the will of those in control of the state.

The true test and value of all government is its effect upon the individual citizens; upon individual spiritual, cultural, and material progress.

A philosopher of the seventeenth century defined the function of government perfectly when he wrote:

"The last end of the state is not to dominate men, nor to restrain them by fear; rather it is so to free each man from fear that he may live and act with full security and without injury to himself or his neighbor. The end of the state, I repeat, is not to make rational beings into brute beasts and machines. It is to enable their bodies and their minds to function safely. It is to lead men to live by, and to exercise a free reason that they may not waste their strength in hatred, anger, and guile, nor act unfairly toward one another. Thus the end of the state is really liberty." [1]

(NOTE.—Prewar Italy, Germany, Japan, and Franco Spain are taken as types of fascistic governments. Russia is taken as the type of government called communistic.)

AMERICANISM	COMMUNISM	FASCISM
Founded upon—	*Founded upon—*	*Founded upon—*
Faith of the people in and devotion to God.	The people's fear of and submission to the state.	The people's fear of and submission to the state.
Right as might.	Might as right.	Might as right.
Dignity and value of the individual, and importance of his spiritual, cultural, and material progress.	Unimportance of the individual and his progress, except as an instrument of the state.	Unimportance of the individual and his progress, except as an instrument of the state.
Freedoms	*Freedoms*	*Freedoms*
Of religion.	State limited toleration of religious teachings.	State limited toleration of religious teachings.
Of political expression.	Ruthless suppression of political expression.	Ruthless suppression of political expression.
Of speech (radio).	Ruthless suppression of free speech and use of radio.	Ruthless suppression of free speech and use of radio.
Of press.	Press strictly controlled by the state.	Press strictly controlled by the state.
Of education; youth may choose course of education desired.	All teachings strictly controlled by state. Government drafts annually from 800,000 to 1,000,000 boys between 14 and 17 years for industrial training, after which they work for state 4 years.[2]	All teaching strictly controlled by state.
From unreasonable search and seizure.	No protection against search and seizure, no matter how unreasonable, by petty bureaucrats.	No protection against search and seizure, no matter how unreasonable, by petty bureaucrats.
From excessive fines, or cruel and unreasonable punishment.	Excessive fines, and cruel and unreasonable punishment the rule.	Excessive fines, and cruel and unreasonable punishment the rule.
Of individual to choose his own means of livelihood within the law.	Individual must work as, and where, ordered by state. Petty administrators issue such decrees.	Individual must work as, and where, ordered by state. Petty administrators issue such decrees.
Of consumers to choose goods and services they desire.	Consumers must take such goods and services, and at such prices, as decreed by the state rulers.	Consumers had to take such goods and services, and at such prices, as decreed by the state rulers.
Rights	*Rights*	*Rights*
Security of the home.	No security of the home. Secret police invade the home when they please, with or without pretext.	No security of the home. Secret police invaded the home when they pleased, with or without pretext.
Of peaceable assembly.	No assemblies permitted except those conforming to official dictates.	No assemblies permitted except those conforming to official dictates.

Of habeas corpus.	Secret police are subject to no rules, and no limits except those of their superiors in making arrests and meting out punishment.	Secret police were subject to no rules, and no limits except those of their superiors in making arrests and meting out punishment.
Of speedy trial by jury.	Citizens can be arrested, held incommunicado, committed to long terms of imprisonment, or even executed without trial, and on confessions extorted by torture of prisoners and/or their loved ones.	Citizens could be arrested, held incommunicado, committed to long terms of imprisonment, or even executed without trial, and on confessions extorted by torture of prisoners and/or their loved ones.
Of confronting accusers.	No such right. Police are supreme in their charges. No real right of defense exists.	No such right. Police were supreme in their charges. No real right of defense existed.
Of private property under due process of law.	No right of private property exists. Rulers of State take whatever they want. If possessor objects he may be liquidated by terror police.	Dictators "owned the owners." Right of private property existed as an implement of the State.
Rights of minorities to be inviolate.	Minorities have no rights. Are cruelly and ruthlessly suppressed or exploited at whims of administrators, big or little.	Minorities had no rights. Were cruelly and ruthlessly suppressed or exploited at whims of administrators, big or little.

Footnotes at end of statement.

AMERICANISM *Fruitage*	COMMUNISM *Fruitage*	FASCISM *Fruitage*
Highest living levels on earth.	Very low living levels.	Very low living levels.
Highest wages on earth.[3] Average wage 63.9 cents per hour; $5.912 per day. Dollar equals 100 cents.	Low wages as decreed by the state. Wage statistics not available.[4]	Low wages as decreed by the state.[3] Italy: 2.26 lira per hour: equaled 5.26 cents; equaled 95 cents per day.[3]
Food for 1 day for family of 5 costs American wage earner 1½ hours' labor.[10]	Same amount of food costs Russian worker over seven times as much, or more than 10 hours labor.[10]	Japan: 206 sen per day (9½ hours); equaled 49½ cents.[3] Germany: 73.2 reichspfennigs: equaled $2.51 per day.[3] Spain: No statistics are available.
Suit of clothes costs average American worker 1 week of work.[11]	Suit of clothes costs average Russian worker 7 weeks' work.	
Radio costs average American worker 1 week of work.[11]	Radio costs average Russian worker 15 weeks of work.[11]	
American living standards for average worker 10 times higher than in Russia.[11]	Russian living standards for average worker only one-tenth as high as American level.[11]	
Wages in America, estimated straight hourly wage basis, industries only, have risen 78.3 as against a cost-of-living rise, over all, of 57.8, since 1941. Different ways of figuring living costs and wage rates may bring varying results, but it is safe to say wage increases since 1941 have more than kept pace with increases in living costs.[12]	Wages in Russia have risen less than half as much as prices of rationed goods since 1941[11] Prices of unrationed goods are four times as high as prices of rationed goods.[11]	
Best working conditions on earth.	Long hours. Poor plants. The women and children do heavy labor. Unsanitary conditions in many plants. Dangerous conditions in many fields.	Long hours. Poor plants. Unsanitary conditions. Dangerous conditions in many lines. Germany and Japan had good plants in some lines. Better conditions than Italy, Spain, or Russia.
Best free educational system on earth.[5] Ratio of teachers to population: 1 teacher to each 119 population (1940).	No statistics available.	Italy: One teacher to each 226 of population (1937). Japan: One teacher to each 211 population (1937). Germany: One teacher to each 258 population (1938). Spain: No statistics are available.
Best independent labor, agricultural and business organizations on earth.	No such independent organizations permitted. Wage earners and farmers obey orders of petty administrators. Are bedeviled by hordes of spies and inspectors.	No such independent organizations permitted. Wage earners and farmers obeyed orders of petty administrators. Were bedeviled by hordes of spies and inspectors.
Best transportation and highway system on earth.[6] United States passenger miles, 1938: (a) Highways, including buses: 239,808,000,000. (b) Railroads, steam and electric: 22,456,000,000.	Poor transportation and highway systems. Russian passenger kilometers, 1938, 95,900,000,000. (Kilometer equals 3,280.8 feet, nearly five eighths of a mile.) No highway statistics available.	Poor transportation and highway systems. Germany partial exception. Japan, passenger miles, 1937: (a) Highways, including buses: 1,651,761,000. (b) Railroads, steam and electric, 1937: 19,379,000,000. Italy: (a) No statistics available. (b) State railways, kilometers, 1939: 11,773,000,000. Germany and Sudetenland, 1938: (a) Reichbahn only; passenger kilometers 58,977,700,000 (Austria included). (b) No statistics available. Spain: No statistics available.
More luxuries and comforts for the people.	No luxuries or comforts for the common people. Only for the bureaucrats.	No luxuries or comforts for the common people. Only for the bureaucrats and the rich.
More automobiles.[7] Per capita distribution of motor vehicles, January 1, 1939: One automobile per 4.3 persons.	Russia: One automobile per 253 persons.	Japan: One automobile per 388 persons. Italy: one automobile per 93 persons. Germany: One automobile per 42 persons. Spain: One automobile per 197 persons.
More radios.[8] United States: Sets per 1,000 population (1946), 425.	Possession of radio by private citizen without permit of some petty bureaucrat means arrest and punishment. Russia: Sets per 1,000 population: 8.1 (1946).[8]	Possession of radio by private citizen without permit of some petty bureaucrat meant arrest and punishment. Germany: Sets per 1,000 population (1944) 167.7. Japan: Sets per 1,000 population (1943) 93.3. Italy: Sets per 1,000 population (1946) 32.7. Spain: Sets per 1,000 population, 14.[8]
More refrigerators, electric and gas kitchens.[9] (a) Number refrigerators: 16,200,000. (b) Percentage of world total: 90.2.	Only officials permitted to have these luxuries. No record, according to Department of Commerce, of any refrigerators having been imported or used. Ice from natural sources may to some degree be conserved and used.	Germany: 200,000; percentage of world total, 1.32. Japan: (est.), 6,000; percentage of world total, 0.04. Italy: 20,000; percentage of world total, 0.15. Spain: 10,000; percentage of world total, 0.06.
More telephones. United States has 15.37 telephones per 100 population.[13]	Only officials have telephones. Ordinary citizen could not have one. Russia had 0.75 telephones per 100 population.[13]	Only officials and business houses had telephones. Ordinary citizen could not have one. Germany: Had 5.20 telephones per 100 population. Japan: Had 1.89 telephones per 100 population. Italy: Had 1.41 telephones per 100 population. Spain: Had 1.19 telephones per 100 population.[13]
More theaters. As of 1940, United States had 17,003.[14]	Few theaters. All plays or pictures strictly censored by bureaucrats. Russia had 3,000.[14]	Few theaters. All plays or pictures strictly censored by bureaucrats. Germany: Had 5,506. Italy: Had 4,013. Spain: (est.) Had 2,852. Japan: Had 1,875.[14]
Better and more extensive health facilities. Number hospital beds in use (1939), 1,195,206.[15] Number of physicians (1946), 180,000.[15] Number of dentists (1947), 82,000.[15]	Hospital beds: No accurate information available. Physicians: Estimated prewar number, 130,000. Dentists: No accurate figures available.	Germany: Hospital beds (1939), 42,996. Physicians: (1939), 49,907. Dentists: (1938), 14,833.[15] Japan: Hospital beds (1938), 246,138. Physicians: (1938), 62,933. Dentists: (1938), 22,735.[15] Italy: Hospital beds (1939), (est.) 59,000. Physicians: (1940), 38,983. Dentists: (1943), 3,048.[15] Spain: Hospital beds: No accurate statistics available. Physicians: (1938), 22,582. Dentists: No accurate statistics available.[15]

Footnotes at end of statement.

AMERICANISM
Fruitage

More toys, books, and joys for children. More sports and amusements.

Individual may safely obey his conscience under government of laws.

For proof, see life in America around you; the daily and periodical press, and history.

COMMUNISM
Fruitage

Children are put to hard work at early age. Their lot is hard and cruel.

Citizen must obey orders of bureaucrats regardless of his conscience, or suffer punishment.

See Communism in Action, by Legislative Reference Service. See daily and periodical press, prewar and now.

FASCISM
Fruitage

Children were put to hard work at early age. Their lot was hard and cruel.

Citizen had to obey orders of bureaucrats regardless of his conscience, or suffered punishment.

See Fascism in Action, by Legislative Reference Service. See prewar daily and periodical press, and history.

DUTIES OF COORDINATOR

House Resolution 183 creating the office of Coordinator provided:

The Coordinator, under the direction of the Speaker, and utilizing the results of work already done by public or private agencies or organizations, shall assemble, analyze, coordinate, and make available in digests, compilations, and otherwise, data with respect to legislation, for the use of the committees and Members of the House, without partisan bias in selection or presentation.

The Coordinator, with the approval of the Speaker, shall employ and fix the compensation of such assistants, and make such expenditures, as may be necessary in the performance of his duties.

Wanted—More Bosses

EXTENSION OF REMARKS
OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herein a short statement issued by the Small Business Economic Foundation under the title "Wanted—More Bosses."

I commend the reading of this statement to every Member. It contains the essence of American progress, production, and private ownership. It typifies the will to do, the initiative to succeed. Such is America.

There are about three and one-half million "firms" or private enterprises in this country. About 7 out of every 100 of these have 100 or more employees.

The astonishing fact is that in America, land of the most fabulous "mass-production" economy in the world, 93 percent of the firms are small businesses.

To be exact, there are only 2 firms out of 10 that have even as many as 5 employees, and in over a million, or nearly a fourth of all our "enterprises" the boss himself is the whole works. Of course there is frequently some bossing and assistance from the wives of these small businessmen who have struck out for themselves; and full credit is due these wives, not only for what they do but for what they do without, to help make a "go" of thousands of struggling small businesses.

But these facts about all the "little people" in our land of industrial giants are far more important than their mere interest as believe-it-or-not statistics. Because one of the things most needed to keep our kind of economy going and growing is a steady stream of more and more men and women who have the ability and the will to be their own boss. They are the seedbed of free enterprise. Not only do big businesses grow from small roots, but even after they are grown, most big businesses could not exist without the many small suppliers and small retail enterprisers who help sell and service their products.

A CHALLENGE FOR HIGH STAKES

We speak of the United States as a "strong nation." Yet its strength is only the sum total of the materials and facilities, the productivity and skills of its own people and of the enterprises which they own and operate. The United States is strong because her people are free and her enterprises likewise are free and growing.

Yet it seems difficult for many people in the world to realize why this country, a mere youngster among the nations, is so productively strong that it is now carrying the lion's share of the economic and financial burdens of the entire world. They see this as a fact, yet the startling truth remains that instead of striving to copy our way of life every other nation in the world is moving away from it toward totalitarianism. We live in the sole remaining nation on earth with a free democratic society based on an economy of private enterprise. It is a tremendous challenge.

But the challenge is not so much to our relatively few industrial giants. They are already big and strong. It is rather to our millions of small businesses to grow stronger and bigger. And most of all, it is a challenge to us as individuals to keep the seedbed of brand new enterprises well tended and growing. It is a challenge to the men and women who believe in free enterprise, and who have the initiative and leadership, to try it for themselves—to be their own boss, to add to rather than take from the supply of jobs and productive output of our system.

A PRODUCT OF ENVIRONMENT

This system of living and working together which we call the American way of life is a logical product of its environment. Nature provided ample room and lavish raw materials; and our constitutional rules of the game were expressly drawn to make it possible for enterprising individuals to translate them into productive usefulness. It is really no surprise that in such an environment we should have many small enterprises.

AFTER-DINNER ORATORY

The real surprise is in our changing attitude toward our economic environment. It is still much the same and opportunity still patiently knocks on the doors of those who will listen. Yet, whenever this subject of being your own boss comes up, there is always lots of loose talk to be heard about the "good old days," "pioneer spirit," and the like. During the depression it became the gloomy fashion to declare that we had lost all of our pioneer spirit so we might as well resign ourselves to living in a mature economy. More people seemed to be interested in security rather than in the doubtful risk of being enterprisers. Graduating classes heard a lot about how to get a job but not much about how to be their own bosses.

Fortunately, the events of World War II put an end to much of this nonsense by confronting us—as well as our enemies—with some spectacular proof; first, that our free-enterprise system wasn't dying of maturity; and secondly, that there was plenty of pioneer spirit left in the American people.

Moreover, when the armed forces began to demobilize it was discovered that high on the list of peacetime objectives of almost half the fighting men was the desire to go into business for themselves—to be their own boss. Recent opinion polls show that in spite of the confusion of reconversion adjustments and labor-management strife (or maybe because of it) the overwhelming majority of workers would still like to be small independent enterprisers on their own hook.

IF WISHES WERE HORSES WE'D ALL TAKE A RIDE

The big trouble is that too many people's desire to be their own boss stops right there.

Like any other undertaking, wanting to be your own boss is something which takes more perspiration of continued effort than inspiration of just wishful dreaming.

One of the biggest stumbling blocks is that the potential small enterpriser doesn't know where to start. This is doubly unfortunate in view of the fact that the answers to almost any question that a small businessman might have can be had for the asking if he knows where to ask. With a little legwork and a few 3-cent stamps almost anyone anywhere can accumulate a surprising amount of free information about any kind of business.

TAKE YOURSELF FOR INSTANCE

Since the chances are better than 10 to 1 that you have at some time played with the idea of being your own boss; let's suppose that you are our hopeful small enterpriser. Let's assume that you are a worker, that you live in Anytown, United States of America, and that you'd like to start some kind of a little store or a service business. If you ultimately succeed it will influence your whole life, so it's worth going about carefully—one step at a time.

First. You can take the first step by "defuzing" your own thinking. Talk your ideas over with your wife and with others whose opinions you respect; examine the general business possibilities in your town; and go over your own list of abilities and interests. The more you can narrow down your field the most specific and better questions you can ask. Vague questions get vague answers.

Second. Once you've boiled down your interest to one or maybe two types of business, or ideas for an enterprise, don't overlook all of the sources of fact and advice right in your own bailiwick. Practically every American town is blessed with a library, and most librarians will welcome endless questions from anyone with a genuine interest in a specific subject. In addition to actual books, most libraries subscribe to many business periodicals and information digests. Also, the librarian can give you leads on a great many other sources like trade associations, government offices, and publications which have free information available in the field of your interest.

Third. Besides libraries, most communities have chambers of commerce, service clubs, and the like which, in addition to being sources of local facts, can also provide you with other leads. Often overlooked are the teachers of business subjects, science courses, government, civics, etc. in the high school. They would welcome a change from answering the general questions of kids to helping solve some real problems facing a potential business man. (They'd probably like to be their own boss, too.)

Fourth. Once you have a line on possible outside sources, sit down and write them letters; but don't just say "please send me 'some information' on how to run a grocery store" or what not. Tell them as definitely as you can what you want to do, then you can ask them numerous specific questions rather than a few general ones. And once you have prepared your basic letter you can send it in a modified form to a great variety of sources, including: State and Federal departments of commerce; State universities, planning boards, development commissions, etc.; business and trade associations; trade magazines, business publications; big companies which manufacture products or supply goods related to the field of your interest.

Your local research will have provided you with a much more specific list. And have your letters of inquiry typed if possible.

Fifth. Once you have gone this far, it won't be long before your ideas and plans will begin to jell. You may end up far afield from your original idea, but if there is a really practical business in the cards for you it will eventually get to the point where some real yes or no decisions can be made. Then, and probably not before, you are ready to sit down and talk turkey with bankers, real estate men, builders, suppliers and all the others who will have to provide you with more than just free information to get your enterprise going. Many a good business idea has gone sour because the hopeful enterpriser tried to get action at 6 percent before he had used up the advice available for free.

WHAT ARE THE CHANCES?

The best planning job in the world won't guarantee the success of a small business, but it cuts down the risk. And taking risks, incidentally, always goes with being your own boss. That's part of the game of free enterprise.

But there is this about it, somebody else doesn't have to lose in order for you to win. Free enterprise is a rare game in which everybody can win (except the right and left-wing kibitzers who want to rig the game so they always win at somebody else's expense).

For example: Suppose you, as a worker, quit and start your own business. Your old job goes to another worker and you have created a new one for yourself. That's two wins to start with. In time your business may grow to provide many more new jobs. But even if it remains small, the business you do carries a share of all the jobs back along the line which helps to create the merchandise you handle. And the money you take in and pay out adds to the job-producing kitty in your town. Even your little company's bank account gets added to the capital available to help start still other new enterprises in your town.

Small wonder that we send good luck horseshoes to a fellow when he takes a fling at being his own boss. When he wins, we all win.

Basic Economic Problems of the United States

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Hon. JESSE P. WOLCOTT before the Economic Club of New York on November 20, 1947:

The subject of tonight's discussion is timely and exceedingly important. The prosperity, perhaps the safety, of America, the reconstruction of the devastated countries, the stabilization of world currencies and world economies, are largely, if not wholly, dependent upon the early and permanent solution of the basic economic problems of the United States. The peace of the world depends upon a sound, strong America.

Conflicting influences are at work in the world today, as they have been for centuries past. The basic difference in political ideologies springs from the writings of Adam Smith and Karl Marx. The American way of life is predicated upon Adam Smith's idea that every man, so long as he does not violate the laws of justice, should be left perfectly free to pursue his own interest in his own way, and to bring both his industry and capital into competition with those of any other man, or order of men.

Marx turned to revolutionary ends the proposition that the value of a commodity, or the quantity of any other commodity for which it will exchange, depends upon the relative quantity of labor which is necessary for its production.

Leonard Dalton Abbott, in his Master Works of Economics, points out the differences between the two systems, somewhat as follows: Marx applied his construction to the class struggle of capitalists and wage workers. He believed that the capitalistic system is based upon exploitation and that its irreconcilable conflicts would lead to its dissolution. Just as slavery passed into serfdom, and as feudalism passed into capitalism, so, according to Marx, capitalism in its turn will pass into socialism.

The struggle between these two forces has been going on for more than three centuries. Incident to these political struggles there have been coincidental but likewise very important economic struggles.

Abbott further says: "The economic pendulum has been swinging between liberty and legislation, between competition and cooperation, between capitalism and some form of collectivism. The debate is still going on. While neither side in innumerable disputes can be said to have won complete victories, we are bound to recognize that society in America, as well as in most of the European countries, has been moved toward economic democracy and extension of government functions."

Many of us contend that it is the province of government to find the golden mean between these two extremes. In present-day America our economic problems can be solved only when and if we have established the extent, if any, to which our Government should try to manage our economy.

As late as last Monday, this centuries-old issue was laid squarely before the American people. The battle between the ideological forces of socialism and the American way of life, based upon our constitution, rages on. Socialism versus democracy, capitalism versus managed economy, regimentation versus free enterprise. These are the issues which must be met squarely; these problems must be solved by the American people before we can ever hope for economic and social stability in America and peace throughout the world.

There should be no question in our minds which political course we should take. Autocracy, socialism, communism—collectivism in any form, is as undesirable and as ineffective an instrumentality for governing any people as is a pure democracy. There is little or no difference between absolute monarchies and the different governmental forms of collectivism. Both, in the last analysis, are despotisms. Each of them is unworkable unless sovereignty is vested, paradoxical as it might seem, in an individual with unlimited political power.

Pure democracy has been characterized as mobocracy. No true democracy has ever successfully functioned as the governing instrumentality of any large number of people. Our forefathers effectively found the political golden mean between these two extremes. Consequently, we have under the American Constitution, this very novel American form of government. It should be our objective to likewise find the golden mean between the extremes of economic philosophies. When we shall have done so the progress of the United States should continue to be as constant as it has been during the first 160 years of our existence as a Nation.

The United States is the greatest Nation on earth. We don't have to argue it. It is self-evident. With a population of less than 7 percent of the population of the world, we normally produce and consume in the aggregate, more than 50 percent of the world's goods. Here in America 7 percent of the world's population normally produces more than 50 percent of the goods produced in the world. Here in America less than 7 percent of the world's population normally consumes in the aggregate, more than 50 per-

cent of the goods consumed in the world. That is a record which is accepted without challenge. It is a record made possible because of and not in spite of the American form of government. It is a record which we can maintain only so long as we adhere to our American principles and our American system of free constitutional government, free economy, and free society; only so long as we continue to protect the right of every individual—so long as he does not violate the laws of justice—to be "left perfectly free to pursue his own interests in his own way, and to bring both his industry and capital into competition with those of any other man, or order of men."

With these thoughts in mind, let us take a look at some of the basic economic problems which confront the United States, and let us also have in mind how necessary it is that our problems be settled early and effectively if we are to have world economic, political and social stability and lasting world peace.

I think we could well consider inflation as the economic problem of primary importance. All of our other economic problems are incidental to it. They can all be solved together.

The causes of high prices in the United States are pretty well known.

First. Production for war purposes left us with a tremendous shortage of all consumer goods. At the same time this production had created more per capita purchasing power than we had ever previously enjoyed. Before enough consumer goods could be produced, the demand resulting from high purchasing power had started the upward rise of prices.

Second. Deficit financing, due to war, had created a national debt of about $278,000,000,000, most of which under our system of monetizing debt, is a decided influence on the value of the American dollar. Under the American quantitative theory of debt monetization, the higher the debt the cheaper the dollar; the cheaper the dollar the higher the prices.

Third. An archaic tax system has been an influence against any broadening of the production base, so that we find it impossible to produce to capacity to meet the demand.

Fourth. Almost 90 percent of production costs are represented by wages, most of which have remained high enough so that the demand for goods in short supply has come from current earnings. Some but not all corporate earnings likewise have been very high. All of this has resulted in the continuance of large amounts of static savings and idle capital. Add to this the demand for goods incident to the creation of large foreign credits.

According to the October report of the council of economic advisers to the President which dealt with the impact of foreign aid upon the domestic economy, we are raising in the United States through government, semigovernment, and private financing sources, at the rate of $11,000,000,000 a year to finance an export surplus.

In the first three quarters of 1947, the dollar value of exports was running at the average rate of about nineteen billion a year. The dollar value of imports of goods and services for the same period was running at the average rate of eight billion a year. The export surplus is about eleven billion.

Fifth. The availability of increasingly large volumes of easy money credits.

Now that the causes of the inflationary plague are fairly well known, every effort should be made to find the cure.

The causes of high prices may be summed up as follows:

First. The shortage of goods against high purchasing power.

Second. Excessively large amounts of Government spending.

Third. A tax structure which discourages maximum production.

Fourth. Idle capital and savings.

Fifth. Large volumes of easy money credits.

The big problem is what can be done about it? The President in his message last Monday made certain general recommendations as possible panaceas for our economic ills. Many of his proposals are as opposite to the American system as socialism is the opposite of democracy. The American people have always come up with a solution of their problems if they had an understanding of them. All our problems—economic, political, and social—have been solved within the framework of the American Constitution. We can continue to solve our problems best if we adhere to the fundamental principles of the American way of life. To borrow from the works of Marx in any respect is to court financial and economic disaster, at a time when the perpetuation of the American way of life is more essential than anything else which can be imagined.

We can remove further threats to a depreciated currency by balancing the Federal budget and retiring as much of the debt as possible.

We can adjust our tax structure in such a manner as to encourage maximum production. This can be brought about through adjustments in the tax base which will encourage expansion of plants and give assurance to producers, agricultural as well as industrial, that they are not going to be penalized by expanding their production. When we have made the necessary adjustments in the tax base to encourage production, much of the idle capital and savings will be put to use in the production of capital goods, in the expansion of capital structures, and can result in many instances in doubling production capacity and effort of our farms and factories.

The impact on prices incident to domestic buying for foreign account can be largely offset by a curtailment in government expenses. If there is sufficient cooperation between the President and the Congress, the costs of government can be reduced amply to take care of all foreign aid requirements, both for interim aid and for long-range programs of reconstruction and rehabilitation. But, in order to lessen the impact of foreign aid on domestic prices, the moneys raised for these purposes must be carefully and judiciously expended. The Congress will not advance to the State Department large sums for either interim or long-term aid without requiring the money to be spent and invested in accordance with certain sound standards. Foreign aid can be most effectively administered by the creation of an independent agency of the Government. A corporation, we will say, with a relatively small capital, with authority to expand this capital a given number of times by the issuance of the agencies' notes, bonds, and debentures. The money can and should be spent under well-defined standards, to give the maximum amount of aid with the least amount of dollar diplomacy. There is no reason why foreign countries should not pay for a large part of the aid given in the currency of the recipient country. A pool of foreign currencies would thus be created, from which loans might be made for productive enterprise in the country receiving the aid, or in other countries whose currency might be converted into that of the recipient country. The expenses in the recipient country of the United States for diplomatic, consular, military, and other purposes, could be paid from this pool, thus removing the necessity for equivalent large amounts of American dollars being exported to pay our current expenses in those countries.

If our foreign-aid program is successful over a course of years, the economy and currencies of the recipient countries will be stabilized. This would activate the International Monetary Fund in such a manner that the currency of the recipient country can eventually be converted into dollars. In that way the United States taxpayers could be assured that a large amount of their investments for foreign aid will eventually be repaid either in dollars or goods.

If the interim plan is successful, we will recreate the ability of the people receiving the aid to work. We will help them get the strong bodies by which they may work and thus create the capacity to work and produce for themselves. If the interim aid is wisely administered and results in the attainment of this basic objective, then these countries may become good risks; there will be reason to presume that loans to them can be repaid, thereby opening up a new reservoir of credits, Export-Import Bank credits. I am fairly certain the Congress of the United States, if the interim program is successful, will not hesitate to increase the capital of the Export-Import Bank by reasonably large amounts to make available all necessary funds for the production of producer and heavy consumer goods. Thus we enter the second stage of our program of foreign relief and rehabilitation.

It is only a step into the third stage in which the foreign country may by proper application of its resources put itself in a position where it can qualify for the use of other and larger reservoirs of credit originating in the International Monetary Fund and the International Bank for Reconstruction and Development. The financial assistance which could thus be made available for rehabilitation, and stabilization, and permanent prosperity all over the world would be for all practical purposes almost boundless.

The foreign aid program can be effectuated with much less money than is being asked for. I have no hesitancy in saying the job can be done under proper management, with one-third of the amount requested by the Paris Conference and by the Administration. We must exert every effort to assure that all possible factors of foreign rehabilitation and stabilization are fully utilized to save every dollar of American money possible. And why should we do this? Because of the impact which the financing of any foreign aid program will have on the value of the American dollar and on American commodity prices. These factors are first of importance as an aid to our own economic stabilization. The most vital economic problem in the world is right here in America. The most pressing necessity is the stabilization of the American dollar and the American economy.

Let us have very definitely in mind that under the Bretton Woods agreements the currencies of all the major countries of the world, except the Russian ruble, are practically speaking, as effectively tied to the American dollar as they formerly were tied to gold. In consequence, any fluctuation or disequilibrium in the American economy, and the American dollar, is immediately reflected in currency and economic fluctuations all over the world. We should be proud of the position we hold, but we should not be unmindful of the responsibility to keep America and American institutions strong and stable against the possibility of world economic, social, and political chaos. Only a sound, solvent, safe America can be the anchor for an enduring world recovery and peace. We cannot be so under an economy managed by the Government. If we have proved anything since VE-day it is this fact, that Government with its self-seeking bureaucrats, starry-eyed theorists, and temperamental tamperers, frequently dominated by political emotionalism, cannot successfully manage our economy. The President's proposed panaceas for the ills of our economy should be

studied in the light of our past painful but enlightening experiences.

Chiseled on the Archives Building in Washington is the truism that "What is past is prologue." It almost follows as a matter of course, in the light of our experiences, that price controls, rationing, priorities, and allocations, whether on the producer or consumer levels, cannot be administered without serious set-backs to our production effort. The only sound practical solution for our economic problems lies in the full use of America's capacity to produce, and the freedom of consumers to choose what they desire in the market place. Everything the Government does must encourage increased production, not slow it up.

Price controls, allocations, and priorities, beget a vast brood of contradictions and uncertainties. They promote illegal operations; they encourage black markets; they open the doors to many other evil influences which will deter, but never can encourage production. In being realistic we must recognize that if the President is given the power to control prices, power to allocate and ration, and power to discriminate through the use of priorities, yes, even if he is given the power to control wages, he is not going to roll back prices; he is not going to roll back wages. To do so, he knows, you know, and I know, would be disastrous. Is he going to freeze wages and prices where they are now? To do so, he knows, you know, and I know, would invite strikes, production slow-downs, and many other conditions which would raise havoc with production. How can he use power to allocate goods in such a manner as to effect in any degree the general price level? If he borrows steel from the appliance industries to increase the production of automobiles, he might possibly lower the price of automobiles temporarily. If the automotive industry had enough steel, it could theoretically double its output; but what would happen to the price of appliances. The saving on the price of automobiles would be completely offset by the increases in the price of appliances. This illustration might be applied to almost every segment of our economy. Why rob Peter to pay Paul and disrupt our whole economy in the process?

Up to the present time the President has not been able to give us—although he has been requested to do so—an example of what commodities he seeks the power to allocate or control by priorities. He has given us no inkling of what commodities he would select upon which he would impose price controls. He has given us no information whatsoever as to what wages, in which industry, he would seek to control. By the very lack of this specific information, or at least enough of it to offer a basis for clear thinking, he may have created such uncertainty as seriously to affect the production of many consumer and producer goods.

The President has asked for authority to control credits. The traditional, tried, and safe method of controlling the velocity and volume of credit has been to raise and lower bank reserve requirements and rediscount rates. The Federal Reserve Board now has the authority to raise rediscount rates. Rediscount rates are now about 1 percent. Under the authority of existing law, rediscount rates have been as high as 7 percent. If it is found advisable to raise reserve requirements, then new legislation is necessary. I do not attempt to predict what the Congress will do in this respect, but, personally, I can see no harm in giving the Federal Reserve Board authority to raise reserve requirements. Of course such authority would have to be within well defined limits. Up to the present time the Federal Reserve Board has not asked the Congress for any authority to raise reserve requirements.

The Federal Reserve Board has asked for legislation authorizing it to guarantee bank loans. This seems somewhat inconsistent with the policy of the President to contract credit. For this reason the power to guarantee loans will probably not be given to the Federal Reserve system at the next regular session of Congress.

The President has asked for authority to control consumer credits. He now has the authority, under existing law, to reimpose controls over consumer credit by proclaiming an economic emergency, and if there is any question about his authority, I believe the Congress would not argue too long about that matter. But what effect will the control of credits on the consumer level have on domestic commodity prices? Hardly a ripple! High prices today are not the result of credit inflation. Such controls over the volume and velocity of credit would have little or no effect upon prices. It might be a desirable technique to have handy when and if there is a threat of inflation incident to any decided increase in the volume and velocity of credit.

The President in his message asks for rent control. When we continued rent control until February 29, 1948, there was some hope that through the removal of governmental obstacles there would be such an acceleration of residential building that the demand, especially for rental properties, might be reasonably met by next March 1. Residential building this year has been at a 20-year high. Almost 900,000 units will be completed. In any event, we will have to take up the question of continuing rent controls shortly after the regular session convenes. If it appears then, as it does now, that the demand for rental properties will not have been reasonably met by March 1, we shall give consideration to the continuance of rent controls. Any new legislation must be in such form as to continue the encouragement already given to the construction of rental units. The greatest possible benefit to both tenant and landlord must be achieved. In all probability, rent controls will be continued in some form for a definite period after next March 1.

While we are on the question of rents and housing, it might be well to clarify our thinking in respect to public housing—especially slum clearance. There is a basic issue involved in this connection which has never been effectively legislated on by the Federal Congress. It will be our objective at the next session to determine whether slum clearance and public housing are the primary responsibilities of the Federal Government or the primary responsibility of the State governments. The settlement of this policy will determine our course for, possibly, generations to come. It is important, in that it affects to a large measure basically our attempts to stabilize our economic and social systems. It is important, in that billions of dollars will be expended by the State and Federal Governments in the years following its statutory adoption. After the policy has been determined, the writing of the bill to effectuate the policy is almost a matter of routine. If it is established that it is the primary obligation of the Federal Government to clear slums and build houses for low rental or otherwise, then it merely becomes a matter of how much money we will appropriate annually out of the Federal Treasury for the generations to come. It is a simple matter to set up the machinery and the standards for the effectuation of the policy, including the proportion of the cost which State governments shall be expected to contribute. If it is determined that it is a primary obligation of the States, then the writing of the bill to effectuate that policy is equally as simple. It becomes a question as to what amounts the Federal Government shall authorize or appropriate for grants-in-aid, and the standards upon which the expenditures shall be contingent. We have the precedent of the Highway Act for guidance in this respect.

In summary, we will not make the mistake that has been made in years gone by in discussing this problem. We will not set up the machinery, and then build a policy around it. We will do the first things first. We will establish the policy once and for all, and then provide for the machinery by which to carry out that policy. There is little doubt that this matter will be definitely settled at the next session of Congress. This policy will be formulated and this bill will be written in the House Banking and Currency Committee after full and complete hearings.

It has been a pleasure to be with you tonight. Let me, in closing, say that I believe David Lawrence in a recent article summed it all up when he said, in substance, that there was nothing wrong with the world, and that includes the United States of America, that hard work, high production, and sound fiscal policies will not correct. It should therefore be our objective to encourage work and production to the extent that through production we will cure all of our economic ills. Can anyone deny that the only solution of the economic problems confronting the United States lies in producing to an ever expanding full capacity? And that full production must ensue not only at home, but especially in those countries which are the recipients of our aid? Only in that way can sound fiscal policies, which we hope will be patterned after our American system, be attained.

In that way they could hope for the marvelous fruits of our American way of life. When we have full production here and when there is full production abroad, when we shall have rebuilt the fiscal structures of America and those of the countries of western Europe on a sound basis within the framework of governments of their own choosing, we may expect to have, and we shall have, continued prosperity here in America, prosperity all over the world, and lasting peace.

Threatened Fuel Shortage in New England

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. CLASON. Mr. Speaker, before I left Springfield, Mass., for this special session, I was told by persons engaged in the heating business that a critical fuel shortage is likely in the New England area during the coming winter. At the same time, I was told that the production of gasoline products in the United States would be so great that there will be no excuse for such a heating shortage. The same tank cars haul either fuel oil or other oil products such as gasoline for automobiles. The companies furnishing oil products are in a position to produce and to lay down in New England fuel oil and the type of oil necessary for use of barges and other coastwise craft bringing coal to New England. I understand that there is a greater profit from the sale of gasoline than from other oil products required for heating, which may be the big factor in determining what oil products shall be made or sent to New England. Already there has been publicity indicating that housewives in New England may have to maintain their homes at sub-

normal temperatures in order to meet the threatening grave crisis.

In wartime there were military reasons, particularly transportation, which caused much hardship during the winter for the people in the six northeastern States. Today, military needs will not be a real factor if there is any shortage of fuel oil this winter. If we must have a shortage of either gasoline or fuel oil, the real reasons for such shortages should be immediately explored by the Government and all necessary steps taken to overcome them. Preference should be given to fuel-oil users.

The New England Governors, following a conference, have written to the Chairman of the United States Maritime Commission seeking the immediate recommissioning of as many tankers as possible. I have also urged the United States Maritime Commission to the same effect. However, those in charge of railroad and other transportation for the Government should, at this time, take all steps necessary to provide as many tank cars and trucks as may be necessary to prevent the threatened fuel-oil shortage now facing New England.

Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

PROGRESSIVE CITIZENS OF AMERICA,
SOUTHERN CALIFORNIA CHAPTER,
Hollywood, Calif.

SIR: This will acknowledge receipt of your form letter of October 25 with a copy of your resolution condemning the Un-American Activities Committee.

So that your records may be complete on another United States Representative, the following is committed to writing:

I have nothing but praise for the Un-American Activities Committee, its able chairman, the Honorable PARNELL THOMAS, and all members of the committee.

I do not know of any congressional committee that has rendered such outstanding service to America as has the Un-American Activities Committee. I shall continue to praise and support their work and do all within my power to help the committee expose the Communists in this country, their fellow travelers, sympathizers, and any organization which would be a party to a plan that would undermine and destroy our American way of life, which evidently is the goal of the Communist.

It is not within the scope of my comprehension to understand how any group of American citizens interested in the welfare of this great Nation of ours could oppose the courageous work of the Honorable PARNELL THOMAS, chairman of the Un-American Activities Committee.

So, again I repeat that I shall continue to support the Un-American Activities Committee and will actively support any bill that would increase the committee's appropriation so that the committee may widen its field of operation.

I like our way of life in America. It is worth fighting for, and if your understanding of the Constitution and the principles upon which this Nation is founded is in agreement with mine, then you would have nothing but praise for the outstanding work of the Un-American Activities Committee and its able chairman, the Honorable PARNELL THOMAS.

Yours very truly,
OTTO E. PASSMAN,
Member of Congress.

Why the Return of Price and Allocation Controls Will Defeat United States Grain Conservation

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. KNUTSON. Mr. Speaker, pursuant to permission granted me to extend my remarks in the RECORD, I desire to insert two memorandums by Walter C. Berger, president, American Feed Manufacturers Association, 53 West Jackson Boulevard, Chicago, Ill., entitled "Why the Return of Price and Allocation Controls Will Defeat United States Grain Conservation" and "Analysis of the Feed Survey Committee Report," which I commend to the House membership:

WHY THE RETURN OF PRICE AND ALLOCATION CONTROLS WILL DEFEAT UNITED STATES GRAIN CONSERVATION

1. We recognize that the amount of grain and feed we export is a problem of high political and military importance on which Congress must make the final decision. However, we do feel that when a decision is made to export a given volume of material, we should not expect to escape the consequences of such action in terms of its effect on our domestic price structure.

2. The feed industry feels very strongly that the United States must go as far as possible in helping to relieve the desperately short food situation facing many countries in the world today. However, we are even stronger in our conviction that this country must take stock of its available grain supplies to see just how much can safely be moved out of this country without seriously disrupting our own economy.

3. The American public must realize that the heavy exports of grain and feed will mean a smaller available supply of the protective foods, meat, milk, and eggs, in the second and third quarters of 1948, in comparison to the same period in 1947.

4. Present price trends of the protective foods are doing the jobs that must be done in order to adjust the consumer demand for these products to the available feed supply. Rationing and price controls will hinder rather than aid this adjustment.

5. Price control on feed and livestock is economically unsound and might well be disastrous to this Nation. It was proven in the 9 months that we attempted to continue price and allocation controls after VJ-day that price control and usage or allocation controls merely cause maldistribution of feed supplies. These controls did not save one pound of feed.

6. During the period of price control and rationing after VJ-day it was definitely proven that these types of orders and regulations cannot be enforced in peacetime in this Nation. Any attempt to enforce such regulations will ultimately lead to complete regimentation, including control of wages and salaries.

CONCLUSION

Restrictions which would limit the available supply of balanced rations to the livestock and poultry producers of this Nation would defeat the purposes of the grain conservation program by forcing the feeding of greater quantities of grain in inefficient rations, as examples:

USDA reports show that on the average it required 900 pounds of feed to produce 100 dozen eggs. Through efficient use of balanced rations, it requires only 600 pounds of feed to produce 100 dozen eggs, or a saving of 300 pounds of feed per 100 dozen eggs, of which two-thirds is grain. Thus a net saving through efficient feeding of 200 pounds of grain per 100 dozen eggs produced.

In the production of pork in dry lots it requires 12 bushels of corn to produce 100 pounds of pork. Six bushels of corn fed with 50 pounds of properly balanced supplement will produce 100 pounds of pork. Thus a net saving through efficient feeding of 6 bushels of corn per 100 pounds of pork produced.

Respectfully submitted.

SUPPLEMENTAL INFORMATION—THE FUNCTION OF THE FEED MANUFACTURING INDUSTRY

The feed manufacturing industry is a service industry filling a very definite and important need in our national economy. It is estimated that there will be produced in this Nation 19,000,000 to 20,000,000 tons of byproduct feeds this crop year. The chief byproduct feeds are mill feeds, corn gluten feed and meal, cottonseed-oil meal, soybean-oil meal, brewers' grains, distillers' grain and solubles, packinghouse byproducts, dried milk and whey, fish meal, and oil, etc.

These byproducts are obtained from the manufacture of products for human consumption, such as oils, starches, flour, alcohol spirits, meat, fish, and dairy products. These byproduct feeds all have available certain nutritional values and in order for the Nation to get the maximum amount of good out of all of these ingredients the feed industry ascertains the value of the variable nutritional elements in each byproduct and blends them together so that the maximum production ability of the total supply of byproduct feeds is obtained.

The economic function that the feed manufacturing industry performs is that of blending this vast volume of byproducts feeds together so that the livestock and poultry feeders of this Nation get the maximum amount of good out of the available byproduct feeds when fed with basic feed grains—corn, oats, barley, and sorghum grains. By doing this, feed manufacturers are extending grain supplies.

Additional economic and statistical information

The level of prices is determined by the amount of money people have to spend and the volume of goods that is offered for sale. Since prewar, we have tripled our money supply. Factory wage earnings have jumped from 63 cents per hour in 1939 to about $1.25 per hour. Total wage and salary incomes have jumped from $50,000,000,000 in 1939 to $125,000,000,000 this year. Is it not reasonable then to expect a general price level of 2 to 2½ times the prewar normal if the volume of goods available for purchase is about the same?

To illustrate the maldistribution which took place under usage-control limitations placed upon the feed industry on March 1, 1946, the following information is submitted from four responsible feed manufacturing companies which represent general conditions in the deficit areas.

Percentage of tonnage produced in the indicated months of 1946 as compared to 1945 (usage limitations were in effect in 1946)

	Company			
	No. 1	No. 2	No. 3	No. 4
March	86	100	62	84
April	84	90	95	75
May	64	79	52	57
June	73	68	41	44
Average, 4 months	76	84	62	65

When feed supplies became available through normal channels after lifting of price and usage controls, the following table shows the production of these same companies for the same months of 1947, as compared with 1946,

Percentage of tonnage produced in the indicated months of 1947 as compared to 1946

	Company			
	No. 1	No. 2	No. 3	No. 4
March	124	110	119	101
April	154	118	128	128
May	187	130	164	180
June	174	144	168	134
Average, 4 months	159	125	144	136

The following example illustrates that price and usage controls on the feed manufacture do not save any grain or feed but merely cause maldistribution, with the result of higher cost to the livestock and poultry producers in the deficit grain areas. Two firms in deficit grain areas have submitted evidence that they were forced to purchase a total of 14,000 tons of manufactured feeds of unknown quality to supplement their reduced production in order to take care of the livestock and poultry producers who were depending on them for feed supplies. The average cost of these feeds of unknown quality averaged $12.29 above the list price on their own feeds of known quality to feed the same type of livestock or poultry.

Under a free enterprise system, prices have effectively performed the function of balancing the available supply with the demand. When the supply of feed has been short, the resultant increase in prices has quickly forced the inefficient, wasteful feeder out of business. As a result of this inefficient feeder being forced out of business, the feed supply, through the operation of free prices, was made available to the efficient producer who could afford to pay the high prices and still make a profit.

This is what must happen if livestock and poultry production is to be brought into line with feed supply and the output of food per pound of feed maximized.

The feed industry, through its extensive service organizations, has already placed in operation special concrete programs designed to conserve grains.

Respectfully submitted.

ANALYSIS OF THE FEED SURVEY COMMITTEE REPORT

(By Walter C. Berger, president, American Feed Manufacturers Association)

On page 5 in the report I think special emphasis should be placed on the fact that in the figures of 7,668,000 tons of wheat and rye fed on farms, 250,000,000 bushels of wheat has been used by the committee. The committee felt that this figure was the amount that would be left for livestock and poultry feeding, if the Government allocated 500,000,000 bushels of wheat for export purposes.

It should be noted that the stocks at the beginning of the crop year of October 1, 1947, of the major feed grains; corn, oats, barley, and sorghums, totaled 13,632,000 tons. They have used a carry-over figure at the end of the crop year on the basis of 10,000,000 tons. They feel that this is the lowest practical carry-over figure we can expect to arrive at by October 1, 1948.

In the figure listed as cereal byproducts, amounting to 8,450,000 tons, is included an estimated production of mill feeds of 6,000,000 tons as designated at the top of page 4. I feel it is necessary to further explain how seriously this figure could be affected in case the extraction rate in milling wheat into flour was shifted from a normal 72 to 80 percent, and if the amount of flour being exported was reduced drastically. Last year approximately 200,000,000 bushels of wheat were exported in the form of flour, and this left us approximately 1,750,000 tons of mill feeds in this country, for our own domestic consumption. It can readily be seen, therefore, that if the amount of flour exported this crop year was reduced by one-half, we could easily lose 850,000 tons of mill feeds.

It is estimated that approximately 500,000,000 bushels of wheat will be milled into flour for domestic consumption, and if the extraction rate was shifted from a normal 72 to an 80 percent extraction on this amount, it would cause us to lose 1,350,000 tons of mill feeds. It can readily be seen how easily the cereal byproducts feed estimated production could be reduced by 2,000,000 tons, and when that is carried over into the balance sheet on page 4, the deficit of 5 percent of grain and mill feeds could easily be increased to a deficit of 7 percent.

I think it would be well to call special attention to the fact that the deficit of 6 percent on 632,000 tons of high-protein feeds is by far the smallest deficit shown by this committee on any of its reports; so that in reality the protein supplies are in a much better position per livestock unit this year, and it should be remembered that we never carry over any sizeable quantity of the high-protein products from one crop year into the other. It is always consumed as produced, and in a free marketing system price rations these high-protein feeds.

It should be noted that the committee recognizes that under the free price system certain adjustments will take place in the rate of feeding in certain classes of livestock and poultry production. This is particularly noticeable in the production of swine, beef cattle, and sheep. The committee has recognized that there will be a change in feeding practices during this feeding season, and they have estimated that the total requirements of grain and mill feeds for this year will be approximately 7,000,000 tons less than the requirements were a year ago.

It is important to note that the reduced rate of feeding is not due to a drastic reduction in livestock numbers, but results primarily from the adjustments in feeding practices. Livestock producers will market hogs at less weights, breed a greater percent of gilts in place of old sows, market beef cattle of less finish, and make greater use of our large hay crop and other roughages.

I think it is well to explain that these adjustments in feeding practices are simply a step toward the greater feeding efficiency which is necessary because of the present relationship between the farmer's buying price of feed grains and his selling price of livestock and poultry. This is all part of the normal operation of a free market system, and continued operation under a free market system is absolutely necessary to assure the maximum production of meat, milk, and eggs that is possible with our limited supply of feed grains.

The main prob em now, is to make up that 5 percent deficit without additional drain on our wheat supplies. A combination of highly efficient feed plus greater feeding efficiency is needed to do the job.

The Free Way of Life Is a Rugged, Painful Business at Times, But It Has Paid the Biggest Dividends on Earth and It Has Been Worth Every Weary Mile of It—John A. Reilly

---

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, November 20, 1947

Mr. GEARHART. Mr. Speaker, it is my privilege to offer for inclusion in the CONGRESSIONAL RECORD the text of a most unusual and at the same time one of the most inspiring addresses that it has been my good fortune to hear during my sojourn in the National Capitol.

The speaker was Mr. John A. Reilly, president of the Second National Bank in Washington, and president of the Washington Board of Trade, an outstanding leader in civic and patriotic affairs in the District of Columbia.

Delivered last night at a dinner meeting of the District of Columbia Society of the Sons of the American Revolution, his utterances were received most enthusiastically by an appreciative audience which was time and again moved to applause by his eloquence. Having himself achieved an outstanding success under our highly competitive system of free enterprise, he was especially well equipped by personal experience to speak with authority on the subject he chose to discuss—This is our heritage.

Because of the timely importance of that which he had to say, the speaker is entitled to and should have a far wider audience than the one which crowded the Sapphire Room at the Mayflower Hotel last night. That this may in a measure be accomplished, I am glad to be able, with the unanimous consent of the Membership, to extend to him the hospitality of the columns of the CONGRESSIONAL RECORD.

Mr. Speaker, this very unusual address to which I have just alluded is the following:

I have often heard it said there is no greater truth than that man fails to appreciate what he already possesses.

Things seldom are appreciated until lost. One never fully realizes the blessings of the use of an arm until it is gone—and gone forever. The joys of sight are coveted by few—save the blind.

And so it is with liberty and human rights. To gain them, men fought through the fires of hell. Once won, and seemingly secured, they were left to the care of everyone in general and no one in particular.

This was fine, when no enemy menaced. Today, the scene has shifted; time has passed and our hard gotten gains are being swept away and unless America keeps a watchful eye, she may find herself in the same unhappy situation that plagues many

of the countries of the world at this very hour.

It was these thoughts that prompted several of our prominent Americans to organize the American Heritage Foundation. In speaking of the problem, Mr. Winthrop W. Aldrich, chairman of the Foundation, recently said, "Our country now stands at a crossroads of its history. Military victory has brought only a breathing space in our quest for peace and security. Nation after nation, under the stress of external pressure or internal economic despair, has turned to the panacea of state control. The areas of democratic government have been perceptibly shrinking on the global map."

The Freedom Train arrives in Washington on Thanksgiving Day. This week, under official proclamation by our Board of Commissioners and with the blessings of the President of the United States, our citizens will be given the opportunity to rededicate themselves to the ideals that made our country great.

I do not propose, in a gathering such as this, to make a patriotic speech. There is no need for it. We will try to throw a little light on the dark and sinister fallacies that threaten to destroy the glory we call the American way of life.

There is only one kind of freedom and it is found where the Government is limited by a Constitution. This protects the freedom of an individual against interference not only from other individuals but from Government itself.

A few evenings ago, when I was studying the part I might have to play during Rededication Week, I picked up a recent issue of the Reader's Digest and was attracted by the title of one of its articles called The Best Years of Our Lives. It was written by Quentin Reynolds, a distinguished war correspondent.

Mr. Reynolds begins by stating that "millions of Americans live and die without ever discovering the land of their birth; it remains as unknown to them as does the second stanza of the Star Spangled Banner. "Perhaps," he continues, "the reason is that most of us, from custom or prejudice, see our country through the wrong end of the telescope."

The writer then outlines many of his experiences in Europe as he watched the misery and lifelessness of the refugees of the continent-people in whose hearts hope had died—as nation after nation fell undefended. He states bluntly that though the years were tragic, they were the happiest he ever knew because for the first time he felt the pride of a discoverer and realized what a great country he had been born in.

As businessmen, I think we often see our businesses through the wrong end of the telescope. We are so close to the inner workings of the machinery of our particular business that we lose our perspective. In other words, we miss the forest because a few trees are in our way.

We are 2 years removed from the greatest war in human history. We are suffering the inevitable dislocations which follow such a conflict. We are still confronted with profound uncertainties regarding the political and economic future, uncertainties that are bound to affect the operations of business.

Tragically enough, the world today is not one world, but two worlds—engaged at this very hour in economic and diplomatic conflict. During the 2 years that have elapsed since the cessation of hostilities, we have been unable to make peace with Germany, and Europe is divided into two separate economic areas by the iron curtain. Russia and her satellites want a planned economy. America and her other allies want a free economy.

A free economy means the capitalistic system. The word "capitalistic" is probably the most misunderstood word in the English language.

Competition is the greatest friend of the common man. Men like Ford, Chrysler, Firestone, and other great industrialists who have been unusually successful and become rich did not do it by cutting wages and raising prices. Instead, they went out and built up their businesses and their fortunes by turning out better products at lower prices, while paying as high, or higher, wages to the laboring group.

Competition is the most stimulating factor in America today for steady desirable progress. It creates the incentive which makes the difference between a lazy economy and a vigorous one.

Some enemies of America have endeavored to convince the masses that the capitalistic system is hostile to their interests. Nothing is more ridiculous. No executive of organized labor, who is faithful to his trust, would seek to abolish our system. The words capital and labor have been used entirely too carelessly in the past and many have placed emphasis upon the fact that one group is opposed to the other. Both management and labor have prospered under our system and I hope the day will never dawn in America when this system will be either discarded or impaired.

I say to you candidly, however, that, as business and professional men, we have the greatest package on earth to sell and we have failed miserably in the job.

The task of defending the capitalistic system is broad, complex, and technical. It requires study and a lot of it. That sacrifice on our part, however, would be infinitesimal compared to that which was made by your sons and daughters in the recent war. During those tragic years you prayed for them and for America. Your prayers are needed much more now to save America from the curse of either socialism or communism.

Let us review some of the poison these groups have been disseminating.

(a) Under private enterprise employees get the small part of the income produced. Figures furnished by the Department of Commerce, for the years 1929 through 1945, reveal that the employees have received 86 cents of each dollar produced; the corporations, in dividends and additions to surplus, have received 11 cents; rents, royalties, and interest accounts for the remaining 3 cents.

(b) The Socialists contend that all big corporations are owned by a few people in contrast to the millions of working men on the pay rolls. The financial reports required by law indicate that this is a lie out of the whole cloth. There are over 8,000,000 people in these United States that own stocks and bonds of our American companies. Approximately half of all corporation dividends are paid to individuals with net incomes of less than $10,000 per annum. Let us analyze the position of the $10,000 executive. He pays approximately $2,500 in taxes. His take-home pay is $7,500, which will buy about what $3,750 used to buy. If these individuals, who get half of all corporate dividends, have the power and influence to exploit the working man, then I am prepared to admit our system is wrong. It must also be remembered that many of our larger corporations have nearly as many and some more stockholders than employees.

EXAMPLE

First. General Motors—425,000 stockholders, 340,000 workers.

Second. United States Steel—225,000 stockholders, 280,000 employees.

(c) The one they use with a vengeance—and which packs the hardest punch—is that a few highly paid officials get the lion's share of employee compensation. The last year before the war, according to the Department of Commerce, the total compensation paid corporation employees was $51,537,000,000. Of that amount $3,472,000,000, or 6.7 percent, went to corporation officials.

I have referred to the fact that General Motors has over a third of a million employees. If the three highest paid executives of that corporation turned over their total salaries to the workers, it would take each 6 days to accumulate enough money to buy a pack of cigarettes.

I have mentioned only a few of the arguments used by the opponents of the capitalistic system. If time permitted I could outline many more.

The point I desire to emphasize, however, is that they distort the facts and fire the imagination of the masses against private business. We must dig out the true facts—put out the fire—and get the masses, who have been so cruelly misled, to know and understand the true significance of our American economy.

The opponents of the capitalistic system refer to the profit element as though it was something criminal. No competent banking or business executive need apologize for endeavoring to make a reasonable profit out of his enterprise.

The proponents of economic security rather than equality of opportunity, never mention the word "loss." Because of this, in my judgment, they are mentally dishonest. Loss is a very important element in risk banking. No banker, however competent, can fulfill the normal functions of a bank without experiencing an occasional loss. Of course, he can say "No" to everyone—if he is a coward and afraid to make a decision to lend based upon facts which justify a loan. In so doing, however, he is defeating the purpose of chartered banking and inviting the Government to come in and take over the banking system.

It must also be remembered that our so-called profit system is supported at a great many points by nothing more than rank optimism. If the human mind were not unconquerably hopeful—more attracted by the hope of rich rewards than repelled by the greater likelihood of heavy losses—business and industrial progress would never take place.

It is profit and the striving for profit that brings to the surface all of the bold and venturesome spirit that has created new industries and bigger pay rolls in this country. It is the hope of more profit that has inspired the imagination of mankind and has brought to surface all of the ability with which man is endowed.

The exponents of the new social order want to take the profit out of enterprise and distribute it to others. Here is where their fallacies appear crystal clear.

All human beings are anxious to attain a greater return for their money and effort. Few, if any, workers are willing to put forth extra hours of effort unless such extra effort is rewarded by extra pay.

When the socialists level down profit, they level down effort. They take away the incentive for the extra effort and that margin has been the difference between success and failure since the beginning of time.

What has the capitalistic system meant to America?

In the United States, with only 6 percent of the world's population and 6 percent of its area, through our capitalistic free-enterprise system of business we have during the past century given to the people of the world more of the comforts and conveniences of life than they had received during the preceding 5,000 years. What do we possess?

Sixty percent of all telephones, 35 percent of the railroad mileage of the world, and 80 percent of all automobiles. America produces 70 percent of the world's oil, 60 percent of wheat and cotton, 50 percent of copper and pig iron, and 40 percent of the coal and lead. Our people own 42 percent of the radios of the world, and 54 percent of all refrigerators.

It is also interesting to discover how the people of the United States have fared under this system. I am going to eliminate people with substantial incomes and only give you facts and figures concerning individuals who earned $6,000 per year, or less, last year.

First. In 1946, these individuals earned approximately $141,000,000,000.

Second. They have equities in homes of $56,000,000,000 and in farms of $22,000,000,000.

Third. These same individuals have invested $39,500,000,000 in Government savings bonds.

Fourth. They own $28,174,000,000 in corporate stocks and $25,000,000,000 in life insurance.

Fifth. Their deposits in savings and loan associations total $4,432,000,000 and they have $2,000,000,000 in savings banks.

Sixth. The Social Security and wage credits of this group amount to $14,690,000,000.

I challenge any other system to produce such a splendid result.

In other words, we, one of the youngest of all nations, have the undisputed claim to the highest standard of living in the world. Why?

This standard of living we owe to our national capacity to produce goods and services in large volume and at low cost.

While this is a very impressive record, some people lost money on their ventures. I might cite a few examples.

Of 142 major automobile companies between 1905 and 1946, only 16 are in business today.

Seventy-five percent of people who started new businesses during the last four generations failed within the first 5 years. They did not go broke because they were dishonest or lacked some business knowledge. They failed because others were more able to give the public a better and cheaper product.

If a new enterprise cannot serve the public efficiently, it is a millstone upon our society. The American system of competition weeds out those unsuited for business. The ones who fail change over into something they are suited for.

I have made these few over-all observations, which you have heard so many times, not to bore you again with repetition, but to ask you to think through with me this evening some of the business problems of the immediate future.

To consider intelligently our problems of the future, we must go back to the lush days of 1929 when everyone had a paper profit in the market until the crash of November of that fateful year.

During the early thirties, we witnessed a severe depression which culminated in the bank holiday of 1933.

Then came the New Deal with a brand-new philosophy of government which a weary people accepted for better or for worse.

Billions were spent on activities that were aimless and unproductive and spiritually degrading to the individual.

Then came the march on Poland by Hitler and it took total global war to invigorate our economy to a point where we have high production and full employment. In short, since 1933, we have had a subsidized economy.

We are now emerging from a subsidized economy to a free economy. I say to you candidly that business and banking are going to be different from here out.

After 12 years of a buyers' market for credit, we appear now to be moving toward a seller's market which will have profound implications for the users, as well as the suppliers of bank credit. The complex forces which affect interest rates comprise the whole range of our economic life.

It is my sincere hope that no disappointing experience you may have had, or may have, with a particular businessman or banker will cause you to hope for governmental control and management. We might cite an example. Across the sea, we witness a great tragedy. The British Empire is on the verge of collapse. Having been bled white by two world wars, her economy has been strained to the breaking point. A few years ago, her leaders felt that the only solution was a socialistic form of government with a subsidy for practically everything—banking, production, transportation, and distribution. A government subsidy may work for a while until accumulated assets disappear, then chaos is inevitable.

Socialism is just one step removed from communism. It is much closer to communism than it is to capitalism. Socialists and Communists are buddies, natural bedfellows in their hatred of capitalism, free enterprise and profit.

The capitalistic system offers unlimited rewards for initiative, enterprise, and wisdom. It guarantees no subsidy for laziness, incompetence, and failure.

The free way of life is a rugged, painful business at times, but it has paid the biggest dividends on earth and it has been worth every weary mile of it.

There is a lesson for America in this hour of world suffering and tribulation. For over 14 years, some of our people have been looking for handouts from the Government. The only reason the United States has been able to survive is because the Government has been spending that which 158 years of American ingenuity and hard work has created by the normal functioning of the system of free enterprise.

We have over 60,000,000 wage earners in America. Everyone has a right to earn a living but, as Americans, they are not content to merely keep body and soul together. They feel that they have the inalienable right to achieve, and life itself is robbed of its zest when those incentives to achievements are removed. They will be removed if we abandon the capitalistic system.

When we look over the past and then extend our vision into the future, all of us, regardless of age, will realize the opportunities that are before us. In no other nation in the world are there to be found management so able and labor so skilled, with a government organized to serve and not to dictate. If these three great groups have the will and intelligence to subordinate temporarily selfish advantages to our one great purpose of making the various cogs in our economic machine function smoothly and efficiently, then we may confidently look forward to the improvement and enhancement of the usefulness of our great system.

In conclusion, may I again refer to the article that made such an impression upon me. The best years of our lives are ahead of us if our people will do the following:

The laboring group should unstintingly produce with the skills which Almighty God has so abundantly endowed them. The philosophy of how little I can do and how much I can get for it should be abandoned and high prices will decline. In the long run, we will be better off if we return to the old fashioned ideas of those who built this country and made it the greatest. It is far more important to stabilize the dollar and have its purchasing power restored to its former dignity than to see how many dollars we can run through the printing presses.

Ownership and management have a very sacred responsibility to unsparingly distribute the product of labor for the benefit of the common man. They should strive earnestly and honestly to bring the bounty of America to the doorstep of every citizen. They will make a real contribution to an enduring economy if they devote their time and talents to adjusting the price structure downward and still enjoy a reasonable profit.

The Government can do its part by getting out of competition with private enterprise. Uncle Sam should make the rules of the game fair and enforce them.

Experience over the last few years proves conclusively that he is a poor businessman and the taxpayers have paid the bill.

My argument against a subsidized economy—socialism, planned economy, or planned chaos, as I prefer to call it, or whatever name you may choose to call it—is that America has the best economic and political system yet devised. This is proven by her glorious record and not on a paper blueprint.

America did not become the breadbasket, the arsenal, the bank, and the hope of the world by following the wrong system or believing in wrong principles. Her solution is to reacquaint herself with her own best way of life—and to live up to its tenets more faithfully—not to throw it away before she has completely understood and practiced it.

The answer, and the only answer, is for all of us to educate ourselves to the responsibilities as well as to the benefits of freedom. Perhaps, as a people, we are not morally strong enough to be free. If this is the case, then we shall certainly lose our freedom and it will not matter much what "ism" supplants Americanism. But this will not prove that our free way of life was not the best way. It will only prove that you and I were not worthy of it.

Notes on a Trip to Europe, by Ernest T. Weir

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, November 24, 1947

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include the following Notes on a Trip to Europe by Ernest T. Weir, chairman of the National Steel Corp., of Pittsburgh.

Mr. Weir visited Europe in August and September of this year and he had unusual opportunities, because of his past connections with European business, to compare the present situation in Europe with conditions prior to the war.

I believe, Mr. Speaker, that careful and serious attention should be given to this frank statement by one of the leading industrial figures in America. Unlike the men in the Truman administration, Mr. Weir has not gone to pieces hysterically, but has examined the problem of our relations with Europe in a practical and realistic manner.

I want to call particular attention to the basic point of Mr. Weir's report, and I quote:

> In my opinion, the bugaboo put out by our administration, namely, that unless we finance countries they will go communistic, is without the slightest justification. People who will stand for communism will go in that direction irrespective of what we may do to the contrary. I think Greece is an outstanding example of a waste of our money without in any way bringing into that country peace and stability.

I hope that all of the Members of the House will read Mr. Weir's statement in its entirety.

NOTES ON A TRIP TO EUROPE

(By Ernest T. Weir, chairman of National Steel Corp., Pittsburgh, Pa.)

On a trip abroad, starting August 1 and ending in New York on September 9, 1947, I spent 1 week in London, 5 days in Switzerland, and the balance of the time in France. My purpose in making the trip was to compare present conditions in the countries visited with my recollection of conditions in the same countries on previous visits before the war, and to check by personal observation the impressions I have gained on international matters from my reading of newspapers, magazines, and books. No one, of course, can make a thorough study of wide areas in 1 month's time. There are, however, certain general aspects which become immediately apparent and lead to conclusions which would not be changed materially by any amount of time and study. It is with such aspects, in the main, that these notes deal.

In addition to numerous informal contacts with people of all sorts, I had extensive interviews with 14 outstanding men of industry and finance in the countries visited. These men are all important, practical business leaders whose observations were based on an intimate knowledge of the conditions applying in Europe generally, as well as in their respective countries. In all cases, their discussions with me were without reserve; they spoke freely and frankly on all questions raised. Although the opinions of these men are represented in these notes, I am not at liberty to identify them because it was understood that our discussions were in confidence.

For convenience and simplicity, my impressions of each country are presented separately.

FRANCE

Basically, the country looks good, with the exception of the cities and districts in Normandy, which suffered heavy war destruction. The country districts have been well cultivated and appear just about the same as the last time I was in France.

In Paris, there is no outward evidence of distress. The city is well kept and looks the same as before the war, there being no destruction in the Paris district. The streets were full of people, stores seemed normal, and people dressed about the same as I have always seen them in Paris, with no surface evidence of malnutrition. In restaurants the food is up to the normal standard and plentiful, and this also applies in the hotels.

Businessmen are very critical of the Government and apparently have no confidence in it, considering it without leadership and entirely political. Too many people are employed by the Government and the budget is out of balance. The rank and file of people with whom I talked—all types—feel the same as businessmen regarding their Government and have the same lack of confidence.

The most serious thing in France is the black market in money. The Government maintains an official rate for the franc of 125 to the dollar, or eight-tenths of a cent. The actual value in the black market is 250 francs to the dollar, or four-tenths of a cent. The black market is universal. You can buy this money in hotels and from certain headquarters. There are runners on the streets who will tell you the headquarters to go to. There is really no reason for any visitor paying the official rate for francs, except that on passports and any purchases you may want to take out of France a check is made as to where the money comes from. Consequently, you do have to buy a limited amount of francs at the official rate.

All Government employees—which constitute a great number—and the workers in many plants are paid on the basis of the official rate. As against this, the cost of practically everything now has gone away up on account of the black-market value of the franc, so that the working people are poorly paid in relation to the real purchasing power of their wages, and consequently are in a bad condition. The important food products are rationed, which creates a further black market in food. If the Government would meet the situation fairly and squarely and devalue the franc, say to the basis of 250 to the dollar, it would be a great factor in improving conditions in France and helping the mass of workers. Also, it would stimulate buying on the part of Americans who visit France and would improve the country's dollar supply. Why the Government does not take this course is hard to understand.
